Our own manufacture. Perfect Mill Work. Uniform Grades.

LET US FIGURE ON YOUR HARDWOOD WANTS.

## MICHIGAN HARDWOODS

Manufactured by

### Mitchell Brothers Co. Cadillac, Michigan

Our assortment of dry stock is now more complete than it will be later in the season.

A car shortage this fall is predicted by railroad authorities and some symptoms of it are already noticeable.

Better anticipate your requirements while stock and cars are available and send us your orders now for

## CADILLAC QUALITY

## SUPERIOR ELM

Our Soft Gray Elm is better than ordinary Soft Elm. It has less shake, is not as hard and is much less liable to warp.

It makes excellent interior finish and is especially desirable for furniture, refrigerators, pews, chairs, tables, etc., and forms a good base for veneers.

### WE HAVE NICE DRY STOCK

# There is a Reason for Every Success

The following are a few that have aided our Columbia in its phenomenal advancement, but the main credit must be given to its drum construction

The Short Screw with its rigid post and adjusting nut. No chance for back lash.

The Oscillator with its perfectly central non-clamping arrangement of levers.

The Drums, with our patent Automatic Take-up device for keeping the paper at an even tension at ALL POINTS and at ALL TIMES. The ONLY way to accomplish perfect sanding

Cross Sectional View, Showing absence of all internal mechanism. The rigid construction, the Cylinder Raising Device, which holds the cylinders Perfectly rigid in any position, permitting them to be belted in any direction; the provision for piping the dust and heavy upper feed roll frame.

### COMING ASSOCIATION MEETING

#### MICHIGAN HARDWOOD MANUFACTURERS' ASSOCIATION.

The fall meeting of the Michigan Hardwood Manufacturers' Association will be held at the Ponchartrain Hotel, Detroit, Mich., Thursday, October 28, at 10 a. m. Members are urged to be present or to send some one to represent their interests, as a number of subjects of importance will be brought up for consideration.

CHAS. A. BIGELOW,  
President.

J. C. KNOX,  
Secretary.

### General Market Conditions

The trend of the hardwood market at all points of consumption throughout the country is healthy, and strength in values seems to be gaining every day. The situation is especially good in the Chicago market, where practically every variety of hardwood is in fair to strong call. Improved sales conditions are reported from St. Louis, Memphis, Louisville, Cincinnati, Pittsburg, Buffalo and the Atlantic Coast cities, although increasing strength is not developing as fast in the extreme East as it is in the middle West and West.

Specifically, perhaps quartered and plain red oak has the strongest call and is showing the greatest advance in price.

Quartered white oak is also remarkably strong, but the high price of plain white seems to be militating somewhat against an increased demand, as many former users of large quantities of the plain white variety are now substituting other woods for it. This is especially noticeable in the furniture trade, where birch and gum are being utilized at the expense of the higher priced oak.

Of the northern woods, the better grades of both birch and maple are in excellent request with gradually increasing values. The lower grades are holding their own. Basswood is not in as urgent

call as the other two northern woods named, but still is in fair demand. Both black and white ash and rock elm are, on the whole, rather sluggish. The old-time users of these woods have transferred their affections elsewhere, owing to the short supply, and while the demand will doubtless consume the present output, there is no particular reason for believing that the prices of either of these woods will materially advance.

Red gum is doing better, which is far from well enough, and there is every prospect of a largely increased demand for this excellent material.

Choice poplar in high grades and good widths is a commodity that the seller needs practically, but for which he asks his own price. It is in demand for automobile bodies and other high-class purposes beyond the quantity that can possibly be supplied. Common poplar is doing very well and there is a reasonable sale for No. 3. Wide, high-grade cottonwood is in excellent request and the common and lower grades are moving with apparent freedom.

The woods in minor supply, like sycamore, cherry and black walnut, are showing a steady market with no particular change in price.

There is little that can be said about hickory. It is not in any particular request except for the handle and carriage trades, and prices are not advancing as markedly as it was expected they would.

The situation on both northern and southern beech is featureless. There is some trade in the wood, but it is not marked by any particular strength.

Firsts and seconds chestnut is in good request in the East, where it is highly esteemed as a finishing material. There is very little sale or demand for it in the middle West. Sound wormy and the common grades are having increased demand with strengthening prices.

Elm, both the grey elm of the North and the southern varieties, is in fair demand and the market shows a little increase in strength.

The mahogany and other foreign woods people report a very fair demand, but with very little increase in the range of values. As a matter of fact, both the English and American markets have been largely overloaded with fancy woods for more than a year.

The hardwood flooring people, both in oak and maple, are very busy; in fact, some factories are obliged to turn down orders for some grades of stock, as their capacity is completely sold up for sixty days to come.

There is an increased call for dimension stock, especially in oak, and it is thought that this trade will be very largely developed during the year. There is a fair call for dimension stock in sundry items of northern and southern woods, but oak is the principal one demanded.

The veneer and panel people are busy, but are still working on a low schedule of prices.

With the exceptions noted, there are no boom needs in any item of lumber stock, but a healthy demand with every evidence of a gradual increase in values in many items, while others are holding their own. On the whole, the situation is the best that it has been for more than two years.

## The Logical Evolution of the Hardwood Lumber Business

After careful analysis it can be stated, without fear of contradiction, that the production and distribution of hardwood lumber are today accomplished on extravagant lines. Primarily, only the better portion of forest growth is cut into saw logs, and of this small percentage of the total forest yield, probably not more than two thirds becomes a merchantable lumber product. Of the resultant lumber, it is doubtful if an average of more than fifteen per cent could be classified as firsts and seconds.

To be sure, as lumber operations have gone on from year to year, some progress has been made, but on the whole lumbering has shown less improvement, conservatism and economy than almost any other industry which has to do with the reduction of natural resources into commercial products.

It must needs be noted that hardwood lumber of the varying grades, from firsts and seconds down to No. 3 common, is being shipped greater and greater distances as time progresses. Owing to the necessity of developing far distant forest areas, each year freight costs are higher on every thousand feet of lumber shipped to points of consumption.

Again, it must be remembered that comparatively little hardwood is today employed as an entire piece in the form of timbers and joists, and even the call for heavy car material is fast ceasing. As the years have gone by, hardwoods, in their eventual utilization, have become practically a cut-up material.

A furniture manufacturer at Chicago, Rockford or Grand Rapids makes a purchase of firsts and seconds oak or some other kind of lumber. He yards this stock and, as occasion requires, sends a portion of his purchase to the dry kilns for final seasoning, puts it through his planing machines and cutting tables and reduces the stock to the sundry sizes he needs in the manufacture of furniture. His waste and cutting cost on this grade of lumber may not exceed twenty per cent of his lumber cost, and very likely the transaction is warranted as an economical business proposition.

When this same manufacturer buys No. 1 common lumber, paying thereon a freight, ranging from \$4 to \$15 a thousand, pays his yarding cost, his waste and labor expense, he has doubtless paid freight on from forty to fifty per cent of the material which goes into his fire room. The lower the grade he purchases, the greater the per cent of waste on which he pays freight and an increased cutting cost.

It seems illogical that a freight rate of from ten to, in some cases, as high as eighty cents per hundred pounds, should be paid on material that eventually finds its way to the fire room. Beyond question, the place to leave waste wood, whether it be woods or sawmill offal, is just as near the point of production as possible.

Evolution and progress in making lumber purchases are manifest at the HARDWOOD RECORD offices, where practically every mail brings a request for a source of supply of some specific kind of lumber reduced to dimension sizes. One prominent buyer tells the RECORD that he seeks to purchase all his lumber supplies in cut sizes suitable for his requirements. He says: "When I buy well manufactured dimension material suitable for the tops of tables or dressers,

for the rails and posts of beds and for panels, I am not buying firsts and seconds, but I am buying clear lumber, and I tell you frankly that lumber delivered to my plant in this form is worth twenty per cent more to me than any firsts and seconds, when I take into account yarding, dry-kilning, waste and the cost entailed in my cutting-up room." Today HARDWOOD RECORD has on file a list of more than seven hundred specific requirements for hardwood dimension material.

The question arises—Why do not lumber manufacturers enter more generally into the scheme of selling their high-grade stock in the form of lumber which can stand any reasonable freight rate, and reduce the remainder to sizes suitable for use by the furniture, interior finish and scores of other trades?

The answers are manifold. Primarily, the average hardwood lumberman knows little or nothing about reducing his stock to dimension sizes to advantage. He may have tried it in a tentative way, utilizing refuse or absolutely unsalable stock, cutting it to random sizes that he imagined might sell, and getting a resultant product that was so far below the average of the cutting from No. 1 or No. 2 common that it was practically unsalable. He became disgusted with the whole dimension proposition and threw it up

as a bad job. He said to himself: "I am a lumber manufacturer and I am going to sell lumber as lumber and not tinker with the dimension game. There is absolutely nothing in it."

On the other hand, when furniture lumber buyers or their kin in other lines of production buy dimension stock, they insist upon considering it of little or no cost to the manufacturer. They say: "You obtained this from refuse; we should pay you nothing except a reasonable profit on your labor cost and the freight. We are willing to pay you practically the price of No. 1 common for dimension, and that is all that we can consent to pay."

The result is that these buyers have done everything possible to discourage manufacturers in the production of first-class dimension material. They have not conceded up to this time a just value for high-class dimension material, and therefore a good proportion of the shipments they

have received they have been compelled to cull and cuss, and to put in reclamation charges. Hardwood manufacturers would like to develop an economical system of delivering them cut-up lumber, but so far the effort has been discouraging.

The cutting of hardwoods to size for the use of remanufacturers of lumber is a logical and businesslike proposition whose development is possible of effecting a manifest profit for the manufacturer and an equally manifest economy for the remanufacturer.

If remanufacturers of hardwood lumber want to secure their lumber at a lower cost than they do now by the elaborate and costly method of carrying large stocks on hand, together with the details and expense of maintaining large cutting plants, they must standardize their sizes. They must make it possible for lumbermen to produce in due proportion regular assorted sizes that will be salable not to one but to hundreds of users. They must educate manufacturers as to their specific requirements and, furthermore, they must be willing to pay for this material prices such as will enable lumber operators to cut into their sizes just as

## Success

**He has achieved success who has lived well, laughed often and loved much; who has gained the respect of intelligent men and the love of little children; who has filled his niche and accomplished his task; who has left the world better than he found it, whether by an improved poppy, a perfect poem or a rescued soul; who has never lacked appreciation of earth's beauty or failed to express it; who has always looked for the best in others, and given the best he had; whose life is an inspiration; whose memory a benediction.**

—Mrs. A. J. Stanley.

good stock as they now buy in the form of lumber. In this way they will raise the standard of the materials they purchase to as high a point of excellence as they can afford to pay for.

On the other hand, it is up to the hardwood lumbermen to study the requirements of the remanufacturers and to learn a good deal more about the details of the cut-up table than they have known in the past. They must learn to establish relatively all sizes and the proportion of these sizes which are in greatest demand. They must needs learn that they will be able to secure very little beyond labor cost out of their small squares, and that they can get a fancy price for materials suitable to make five-foot quartered oak table tops, full length casings, door rails and baseboards.

Freights alone make a great leeway of profit between shipping hardwoods containing from twenty-five to fifty per cent of waste material a distance of from 100 to 1,000 miles, and the shipment of the clear stock from this material.

Therefore, as a deduction from the foregoing, the RECORD insists that the dimension business is the logical evolution of hardwood lumber manufacture conducted at long distances from points of consumption, and that it is the only way in which a reasonable profit can be secured from lumber manufacture at these remote points. It insists further that it is perfectly feasible for leading manufacturers of furniture, interior finish and kindred lines to establish and standardize sizes to the end that a manufacturer will be able to produce them in quantities, knowing that there is an established market not only with one, but with a hundred and very likely a thousand users of the material.

### Lumber Trade Ethics

The daily press a few days ago quoted August Belmont as stating: "We all used to rejoice in an Uncle Sam who was honest, fearless, self-reliant—a fine old chap. \* \* \* No truthful cartoon of Uncle Sam of this day could present such a figure as that \* \* \* he would be supplanted by cunning, suspicion and withal a certain sycophancy denoting deterioration of independent manhood."

Mr. Belmont's strictures are scarcely justifiable by the facts. Uncle Sam, as the embodiment of the American citizen, of the American business man, of the American lumberman, cannot justly be epitomized by cunning, suspicion and sycophancy, or any other untoward characteristic indicative of either mental or moral deterioration. Independent manhood is just as prevalent and as sincerely appreciated in this country today as it ever was. Certain elements of the business public occasionally "slip from their moorings," but they are very properly and promptly "called" by their confreres. The man who is too smart to be quite honest has a hard road to hoe in this country; whatsoever his inclinations may be toward wrong doing, his common sense usually leads him out of the devious by-ways of commercial cunning and sycophancy to the straight and true road of commercial integrity and common sense. The oversmart man has no show on earth in this country against the straightforward, upright business man.

Look over the history of the hardwood lumber business for the last few years. The man who has achieved a reputation for salting grades, for raising his measurement, for selling one thing and delivering another, or for any other specious practice either has a sheriff on his front steps or is mighty close to that unenviable position. The RECORD contends that the morals of the men engaged in the lumber trade in common with that of nearly every other line of American business are very much better than they were ten years ago, and infinitely better than they were twenty years ago. Practical business men very soon grasp the situation when any of their associates in the trade attempt to "do" them, and there is such a ban put upon this class that their business very soon goes into the same decay as have their morals.

Every prominent business calling of the day has its associations, and to these associations may be attributed very largely the improved standard of commercial morals that prevail today. These organizations are not only extending a good business education to

their members, but withal they are infusing into their members a spirit of commercial integrity and business ethics that is a vast benefit not only to themselves but to the entire trade which they represent.

The spirit of commercial and moral evolution in the lumber trade is going forward very fast. It is manifest in Chicago, in Cincinnati, in St. Louis, in Memphis, in Buffalo, in Pittsburg and all the cities of the East. Where there were hundreds of "sharks" in the hardwood business of these commercial centers ten years ago, it is doubtful if it is necessary today to put the commercial ban on twenty-five, and the career of this small number is nearly at an end.

### Woods, Sawmill and Planing Mill Waste

The utilization of woods, sawmill and planing mill waste is attracting more attention today than ever before in the history of the lumber business. When one considers that a close estimate shows that not more than ten per cent of the hickory in the forest goes into eventual utilization; that scarcely more than half of an oak tree ever enters into a piece of furniture, and so on all through the line, it becomes an interesting subject of economic discussion.

Some of the northern hardwood operators are getting fair returns out of the production of charcoal, wood alcohol and acetate of lime from their woods refuse; in the South, the turpentine still secures no inconsiderable monetary results from the stumps and refuse of the yellow pine forest; in the chestnut regions a small profit is obtained from the conversion of chestnut woods refuse into acid wood which is converted into tanning material. The only forest material unsuited for lumber production that is utilized closely is spruce (and to a small extent hemlock), which goes into paper pulp at a value nearly equal to that of the larger saw timber. Today, outside of a small production of dimension material, there is little utilization made of the woods waste of oak, poplar, hickory, cypress, gum, ash and several other woods.

In some sawmill and planing mill centers located in towns and cities mill offal has some value for fuel, horse bedding, crating and packing material, but the profit on the handling is so slight that it shows but little in the general aggregate above the cost of handling.

As an example of utilization, one prominent Cincinnati remanufacturing house is securing fair profits from its cuttings, sawdust and shavings by carefully rehandling and sorting the materials. The clippings are put through a hog and reduced to shredded wood, which is sold to railroads and owners of varied steam plants to be mixed with oil or slack coal for fuel. The shavings are baled and sold for horse bedding and packing. The sawdust is sorted into soft woods and hardwoods, sifted, and sold for packing material and other purposes. This plan shows a small profit, but in a strict sense of the word it hardly seems to be the logical solution of wood waste utilization. To a small extent sawdust and wood chips are pulped and form the basis of sundry forms of composition lumber that make but a very slight inroad into the vast quantity of wood material that now rots on the ground or is consumed in the forest slashing fire. Beyond doubt some inventive genius will eventually evolve a system of making wood waste the basis of a material that will take the place of lumber for many purposes, but that time has not yet come.

### Suspension of Government Monthly Price Lists

Under date of October 15, Gifford Pinchot, head of the Forest Service of the United States Department of Agriculture, announces that with the current issue of the record of wholesale lumber prices, the publication will cease as a monthly record, and that the next issue will be a quarterly one, the first to be published in January, 1910.

If Mr. Pinchot will make one more change and publish this price list as an annual, it probably will meet the full approval of the manufacturing, jobbing, and consuming lumber trade of the country.

## Pert, Pertinent and Impertinent

### A Land Lubber

I do not care to aviate,  
To run an aeroplane;  
I'm satisfied if on the earth  
I only may remain.

I have no wish to fly about  
From fleecy cloud to cloud;  
I have a face two legs and arms  
Of which I'm very proud.

There are no tomorrow  
rows on the calendar of  
the man who does  
things.

You may say what  
you please if you don't  
care whether you please  
others or not.

When a man is finan-  
cially weak he is un-  
able to stand a loan.

The best way to kill  
a falsehood is to let it  
lie.

It isn't what a man  
actually knows but  
what he thinks he  
knows that he brags  
about.

There never have  
been enough cork jack-  
ets made to save the  
people who have been  
sunk by corkscrews.

Lots of men work  
harder to avoid paying  
an honest debt than  
they would have to in  
order to earn the money  
to pay it.

Hiding your light  
under a bushel is bad  
enough, but standing  
in your own light is  
worse.

Some men make  
money just about as  
easily as other men  
make trouble.

It isn't every family  
tree that bears the fruit  
of industry.

Some people seem to  
possess the knack of  
making their dollars  
have more sense than  
the rest of us.

An easy way to get  
ahead is to go to a gro-  
cery store and buy a  
cabbage.

And while it may be very nice  
To sail the azure blue,  
I do not care to break a leg  
Or c'en a rib or two.

I do not care to aviate  
On earth I'm glad to stop;  
Where if I fall I still may live  
To take another drop

### Prohibition

"Prohibition's worth a thought,  
Perhaps I'd better start in thinking.  
But thought once killed a man, 'tis said,  
If I thought till I died,  
'Twould be suicide,  
So I guess I'll keep on drinking."

Anybody can cut prices but it takes brains  
to make a better article.—Elbert Hubbard.

## A Welcome Caller

Birch has taken a brace on himself, and the furniture man has become convinced that his friendship is worth cultivating.

The new Cook book  
will deal largely with  
ices.

The way of the trans-  
gressor is hard proba-  
bly because of the great  
amount of travel there-  
on.

The man who never  
does more than he's  
paid for usually gets  
paid for what he does.

Some men are born  
liars and some are com-  
pelled to acquire the  
art.

Did you ever see a  
self-made man who was  
able to talk to a stran-  
ger for ten minutes  
without mentioning the  
fact?

The people who are  
constantly patting you  
on the back are danger-  
ous—they are likely  
looking for a chance to  
kick your feet from  
under you.

Too many men try  
to build a skyscraper  
on a one-story founda-  
tion.

Sometimes wanting  
what you can't get is  
about as much fun as  
getting what you don't  
want.

It's too bad that the  
miser who has money  
to burn can't take it  
with him when he dies.

There would be a  
scarcity of worms if  
all the birds were early.

In his school days  
the man found partial  
payments very difficult;  
later he finds payments  
on the installment plan  
even more difficult.

### In Need of Courage

"A French surgeon claims to have discovered  
an operation that will transform a shrinking  
coward into a hero."

"I wish I could afford to go to Europe."

"Would you have the operation performed?"

"I certainly would."

"So that you would have the courage to ask  
papa for my hand?"

"Nope; I'm wearing a porous plaster that  
ought to have been pulled off a month ago."

HOUSTON POST

### A Conjugation

The class at Heidelberg was studying English  
conjugations, and each verb considered was used  
in a model sentence, so that the students would  
gain the benefit of pronouncing the connected  
series of words, as well as learning the varying  
forms of the verb. This morning it was the  
verb "to have" in the sentence, "I have a gold  
mine."

Herr Schmitz was called to his feet by Pro-  
fessor Wulff.

"Conjugate 'do haff' in der sentence, 'I haff  
a golt mine'," the professor ordered.

Herr Schmitz proceeded:

"I haff a golt mine, du hast a golt dein, he  
hass a golt hiss. Ve, you or dey haff a golt  
ours, yours or deirs, as de case may be."

—EVERYBODY'S.

It's a poor plan to judge a man's liberality  
by the way he spends money on himself.

It's queer that the absent-minded man rarely  
forgets himself.

# AMERICAN FOREST TREES

## EIGHTY-FIRST PAPER

### Black Spruce

*Picea nigra* -Link.

*Picea Mariana*—Mill.

The range of growth of black spruce is from Newfoundland to Hudson Bay and the valley of the Mackenzie river; southward through Michigan, Wisconsin and Minnesota and along the Alleghany mountains to North Carolina. The tree is essentially a northern growth, and attains its largest size and is most abundant in Canada, forming extensive forests in Manitoba and the Labrador peninsula. In the United States it is smaller and less frequent, its growth being confined largely to the northern borders of New York and New England, the lake shores in Minnesota, Michigan and Wisconsin and to the cold, damp woods and swampy bogs in the other regions of its growth.

There are three species of the genus *Picea* found east of the Rocky mountains, red, black and white. Red spruce is most abundant in West Virginia and the Appalachian country, and the black spruce in New England and northern New York, although the two are found intermingled to some extent in both these sections. Red and black spruce trees are very much alike in appearance, but botanists have distinguished between them by two main points of difference, the size and shape of the cones and staminate blossoms and the fact that the cones of the red spruce, which are the larger, fall during the first winter, while those of the black spruce have great staying qualities and remain on the branches for several years. The timber of the two varieties is also very similar, so that some botanists class them as two different forms of the same species. There is some difference in the color of the foliage of the two trees, that of the red spruce being a light olive green, while the black spruce displays a darker olive with a slight purplish tinge.

Black spruce belongs to the pine family. The tree has a straight smooth trunk, and under favorable conditions reaches a height of one hundred feet and a diameter of two feet; its usual range is from forty to eighty feet in height and from one-half to one and a half feet in diameter. The tree is sometimes planted for ornamental purposes, but it is short lived under cultivation and is one of the least satisfactory of all the spruces for decorative planting.

Spruce is usually found in pure stands and

only occasionally does it grow interspersed with hemlock. It is not such a rapid growing tree as is generally supposed, as observations have proved that its average increase is approximately two per cent a year. A large percentage of the cutting of black spruce in northeastern United States is from second-growth trees.

TYPICAL FOREST GROWTH BLACK SPRUCE, GRATON COUNTY, NEW HAMPSHIRE.

The black spruce tree is conical in shape, with slender branches, usually pendulous with an upward curve, forming an open and irregular head. Alice Lounsberry, in describing the tree, says:

"To speak definitely of the outlines of trees is often difficult, for they adapt themselves with wonderful facility to the various conditions under which they grow. The

black spruce when it inhabits dense thickets sends up a tall and slender shaft, quite free from branches until near its top; but when growing in an open swamp with plenty of room for a free development it is often clothed to the ground with vigorous boughs. It then is very beautiful. After its youth has passed, however, and especially in cultivation, it becomes scraggly and rough-looking. Only when the tree is surrounded by abundant moisture does it thrive well, and near the coasts of southern New England, New York and New Jersey, it occupies many small swamps and bogs. From those of the red spruce its leaves are readily distinguished, for they are shorter and of a bluer tint of green."

Black spruce is also known by the name water spruce in Maine; blue spruce in Wisconsin; double spruce in Maine, Vermont and Minnesota; yew pine and spruce pine in West Virginia; merely as spruce in Vermont; as white spruce in West Virginia and as he balsam in Delaware and North Carolina.

The bark of the tree is grayish brown and rather rough. On the branchlets it is green and pubescent, turning brown in time. The needle-shaped leaves are seldom over two-thirds of an inch long, dark bluish green in color, four-sided and curved or straight. They grow very close together on all sides of the light tan twigs.

The cones are from one-half to one and a half inches long, turning tan color to reddish brown from the rich purple shade they possess on appearance. They are solitary and drooping at the ends of the branches and remain on the tree for several years, assuming a dull gray brown color with age. The scales are thin, rounded and persistent, wavy-toothed at the apex.

The wood of the black spruce is light, soft, elastic and resonant. For its weight it is, like red spruce, one of the strongest American woods. Lumbermen recognize no difference between black and red spruce, and they class the two together.

Black spruce is pale yellow-white in color, with thin sap-wood; clear, with the exception of a few small knots. It weighs, seasoned, thirty-two pounds to the cubic foot. The wood is used largely for pulpwood, and also extensively in house building, for ordinary flooring, roofing, joists, sheathing, interior finish and studding, and is a very popular building material in New York and New

England. Other purposes to which the wood is put are for ship building, piles, posts, ties, cars and sounding boards for pianos. It is used considerably as a substitute for pine, which it resembles quite closely.

Spruce gum, the resinous exudation of spruce trees of the northeastern portion of America, is obtained from this tree in Canada and New England in considerable quantities. It is a favorite masticatory. Spruce beer is obtained by boiling the branches of this variety as well as from the foliage of the red spruce.

The accompanying half-tone showing forest growth of black spruce was made from a photograph taken in the White Mountain district of New Hampshire, as was also the one of spruce logs which illustrates a peculiarity of spruce growth. The tree at the stump line is rarely round, but has a flattened side and convoluted base, as shown in the illustration, the bole higher up in the tree assuming the regular round contour of most growths.

BLACK SPRUCE LOGS SHOWING IRREGULAR SHAPED ENDS PECULIAR TO SPECIES.

## Makers of Machinery History

NUMBER IX

V. H. Hanchett

(See portrait supplement)

The name Hanchett is familiar to users of saws all over the country. It has long been associated with filing-room equipment, and at once stamps a tool as best. The name was connected with the first saw swage ever built and it has been practically a synonym for the acme of filing equipment production ever since.

It was John Hanchett who, as a saw filer in a Michigan sawmill twenty years ago, conceived the idea that saw filing could be accomplished by a machine. He put his idea to practical test and soon was running a small shop making the first Hanchett saw swage. Shortly after he was joined by his brother, V. H. Hanchett, and together they soon built up a large business.

V. H. Hanchett is now head of the Hanchett Swage Works at Big Rapids, Mich., a man of foresight, energy and perception. To him is due not a little credit for the general development of the business and for its expansion to embrace its present well-rounded line of filing-room equipment. The RECORD takes great pleasure in presenting to its readers the portrait and this brief sketch of Mr. Hanchett, who has achieved success by dint of hard work and persistent effort.

In the southern part of Michigan nearly fifty-eight years ago, V. H. Hanchett was born. His father for years operated a sawmill, and here it was that Mr. Hanchett, early in life, got his first training in the lumber business, and he has kept in touch with the needs of the sawmill ever since.

Mr. Hanchett

formed a partnership with his brother, John Hanchett, inventor of the now famous Hanchett swage. Their shop was very small at first, and only one or two men were employed. Business, however, steadily increased until in a few years it was necessary to move to larger quarters.

In 1902 John Hanchett severed his connection with the firm and Arthur K., son of V. H. Hanchett, was admitted. Up to this time the Hanchett Swage Works had manufactured saw swages only, but now commenced to branch out and make other filing-room tools. The first new tool placed on the market was the Hanchett swage shaper, which met with such signal success that the company was urged by several concerns to manufacture other filing-room tools and machinery. It was finally at the suggestion of one of the largest saw manufacturers in the world that the Hanchetts took up the task of perfecting a line of filing-room equipment. Their delay in entering this field arose from the fact that they had no desire to add another tool to those already on the market until they could present a machine with improvements of enough importance to make a real demand for it.

In 1905 the firm was fairly launched in the manufacture of filing-room machinery and L. B. Hanchett became associated with it. Within two years business had grown to such proportions that it became advisable to incorporate, which was done, with a capital stock of \$150,000, most of which is paid in.

The Hanchett Swage Works is a rare example of business enterprise, showing what

can be done by perseverance and wise judgment in following closely a good line of machinery. The business in less than twenty years has grown from a small shop, employing a couple of men, to a large plant, employing in the neighborhood of one hundred and fifty skilled workmen and fitted out with modern machinery of the most approved type. That the Hanchett equipment is all that is claimed for it and gives universal satisfaction is shown by the fact that the great plant at Big Rapids turns out more machinery than any of its competitors.

### Michigan Business to Be Incorporated

The Robinson Lumber Company will be incorporated shortly with a capitalization of \$50,000 and S. L. Eastman of Saginaw and S. A. Robinson of Ogemaw county are the principal stockholders. Mr. Eastman has for some time held large timber properties in Ogemaw county. Last winter he entered into an arrangement with S. A. Robinson, a thoroughly practical sawmill man and a gentleman of excellent attainments and reputation, to build a plant in the town of Goodar on a four-mile spur track of the Rose City division of the Detroit & Mackinac Railway. A fine band sawmill of 50,000 feet daily capacity was erected and has been in operation during the summer. It has contracts to cut a large quantity of maple and other hardwood lumber for the S. L. Eastman Flooring Company, the plant being located at Carrollton opposite Saginaw.

The new company is to take over the entire property. It has about 50,000,000 feet of timber, enough for a long run, and there is more in reach. Goodar is an active little lumbering town and is growing rapidly. This year four miles of track were laid to reach more timber, and ultimately it will be extended twenty miles to Mio, the county seat of Oscoda county. The manufactured product comes out over the Detroit & Mackinac Road to Bay City and Saginaw.

V. H. HANCHETT  
BIG RAPIDS, MICH.

## Meeting Chicago Hardwood Exchange

A mid-monthly meeting, accompanied by an enjoyable lunch, was held by the Chicago Hardwood Lumber Exchange in the college room of the La Salle Hotel at one p. m., Saturday, October 16. The meeting called out more than fifty members and showed that

account be paid. On motion, the report of the committee was accepted and the treasurer was instructed to issue a check for the amount.

Jas. S. Trainer, chairman of the Market Conditions Committee, made an exhaustive report on the situation in the various woods in this market. On the whole, the report indicated increasing values on nearly every variety.

Chairman Charles Westcott, of the Membership Committee, reported applications from the following concerns, which on motion were admitted to membership: F. B. Sprague Lumber Company, Huddleston-Marsh Lumber Company, P. Schmechel, McLaughlin Lumber Company, D. K. Jeffries & Co., and S. P. C. Hostler.

Chairman Harvey S. Hayden, of the Publicity Committee, then made a report on the proposed seal to be used on the stationery of members of the exchange, and exhibited a

both buyers and sellers in this market; that any charges against the commercial integrity of Chicago's hardwood market are not warranted by the facts, etc.

H. H. Gibson, editor of *HARDWOOD RECORD*, on invitation, spoke briefly on the system pre-

JAMES S. TRAINER, CHAIRMAN MARKET CONDITIONS COMMITTEE.

there were twenty-seven houses represented.

President F. L. Brown presided and Secretary Joseph H. Dion recorded. After roll call, the minutes of the last meeting were read and approved, when the meeting listened to a report from Chairman Schreiber of the Labor Committee. Mr. Schreiber reported that the proportion of expense that had been

HARVEY S. HAYDEN, CHAIRMAN PUBLICITY COMMITTEE.

large colored drawing showing the design. The design and color scheme had the general approval of those present and after considerable discussion it was turned back to the committee with instructions to make some slight amendments and prepare the necessary drawings and engravings from which electrotypes could be made for the use of the members. It was also decided to have the design printed on stickers to attach to envelopes and letter heads for temporary use until all members had exhausted their present stock of stationery.

Chairman O. O. Agler of the Trade Committee made a report in which he recommended that a committee of complaints, to consist of three members, be authorized by the exchange. He spoke at length on this subject and stated that he believed that such a committee could do much good work for

E. E. SKEELE, CHAIRMAN COMMITTEE ON COMPLAINTS.

vailing in other hardwood trade centers involving business ethics and the efforts made to supply information, methods of arbitration, etc.

On motion, the chair was authorized to appoint a committee of three to more fully investigate the subject and if deemed wise to present at the next meeting of the exchange an amendment to the by-laws which will per-

CHARLES WESTCOTT, CHAIRMAN MEMBERSHIP COMMITTEE.

assigned to the exchange by the Employers' Association, covering the cost of arbitration in labor troubles for a long time past, amounted to \$237.50, and advised that the

O. O. AGLER, CHAIRMAN TRADE COMMITTEE.

mit the organization to add this detail to the present work.

President Brown did not name this committee at the meeting, but a few days later

appointed E. E. Skeele, chairman; F. S. Hendrickson and Theodore Fathauer to serve in this capacity.

The committee will be known as the Committee on Complaints. It is a trade ethics or trouble committee and on occasion may serve as an arbitration committee. To this body will fall a great deal of the work of ridding Chicago of any taint as to unfair dealing and the exchange will welcome any information which will assist in the work to this end. Mr. Brown feels that he has appointed an especially strong committee for this important work, and that the men chosen will command the respect of lumbermen generally and they can be depended upon for active and faithful service. Although the committee has no jurisdiction outside of the membership of the organization, it undoubtedly will have considerable influence in checking abuses which may occur outside of the exchange.

There were present:

H. D. Welch, E. A. Thornton Lumber Co.  
A. H. Ruth, G. W. Jones Lumber Co.  
Louis A. Smith, Fullerton-Powell Hardwood Lumber Co.  
O. O. Agler, Upham & Agler.  
Thomas B. Roy, Theo. Fathauer Co.  
W. E. Trainer, Trainer Bros. Lumber Co.  
J. S. Trainer, Trainer Bros. Lumber Co.  
G. R. Thamer, Empire Lumber Co.  
William Baithis.

## Hardwood Record Mail Bag

[In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.]

### Wants Quartered Oak Table Tops

The following letter is from a leading Chicago furniture company. Anyone desiring to negotiate for the trade noted can have the address by addressing HARDWOOD RECORD.—EDITOR.

CHICAGO, Oct. 16. Editor HARDWOOD RECORD: We are in the market for a lot of 54x54 inch round tops for tables, four pieces to each half, or each 27 inches. Also for a lot of 60x60 inch table tops, round, five pieces to each half, or 30 inches. These tops must be made of very nice selected common quarter-sawn white oak, with a large figure. We are writing this letter to you, as you perhaps know of some one who advertises in your paper that makes these table tops. If you have any addresses, kindly have the parties quote us lowest prices, for a bulk order in Chicago.

### Wants Booklet on Gum

Oct. 18, 1909. Editor HARDWOOD RECORD: In view of the fact that we are now manufacturing gum lumber extensively, we find that a great many of our customers are anxious to try this wood, but they are afraid owing to the fact that they have been informed that the stock will warp badly and cannot possibly be manipulated so as to stay in place or stay straight. It occurs to me that you have a good deal of information on this subject and we would like to know what you will charge us for about 10,000 booklets showing how to handle this wood from the standpoint of the cabinet maker. We feel that this is a valuable wood and a comer, but on the other hand, in opinion ninety-five per cent

of the hardwood users of the country do not understand how to treat the wood so that it will keep straight and stay in place.

The foregoing communication is from a leading lumber manufacturing institution. The writer has been advised that the editor of the RECORD, at his early convenience, will undertake the preparation of a booklet on gum, covering not only the range of forest growth, botany of the tree, physical characteristics of the wood, proper method of manufacture, handling and seasoning, but also the best method of rehandling and remanufacturing for eventual utilization.—EDITOR.

### Seeking Modification of Eastbound Freight Rates

At the last meeting of the Hardwood Lumber Manufacturers of Wisconsin, a committee was appointed to take up the matter of hardwood freight rates to trunk line territory with the leading general freight agents interested in these shipments, in an attempt to convince them that there should be a readjustment. The letter quoted below has been forwarded as directed and makes a very forceful claim for the relief desired. Two years ago the railroads made an arbitrary advance in rates and up to this time the efforts of shippers to secure a return to the old schedule have been unsuccessful. The former rates from northern Wisconsin averaged about 28½ cents per hundred pounds to New York City, while the current rates are about 41½ cents above this rate. The result has been that Michigan and Wisconsin shippers have had a marked falling off of

their former business in the East for some years. One railroad man asserts that the decrease has been from 75 to 80 per cent. Just at this time the Michigan and Wisconsin hardwood manufacturers are wedged in "between the devil and the deep sea." They recognize that the southern territory is having a much more favorable rate into the East than they enjoy, and besides this they are up against an iniquitous rate to the Coast, where they formerly were able to secure quite a volume of business. It is expected that the traffic managers in trunk line territory will thresh out this matter at its October meeting in Chicago.—EDITOR.

WAUSAU, Wis., Oct. 16, 1909.

To Freight Traffic Mgrs. Trunk Line Territory.

DEAR SIR: The hardwood manufacturers of Wisconsin, representing over 200,000,000 feet annual production of hardwood lumber, through their special railway committee, respectfully attach for your worthy consideration copy of resolution passed unanimously at their last meeting.

By using the multiple of 3,000 pounds (a very low average) per 1,000 feet, it will not take you long to compute the enormous tonnage produced by our association members. Then please consider that it is conservatively estimated that from twenty-five to thirty-three per cent of the total tonnage moved east of Chicago under the rates in effect prior to June 1, 1907.

Then digest the fact that this committee has reliable information from more than thirty Wisconsin lumber shippers that since June 1, 1907 (when new tariff became effective) their decrease in business to trunk line and C. F. A. territories is from sixty-five to eighty per cent.

Kindly remember that above figures represent only statistics of members of this association, and that it is safe to assume that the same conditions prevail among non-members; that the latest government report (1907) shows Wisconsin produced 510,000,000 feet of hardwood lumber.

The same government report shows that Wisconsin also produced 1,492,000,000 feet of soft woods, 364,000,000 lath and 348,000,000 shingles.

The officers of the Northern Pine Manufacturers' Association and Northwestern Hemlock Association assure committee decrease in their eastern business corresponds to the decrease reported by hardwood association members; they also pledge cooperation and liberal support to this move for freight rate reduction.

Committee asks this reduction in rates to increase selling territory for Wisconsin, northern Michigan and Minnesota lumber manufacturers—and likewise increase their revenue—and feel sure you can readily figure increased revenue for your line by putting into effect at once former rates to trunk line and C. F. A. territories.

Respectfully submitted,

F. H. PARDOE.

C. A. PHELPS.

W. C. LONDON.

Committee.

### In Market for Cypress Cross Arms

TOLEDO, O., Oct. 8.—Editor HARDWOOD RECORD: We are in the market for a quantity of cross arms such as are used on telegraph, telephone and electric light poles. These we purchase in long leaf yellow pine, but we have been considering the use of cypress arms. Through the courtesy of one of your subscribers we are referred to you as one who can perhaps give us some valuable suggestions as to a source of supply of these arms. It is possible that you do not know of mills that are now turning out cross arms, but you may know of some manufacturers who would perhaps consider the installation of the machinery to supply us with our require-

ments. If you can give us some information in reference to such manufacturers as you think would be interested we shall be greatly indebted to you for the courtesy.

The foregoing letter is from a prominent house manufacturing electrical supplies and machinery. Anyone interested in negotiating for a market for cypress cross arms can have the address by advising this office.—EDITOR.

### In Market for White Oak and Hickory

PHILADELPHIA, Pa., Oct. 8.—Editor HARDWOOD RECORD: We are in the market for one carload of log run square sawed white oak 1x15-12, 14 and 16-foot green. We also want to buy one carload of 2 3/4 x 2 1/2-15-foot hickory for spokes. If you can give us information as to where we can obtain this stock, we would appreciate it very much.

The foregoing letter is from a leading eastern lumber house and anyone desiring to figure on the requirements noted can have the address by addressing the RECORD.—EDITOR.

### Inspection Suggestions

One of the most logical and forceful men connected with the trades allied with the lumber business is E. W. McCullough, of Chicago, secretary of the National Wagon Manufacturers' Association. The RECORD is in receipt of the following letter from this gentleman, which contains some suggestions that are worth the attention of the lumber association magnates.—EDITOR.

CHICAGO, Oct. 11.—Editor HARDWOOD RECORD: In noting frequent reference in various lumber journals relative to the controversy as to the grading and inspection rules promulgated by the two or more hardwood associations and the question as to the formulation of rules that may be used universally, beg to say that there is a vital point which I think has been overlooked by at least part of these warring factions, which if properly considered might bring this controversy to an early and satisfactory conclusion.

We have found in manufacturing our own line of goods, and it is true also of almost all lines without a single exception, that the views of the consumers or users of the product must be considered to a very great extent, but where these are ignored or at least disregarded, as has been the case with at least one of the lumber organizations, the lumber manufacturers themselves can go on formulating and adopting rules as long as they please, such rules will neither be used universally nor prevent controversies in settlement such as frequently occur now. Also, while it may be possible to force compliance with these rules on the consumer at times when supplies are difficult to obtain, all this is reversed immediately when the market becomes easier.

I do not mean by this suggestion that it is possible to consult with or adopt the suggestions of all consumers of hardwood lumber, but it is possible to learn their wants and requirements and give them consideration in the formulation of these rules, and with the larger lines that demand many million feet of lumber annually it would be a great economy to both shipper and consumer if an understanding could be reached as to rules that would be fair and equitable. This has already been tried by one faction to this controversy and has proven satisfactory, but with the others who insist on forcing the issue the rules they promulgate amount to little or nothing. There is a middle ground on which the producer and consumer can

meet and solve this problem, but unless both are willing to approach it nothing satisfactory will ever come of arbitrary rulings that may be set up by either side.—E. W. McCULLOUGH.

### Lumber Graded by Hardwood Manufacturers' Association

The RECORD is in receipt of a letter from Lewis Doster, of Cincinnati, secretary of the Hardwood Manufacturers' Association, the essential features of which are reproduced below:

CINCINNATI, O., Oct. 14.—Editor HARDWOOD RECORD: In the promulgation of facts pertaining to the hardwood industry you may no doubt desire to become more thoroughly acquainted with the workings of the Hardwood Manufacturers' Association. This subject comes before me after reading an editorial in your paper of Oct. 10, in which you have quoted other papers on the subject of the amount of hardwoods graded under various systems.

For your information will say that the association I have the honor to represent contains a list of members in the neighborhood of 350, and when times are satisfactory operate about 700 big and little sawmills. This membership covers the entire hardwood producing field of the South, and the properties embrace therein timber holdings in lots up to 300,000 acres.

To further substantiate my idea in bringing to you the size and importance of the product of this association, I would like to go into more detail about the area of timber owned by hundreds of thousands of acres; the various states covered by the same, as well as the amounts in feet in the different kinds of woods, but at this time it is impossible for me to give these details.

The system of our bureau of inspection provides for placing the inspectors in the different sections of the country, for the purpose of adjusting quickly any complaints on shipments, to avoid demurrage or any inconvenience of storage room until the settlement is made. These inspectors are located at convenient consuming points to give prompt attention to any one desiring their services. The reports of their work are made out in triplicate; one copy sent to the purchaser, one copy to the shipper and the triplicate to our office for record. Special tally sheets are used to enable the members to obtain accurate information covering the widths and lengths of the lumber inspected.

We never locate a man permanently in any one section of the country. His travels extend to every part of the producing and consuming territory. If we find lumber shipped that is not graded properly, or not well taken care of, we send an inspector to the source of shipment to explain, if the shipper wishes, the bad features of the work, which tends to overcome like results in the future. These men do intelligent and excellent work, as we figure that the smaller the number of complaints the more our members are being benefited. After the inspectors visit the mills they make reports to the management in duplicate; the original report being left and the duplicate mailed to this office for record. The visits of the inspectors to consuming markets has great weight in the work at the mills. This service is free to the members, the cost being deducted from the income received through dues.

We issue certificates only on lumber that is complained of, and our method of handling is quick. However, we do issue some certificates which are authorized on some foreign or west coast shipments, when it is agreed between purchaser and seller that such certificate is the basis of settlement.

The main part of our work and the expensive one is the maintenance of inspectors in the consuming markets for handling complaints, and in the producing markets for inspection and in-

struction services. Now I have come to the point which I desire to bring out—the amount of lumber which is graded by our association members. There are two ways to figure that: We have shipped annually from 600,000,000 to 800,000,000 feet of hardwoods; during times of depression we have gone below this amount, but the output of our members at the present time, running full force, comes close to 1,000,000,000 feet. We found less demand for investigation of disputes in 1908 than we did in 1907.

A comparison of the expense incurred per car per thousand feet in the year 1908 was greater than in 1907. This was due to the fact that lumber was situated in a more scattered territory, causing more expense in the traveling of inspectors. I can truthfully state that ninety per cent of the lumber shipped by our members is based on the rules of this association, and from the millions of feet which go into the markets on our grades which require the settlement of only 600 disputed cars we feel that the percentage is very low. However, it would be a great delight to me to see such a number of complaints reduced year by year, which we hope to accomplish. Increasing the volume of our product and decreasing the number of complaints is the aim of this association, and they will be reduced to the minimum with the businesslike system we have inaugurated.

It may be that I have gone too much into detail on the number of feet of lumber graded in our hardwood section covering the southern producing field, but I believe it will be of interest to you, to not only correct the erroneous matter which I have noted, but also to enable you to avoid any misstatements in the future. The publication of this letter will enable the entire hardwood industry to obtain a correct idea of the enormous product in value, as well as in volume, passing through the hands of the organization of which I have the honor to be at the business end.—LEWIS DOSTER, Secretary.

This letter has evidently been brought out by recent editorials in various lumber newspapers, referring to the quantity of hardwood lumber that passes under the "official inspection" of various associations. Mr. Doster's letter explains quite fully that the system of the Hardwood Manufacturers' Association governing inspection matters differs materially from that employed by the other chief hardwood organizations.

Primarily the Hardwood Manufacturers' Association employs a large number of inspectors not to actually inspect and issue official certificates, but as a corps of pedagogues to educate inspectors employed by manufacturers with respect to the correct interpretation of inspection rules, and also when occasion arises, to reinspect lumber at points of destination, and to educate buyers in the specific details of accurate inspection. According to Mr. Doster's statement this educational system has made it necessary to reinspect during the past year only about 600 cars that were originally inspected under the Hardwood Manufacturers' Association rules.

Mr. Doster's showing would indicate that from 600,000,000 to 800,000,000 feet of hardwoods are now annually marketed under the Manufacturers' system of grading, and that during the present year it is likely to run well towards one billion feet.—Editor.

The plant and yards of the Oakland Lumber Company at Rhinard, W. Va., were destroyed by fire Oct. 8 at a loss of about \$10,000, partly covered by insurance.

## Log Sorting and Handling Cableway

In the milling of hardwood in the northern states one of the difficulties encountered has been the handling of the logs at the mill. In the old pine days the mill pond was an absolute necessity for the proper sawing and general handling of logs. It prevented the logs from deteriorating

any size was required the derrick was found to be very cumbersome and hardly suitable for the purpose.

The most recent and efficient method used today is the cableway—the log handling cableway. This is a modification of the device used to such a great extent in

yard, the pond, if one is used, being at some point between and extending to the log chain. Shown herewith are a number of halftones which show such a system and which is in fact probably the most efficient log handling cableway for its specific purpose in existence. This cableway is in operation at the Girard Lumber Company's plant, one of the largest concerns brought to its present efficiency by the well-known northern operator, J. W. Wells of Menominee, Mich. This cableway has its further or tail tower so situated that the span of the cableway extends across the hot pond for its entire length, running parallel to the railroad track over which the logs are delivered to the mill and which in turn separates the hot pond from a larger pond on the further side. The cableway is useful in accomplishing the following purposes:

First: Logs may be delivered in the large pond at the further side of the log track. When desired, the fall line of the cableway will reach over and convey those logs into the mill pond proper.

Second: The logs which are brought in for immediate use upon the cars are unloaded by the cableway from the cars, deposited in the pond or decked upon skids, as shown, for future use.

Third: As the logs are required at the mill this cableway will take them either directly from the cars or from the two ponds mentioned or from where they are decked upon the skids. It deposits the logs directly on the log chain with practically no hand labor. The device is remarkable for the immense quantity it can handle per day, and the small amount of labor necessary.

CABLEWAY EQUIPPED WITH CLAM-SHELL BUCKET CLEANING OUT HOT POND, while awaiting sawing, and offered the cheapest, simplest and most efficient way of conveying them to the mill slip.

In the hardwood mill of the present day, however, sawing proceeds throughout the year or at least well into the winter; and it is difficult to keep a pond open through the winter season. A number of companies do this by instituting a hot pond, simply a small part shut off by planking or otherwise, and kept open by waste steam from the mill or by other special supply. It is difficult, however, to maintain a large enough pond of this sort to hold a full winter supply of logs, and some provision has to be made for storage. The valuable functions of the hot pond are to wash the grit and gravel out of the logs and to thaw them out, making sawing a much easier operation. Another difficulty is that from their great weight very few hardwood logs float for any length of time after being placed in the water. The tendency among mill operators, therefore, is to restrict the size of the pond to that necessary for the proper washing and thawing of the logs and to provide storage room on the bank, decking them to considerable height.

To deck these logs the smaller and earlier mills used a team of horses and a number of men. This was of course a slow and expensive method. Subsequently various forms of derricks were used for this purpose, but a sturdy where a supply of logs of

the construction of dams and general excavation work, such as canal building, quarrying, etc. With this system for handling logs at the mill two towers are usually erected, one straddling the log chain just in back of the place where the logs are to be delivered to the chain, and the other at the furthest end of the proposed log

DECKING LOGS FOR WINTER USE. ENDS OF DECKING PILES.

In the halftones the men necessary for the suitable handling of the logs are shown, with the exception of the engineer, who is standing in a small house beside the mill. The steam for the hoist which operates this cableway is taken directly from the mill boilers so that no fireman is necessary.

This cableway in its general use for handling logs does not differ greatly from others used at various mills throughout the country. There is, for instance, another one at the J. W. Wells Lumber Company's plant at Menominee, Mich. (another concern in which Mr. Wells is interested).

A large item of expense in the ordinary log pond artificially created is cleaning it out once or twice a year. A small pond usually fills up rapidly with bark and dirt from the logs. In the past it was necessary to drain the pond and clean it out by hand. This is slow, difficult and expensive, and moreover necessitates shutting down the mill for the time. To eliminate these

DUMPING LOGS FROM CARS INTO POND BY CABLE.

vided for such storage. The height to which they can be decked is determined by

This is a device which, by its great labor and cost saving, and general efficiency, would be of great aid to any hardwood mill in the country.

The equipment here described was built by the Lidgermond Manufacturing Company, 96 Liberty Street, New York City.

#### The Finish of the New La Salle Hotel

One of the latest and most interesting skyscrapers in Chicago is the La Salle Hotel, which occupies nearly a quarter of a block at the corner of La Salle and Madison streets. This hotel is the most palatial one in Chicago, and has all the latest "frills" involved in modern hotel building.

The feature about the hotel that particularly interests the lumber trade is the handsome interior finish. The office and first floor of the structure is done in Circassian walnut. Everything above this floor, including doors, trim and furniture, is red gum. To say the least, the beauty of this finish and furniture is attracting even more attention than that of the lower floors. The splendid coloring, fine figure and quiet tone of the entire work appeals to good taste.

The lumber from which these materials were made was supplied by the Three States Lumber Company, of Memphis, Tenn., and is a mighty good advertisement for the high-class product produced by this house.

CABLEWAY DECKING LOGS FOR WINTER USE OF MILL.

difficulties the Girard Lumber Company's cableway has an additional attachment, a clam shell bucket with suitable apparatus for its efficient operation. With it the pond can be rapidly excavated at any time when it fills up with bark or other refuse, without shutting down the mill or interfering with its regular work. The dirt is conveyed and dropped onto cars, and can then be readily taken away and utilized for fill or otherwise disposed of. The actual cost of the excavation has been proven to be about one-fifth of that of the old hand method; and the saving in not having to shut down the mill for this purpose can readily be appreciated by any practical operator.

In the pictures the points in the handling of the logs are well illustrated, logs being unloaded from cars, being taken to the mill and being decked for winter sawing. Such a cableway will readily handle all logs necessary for the ordinary double band mill and the amount that can be decked for holding is only limited by the ground pro-

vided for such storage. The height to which they can be decked is determined by

CABLEWAY CONVEYING LOGS FROM THE POND TO THE MILL.

## Tree Curiosities

Man, it seems, has always venerated the trees. Although we no longer worship the giants of the forests as did the ancient Druids when they built their great altars at Stonehenge, we still regard certain trees as precious memories and look upon them with infinitely more respect than we give any man-made monument. Innumerable villages and hamlets all over the world contain trees made famous by some historical event or by some noted person, and hundreds of tourists visit these places every year and render homage to these venerable monarchs of nature.

Even the least human of mankind, in many cases utterly devoid of the finer sensibilities of feeling, seem to have a peculiar regard for great majestic trees, and it is said that Napoleon, that imperial vandal, showed respect for them. When building the wonderful road over the Simplon Pass that he might with less difficulty get his devastating army into Italy, he ordered his engineers to swerve from the straight and direct line so as to avoid injuring a giant cypress at Somma in Lombardy. This tree, 106 feet high, and 20 feet in circumference, is one of the oldest trees in Europe. Its age has been estimated at 1,950 years.

### THE PARLIAMENT OAK

The famous Parliament oak, under which met the first English Parliament in which the Commons took part in 1295, is one of England's most beloved trees. Tyrril's oak still marks the spot where Rufus, one of the sons of William the Conqueror, was slain, and is regarded highly by the English. At Holwood, England, there is an old tree known as the Wilberforce oak with a large limb extending out from the trunk forming a natural settee. While seated on this limb it is said William Pitt and William Wilberforce first discussed the abolition of slavery in the possessions of England more than a century ago.

### FAMOUS FOR SIZE AND AGE

There are no trees in the world which can compare, either in point of size or age, with the beautiful and wonderful redwoods of California. Many of the trees still standing were veritable giants of the forest when Columbus made his famous voyage of discovery. The largest redwood in the United States is on the north bank of the Tule River near Bear Creek, California. This giant measures 140 feet in circumference. A more interesting tree is the Dead Giant redwood in Tuolumne Grove, which had a girth of 119 feet. The Indians had built their camp fires against this tree so long that its trunk became hollowed out like a chimney. Finally when the road builders came they cut through the stump and built a highway by means of which coaches and wagons pass through the heart of the tree without difficulty.

Several years ago a hotel man with an eye for bizarre effects converted a grove of redwoods between San Jose and Santa Cruz into an inn. He hollowed out ten immense trees,

the largest of which was 63 feet around, and fitted them up as dining-rooms, drawing-rooms, parlors and sleeping apartments.

One of the highest trees in California is in the Calaveras grove; it reaches a height of 325 feet and is known as the "Keystone State." The state of California now owns the Mariposa grove, embracing hardly four per cent of the area on which the big trees grow, and its two square miles of territory are protected against cutting. Other forests of the state are in private hands and the giant trees famous for their size all over the world are rapidly being cut down for commercial profit.

### TWO BIG AUSTRALIAN TREES

Although the redwoods of California are as a class the largest trees in the world, reaching as they do an average height of 250 feet, there are specimens scattered throughout the world which are of even greater size. In the Dandenong district of Victoria, Australia, there is a eucalyptus tree 430 feet high. The trunk, sixty feet in circumference, towers 380 feet before giving off a single branch. Another Australian giant is a fig tree which stands on the banks of the Johnstone River near Brisbane. Three feet from the ground it has a girth of 150 feet and at a height of 55 feet, where it branches, it has a circumference of 80 feet.

### THE OLDEST TREES IN THE WORLD

The dragon-tree of the Canary Islands is remarkable for its extreme age. Individual members of the family are believed to be the oldest living vegetable organisms in the world. The age of one tree in particular has been much written about—the once famous dragon-tree of Teneriffe, and it was estimated to be from four to six thousand years old. This giant was over seventy feet in height and survived intact until the year 1819, when a wind storm broke off one of its largest limbs and a second storm in 1867 stripped the trunk of all its branches and left it standing alone. The tree takes its name from the reddish fluid it exudes, known as dragon's blood, found in the sepulchral caves of the islanders and supposed to have been used by them in embalming the dead. At one time it was an important article of export from the Canaries and has never fallen entirely into disuse.

### THE WORLD-FAMED PLANE TREE

On the Island of Cos in the Aegean sea there stands, carefully guarded, a huge plane tree, measuring 18 yards in circumference. The tree is surrounded by a raised platform breast high, doubtless built to support the trunk after it had become weak with age. The limbs are also supported by braces. Close by the tree is a marble bench, said to be the chair of Hippocrates, the Father of Medicine, and it is supposed that he taught the art of healing from this seat. He was born at Cos 460 B. C., so that some idea of

the age of the tree is gained from this fact. It is estimated that the tree is more than 2,000 years old, and the late Dean Farrar of England stated that it is probable that under the shade of this tree Sts. Peter and Paul rested.

### A FIREPROOF TREE

A tree called the rhopala, a native of Colombia, South America, is fireproof, and the hottest fire can not burn it. It is a veritable salamander in the vegetable world, and has been known to have survived fire which laid waste great areas, old and young trees, underbrush, weeds, everything but the rhopala. It is an ugly plant, small and scraggly, and has a wild and desolate appearance. Its ability to resist fire is said to be due to the structure of the bark, the outer layer of which, to a depth of half an inch, is formed of dead cells and fibers. This makes an incombustible coat, which not only will not burn itself, but keeps the fire from the living inner parts.

### THE WORLD'S LARGEST TREE

To Sicily must be given the credit for having the largest tree in the world. It is known as "The Chestnut Tree of a Hundred Horses," and is situated at the foot of Mount Etna. Its five enormous branches, each as large as an ordinary tree, issue from a trunk which is 212 feet in circumference. A hollow in its trunk is large enough to admit a flock of sheep. The name of the tree originated from the story that Queen Joan of Aragon with her nobility and their retinues once took refuge from a violent storm under its spreading branches.

### SOME FREAK GROWTHS

An elm tree growing originally on the left bank of a small stream near Enys in Cornwall, England, was overthrown by a severe storm. The tree fell directly across the stream, but it did not die but took root again on the other side, and three trunks have sprung up at this point. The main stem, with a girth of ten feet, forms a natural living bridge.

At an elevation of four thousand feet above sea level, near the baths of Alliaz in Switzerland, stands a linden supposed to date from the time of Charles the Bold. This tree would attract attention because of its great size if for no other reason, as it has a trunk thirty feet in circumference which sends off horizontal branches about a yard from the ground. The branches do not continue in a horizontal direction, but have turned upright and then form seven trunks parallel to the main stem. The most peculiar feature of the growth, however, is that the two largest side trunks are connected again with the main trunk by subquadrangular branches like girders.

### THE AGE OF TREES

Among scientists and students of botany in Europe there is not a little contention as to the great age attributed to various famous trees. The German Forest Department has

made some very careful observations and has deduced some dependable facts on this subject. It is the opinion of the best qualified judges that there is no European tree which can be proved to be over 800 years old, and that no tree in Germany attains even that age in a healthy state. The rings formed by the annual growth of exogenous trees are of course the best evidence of their age, but this is only to be obtained before decay and age have effaced the record. Documentary evidence of the existence of a specified tree at a certain date, it is pointed out, is not necessarily conclusive. This does not question the truth of the record, but it is claimed that very often young trees have been planted on the sites of their famous predecessors, and as the one died the other sprang up and eventually assumed the identity of the older tree.

Cases in which a young tree has sprung up spontaneously at the very foot of a noted tree have been observed not infrequently, and

other instances where a healthy young sapling took bodily possession of the hollow trunk of an old tree and grew at its expense have been noted. It is claimed that it is by no means unlikely that some of the ancient old oaks of England have undergone such a transformation. An age of 700 or 800 years has undoubtedly been attained by many trees, and this can be proved by unquestionable evidence in many cases, but the tradition attached to many well-known growths must be accepted with some measure of doubt. About the only conclusion that can be reached in regard to very old trees is that they can not be less than a certain age, but beyond that there is nothing but estimates of probabilities. Experts base their calculations of tree ages upon species, size, and the known laws of a tree's growth, allowing, of course, for modifications of these under varying conditions.

gating a total capacity of 2767 H. P., are employed throughout the works.

In general the requirements of the lumber and woodworking industries can best be met by constant speed motors, and so alternating current induction motors were adopted for the majority of the machines, the exception being a few direct current motors for use in the machine shop where a wide range of speed is required.

The type of alternating current motor used is the well-known General Electric Company's form K induction motor. This is simple and strong in construction and capable of maintaining high efficiency over a wide load range. The open type of construction of the frame materially improves the cooling of all parts of the motor and avoids spaces for the accumulation of dust. The entire absence of sparking is an especially valuable feature and permits of their installation where the air is laden with fine dust. They are quick and certain in starting, have high overload capacity, and require practically no attention while running.

The cut illustrates the advantages of the individual drive very effectively.

The absence of belting and shafting contributes greatly to the neat appearance of the mill and allows a much better diffusion of the light, and also eliminates the circulation of dust and dirt, the dripping of oil from shafting, the power loss in belting and shafting and the danger to employees incidental to their use.

There are seventeen planers and matchers in this bank, each being driven by a 35 H. P. induction motor. The individual starting compensators are shown at the right, located conveniently near the machine.

Each machine is a unit in itself and may be shut down when not in use and will then contribute nothing to the cost of operation while idle.

#### Second-Hand Poplar

A few weeks ago Howard Bros. Company, boat builders of Jeffersonville, Ind., received a telephone message from a Louisville contractor asking them to come and look at a lot of second-hand poplar joists they were taking out of the warehouse they were dismantling. At that time Mr. Howard gave no heed to the message, but a few weeks later, happening to be in the vicinity of the building being demolished, he noticed a pile of 500 2½x24—26-foot old and yellow clear poplar joists that had been removed from the structure. Although the top edges showed some little decay, and the effect of the nail holes of frequent floors that had been laid on top of them was apparent and the sides were somewhat rusty, the bunch of stuff looked good to him.

Very soon he struck a trade with the contractor for the entire lot at \$20 per M. He transferred the material to his shipbuilding plant at Jeffersonville. He has dressed the stock two sides down to 2 inches and ripped off the defective edge and resawn the material to inch, with the result that he probably has the finest lot of poplar panel lumber that exists in the United States. He says perhaps forty-year-old clear yellow poplar of the old fashioned yellow variety won't make panels in steamboat cabins that the owners will be proud of, but he thinks it will!

## Individual Drive in a Planing Mill

The Great Southern Lumber Company, at Bogalusa, La., operates the largest electrically driven lumber manufacturing plant in the world. The complete electrical equipment, with the exception of the transformers, was furnished by the General Electric Company of Schenectady, N. Y.

The powerhouse equipment consists of two 500 Kw. and one 200 Kw. generators, direct

generators set supply current to the direct current motors in the machine shop. There are also two 30 Kw. 125 volt engine type exciters.

The switchboard equipment consists of three generator panels, two exciter panels, twelve feeder panels, two motor-generator panels, two luminous arc lighting panels, two series A. C. lighting panels.

ROW OF INDIVIDUAL GENERAL ELECTRIC MOTORS.

connected to steam engines. All three generators are of General Electric three phase revolving field type, running at 100 R.P.M. and generating current at a potential of 2,300 volts and a frequency of 60 cycles. The current is transmitted at a potential of 2,300 volts and stepped down to 440 volts for the operation of the alternating current motors.

The 50 Kw. 250 volt direct current motor-

In addition to the above apparatus there are two 50 light C. C. transformers and mercury arc rectifiers for supplying current to the luminous arc system installed on the towers in the mill yard and three 25-light C. C. transformers for supplying alternating current for lights in the streets of the mill town.

Eighty-one General Electric motors, ranging in capacity from 5 to 150 H. P., aggre-

## Power for Handle Plants

BY H. B. ALEXANDER

Among handle men there is generally more or less discussion as to which is the more desirable power for handle plants, steam or electricity. Like all such discussions there is a great deal to be said on both sides of the question, the most influential point being local conditions surrounding each factory.

In our factory we use electric power and find it quite satisfactory with one exception. We use one motor only and this has to drive the heavy line shaft and all the machines. This gives an unnecessary load of several horsepower required to overcome this friction. The motor is a high-speed and the drive pulley is too small for the load that it has to handle and this requires that the drive belt should be very tight in order to keep it from slipping.

People who visit the shop remark that it is a great waste to pay for electric power when there is so much refuse in the shape of shavings and sawdust that could be used as fuel in a refuse burner to produce steam. There is plenty of fuel about the shop to feed a refuse burner and steam up a hundred horsepower boiler and keep it popping off all the time—but even at that it is doubtful whether it would pay. When it is remembered that the expense of a first-class engineer to look after the boiler would more than pay the cost of the power used, to say nothing of the fact that, as everyone knows, engines are very liable to get out of order as well as boilers and pumps, it will be conceded this is a point in favor of electric power. It is regrettable that all this heat should go to waste, but for a plant the size of ours it would not pay to try to save it and run with steam, as electricity can be had for about half what steam would cost and furnish as good if not better power.

All these remarks refer to plants which have to purchase power from a central station. If a concern were building a plant that would require from one hundred and fifty horsepower up then the best plan would be to install steam equipment, using it, however, to generate current only, and operating the machines by means of motors.

Each machine which requires five or more horsepower should be operated by a separate motor, directly connected if possible to the machine itself, or if this can not be done, to the countershaft.

On smaller drives a group of machines can be arranged together and made very convenient. In broom handle manufacture, it is necessary to have the shifting lever of the countershafts convenient to the operator and it is an easy matter to arrange the switch of a motor in just as handy a position.

By having separate motors the power cost will be reduced to an appreciable extent if payment is made by meter and even if on a flat rate it will mean economy if only from the lessening of wear and tear on the counter-

shafts and loose pulleys, as well as saving all the long belts from the main line shafts. Should a lathe be put out of commission because of broken parts, while having the knives sharpened or because of the absence of the operator, then the cost of power and the wear on the machine stops for the time being; on the other hand, should it be necessary to work part of the shop overtime, the machine can be run independently. It sometimes happens in a handle factory that the sander has to be run nights part of the time in order to keep up with the lathes, and without individual motors the countershafts on every machine in the factory must be run or else someone has to go around the shop and take off all the belts, which is a serious waste of time as they must be put on again in the morning. This same difficulty would be met in a plant operated by steam.

One of the chief objections to the electric plant is the initial cost of installing. A steam plant of the size ordinarily used by a handle maker can be put in for about the same cost as a plant driven by one motor, but where a motor is used for every machine, then the cost mounts up rapidly. The factory owner is then often scared out of the notion of an electrically driven plant and, thinking of the waste product which will have to be disposed of in some way, he decides on the good old steam power, which undoubtedly will cost him more, but which he argues he is sure of, understands perfectly and which he knows will do away with the waste of his machines.

Refuse burners undoubtedly have many good points, but on the other hand, they require a good deal of watching to keep them in shape, and to control sparks, and there is always thin stuff that comes from the rip saws that should not be allowed to go into the blow pipes and which, being too small to sell for wood, must in this way be wasted.

The gas engine has some admirers among handle men, but unlike steam or electricity, with which a saving can be effected in pulling an overload of some five per cent, at least for short periods, it would not be safe to try to do this with a gas engine, and with the general run of them it would not be safe to try to do this within five per cent of their rating.

When I first entered the handle business, we had a very small plant—only one old-style lathe and one dowel machine with a rip and cut-off saw. These together did not aggregate ten horsepower. A twelve horsepower gas engine was installed to pull them. For a short time all went well, and then the gas engine began to buck. This was then changed for a fifteen horsepower, which gave fairly good service for a short time and then it, too, commenced to buck. When we came to our present plant, a twenty horsepower gas engine was giving about as much

trouble as we had had before. After considerable trouble with this engine, we decided to give it up and are now running a plant just three times as big as it was, and a thirty horsepower motor is driving the machines with power to spare.

In the near future we expect to double the capacity of our plant, which will of course necessitate more power and we will undoubtedly adopt the separate motor plan, believing that it is unqualifiedly the handiest and best.

\* \* \*

Did you ever try keeping books on your machines? It pays. Each machine is charged with its repair bills, labor, oil and all sorts of supplies and is credited with the amount of work turned out. Don't keep these figures secret—let them be known—and then see if they won't help get out more work.

\* \* \*

If you have been thinking of building a new plant, don't delay. Ample yard room and private switching facilities are great conveniences and really money savers. A factory located so that a regular switching track must be used to load and unload stock might as well be half a mile from the railroad.

\* \* \*

Expert workmen in the various departments of handle making are extremely hard to get, and when you find one that suits, hang onto him. It is uncertain, unsatisfactory and troublesome work to break in new men and oftentimes it is necessary to try a dozen or more before a skilled and trusted man is found. Of course the time lost in teaching and the cost of stock wasted or spoiled is to be considered and it is really enough to make up for the additional cost of an expert.

\* \* \*

Don't be stingy with tools. It's about as reasonable to expect a mason to build a chimney without mortar as to think a workman can do good work when he hasn't the right sort or enough tools to do it with. A frequent difficulty in most shops is that the supply is so meager that a man has to hunt all over the place for a hammer or a screw driver, sometimes spending twenty minutes looking for a tool with which to take care of a two minutes' job.

\* \* \*

Do you use sprocket chain? Some handle men never keep extra parts of chain on hand—it can easily be imagined what sort of a scene takes place when the factory is rushed with work and a link in the chain breaks, and to make matters worse, it is very seldom that the desired size can be obtained at local supply houses.

The Blair Veneer Company, one of the leading manufacturers of North Troy, Vt., is planning an extensive addition to its plant.

Fire recently visited the mill of the Cypress Shingle & Lumber Company located near Old Hardin, Tex. The mill was owned and operated by Messrs. Waterman and Jackson and had been in operation for five or six months.

## News Miscellany

### October Session Cincinnati Lumbermen's Club

The October meeting of the Lumbermen's Club of Cincinnati was held Monday evening, Oct. 4, in the banquet room of the Gibson House. The river and rail and other committees reported on the work done, all of which was of local interest only. The special committee appointed to make changes in the by-laws made their report and same was accepted subject to a few slight changes. This new constitution will be voted on at the November meeting of the club. Several radical changes were made, the most important of which provides for the appointment of a commission to whom any shipper may apply in case he feels he has not been treated fairly by any member of the club. This is a long step in the right direction, for it will make shippers feel that they can ship to Cincinnati and be positively assured of a square deal, for while Cincinnati has always been noted for its fairness, at the same time no assurance of this fact heretofore has been possible. Several other

and treasurer of the Hardwood Lumber Company of Cincinnati, died at a sanitarium at Loomis, N. Y., October 4, and was interred at Jackson, Mich., his former home, October 7.

At the time of the severe illness which caused Mr. Heyser's demise he was engaged as a salesman by the Galloway-Pease Company of Cincinnati.

Mr. Heyser was 28 years of age. He was a remarkably promising young man, and his death is deeply deplored by a large circle of friends.

### Melted Wood

In an article by Francis Marre, published in *La Nature*, Paris, August 14, a translation of which appeared recently in the *Literary Digest*, it is stated that it is possible to melt wood by heating it in a vacuum, the resultant product being a hard homogeneous substance that apparently has a great industrial future before it. Melted wood has long been considered merely as a laboratory curiosity, but it is now probable that practical applications of this new product will develop rapidly. The writer of the article states:

"Although wood is eminently inflammable, it melts at a relatively low temperature, but in very precise conditions, and only when it is absolutely removed from contact with oxygen, so that its combustion is impossible. This may be understood when we remember what its composition is. When its immediately soluble constituents have been removed by means of alcohol, for instance, it gives on analysis organic acids, water, oily essences, silicates, sulphates, phosphates, chlorides, and hydrocarbonates of lime, potash, soda and magnesia, carbonic acid, carbonated hydrogen, etc.—that is to say, solely bodies susceptible of being evaporated or dissolved after having cooperated by chemical affinity in the formation of determinate substances.

"Starting from these data, Messrs. Bizouard and Lenoir, the former an electric engineer, the second a printer, studied in 1891 the problem of the fusion of wood, and after a year of investigation succeeded in producing a sample of melted wood which, although obtained without special apparatus, still had remarkable peculiarities. The details of the process are not exactly known; they operated in a closed vessel at a relatively low temperature—this is about all that we can gather from the technical journals of the period.

"But their work has been taken up by others, and now there is a full operative technic that enables us easily to obtain excellent results. A metal receiver, a sort of boiler having a double bottom through which superheated steam passes, is filled with bits of wood; it is closed by a lid similar to that used in autoclaves, and provided with a tube and stopcock communicating with an apparatus for exhausting the air. \* \* \* When the wood thus kept in a vacuum is heated above 284 degrees Fahrenheit, the water and other volatile substances are given off first, and are drawn off by means of the exhausting apparatus, after which the heating is continued for about three hours. There then take place a complex series of reactions and phenomena analogous to those that accompany the distillation of wood in a closed vessel, and in this way all the so-called pyrogenous products are separated; these in turn are drawn off, condensed and separated so that they may be utilized commercially. There then remain in the receptacle only the fibrous skeleton of the wood and the mineral salts, which, taken together, constitute a fusible mass. This is allowed to cool slowly, out of contact with the air, and then placed in a second boiler which, after the air has been exhausted, is filled with nitrogen under a pressure of 1.5 to 2 atmospheres. \* \* \* The whole is heated to 1,500 degrees Fahrenheit for two hours, and at

the end of this time the wood is melted into a homogeneous, hard mass."

The melting process may also be performed without drawing off the distillation products, resulting in about two hours in the formation of a solid amorphous mass of fused wood. The product has a fine grain, takes a high polish and is hard and resistant, so that it will undoubtedly prove of great industrial value. Melted wood takes printing ink readily and may be cleaned with potash, soda or turpentine. It is also easily cast and moulded into all manner of different shapes and by adding preservatives to it during the melting process it may be rendered practically indestructible.

### St. Louis Concern to Open Chicago Office

St. Louis' loss is Chicago's gain. One of the most active and popular of the lumbermen of St. Louis, W. W. Dings, secretary of the Garretson-Greason Lumber Company, is about to move his place of residence from the Missouri city to the Illinois metropolis, where he will open a branch selling office for his concern. The Garretson-Greason Lumber Company for a long time has had a wide and rapidly growing trade in Chicago and Mr. Dings has of necessity spent a

### Death of W. C. Heyser, Jr.

Winfield C. Heyser, Jr., son of the veteran lumberman, W. C. Heyser of Knoxville, Tenn., and brother of Walter E. Heyser, vice-president

W. W. DINGS, SECRETARY GARRETSON-GREASON LUMBER CO.

great deal of his time here. Business has developed to such an extent that it has been deemed wise to have Mr. Dings located here permanently.

Mr. Dings has already resigned from the Missouri State Forestry Commission of which he was a member, from the Lumbermen's Club and from the Lumbermen's Exchange. He has been a prominent figure in St. Louis hardwood circles for years and his loss will be keenly felt there.

### Annual Meeting Gulf Coast Exporters' Association

The third annual convention of the Gulf Coast Exporters' Association was held in the auditorium of the Battle House, Mobile, Ala., Oct. 18. The two matters of special interest to be considered at the meeting were the report of the committee on a plan for an inspection bureau and the election of officers for next year.

The secretary read a report covering the work of his office and showing that the organization has a membership of fifty-one and that its work is progressing satisfactorily in all departments. The treasurer's report showed a small though fairly satisfactory balance on hand.

The committee on trade ethics, of which E.

P. Holmes is chairman, then submitted its report. Mr. Holmes, before presenting the committee's decision, stated that its report was very incomplete and it was finally decided that the committee be continued to report at a later date.

Following this came the report of the committee on inspection, of which E. C. Ganahl of Mobile, Ala., is chairman. The report, which was very long and involved, had been printed and sent to all members of the association so that they were familiar with its provisions. After considerable discussion it was decided to accept the report and the secretary was ordered to place it before all exporting members who, in turn, were requested to take it up with their agents and if it proved satisfactory, to communicate to this effect to the secretary, who would report back to the association. The committee was then discharged as having completed its work.

The report proposes two branches of the service, inspection on the gulf and inspection abroad. The chief inspector abroad is to be a practical high-class lumberman from the United States paid a salary by the association. He is to have under him native inspectors in the various countries of Europe, these to be paid for each inspection made.

The election of officers was then taken up, resulting as follows:

President, Robert Hunter, Mobile, Ala.

Vice-President-at-Large, Gus Eitzen, Pensacola, Fla.

Secretary, J. O. Elmer, Mobile, Ala.

Treasurer, E. C. Ganahl, Mobile, Ala.

The association maintains a number of port vice-presidents and these were also chosen for the ensuing year.

The meeting then adjourned.

#### October Meeting St. Louis Lumbermen's Club

The October meeting of the Lumbermen's Club of St. Louis was held at the Mercantile Club Thursday evening, Oct. 7. It had been moved forward one week in order to have the meeting held during centennial week, when it was thought many visiting lumbermen would attend and be the guests of the club. However, the flying machines were too much of an attraction so the attendance, even of the members, was not as large as had been expected. All reported a good time, however.

During the dinner, which was something extra for the occasion, there was singing by the members.

President Julius Seidel gave a history of the lumber industry of St. Louis and to what importance it had grown. A brief resume of his address follows:

"The growth of the industry in this city has kept pace with the march of population from 795 people in the year of incorporation in 1809 to 750,000 in 1909. The first lumber came into St. Louis from Pennsylvania in 1810 and continued to come from that source until the end of the fifties. Northern white pine had come into this market as early as the latter end of the thirties and developed at a rapid rate until 1858, when it drove out its competitor from the Alleghenies. With the growth of the western country, St. Louis became the logical center for the distribution of forest products for the up-building of the West and the yards here were all shippers to points on the Illinois, Osage and Gasconade rivers and on the Missouri River as far as Benton, Omaha and Kansas City. In the sixties and to the beginning of the seventies there were probably ten sawmills located here, including Overstolz & Lezon, at Jefferson avenue; H. F. Parker & Co., at Chambers street; Clark & West, at North Market street; William Anderson, at Horse creek, and Seymour, Gibson & Co., at Salisbury street. Hill, Lemon & Co. afterwards merged into Knapp, Stout & Co. Others were Schulenberg & Boeckeler Lumber

Company, Douglas & Lobsinger, Carondelet; and Liebke & Straige, hardwood mills. The capacity of these mills was only about 25,000 to 30,000 feet, until Schulenberg & Boeckeler erected a mill of 250,000 capacity, this plant being the largest of its kind in St. Louis. The lumber sawed here was white pine mostly, except by special contract, when hardwood logs brought in from the Osage, Missouri and Gasconade, and likewise from southern Missouri, were cut to order. The existence of these mills locally was a great benefit and gave all the yards a chance to fill orders for odd sizes quickly. The first flooring made in St. Louis was turned out in the basement of an old flour mill at Eighth and St. Charles streets about 1855."

J. A. Freeman gave an impromptu talk and told how unjustly the lumbermen had been attacked by the government because of alleged trusts.

Among the other speakers were D. B. Hoven of the Fourche River Lumber Company, J. W. Wackmer of Peoria, R. E. Hodges of Milwaukee and W. E. Barnes.

A toast, standing, was drunk to A. H. Schnelle, as being the oldest lumberman in St. Louis, and he responded with appropriate remarks.

Those present were:

Roland F. Krebs, Krebs-Scheve Lumber Co.  
George E. Hibbard, Steele & Hibbard Lumber Co.

Julius Seidel, Julius Seidel Lumber Co.  
J. A. Freeman, Freeman-Smith Lumber Co.  
W. E. Barnes, St. Louis Lumberman.  
J. B. Kessler, secretary Lumbermen's Club of St. Louis.

Henry G. Rolfes, St. Louis Lumber Co.  
Frank Goepel, Chicago Lumber & Coal Co.  
Thomas Whitmarsh, W. T. Ferguson Lumber Co.

Hans Wachsmuth, W. T. Ferguson Lumber Co.

F. H. Long, Huttig Sash & Door Co.  
A. M. Hill, Southern Pine Lumber Co.

#### Prominent in the East

Ely Bros., Inc., manufacturers of eastern hard and soft woods, Westfield, Mass., are very busy in all lines. This concern, a corporation under Connecticut laws, maintains offices at 120 Silver street, Westfield, Mass., and 210 Beacon street, Hartford, Conn. The officers are E. S. Ely, president, and P. M. Ely, secretary and treasurer.

Ely Bros.' output comprises ash, oak, maple, basswood, chestnut, birch, beech, hemlock, spruce and pine and they make a specialty of dimension stock. Their Massachusetts mills are located at Granville, Chester, Huntington, Great Barrington and South Lee, and they also have mills at Granby, Thomaston, Harwinton and Bristol, Conn. E. S. Ely states that orders are coming in satisfactorily and signs are most encouraging for future hardwood dealing.

#### Imports and Exports for August, 1909

Advance sheets from the monthly summary of commerce and finance, issued by the Department of Commerce and Labor, showing details of the country's imports and exports for the month of August, 1909, shows that wood and manufactures thereof to the total value of

\$5,582,198 were imported during August this year as against a total of \$4,116,547 for the same month last year.

Exports of domestic woods and manufactures thereof for August, 1909, reached a total of \$6,495,662; for August, 1908, the total was \$5,080,270.

Under "Exports of Foreign Merchandise" it is found that wood and manufactures thereof to a value of \$132,348 were shipped out of the country during August this year as against a total of \$85,890 in August, 1908.

#### Philadelphia Exchange Meeting

The regular monthly meeting of the Lumbermen's Exchange was held Thursday, October 7. At 1:45 business opened with President Herbert P. Robinson in the chair. The following resolution was presented and unanimously adopted:

"Whereas, the foreign trade carried on by the merchants of Philadelphia deserves every encouragement and aid that can be given for its development; and whereas, the Philadelphia Commercial Museum has given splendid and practical aid to the merchants engaged in export trade in Philadelphia, and has been actively working in every part of the civilized world to bring trade to Philadelphia; and whereas, an ordinance has been introduced to city councils, which when enacted will take away the grounds and buildings used by the Philadelphia Commercial Museum; be it resolved, that we earnestly protest against the passing of this ordinance unless it be so amended as to provide other and adequate quarters for the museum, fully as commodious as those at present used."

John H. Lauk, secretary, read a report from the Car Demurrage Bureau of Philadelphia, showing that during the month of August there were received in the vicinity of Philadelphia 1,412 cars containing 21,180,000 feet of lumber.

Beecher & Barr, wholesale lumber dealers, with offices in the Land Title Building, were elected to membership of the Exchange.

#### English and American Measurement

As a result of the negotiations carried on by G. A. Farber between the hardwood section of the Timber Trade Federation of London and the National Lumber Exporters' Association in regard to discrepancies in measurements on London shipments, it has been suggested that American shippers adopt the method of the London dealers in tallying the contents of each piece, the federation on its part recommending to its members the American plan of measuring stuff over one inch in thickness, i. e., to measure the entire lot on the basis of one inch and make proper addition to the total to cover the extra thickness. It is said that the proposition has been met favorably by dealers on both sides.

It seems that the principal difficulty lay in the fact that shipments here are tallied by widths and lengths on the 12-foot scale, while in London a detailed piece contents tally is made, and the disposition of fractions frequently gives rise to considerable discrepancies in the totals.

With the same system of measurement in force on both sides, it is expected that the frequent disagreements and delays will be obviated and that trade will progress more smoothly hereafter.

#### Foresters for African Mahogany

Even in far-off Africa forestry methods are practiced, and African mahogany forests are under the control of trained men. A. H. Unwin, forester at Benin City, West Africa, estimates that there are about 400 trees and 1,200 logs per square mile in his territory, which is less than one tree to the acre. Mahogany trees in this region have large buttressed roots, and have to be cut from platforms ten to fifteen feet from the ground. The soil is so soft and trees so scattered that the logs, after being squared, are

pulled by natives to the nearest stream and then rafted to the coast.

An important part of the foresters' work in the Benin region is the planting and raising of seedlings to replace trees cut. According to the old rule twenty seedlings are allowed for each tree felled. A group of young trees is set out near the stump of the old tree and seedlings are also planted along the hauling roads. An average height of fifteen feet in twenty years has been established for these young trees, and some even attain twenty feet in this length of time.

Concerns working these lands pay a royalty and export duty on their timber which is sufficient to cover the cost of the forestry work.

#### Annual Meeting New York Association

The twenty-third annual meeting of the New York Lumber Trade Association was held at the headquarters, 18 Broadway, Oct. 13, preceded by a Delmonico luncheon, which was participated in by a large and representative gathering.

The meeting was presided over by James Sherlock Davis of Brooklyn, who is now completing his fifth term as president. Mr. Davis made an interesting address, which was commented upon as being one of the best ever made to the association.

Mr. Davis reviewed the work of the association during the five years of his presidency, touching on the various important changes that had been made through the efforts of the organization, that were of great benefit to the members. He showed that there had been a satisfactory increase in membership and that the present list includes 105 concerns. After expressing his gratitude for the support he had received from the association, Mr. Davis closed his remarks, the attendants feeling much regret on losing such a vigorous and efficient president.

The report of the board of trustees showed a total membership of 111 retailers and 103 wholesalers and 16 non-resident members, and also covered the general work of the association in all departments, which showed a year of activity all along the line.

The report of the credit system was of special interest, showing a total value of claims reported as \$417,537.55 and a total amount collected of \$204,564.14, or forty-nine per cent of the whole.

The treasurer's report showed the finances to be in excellent shape.

The report of the committee on inspection was of special interest and was rendered by Chairman Patrick Moore, as follows:

To the Members of the New York Lumber Trade Association:

The Committee on Inspection have had a busy year. They have had four regular meetings at the association rooms, besides which they have attended by sub-committees most of the important meetings of sister associations which have been held, notably at Albany, Springfield, Connecticut and New Jersey. The principal object in attending these sister meetings was to place this association and its Committee on Inspection in the proper light before them. So much misrepresentation had been made concerning this association's attitude on national inspection that we felt it extremely important that the members of our sister associations should know exactly the truth and just where our association stood in the matter. For this reason we attended these various meetings, and we are pleased to say that in all cases we were received with great courtesy, and that in Massachusetts, Connecticut and New Jersey the United States rules were adopted as the official rules of those associations. These rules, that is, the United States rules, were adopted by this association on March 17 last, and five thousand copies were printed for free distribution to members and all others who might want them. So far as we have been able to learn, the rules have met with favor. No trouble has been experienced by those who desire to buy under them, and we feel that they are looked upon as eminently fair. Besides their adoption by this association and the associations above referred to, they have become also the official rules of the following: The Retail Lumbermen's Association of Philadelphia and the Eastern States Retail Lumber Dealers' Association. Your committee deprecate as much as anyone the fact that there is not a national inspection. At the

present time there may be said to be three sets of rules—the United States rules, the Hardwood Manufacturers' rules and the National Hardwood Lumber Association rules. The three sets of rules are not greatly at variance, and this committee wishes to go on record as being willing at all times to meet any and every section at least half way in the formulation of rules or in any effort to bring about rules which may be fairly national in their character, but we also feel that in the making of such rules an important market such as is New York must be duly considered.

The trade relations and legislation committees also reported important work along those lines.

The nominating committee presented the following ticket, and the various nominees were unanimously elected:

For president: Russell Johnson Perrine of Brooklyn.

For vice-president: John F. Steeves of Manhattan.

For second vice-president: Frederick W. Starr of Brooklyn.

For treasurer: Charles F. Fischer of Manhattan.

The new president, Russell Johnson Perrine of Brooklyn, is head of the large retail house of Johnson Bros., Inc., an old and reputable house. On taking the chair he made a few appropriate remarks in which he assured the members that he will endeavor to perform the work to the best of his ability.

Following the annual meeting the board of trustees met to transact routine business.

#### A Help to the Veneer Man

With the development of the veneer business has come the need of many new and improved machines to simplify and cheapen not only the manufacture but the utilization of veneers.

Improvements have constantly been made in veneer sawing, slicing and cutting machinery, and in the various minor tools that make up the equipment of a veneer factory.

In the line of especially valuable tools that have latterly been designed and placed on the market, no concern in the country has done more to assist the veneer manufacturer in economy of results than has the Veneer Machinery Company of 602 Austin avenue, Chicago, Ill. Among this company's tools is a continuous feed veneer jointer, which has been in process of evolution for some time, until now it is said to be almost perfect in all details and practically indispensable to every up-to-date veneer manufacturer.

This machine has a continuous feed, which handles a bunch of veneers at one time, trims off the uneven edges, and puts on a jointing edge at one operation. The machine is of large capacity and is very cheap to operate.

The original jointer had a movable bed, in which the stock was clamped, the bed moving forward past two cutterheads, one to take off the rough cut, the other to put on the finishing edge. It did good work but was of limited capacity.

To increase the capacity, another machine was put out, embracing the continuous feed arrangement and retaining the two cutterheads of the original machine. This increased the capacity about four times and was a decided improvement, as it handled stock of various lengths.

The only criticism that could be made to this latest machine was that like the two previous

models it was sometimes necessary to pass the stock through the machine two or three times in order to trim off all the rough edges. To overcome this and to save the expense of using an edger or a trimmer to prepare the stock before jointing, the company has evolved its latest model, which comprises a saw and a finishing head in place of two cutterheads.

The stock in traveling through comes in contact with the saw which acts as an edger, cutting off all the rough edges of the veneers. As the stock travels on past the saw, it comes in contact with the finishing head, which completes the operation, thus doing away with the necessity of running the stock through several times.

This machine is being installed in a great many plants, and users universally report satisfaction. Full details can be obtained from the manufacturers, the Veneer Machinery Company, 602 Austin avenue, Chicago.

#### New Wisconsin Veneer Company

The Wisconsin Lumber and Veneer Company has been organized, with \$300,000 capital stock, by Fred A. Dennett of Sheboygan, John R. Dennett of Port Washington and J. M. Bostwick. Its headquarters will be at Port Washington, where it will take over the veneer plant owned by the Dennetts. It will also operate the large veneer plant owned by the same interests at Mound City, Ill. The company will manufacture veneer from all kinds of native hardwoods and from mahogany and other imported woods as well. The company has men of wide experience back of it so that it will undoubtedly meet with a large measure of success.

#### Use of Sawdust

There are many ways of putting sawdust to practical use, so that it is nowadays but rarely that a manufacturer is unprogressive enough not to realize something on his saw waste. One of the most important uses for sawdust is in the manufacture of artificial woods, the sawdust being mixed with tar resin and pressed at high temperature in moulds, after which it can be cut, planed and bored like ordinary wood. It is susceptible of a high polish and is altogether quite as satisfactory as solid wood.

When mixed with some sort of binding material sawdust is poured into moulds, making imitations of wood carving that are very handsome. By this means mouldings and decorative carvings of all kinds, including panels for the walls and ceilings of houses, furniture ornaments, etc., can be made.

From a mixture of the sawdust from the finer hardwoods a substance known as wood marble is made; it is mixed with ivory waste to which pigments are sometimes added, waterglass and glue being employed as a binder. The substance thus made is cut into veneers which may be highly polished and are not easily distinguished from the finest marbles. Oxalic acid, an important commercial article, is produced nowadays largely from sawdust. A fine sifted sawdust, known as "wood meal," is used as an imitation of pollen in the manufacture of artificial flowers. Beech sawdust is useful for polishing gold, and in France wood meal is employed to dry up ink in place of the old-fashioned sand and as a

VENEER JOINTER AND EDGER

substitute for blotting paper. For this purpose the kerf of hardwoods is principally used, and it is dyed dainty colors and perfumed so as to make it a pleasing article about a woman's desk.

Sawdust is the source of much of the cellulose now employed for the manufacture of explosives. Eventually, however, its most important use will undoubtedly be in the production of sugar and alcohol. Sawdust is practically all cellulose, and the latter is convertible into sugar, which by processes already well understood can be transformed into alcohol.

### A Syndicated Automobile

The accompanying view represents a new type of automobile built especially to order. Lewis Doster of Cincinnati, secretary of the Hardwood Manufacturers' Association, assumes to possess ownership of it. However, it is generally known in Cincinnati that the purchase was made by Bill DeLaney, manager of the Kentucky Lumber Company, and all that Doster owns of the outfit is the off-hind wheel and the doughnut strapped to the side.

This machine is said to possess sundry new features which are of particular value to the member of the Hardwood Manufacturers' Association inspection committee and to the redoubt-

THE SYNDICATED AUTOMOBILE.

able secretary. It has an automatic attachment by which any variety of hardwood lumber can be accurately inspected and automatically tallied.

Neither of the gentlemen interested in the "Joy-wagon" pretend to claim ownership to the original ideas involved in the construction, and the name of the inventor is a secret. Under the terms of the joint ownership of the equipment DeLaney has the use of it between 6 o'clock in the morning and 12 o'clock at night during all the months in the year save December, January and February, when the order of the right of use of the vehicle is reversed.

The picture is a January view of Doster at the helm of the automobile.

### Italy Works to Renew Forests

Italy, which has suffered extremely in the past from the ruin which follows the removal of protective forests, is now among the leading nations working for the conservation of forest resources. Extensive operations in reforestation have been going on for forty years, and the Italian secretary of agriculture has just published his report on the progress made in that time.

This report indicates that the Italian government is keenly aware of the value of forests to the country, and that it is determined to bring its deforested lands into a forested state as soon again as possible. To attain this end, planting operations have been conducted on government land to such an extent that during the last thirty years 122,000 acres have been planted in twenty-five of the provinces of Italy. Of this area, 69,000 acres, or approximately 108 square miles, were planted in the year 1907 alone, causing an outlay of nearly \$2,000,000 and giving employment to a large number of men.

Reafforestation has been carried on so vigor-

ously that there now remains only about 36,000 acres of government land in need of planting. In addition to conducting planting operations on a large scale, the Italian government has during the last forty years distributed over 130,000,000 young trees and 237,600 pounds of seed, an amount sufficient to restock approximately 100,000 acres of land, to the people in an effort to encourage planting and sowing by private persons. As the forest area of Italy amounts to only slightly more than 10,000,000 acres, this planting by the government and private persons amounts to approximately one-fortieth of the total forest area of Italy. Further steps must be taken by the government, however, before its forest policy will prove the success of some of its European neighbors.

Forest fires still continue to be the cause of heavy damage. During the year 1907, 1,294 fires were reported with an estimated loss of \$194,400. While this amount is insignificant when compared with the yearly loss from fires in the United States, it is large relatively speaking and would be viewed almost as a calamity in the better managed German forests. Of these figures, 94 were due to criminal design, 267 to culpable negligence, 132 to accident, and the rest to unknown causes.

Fire, however, is not the only enemy of the Italian woods. The small land owner often fells recklessly, and sometimes with good excuse, because of the heavy taxation of timber lands. Large tracts which used to be covered with thick growths of chestnut have, even during recent years, been stripped of every tree.

### The Situation Abroad

From circulars of the various large hardwood concerns of Liverpool, under date of October 1, a fairly accurate idea of conditions prevailing in England may be obtained.

Alfred Dobell & Co. say in respect to American hardwoods: "We have to record another month of quiet trade. The advance which has taken place abroad in several important articles has not yet met with tangible response on this side. Stocks generally are not heavy, but they are ample for the demand, which continues to be of a languid character. The consumption of rock elm is of a retail character at steady figure. The stock of birch logs is ample and values have been barely maintained. The stock in planks is more than sufficient for the present limited demand. Prices are somewhat easier. Of round southern oak, the import has been light and values are firm. There is a good inquiry for really prime logs. Baltimore Wancy Logs There has been no import for a long time and prime parcels would meet with a ready sale at full figures. Wagon Planks—The import during the month has been moderate. The stock of first quality planks in desirable sizes, namely 15½ and 16 feet 5 inches and 5½ inches x 12 inches and 10 feet and up, 3½ inches x 12 inches is now within reasonable compass, but the market continues heavily weighted by planks in poor specifications and in inferior quality. There is a little more activity in the general enquiry. Coffin Planks—The stocks of medium quality are heavy and values easier; prime parcels are enquired for. Walnut logs of strictly prime quality are saleable at full prices. The arrivals have been small and consisted of medium and inferior qualities. Planks and boards have been arriving freely and values are consequently at a lower level. The stocks are quite sufficient to meet the slow inquiry. Satin Walnut—Boards are difficult to sell, owing to the poor demand and ample stocks. Whitewood—Logs—The demand is good for parcels of prime logs of large sizes. Medium and inferior grades are not wanted. Planks and boards are sufficiently stocked to meet the present requirements. Values are firm for the better grades. Bay Poplar—There is only a limited demand and sales are difficult to effect.

Ash and Hickory—Round Logs—The import has been light and prices for the coming season's shipment are firm."

Tickle, Bell & Co.'s circular says of mahogany: "There were good companies at the last auctions and very keen competition for all wood of anything like good quality. Prices showed considerable advance on last auction, and with the short supply combined with strong demand are likely still further to advance in the immediate future."

John H. Burrell & Co.'s wood circular states: "Ash Logs—The arrivals as usual have consisted principally of round wood on contract. Ash Lumber—There is a quiet demand for prime stock of good specification. Black Walnut Logs—The arrivals have been moderate and prime large logs continue in good demand, though medium, small and inferior wood is hard to sell even at low prices. Black Walnut Lumber—Demand quiet, supplies excessive, and values weaker. Chestnut Logs No inquiry. Hickory Logs—The slightly improved demand noted in our last continues for strictly prime clean butts, but rough and inferior wood is very unsaleable. Oak boards—The import has been considerably in excess of the quiet demand. Oak Planks (cabinet) There has been a little more inquiry for strictly prime stock, but there is no improvement to record in the demand for average parcels. Oak Planks (coffin)—There is slightly more demand for prime parcels of good specifications, but inferior planks continue to be very unsaleable. Oak Planks (wagon)—The improved tone noted in our last continues to be maintained, with the prospect of a rather brisker demand, but it must be remembered that first quality planks, 15½ and 16 feet 5 x 12, coupled with a fair percentage of 3½ x 12, constitutes the only saleable specifications, as short 5 x 12 are greatly overstocked, while second class and inferior planks of any specification are a drag in the market and quite unsaleable. Poplar Logs—Prime, clean, well-made sizeable logs are in good demand. Poplar Lumber—The import has been light, but the demand is not active, and the competition among sellers to contract for future shipments is such as to give little chance for prices to rally. Satin Walnut Lumber—The market is without change."

Edward Challoner & Co. state that arrivals from North American ports during the month of September totaled 24,037 tons, as against 26,599 tons for the corresponding month of last year. Of the various woods, their last circular states: "Oak—Log timber has not been imported during the past month and the demand has been quiet; prices for prime wood are firm. Stocks are moderate. Wagon Planks—Import has been light, but a fair quantity has passed into consumption; prices for first-class planks of good specification are firmer, but for inferior grades rule low; the stock of the latter description is heavy. Elm—No arrivals during the past month, and the consumption has been only 1,000 cubic feet. The stock is light and prices firm. Ash

Import and consumption have been small; the stock is light and prices firm. Walnut—Logs of good to prime quality are in steady demand at firm prices, but for inferior and small wood values rule low. Boards and planks of the better qualities sell at fair prices. Satin Walnut—The demand is quiet at unchanged prices. Whitewood—Logs—There is a steady demand at good prices for prime quality wood of large dimensions, but for other descriptions values rule low. Boards and Planks—The higher grades are in fair request at firm prices, but inferior qualities are dull of sale and prices rule low. Birch—Logs—There has been a light import and moderate consumption during the past month; prices have ruled steady. Planks—Arrivals and deliveries have been moderate; prices are easier. Stocks of both logs and planks are sufficient. Hickory—Prime quality butts would realize good prices."

## DOVETAILING

COVER OF FAY & EGAN'S NEW CATALOGUE OF DOVETAILERS

### A New Dovetailer

The J. A. Fay & Egan Company, well known woodworking machinery manufacturer of Cincinnati, Ohio, has just issued a special catalogue descriptive of its new gang dovetailing machine, designated as No. 201.

The cover contains a two-color engraving showing a variety of drawer fronts that can be dovetailed on the Fay & Egan machine without dismantling or changing any of its parts (see Fig. 1).

In the body of the book is illustrated the superior construction of the spindles and bearings of the machine (see Fig. 2). It represents a cross section of the spindle housing taken from the center of the company's nine-spindle machine. It is intended to show the adjustments of the spindles and bearings and also the eccentric bits. By the use of the large screw below, the entire housing is raised and lowered, adjusting all the spindles at once. Each spindle with its upper and lower bearings has a separate adjustment vertically and is locked to its position as shown in the cut by two rows of screws at the front. Each spindle box is made from aluminum bronze cast under heavy air pressure and has a reservoir for oil which can be seen in the halftone. The bits are made with the cutting edge eccentric, and the holes in the spindles are bored eccentric to receive the bits. This feature enables the bits to always be set to cut the same size dovetail, no matter how unevenly they may be worn or filed away. A careful inspection of the illustration will confirm this fact.

This new Fay & Egan machine is made with either plain or eccentric bits. Fig. 3 shows the plain bits which are merely two winged cutters fitted directly into the top of the spindle and are locked by contact of the shoulder of the cutter against the end of the spindle. The eccentric cutters are single edged and, as the

name implies, the cutting edge is out of the center and adjustable. This is a patented feature and is extremely valuable to any concern that works its materials to exact standards.

Other dovetail cutters change the size of dovetail each time they are sharpened. This style of cutter makes the same size of dovetail no matter how much the bits may have been worn away by sharpening, and all drawer parts are always interchangeable.

Woodworkers are invited by the J. A. Fay & Egan Company to write for a copy of the book, which will be sent postpaid. The proper address of the company is 414-424 West Front street, Cincinnati, Ohio.

OUTLINE OF SPINDLES AND BEARINGS.

FAY & EGAN'S NEW GANG DOVETAILER

### Wood Turning

Few people, even among those connected with the woodworking industries, realize the infinite variety of small turned articles in common use among wood-using manufacturers. Chair spindles, drawer stops and pulls, fancy ornaments for furniture, tops and knobs, go-cart push handles, baby cab fittings and reed chair stretchers and legs, beaded mouldings, cane and flagsticks, dowel pins and dowel rods, are just a few of these much used specialties. Almost everything made of wood has some turned work about it, and we have become so used to seeing artistic mouldings, handles and knobs about us that we have come to take them all as a matter of course. However, the production of these articles is an important line of manufacture and one that consumes large quantities of hardwood annually, in spite of the fact that most of the things made are very small.

One of the largest manufacturers of this line of goods in the country is the Stephenson Manufacturing Company, located at South Bend, Ind., where it has a large, modern plant, fitted with a complete line of equipment for turned work. The company was established in 1879 and is composed of C. B. Stephenson, president; F. A. Stephenson, vice-president; B. C. Stephenson, secretary, and A. H. Stephenson, treasurer. It recently completed two large additions to its plant at South Bend, so that very prompt and efficient service is now accorded customers.

One of the most popular specialties turned out by this company is its pointed and spiral grooved dowel pins. These are made of thoroughly kiln-dried hardwood and have a holding power similar to that of a screw, the glue hardening in the spiral groove and effecting a very secure fastening. Pins turned are of uniform diameter and not crooked, so that there is no danger of them splitting stock when driven into place, as is the case with punched dowels.

The Stephenson Manufacturing Company manufactures every conceivable variety of wood turned goods, a partial list of its products including automatic wood lathe turnings, beaded and twisted chair spindles, bent and turned seat sticks, turned and twist mouldings, steam pump and shipping plugs, washing-machine turnings, card rack washers, turned drawer pulls, ornaments and buttons; baby cab, screen door, reed chair and novelty turnings, screw hole plugs, crank handles, kitchen cabinet legs, extension table pins, splasher rods, gun rods, cane and flag sticks, plain and beaded dowels, and even more. In the manufacture of these articles the company uses white maple, beech and birch, and it always carries a large stock of these woods so that any of its specialties can be supplied in carload lots on short notice.

The company will send out on application its Catalogue D, which contains actual size drawings of its products. This is a most interesting book of some sixty pages of outline drawings, and gives a very good idea of the vast number and variety of turned articles made by these specialists in wood turning.

### Furniture Imports in British Guiana

Consul Arthur J. Clare of Georgetown responds as follows to inquiry concerning furniture imports into British Guiana:

During the fiscal year ended March 31, 1908, cabinet ware and upholstery to the value of \$24,957 was imported into British Guiana. The United Kingdom furnished \$19,609; United States, \$3,360, and Canada, \$1,398. Furniture manufactured from the native woods of British Guiana is very popular, owing to its immunity from the attacks of the wood ants and other insects, which are destructive to some imported articles of furniture. The principal furniture manufacturer in Georgetown has for some years discontinued manufacturing articles from any of the imported woods, such as oak, ash, walnut, maple, etc., and is using the native woods exclusively. Under the circumstances it is not likely

that the imports of furniture will increase to any great extent, except perhaps in the line of modern office furniture, which is not manufactured here, and for which there will continue to be a limited market.

Furniture intended for British Guiana need not be packed to stand overland wagon hauls, as the transportation after arrival here is mostly by steamship or rail.

### Slack Cooperage Stock Purchased in 1908

A bulletin recently issued by the Forest Service gives statistics of slack cooperage stock production during the year 1908, these being collected from 1,151 establishments as against 950 for the preceding year. The statistics on this industry show general increases in quantity and value of these products over previous years, despite the fact that industrial conditions obtaining were unfavorable. An interesting fact disclosed by statistics the last few years is the increasing number of establishments that turn out staves and heading as by-products in the manufacture of lumber.

During 1908 a total of 1,557,644 staves were produced as against 1,175,977 in 1907.

One hundred and twenty-three thousand eight hundred and forty-nine thousand sets of heading were produced in 1908 against 106,074 thousand sets in 1907. Of hoops the total in 1908 was 336,484 thousands against 490,570 thousands in 1907. The total value of staves produced in 1908 was \$8,912,957; of heading, \$5,661,713, and of hoops, \$2,325,981.

The five kinds of wood which had a production of more than 97,000,000 staves each in both 1908 and 1907 ranked as follows in the two years: Red gum, pine, elm, beech and maple.

In the manufacture of heading five principal woods were used. Though the same woods are generally used for both purposes, in heading pine ranked first, red gum second, beech third, maple fourth and basswood fifth. The production from these woods was seventy-seven per cent of the total.

In the production of hoops only ten kinds of wood were reported in sufficient quantities to warrant a separate presentation for 1908. Of these, red gum, ash and beech showed increases in 1908, as compared with 1907. In elm alone there was a decrease of nearly ninety-three per cent.

### Wood Distillation for 1908

The Forest Service recently issued a bulletin covering wood distillation for 1908, giving a number of tables showing statistics of the various woods used, values, quantity utilized, etc.

Although, generally speaking, wood distillation is rather unimportant compared with the other industries utilizing forest products, yet in certain sections it is a very important business. In general the industry consists of the manufacture of such products as result from the heating of wood so as to produce volatile distillates and forest residue. Two distinct processes are in common use, the destructive and the steam processes. The basic principle of the former consists in heating the wood to such a temperature that the fiber is destroyed and new products are formed. In the steam process volatile substances which are present in the wood are removed without destroying the fiber itself. Besides these two definite processes there are several others which cannot be definitely classed under either of these two heads.

The wood distillation industry is divided into two branches according to the woods used. The Forest Service in its bulletin uses the two headings, "Hardwood Distillation" and "Soft Wood Distillation." The principal woods used in hardwood distillation are beech, birch and maple, with small quantities of oak and elm. In this process of distillation the destructive method is generally employed.

In 1908 hardwoods to total value of \$2,710,745 were used for hardwood distillation by the 101 establishments reporting. This wood was used in the production of charcoal, crude alcohol, gray acetate, brown acetate, iron acetate and oils; the combined value of these products being \$5,408,265. This amount was a considerable decrease in the figures for the preceding year which were \$7,661,379, due to the general business depression.

Of the various states containing wood distillation plants, Pennsylvania leads with 53, which turned out in 1908 \$1,070,012 worth of these products. New York state is second with 24 plants and Michigan third with 11.

In hardwood distillation in 1908 there was no sawdust reported, although over 25,000 cords of mill waste and stumps were used, of which Michigan reported over three-fourths.

In soft wood distillation 30 plants reported in 1908, and the total value of their products was \$491,161, slightly less than the total for the preceding year. Dry body wood of pine still forms the greater part of this material, though in 1908 Douglas fir was reported for the first time, and quite a large amount of this wood was utilized. The southern states are the principal fields for soft wood distillation.

Practically the only product of wood distillation exported is wood alcohol. During 1908 1,958,630 gallons of this product were exported; this product had a total value of \$819,758.

### American Refrigerators in France

An American consul located at Havre, France, states that there is a good opportunity for American manufacturers of refrigerators to build up a profitable business in some parts of France. He cites the case of one manufacturer who experimented with the market in the vicinity of Havre, where the American product comes into competition not only with continental stock but with a local refrigerator as well. This manufacturer sent a salesman into the territory who made a house-to-house canvass with miniature sample refrigerators, speaking the language of the country. He reported that his sales were heavy. Of course no one salesman could cover the field, no matter how ingenious his methods, and much territory remains uncovered. Almost no solicitation has been tried among the hotels, stores and other large buyers of refrigerators. Solicitation of this sort would undoubtedly bring to American concerns a reasonable amount of trade, but correspondence and the sending of catalogues in the English language will never get any business in competition with French goods.

The advantage of Havre as a shipping point for American goods is pretty generally recognized. It is an excellent point not only for importation but for distribution through resident agencies. The average retail price of domestic refrigerators is \$19.

### The Casket Industry of St. Louis

The real live city of St. Louis has one large and thriving industry which seems quite out of keeping with its reputation. It is the largest and most important market for the production, sale and distribution of caskets and coffins in the United States, and according to some authorities there are more caskets manufactured and shipped from St. Louis than from any city in the world. The city is unique in this line of manufacture, for no other place in the country is a close competitor in this business, and no other center has kept pace with St. Louis in the introduction of new styles and improvements which its manufacturers have added frequently to their product until today St. Louis is known far and wide for the excellence of this line.

A combined capital of over \$2,000,000 is invested in the casket industry by St. Louis firms, and there are six large concerns in the business. These are: The St. Louis Coffin Company, The Mound Coffin Company, Kregel

Casket Company, Riddle Casket Company, Jennings-Amos Casket Company and the Missouri Casket Company.

During the past ten years the trade of St. Louis in this line has increased about two hundred per cent, and there has been the enormous increase of over five hundred per cent during the past twenty-five years. The factories at present employ over fifteen hundred men and women, and each establishment has a number of traveling salesmen on the road as well.

Forgetting the gruesome purpose for which this product is used the casket making industry is an interesting one. The materials used are many and varied; the woods embrace some of the rarest and finest hardwoods of this country and the world. Oak, rosewood, walnut, chestnut, cedar, mahogany, pine, ebony and cherry, as well as other varieties, enter into the make-up of high-class burial caskets, many of which are left without any covering of cloth or velvet. The metals used include solid bronze, copper, zinc, steel and cast iron.

One of the most popular of the recent improvements made in burial equipment is the airtight copper case made to fit inside the casket. This case fills all the requirements of the solid metal casket and does away with its great weight. This metal case was a St. Louis discovery, and its introduction has to a great extent replaced the old metallic caskets.

St. Louis factories are all up-to-date modern establishments; they have the best of equipment for this line of manufacture, and employ the most expert cabinet workers obtainable. A great many of these workmen are artists of no little ability, as may be judged by the fine hand carving on some of the best types of caskets.

#### What the Dodge Plant Accomplishes

Laying claim to the largest plant in the world for the manufacture of machinery for the mechanical transmission of power is no idle boast with the Dodge Manufacturing Company, Mishawaka, Ind., whose buildings cover nearly forty acres in a sixty-acre location on the Lake Shore & Michigan Southern Railway.

The consumption of raw materials, the production of finished goods, and the capacities of the power and mechanical equipment, are evidence of the extensiveness of the factory.

There is annually consumed 20,000 tons of pig iron, 7,000,000 feet of lumber, 900 tons of

steel and structural iron, 6,200 tons of steel shafting and 9,000 tons of coal.

There are annually produced 250,000 "Independence" wood split pulleys, 100,000 "Dodge Standard" iron split pulleys, 90,000 solid iron pulleys, 95,000 hangers, 150,000 bearings of all types, 4,000 friction clutches and more than 2,000,000 pounds of bearing metal.

The steam boilers have a capacity of 1,500 horse power and the steam engines 1,500 horse power with electric generators of 250 kilowatts.

The steel shop in which the Eureka water softener and purifier is made has a capacity of 52 fully equipped machines per annum.

#### Quebracho for Tanning Purposes

The Plata River region in South America is the source of supply of a large amount of quebracho wood which is extensively used for tanning purposes. There are two species found growing in Uruguay, the Chaco country of Paraguay and northern Argentina, the red being the one containing tannin used in the manufacture of the extract so valuable in the tanning of hides. It is said that the industry in Uruguay will probably never reach great commercial importance, as the supply of trees is limited, but in Paraguay and Argentina it is a large item of national wealth, land bearing these trees bringing high prices.

Large consignments of quebracho logs are annually sent to Europe, but this will probably be stopped, as there is a strenuous effort being made by Argentina people of influence to have a heavy export duty imposed so as to prohibit the exportation of these logs. Very durable railroad ties are made from quebracho.

The extract of quebracho is prepared by disintegrating the logs in a manner similar to that employed in making wood paper pulp, then macerating and cooking the product with certain chemicals.

During the year 1908 the United States imported quebracho wood to a value of \$612,971 from Argentina. Imports of quebracho extract for the same period were valued at \$2,260,364, nearly all coming from Argentina.

#### 1908 Statistics on Tight Cooperage Stock

In a bulletin just issued by the Department of Agriculture in cooperation with the United States Forest Service, statistics covering the production of tight cooperage stock for 1908 as compared with those of 1907 are given. The

output of tight cooperage stock in common with that of most forest industries showed a falling off in both quantity and value in 1908 as compared with the previous year. The reported production for the year 1908, however, exceeds that of 1906.

In 1908 staves to a total value of \$10,009,295 were manufactured, as against \$12,942,885 in the previous year.

Heading to a total value of \$4,397,148 was manufactured in 1908, the figures for 1907 being \$6,864,485.

Of the total quantity of sawed staves, 55.5 per cent were oil and tierce, and staves of this class were made principally of white and red oak. Spirit and wine staves formed 12.8 per cent of the sawed staves and Bourbon staves 4.8 per cent. Bourbon staves were exclusively of white oak, and 98.7 per cent of the spirit and wine staves were of this kind of wood. Over 22 per cent of the cut-offs were of red oak, and nearly 33 per cent of the pork staves were ash.

White oak timber supplied material for approximately seven-tenths of all the sawed heading reported in 1908, of which oil and tierce heading formed 54.9 per cent; Bourbon, 16.1 per cent; and spirit and wine, 15.8 per cent. Of the red oak heading reported, about three-fourths was oil and tierce. Gum was to a considerable extent employed in the production of half barrel and keg, and oil and tierce heading. Though ash heading was reported in limited quantity, forming less than one-fortieth of the total quantity of heading produced, this wood was used in the manufacture of every kind of heading except Bourbon. Pork heading comprised about three-eighths of the total amount of sawed heading produced from this wood. Other woods utilized in heading manufacture in 1908 were cypress, spruce, Douglas fir, pine, dogwood, basswood, etc.

Exports of tight cooperage stock from the United States for 1908 amounted to \$6,016,690 as against \$5,127,522 for 1907. Both the quantity and value of staves exported during the fiscal year ended June 30, 1908, were greater than during the previous year. The average value of the exported staves was nearly \$3 less in 1908 than in 1907, for which year the highest average value yet shown was reported.

#### A Growing Concern

The Rice Veneer & Lumber Company of Grand Rapids, Mich., has leased larger quarters to care for its growing business. The company has been located in the Gunn building on South Ionia street for several years, but after January 1 will remove to the new Vinkemulder building, Campau street and the railroad tracks, occupying the west half of the five-story building from the second to the fifth floors. Attractive offices will be fitted upon the second floor. The change will give the concern double its present warehouse capacity and its facilities for shipping and business will be largely increased. The company recently increased its capital stock from \$10,000 to \$40,000.

#### Miscellaneous Notes

The James J. Copellar Tie & Timber Company, formerly of Grappes Bluff, La., has just moved its headquarters to 518 First National Bank building, Shreveport, La. This concern has mills in Mississippi, Louisiana, Texas and Arkansas.

Another change in location is that of the Delphi Lumber Company, manufacturers of hardwood lumber, which has moved its offices from Delphi, W. Va., to Cowen, W. Va.

The Omega Lumber Company has been organized at Charleston, W. Va., with a capital stock of \$10,000. The incorporators are J. R. LeSage, Azel McCurdy, F. A. Johnson, C. H. Wyatt and J. C. LeSage of Huntington.

Fire recently destroyed the main building of the Standard Box & Lumber Company of Ports-

THE IMMENSE PLANT OF THE DODGE MANUFACTURING CO. AT MISHAWAKA, IND.

mouth, Va. The company employed sixty men, who will be thrown out of employment, perhaps only temporarily, however, as Mr. Emich, one of the proprietors, states that the company has contemplated the removal of its big plant in Pittsburgh to the Belt Line site of the plant destroyed. The plant may be rebuilt on a larger scale. The loss totaled \$80,000, with \$40,000 insurance.

The building occupied by the Palmer and Pioneer Manufacturing Companies at Detroit, Mich., was recently damaged by fire to the extent of \$100,000. The origin of the fire is unknown. The machinery of the Palmer Manufacturing Company is badly damaged, but a large stock of hardwood used for the manufacture of tables was saved, although soaked with water. The damaged portions of the plant will be rebuilt.

The large stave manufacturing plant of the Moore Lumber Company, Washington, N. C., was almost totally destroyed by fire on Oct. 5. The origin of the fire is unknown and whether the company will rebuild the plant has not yet been decided.

In India there is a patent medicine firm which converts into penholders the wooden packing case in which it gets drugs from America. These penholders are made by hand and are so good that the government buys them.

C. L. Marshall of Bristol, Tenn., has been appointed receiver for the Allen Panel Corporation of Johnson City, Tenn. The Allen corporation was organized only a short time ago, taking over the property of the defunct Allen Panel Company. Mr. Allen interested Ferd Powell and others in the new company and it resumed operations of the large plant at Johnson City. A disagreement followed, resulting in the appointment of a receiver. Mr. Allen was also president of the Standard Oak Veneer Company, Interior Hardwood Company and allied corporations, all of which failed during the panic.

The Miles Brothers Hickory Manufacturing Company of Des Arc, Ark., is making arrangements to establish a rim and spoke factory at Jonoke.

J. L. Logan, president of the Central Lumber Company of Mansfield, La., has purchased 5,755 acres of timber land between Mansfield and Benson, La., from E. W. Hamlin of Cincinnati, O., for \$144,375. The lands are timbered with short-leaf pine and mixed hardwoods. The Central company operates a handle factory in connection with a planer and some of the hardwoods will be utilized in this business. Mr. Logan is president of the De Soto Parish Industrial Company, chartered to settle white immigrants upon and as fast as the timber is removed.

It is reported at Baltimore, Md., that the combination of interests effected recently by the Empire Lumber Company under the name of the American Forest Company will erect a large sawmill plant near Murphy, about sixty miles below Asheville, N. C. The plant, it is estimated, will cost about \$100,000.

The General Electric Company reports very gratifying sales of Tantalus lamps. The sales of this lamp are more than double what they were a year ago and the lamp appears to be sharing with the demand for high efficiency lamps created by the introduction of Tungsten lamps. The Tantalus lamp, as at present supplied, is giving most excellent life service. Contrary to general belief, these lamps will give good commercial life on alternating current of sixty cycles or less. Their life on this frequency will average well about 600 hours. An interesting Tantalus lamp order recently received called for 9,900 lamps for the United States war vessels attending the Hudson-Fulton celebration in New York.

Brazil has 4,346,400 saw and planing mills with an annual output valued at \$9,413,700.

The Jump River Lumber Company of Sheldon, Wis., was recently incorporated to manufacture hardwood and pine lumber.

The sawmill of the J. W. Wells Lumber Com-

pany was recently destroyed by fire, causing a loss of about \$50,000. Two hundred men were employed in the mill.

The American Bent Wood Chair Company is the name of a new concern chartered at Otego, N. Y.

The Southland Veneering Company has started operations at its big plant at Tuscaloosa, Ala., and has been running a couple of weeks. The first shipment of veneers has already been sent out and orders are coming in with gratifying steadiness. Two orders just booked show the wide scope the company's business will assume, as one goes to Pittsburg, Pa., and the other to Palatka, Fla.

Frank Seibel, for years superintendent of the Eggers Veneer Seating Company's plant at Two Rivers, Wis., has severed his connection with that firm. He has not yet decided just what he will do, although he has had offers from some of the largest veneer concerns in the country.

## Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

### CHICAGO

W. D. Mershon, with offices at No. 1 Madison avenue, New York City, who for the past twenty years has been New York sales manager for the Mershon-Eddy-Parker Company of Saginaw, Mich., severed his connection with that institution on Oct. 20 and has engaged in the wholesale lumber jobbing business at the same address. He will handle interior finish in both soft and hard woods and will pay particular attention to marketing west coast products. Mr. Mershon is one of the best known lumber sales agents in the East and will undoubtedly have marked success in his new undertaking.

The RECORD has been advised by the Cooper & Maxson Lumber Company, well-known lumber manufacturer and jobber of Milwaukee, that one Thomas Flynn has been operating in St. Louis of late pretending to be representing this sterling company. The Cooper & Maxson Company wish to state that Flynn is not in its employ and has no authority to represent the concern.

The RECORD is in receipt of a notice from the Quinn Lumber Company, formerly located at No. 1 Madison avenue, Metropolitan building, New York City, that it has removed its general offices to No. 164 First street, Jersey City, N. J., where all mail should be addressed in the future.

The RECORD is advised by Markley & Miller, mahogany lumber and veneer manufacturer at West Lake and Elizabeth streets, this city, that it is closing out its Chicago yard and offices.

It is with sincere regret that the RECORD learns that John P. Brown, the veteran arboriculturist, who has published a journal under the title of "Arboriculture" at Connersville, Ind., for the past eight years, will discontinue it, owing to lack of financial support.

The RECORD acknowledges receipt from Harris & Cole Brothers of Cedar Falls, Iowa, manufacturers of oak flooring and interior finish, newel posts and cut-up material generally, of its handsomely illustrated catalogue No. 10 covering its various lines of production. It is a catalogue that should interest many, and undoubtedly a copy can be secured by addressing Harris & Cole Brothers.

Special attention is called to the notice under the masthead of this issue of HARDWOOD RECORD, giving the date of the fall meeting of the Michigan Hardwood Manufacturers' Association, which will be held at the Ponchartrain Hotel, Detroit, Mich., on Thursday, Oct. 28, at 10 a. m. The principal subjects to be considered in this meeting are hemlock statistics and the handling of hemlock along with hardwoods; report of

Mr. Seibel is an expert veneer man, having made a careful and intelligent study of veneer problems for years.

The United States is to receive a gift of 2,000 cherry trees from the Emperor of Japan. These will be sent to Mrs. Taft and by her presented to the government. They are to be planted along the Potomac river at Washington on what is known as the Potomac drive. In Japan there are many interesting legends about the tree and flowers of the cherry. The blossom of the Japanese cherry is of a peculiarly delicate beauty, and there is a tradition that if the same tone appears in the blossom of the Japanese cherry when planted in another country that country can be subjugated by Japan. It is said, however, that while many Japanese cherry trees have been brought to the United States the color of the blossoms, although quite as beautiful as in their native land, is unlike the blossom which appears in Japan.

market conditions committee, including both hardwoods and hemlock; discussion of stock reports covering hardwoods and hemlock and their relations to the present market, and the reports of various committees appointed at the last meeting. It is expected that the importance of the subject will bring out practically the totality of the Michigan hardwood and hemlock contingent.

As before noted in these columns, the Forbes-Everts Lumber Company, whose principal offices have been located at Minneapolis, has removed its headquarters to Van Buren, Mo., where its mills are located. Mr. Everts of this company reports that the railroad business is greatly improved and prices are considerably stronger, with an apparent shortage in car stock, timbers and ties. He looks for higher prices to prevail very shortly and a manifest scarcity of certain varieties of railroad requirements.

James D. Lacey of the well-known house of James D. Lacey & Co., is again at headquarters in the Old Colony building after an extended visit to the New Orleans office. Wood Beal of the same concern is in Quebec at present in connection with a large timber deal.

The RECORD was favored with a call from W. E. Barnes, editor of the St. Louis Lumberman, on Oct. 20.

John W. Adriance, for twelve years advertising manager for the True & True Company, well-known manufacturers of doors in this city, resigned this position Oct. 4 to engage in business on his own account. He has opened an office at 805 Tacoma building, from which point he will supply a line of specialties, including china closets, hardwood flooring, colonnades, grilles, mantels and weather strips. He will do business with retail dealers only and will be a wholesaler in the strict sense of the term. Mr. Adriance is a hustler as well as a man of no little ability and with a good knowledge of the business he proposes to go after. He will undoubtedly meet with success.

J. D. Bolton, office manager for the Hayden & Westcott Lumber Company, Railway Exchange, returned a few days ago from a purchasing trip along Ohio river points.

J. W. Thompson, well-known Memphis lumberman, made one of his regular Chicago trips a few days ago, and gladdened the hearts of his many friends here.

C. L. Cross, the cypress magnate of the Monadnock block, recently returned from a Canadian sales trip.

Howell C. Humphrey of the G. W. Jones Lumber Company, Appleton, Wis., was a recent Chicago visitor.

J. H. P. Smith, president of the Hardwood

Lumber Company of Cincinnati, O., spent several days in Chicago last week. Mr. Smith enjoys a profitable trade in this market.

W. D. Reeves, the hardwood man of Helena, Ark., spent a few days in Chicago the first of the month.

Ed J. Young of the Brittingham & Young Company, headquarters at Madison and branch yards at Chicago, spent several days in town last week.

Gus Landeck of the Landeck Lumber Company of Milwaukee, Wis., was a recent Chicago visitor.

H. B. Leavitt of the Leavitt Lumber Company is home from a trip to his southern sawmills.

G. E. W. Luehrmann of the Charles F. Luehrmann Hardwood Lumber Company, St. Louis, Mo., spent a few days in Chicago last week on an important lumber deal.

W. H. Martz of the Good Land Cypress Company, New Orleans, La., was a recent Chicago visitor. Mr. Martz was en route to New Orleans via Kansas City and since leaving home has visited the New York offices of his company.

The manufacturers of dining-tables of the United States will hold a convention at the Auditorium in this city on Tuesday, Oct. 26, to discuss matters of interest in their line of production.

The Chicago Furniture Manufacturers' Association will hold its annual meeting in this city on Nov. 9.

L. D. Gotshall of the Gotshall-Goodyear Company, hardwood manufacturer at Toledo, Ohio, was a caller at the RECORD office Oct. 12.

Among recent HARDWOOD RECORD callers was H. A. Langton of Peoria, Ill., exporter of hardwood lumber and walnut gun stocks. Mr. Langton was in town on Oct. 12.

The daily press announces that the Brunswick-Balke-Collender Company is about to remove its big Chicago factory to Elkhart, where it will employ more than 200 men, commencing in December, and eventually it is expected to have over 700 men on the payroll. In addition to this company's former line of bank, hotel, barber shop and bar fixtures, it will undertake the manufacture of refrigerators on a large scale. The reason the concern gives for removal is to provide an opportunity to expand, which present quarters would not allow. As a matter of fact, it is well known locally that this company has had a series of expensive labor troubles, covering a period of several years, and probably this is the chief reason for its removal to the Indiana city. It is unfortunate to lose such an important industry from Chicago.

Lewis Doster, secretary of the Hardwood Manufacturers' Association with headquarters in the First National Bank building, Cincinnati, has issued a statement of market conditions under date of Oct. 11, which is the most comprehensive document of the sort that has ever been put out by this organization. Copies can be obtained from the secretary by enclosing ten cents in postage stamps.

Mr. Doster is scheduled to be in Chicago Oct. 26, when he will address the association of dining table manufacturers on the subject of hardwood purchases.

The RECORD has received an announcement card from Alfred Dobell & Co., Liverpool, England, stating that the partnership has been augmented by admitting Alfred Temple Dobell, son of the senior member of the concern.

Miss Gertrude Hostler, daughter of S. P. C. Hostler, popular Chicago lumberman, was married Oct. 14 to Leonard Lewis Miksch. The RECORD's heartiest congratulations are extended to the young couple.

Miss Grace M. Corwin, head of the local offices of the Corwin Lumber Company, 539 Stock Exchange building, made one of her frequent business trips to Milwaukee a few days ago, and reports business fine. E. T. Corwin, her brother, recently visited Buffalo and sold all the company's lumber at Ontonagon, Mich., to concerns

at Tonawanda. The lumber has already been shipped. During the next week Miss Corwin will also make a trip to Ontonagon.

F. S. Hendrickson and H. R. Foster of the F. S. Hendrickson Lumber Company, Masonic Temple, are spending a few weeks at the company's mills at Haworth, Okla.

The Lumber Shippers' Storage & Commission Company, of which Q. Y. Hamilton is manager, has moved to its new offices and yards at the south end of the Bardley property on Throop street. The company now has ample shed and yard facilities to take care of its large and ever-increasing storage business.

The Flanner-Steger Land & Lumber Company, with offices in the Fisher building, is already installing dry-kilns in the new oak flooring plant it is building at Blackwell, Wis. This plant will have a daily capacity of 25,000 feet and will be operated in connection with the company's sawmill at that point.

R. E. Thompson, a member of the sales force of C. Crane & Co., large hardwood concern of Cincinnati, O., called on the Chicago trade last week.

George Mason and Carl Donaldson of the Mason & Donaldson Lumber Company, Rhinelander, Wis., spent a few days in Chicago recently.

Another well-known hardwood man who visited the local market last week was W. T. Culver of the Stearns Lumber Company, Grand Rapids, Mich. Mr. Culver makes his home at Ludington.

O. O. Agler, the energetic president of the National Hardwood Lumber Association and the active force of Upham & Agler of this city, is on an extended northern trip.

J. M. Attley of J. M. Attley & Co., Railway Exchange, has gone to the mill of the Ross-Attley Lumber Company at Heth, Ark., where he will remain about a week looking over conditions at that point. He is accompanied by his wife.

Walter DeWitt, secretary of the Estabrook-Skeele Lumber Company, is in Cadillac, Mich., this week in connection with business. While away he will combine business with pleasure and will indulge in his favorite sport of hunting.

William G. Commetz, traveling representative in Illinois for the G. W. Jones Lumber Company of Appleton, Wis., became a benedict Oct. 12, the fortunate young woman being Miss Lynn Bernardine McCulley of Menasha, Wis. Mr. Commetz, who has headquarters at the Chicago office of the Jones concern, is very popular in hardwood circles and his many friends in the trade will wish him happiness.

F. H. Pardoe of the Ingram Lumber Company, Wausau, Wis., spent a couple of days in Chicago recently looking into freight rates.

G. C. Scott, who represents Lee Wilson & Co. of Memphis at St. Louis, was a recent Chicago visitor.

Henry C. Koll, the tall and genial secretary of the Hartman-Sanders Company, manufacturers of Koll's patent columns, was married Oct. 20 at Detroit, Mich., to Miss Rose Hess of that city.

## NEW YORK

The Bickford Lumber Company was recently organized, with headquarters at 305 Union building, Newark, to conduct a general wholesale business. The principals are A. B. Bickford, formerly of the H. M. Bickford Company of Boston and W. R. Creed & Co. of New York, and E. C. Speer, until lately head of the Beauford Coal, Grain & Lumber Company, of Essex Falls, N. J. Both of these gentlemen are well known in the Jersey section of the Metropolitan district and have ample experience to assure the company of complete success. They have already closed mill connections on North Carolina and yellow pine and Pacific coast products.

Another new company is the Hedden-Clark Lumber Company, with a capital of \$50,000 and headquarters in the Hudson Terminal building, New York. It is composed of George P. Hedden and J. B. Clark, who for some time have been actively identified with the selling staff of H. H. Salmon & Co., wholesalers of New York City. This company will do a general wholesale business in hardwood, spruce, hemlock, North Carolina pine and maple flooring. Both young men are hustlers and have a large acquaintance in the trade.

W. D. Mershon, sales manager for the past several years for the Mershon, Eddy, Parker Company of Saginaw, Mich., and its predecessor, with headquarters at 1 Madison avenue, Manhattan, resigned on October 20 to engage in the wholesale business on his own account, with headquarters at 1 Madison avenue. Mr. Mershon has been identified with the lumber trade of the Metropolitan district and vicinity for so many years that he needs no introduction. He is a very able and popular lumberman, and, with the large acquaintance which he enjoys, his efforts should prove successful. He advises that he has already closed for very high class connection in both southern lumber and Pacific coast products, including all kinds of sash, doors, millwork, moulding, etc.

F. E. Longwell, the well-known lumber purchasing agent of the big National Casket Company, headquarters Oneida, N. Y., and large plants and lumber yards at principal points throughout the country, was in town during the past week, accompanied by his bride, preparatory to sailing on a honeymoon trip to the Isle of Pines, Cuba. Mr. Longwell was married October 6 at Kenwood, N. Y., to Miss Edith Snell, a charming young lady of that town. Upon their return Mr. and Mrs. Longwell will reside at Oneida.

The court has dismissed the petition in bankruptcy filed September 4 against Schwartz & Co., cabinet makers, 177 Price street, on a settlement of thirty-five cents on the dollar.

The corporate interests of the big West Virginia spruce interests at Cass, W. Va., selling agents for which are S. E. Slaymaker & Co. of this city, and in which S. E. Slaymaker is largely interested, will be absorbed on November 1 by its allied interest, the West Virginia Pulp & Paper Company, a \$20,000,000 corporation, and thereafter both operations will be conducted under the style of the West Virginia Pulp & Paper Company. This consolidation of corporate interests in no wise affects the operations of either company, as the lumbering and lumber sales department heretofore operated by the West Virginia Spruce Lumber Company will be continued as a lumber department of the West Virginia Pulp & Paper Company and will be under the personal management of Mr. Slaymaker.

Page Brothers, wholesale and commission lumber, 1170 Broadway, have been organized by Charles E. and Frank J. Page, principals in the late firm of C. E. Page & Co.

Stewart S. Mitchell, Jr., brother of S. A. Mitchell of White, Gratwick & Mitchell, Buffalo and Tonawanda, N. Y., has joined the office force of the Stevens-Eaton Company, 1 Madison avenue, New York. E. B. N. Golke, formerly of the selling staff of the Stevens-Eaton Company, has joined forces with William Schuette & Co., at the same address, and will represent them in the New York and New Jersey trade.

The executive committee of the National Wholesale Lumber Dealers' Association held an important meeting at the headquarters, 66 Broadway, on October 8, at which were present President George F. Craig of Philadelphia, Robert W. Higbie of New York, F. R. Babcock of Pittsburgh, F. E. Parker of Saginaw and A. L. Stone of Cleveland. The committee held an all-day session, going over the operations of the various departments, and everything is reported as in a most satisfactory state of affairs.

J. B. Ransom, head of J. B. Ransom & Co. and the Nashville Hardwood Flooring Company, accompanied by his wife and son, spent several days on a visit here, making their headquarters at the Holland House.

President R. M. Carrier and Secretary Lewis Doster of the Hardwood Manufacturers' Association of the United States were in town for several days last week at the headquarters of the association, 1 Madison avenue, busily engaged in association affairs. Both gentlemen spoke most optimistically of the general hardwood situation from current and prospective standpoints, and looked for a firm market for some time to come, which they are inclined to believe will be shared by low-grade as well as the high-grade hardwoods.

Other hardwood visitors of special interest were N. J. G. Van Keulen, Van Keulen & Wilkenson Lumber Company, Grand Rapids, Mich.; F. A. Kirby, sales manager of the Cherry River Room & Lumber Company, Scranton, Pa.; Charles H. Barnaby, Greencastle, Ind.; E. E. Goodlander, Goodlander-Robertson Lumber Company, Memphis, Tenn., and W. M. McCormick of Philadelphia, Pa.

Secretary George Wilson-Jones of the Retailers' Association of the State of New York, headquarters Utica, N. Y., was also a recent visitor in the interest of business.

Edward Hines, head of the Edward Hines Lumber Company, Chicago, was in town during the fortnight in the interest of business.

F. B. Southgate, chief inspector of the National Hardwood Lumber Association, has been spending considerable time in New York and vicinity during the past fortnight in the interest of association matters.

J. V. Stimson, the prominent hardwood lumberman of Huntingburg, Ind., devoted several days during the fortnight between this city and Philadelphia in the interests of business.

The services of John McClave as treasurer and a director of the McClave Lumber Company have been discontinued and he is not now identified with the firm in any official capacity. His withdrawal will not affect the corporation financially. In three years the company expects to celebrate its fiftieth anniversary and in beginning the last half of the century hopes to start in with the same enthusiasm, the same vigor that its predecessors did forty-seven years ago.

## BUFFALO

Angus McLean, who is the Canadian member of the McLean interest, is now shutting down those mills for the winter, having already closed the one at Cascapedia and will have the Bathurst mill laid up soon.

Lumbermen, and especially the hardwood members of the trade, have been very much occupied with the late exposition of the Manufacturers' Club, so that they were ready on call at any time to drop their own business to attend to that. The hard work has brought success, for it is said that the exposition has not only helped the city very much in a general way, but the profits are likely to amount to a matter of \$15,000.

The next question to settle is to fix on a site for next year's show. If the city does not build a suitable convention hall that will also answer for the exposition, the Manufacturers' Club will have to do it, for it will not answer to give up so good a thing. If the club does take the matter up there will be more work for the lumbermen members to do along that line.

Better prices in the woods handled by F. W. Vetter is the report from him, especial mention being made of maple and oak, though he is quite long on all the leading hardwoods this season.

With a yard full of hardwood lumber here and another in Memphis and two or three wood working mills in the city to look after, it is

certain that the members of the Buffalo Hardwood Lumber Company are quite busy this fall.

The end of the Buffalo exposition releases President Frank A. Beyer from a second hard strain he has borne as the head of the Manufacturers' Club, under the auspices of which it was given, and now he hardly knows whether he is a lumberman again or merely a citizen who is running for county treasurer.

I. N. Stewart may truthfully be said to have "done noble" as the chairman of the entertainment committee of the exposition. He sold some good lots of lumber at the same time.

Scatherd & Son are sure that there is reason for a better price and a larger movement in the lumber trade, for logs have gone up so high in the Southwest that it is not always easy to get a profit out of them.

There is activity in the dock yard of T. Sullivan & Co., as it is fall of the year and the plan is to put in a large lot of lake hardwoods. It is hard to find barges, for there is a big demand for them in other trades.

O. E. Yeager is looking to his mills south of the Ohio to turn out some extra stock this fall, some of which will be brought here to replace his sales, which have been decidedly good all through the fall so far.

President A. Miller of the Hardwood Exchange did not call the body together last week, and as the meeting the previous week was with the general exchange and the members were invited out by the Automobile Club on the week before that, the score is pretty clean this month so far.

Hugh McLean is always off on a two weeks' trip into the eastern hardwood market, but he is ably seconded at the home office while away, and the reports of the mills at Memphis and southward are favorable to good business. The Memphis mill is again running steadily.

The word from the Standard Hardwood Company is that business is all right and that there is all of the usual amount of good hardwood stock coming up from the Kentucky and Tennessee mills of the company to keep the yard well stocked.

It may be that some of the local lumber dealers are carrying a light stock into winter, but it is not G. Elias & Bro., for the report is that the yard is fully stocked with all sorts of the many varieties they have formerly carried.

## PHILADELPHIA

Emil Guenther, wholesale lumber dealer, reports business touching normal with prices strengthening. He spent a week recently at his mills in Bristol, Tenn.

Harry R. Humphreys of the Hardentine Lumber Company states that in spite of the relaxed activity during the summer the company has kept mills running and carried on an extensive export trade. Discarding all inferior lumber, it secured good prices.

Charles M. Betts of Charles M. Betts & Co. reports a magnified trading. He has great confidence in the future outlook.

A. W. Smenner, representative of the Fenwick Lumber Company, reports expanded business. Prices are stronger and the outlook inspires confidence.

The D. G. Courtney Company of Charleston, W. Va., with which Jerome H. Sheip, formerly of Sheip & Vandegrift, Inc., has recently become associated, and of which the Big Four Hardwood Company is an auxiliary company, is being incorporated for \$1,000,000 with surplus of \$420,000. It owns 30,000 acres of the finest poplar timber in West Virginia. The land also contains some of the finest veins of soft coal, oil and gas.

John P. Cline, individually and trading as the Cline Wagon Company of this city, was adjudged an involuntary bankrupt in the United States district court Oct. 4; referee, Theodore M. Etting.

It is reported that from \$300,000,000 to \$400,000,000 worth of railroad equipment is now in use in this country, which was idle in the dulllest period for railroad traffic last year.

The De Soto Lumber Company, Jersey City, N. J., was incorporated under New Jersey laws on Oct. 4 with a capital stock of \$50,000.

The Granville Lumber Company, Philadelphia, was recently chartered under Delaware laws with a capital of \$100,000.

The Beamer Handle Company, capitalized at \$25,000, is a new concern for Manor, Pa.

The United Furniture Company started business in South Bethlehem on Oct. 16 with a capital stock of \$50,000.

Willard S. Paden of the Northampton Emery Wheel Company, extensive manufacturers of emery wheels and emery wheel machinery, Leeds, Mass., says that some sections are a little slow in their recuperation from the effects of the panic, but the general tone is much improved and the company is getting substantial orders from the eastern and western fields. Indications are favorable for a normal activity in the near future. The Chicago office of this company is located at 100 South Clinton street.

Francis J. Snow of the Francis J. Snow Company, wholesale hardwoods, etc., Greenfield, Mass., maintains an easy tranquillity as to conditions, as some very desirable orders are being booked. The company is the most extensive handler of hardwoods in this section and its trade reputation is one to be proud of.

## PITTSBURG

E. H. Shreiner, local manager of the Goodwin Lumber Company, made a week-end trip to New York recently with good results. He says trade is coming up right along, the only difficulty being to get cars for his daily shipments.

The Pennsylvania State Forestry Commission last week bought 12,300 acres of forest land in Clinton, Cameron, Perry and Franklin counties at an average cost of \$150 per acre. This makes the total forest area of 940,000 acres now under the control of the state.

J. G. Criste, secretary of the Interior Lumber Company and also of the Pittsburg Wholesale Lumber Dealers' Association, is mourning the death of his four-year-old daughter Edna, who died recently from the effects of diphtheria.

The Railroad & Car Material Company is pushing right into the hardwood business with a vim under the direction of A. C. Schuyler, who recently assumed charge of its hardwood department. This concern has some of the very best connections out of Pittsburg and its members are thoroughgoing lumbermen in every sense of the word.

The Broadford Cooperage Company has been formed at Pittsburg by G. F. Kober, Jr., and F. W. Kober and H. T. Hollingshead of this city. It will manufacture both from wood, metal and pulp, and will have a plant near Pittsburg.

J. R. Wheeler & Co. are setting their stakes for selling 20,000,000 feet of lumber in 1910. Their box business is looking fine and Mr. Wheeler anticipates a very steady and rapid gain in business the rest of the year.

J. N. Woollett, who recently organized the Aberdeen Lumber Company, spent the first part of the month on a 4,000-mile trip down the Atlantic coast. He built up his fences all along the line in good shape and came back greatly enthused over the prospects for a good hardwood lumber business.

A. J. Diebold of the Forest Lumber Company has returned from a business trip to the East, as has also F. X. Diebold from a trip to the southern states.

The Ashtola plant of E. V. Babcock & Co. was slightly crippled last week by an accident to one of its main power engines. The company is running at full speed at that plant.

The West Virginia Lumber Company through

its manager, B. W. Cross, announces that business is picking up daily in oak bill stuff. This is wanted chiefly for the manufacturing trade, as the yards so far are not buying heavily.

The Germain Company announces some improvement in heavy timber business and a little tendency to get into the export trade again. The latter has been disappointing most of the year to date.

The Henderson Lumber Company is buying large quantities of lumber from the country mills to cover its trade with the coal and coke interests. Its business is decidedly satisfactory at present and Mr. Henderson believes that the coming six months will be a record-breaking period in this line.

The W. P. Craig Lumber Company reports increasing shipments, especially of spruce. Both merchant and box lumber are selling in larger quantities than a few months ago, and much better prices are being secured.

The H. V. Curll Lumber Company is very strong on the poplar market and bases its judgment on a frequent inspection of stocks at the West Virginia mills. Although poplar has been a rapid seller all the year, Mr. Curll believes that this winter it is going to be an exceptionally scarce article in the better grades, and he is keeping his connections well built up, in addition to putting forth all efforts for making a good cut at their own plant.

The L. L. Sattler Lumber Company is marketing a nice lot of lumber from its new hardwood operation near Blackstone, W. Va. Mr. Sattler says prices are getting "ripe" very rapidly.

J. L. Kendall, president of the Kendall Lumber Company, goes to Oregon this week for a six weeks' stay, to look over the timber and power interests of the Kendalls in that state. J. F. Henderson, secretary of the company, spent a week with the eastern trade recently. The Kendall concerns are sold ahead in many lines and could do more business if there were cars sufficient to take care of shipments from the large manufacturing points.

H. C. Bemis of Bemis & Vosburgh has just returned from the West Virginia plants and reports them all very busy. W. W. Wilson, Jr., of the same company, has been over in Ohio working the Buckeye trade. This firm notes a very fair tone in the market in all respects, with prices holding their own well.

The Buffalo, Rochester & Pittsburg Railroad Company, following the example of the Pennsylvania Railroad Company, is arranging to build a large creosoting plant at Cloe, Pa. Its agents have been instructed to buy all the ties they could get, and one contract for 10,000 was signed last week.

The largest white oak tree which has been cut in Trumbull county, Ohio, for more than fifty years, was delivered to the Helman Ship Timber Company in Warren, Ohio, recently. It was 62 feet long, 7 feet in diameter, and contained 7,560 feet of lumber, board measure. The tree was cut in Gustavus township and was sold for \$100. The Helman company will dress the stick down to 30 inches square and 62 feet long and then ship it to New York to be used as a dredge anchor.

J. B. Flint, president of the Flint, Erving & Stoner Lumber Company, says that the company shipped 260 cars of lumber in September. It is now drying a large amount of hardwood from its new operation in Dunlevie, W. Va., and will be ready to make shipments of this about December 1. By that time he anticipates that prices for hardwood will range quite a little higher than now. Mr. Flint last week made a flying trip to Canada and took in the world's series baseball games at Detroit on the way.

A very suggestive note of warning comes from J. B. Johnston, president of the American Lumber & Manufacturing Company, who says: "The demand for lumber is increasing and prospects are fine, but a very serious car shortage threatens within the next forty days. We are noticing

it very much in different spots and are advising all our customers to get their orders in early so that we can figure on splitting up the shipments and satisfying their needs. The Florala plant of the American is busy cutting yellow pine and there is now some activity at the hardwood operation at Paxton, Tenn."

Pittsburg wholesalers and retailers are considerably agitated over the question, "Who shall receive the rebates in freight ordered by the Interstate Commerce Commission from certain railroads?" The wholesaler naturally expects to get these rebates, which are going to amount to a large sum to Pittsburg firms. Lately, however, retailers have awakened to the fact that perhaps some of this money belonged to them, especially as some of them paid the freight direct, while others claim that they paid the freight in higher charges asked by the wholesalers for stock. The decision is being awaited with great interest and will mean hundreds of dollars to many firms.

## BOSTON

The Robbins Lumber Company, representing several hardwood lumber manufacturers, has removed its Boston office from 79 Milk street to the Broad Exchange building, 88 Broad street. Mr. Robbins sells the "Acorn" brand of oak flooring and reports a good demand. He has placed several very good contracts within a few weeks.

H. W. Blanchard of the Blanchard Lumber Company has been appointed a delegate to the Massachusetts State Board of Trade from the Massachusetts Wholesale Lumber Dealers' Association, of which he is president. Mr. Blanchard is also a member of the Boston Chamber of Commerce. This body has succeeded in interesting the Clyde line to establish direct sailing between Boston and Galveston, Texas. It is reported that this line of steamers will be started before long.

Charles M. Hamlin of Wistar, Underhill & Co. of Philadelphia, Pa., was a recent visitor in this market.

A representative of Hoar & Brown, timber, team and mahogany merchants, London, England, is visiting this country in the interests of his firm. He made a call upon the Boston trade about ten days ago.

William E. Litchfield of this city is an expert on hardwood lumber and has given a great deal of study to the various kinds of hardwoods and the growth of the same. He has always been willing to impart to others what it has taken him many years to learn. He recently gave a lecture on forestry at Braintree, Mass., using lantern slides to illustrate his talk.

Mr. Barclay, representing the William B. Morse Lumber Company of Rochester, N. Y., was a recent visitor in this market. Mr. Barclay reports business as improving.

The Tiffany & Pickett Company of Winchester, Conn., has been incorporated to deal in lumber and other building materials, with a capital stock of \$75,000. The incorporators are Dwight B. Tiffany and Frederick B. Pickett of Winsted and Alexander Plumley of Waterbury.

There has been a large gain in the building contracts awarded in New England since the first of January as compared with those of the same period last year. The gain this year is almost \$40,000,000.

The Metropolitan Chair Company is the style of a new corporation formed to do business in New Haven, Conn. C. F. Walker is president and H. S. Munhall is secretary and treasurer.

The C. H. Aunabie Lumber Company is now located in its new office at 41 Court street, Springfield, Mass. The company has large yards adjoining.

The Winchendon Bobbin Company, Winchendon, Mass., plans to materially increase its output. For a number of years the business has

been conducted in a part of the Wilder P. Clark Company's plant, which was recently purchased by William M. Whitney.

The Ellsworth Hardwood Company, Ellsworth, Me., is having a new storehouse erected. The business of this company is on the increase.

George H. Clark, manager of the A. F. Clark Lumber Company, Peabody, Mass., died recently. He leaves a son, who was associated with him in business, and a widow and two daughters.

From a preliminary description recently filed in the Office of Public Buildings, Worcester, Mass., it is learned that the new plant to be built at Greendale by Osgood Bradley & Sons will comprise six separate buildings, embracing a working floor space of approximately 175,000 square feet and which will eventually employ 1,000 skilled workmen. The six buildings will consist of an erecting or constructing shop, a paint shop, powerhouse, lumber kiln, lumber shed and a two-story office building. All but the lumber shed and office will be of steel and concrete construction. Steel frame passenger coaches, passenger coaches of wood, and trolley cars will be built in the new plant. Freight cars will not be built there.

## BALTIMORE

A big revival in the lumber business is reported from Cumberland, Md., concerning the operations of the Kendall Lumber Company at Crellin, Garrett county, Maryland. It is stated that this company during the months of July, August and September sent out not less than 712 cars of lumber from its mills. Counting each car as forty feet long, the shipments for the three months made a train five and two-fifths miles in length. Crellin is about ten miles from Oakland, Garrett county, and practically all the inhabitants of the town are employed by the Kendall company. A branch road connects Crellin with the Baltimore & Ohio main line at Hutton, Md., and there is a logging road which extends twelve miles back into the mountains.

The Croft Lumber Company, which takes its name from the last syllable of the name of Dr. Robert A. Ravenscroft of Garrett county, Maryland, and surveyor of the port of Baltimore, has opened its new lumber plant at Alexander, W. Va., and is now turning out large quantities of lumber there.

Secretary E. M. Terry of the National Lumber Exporters' Association, started last week on a tour of several weeks, to do some missionary work among members of the organization and make efforts to get new members. He went first to New York and Buffalo, and it was his purpose afterward to take in Cincinnati, Pittsburg, Chicago, St. Louis, Memphis, New Orleans, Mobile and other cities. Mr. Terry expects to be away about three weeks.

Among the visitors here in the past two weeks were Irvine Whaley of the Whaley-Warren Lumber Company, Bristol, Tenn.; F. D. Duffield of Beecher & Barr, Pottsville, Pa., and Oscar Babcock of E. V. Babcock & Co. of Pittsburg. The latter concern is one of the largest of its kind in the country, and handles all of the hardwoods, as well as some softwood. It makes a specialty of spruce. Mr. Babcock reported that business in his section of the country was improving and that not only the demand was better but that prices were moving up.

A similar report was made by Mr. Fassett, the representative of the George D. Emery Company of Chelsea, Mass., extensive dealers in mahogany. Mr. Fassett was here this week and called on some of the local dealers in mahogany, also placing several orders. He stated that business everywhere was picking up.

Information has been received by hardwood exporters here that John Cant of the Glasgow firm of Cant & Kemp will shortly come on a visit. Mr. Cant came over on the Caronia, landing in New York, and starting from there on a

trip of the lumber centers of the East. This is his first visit to the States. He is the son of Mr. Caut, the senior partner of the firm.

Kidd & Buckingham of this city have made an addition to their yard on South Sharp street, which gives them about twice as much room as they had before. The extension was needed to meet the wants of their increasing business.

J. B. Hart of the Pigeon River Lumber Company of Mt. Stirling, N. C., and president of the Tennessee & North Carolina railroad, with headquarters at Clarksburg, was a recent visitor in Baltimore. His company has an office in the Union Trust building.

John L. Alcock of John L. Alcock & Co. was in West Virginia this week looking after his inspectors and other connections.

David Baird, president of the Norva Land & Lumber Company and a large lumber dealer at Camden, N. J., was down at the mill for an inspection last week and found everything running smoothly. E. F. Burke of Wallacetown, Va., also connected with this company, has recently returned from an extended European tour.

### CHARLOTTE

Louisburg, N. C., is becoming quite an important lumber center. Figures just compiled for that town show that between September 1, 1908, and September 1, 1909, there were shipped from Louisburg 7,371,290 feet of lumber, cut in the sawmills of Franklin county, North Carolina. The freight paid on the lumber alone amounted to \$39,110. The wagon manufacturing plant at Louisburg is in a prosperous condition.

A new chair manufactory having \$125,000 capital has been chartered for Lenoir, N. C., known as the Moore-Stone Chair Company. Among the incorporators are T. J. Stone, J. C. Moore and others of Lenoir.

A new concern for High Point, N. C., which will manufacture novelties, piano and organ stools, etc., is the Southern Novelty Works Company. A. S. Caldwell, Jr., and others are the incorporators. The company is backed by ample capital to conduct a large business.

The Park Lumber Company of Roaring River, N. C., has been chartered to manufacture lumber, bobbins, spokes, etc. It has a capital stock of \$25,000.

Georgetown, S. C., already one of the most important lumber manufacturing centers in the South, home of the gigantic Atlantic Coast Lumber Corporation, is to have another large new lumber company. Charter has just been granted the Fairfield Lumber Company of Georgetown, with \$300,000 capital, to deal in timber and timber lands and manufacture lumber. Incorporators are H. L. Ellington, M. W. Pyatt and others.

The Laurel River Logging Company of Stackhouse, N. C., in Madison county, has been chartered with \$10,000 capital by Anson Betts and others.

The Giant Lumber Company's flume, which extends from North Wilkesboro, N. C., home of the company, up Reddies river for twenty miles, is now in working order. It has a capacity of 150 ordinary wagon loads per day, and a large amount of tan bark, telephone poles, lumber, etc., is being floated. There is a large wood-working plant at the mouth of the flume.

The plant of the Tomlinson Chair Manufacturing Company of High Point, N. C., has just been enlarged to double its capacity. C. F. Tomlinson, head of this concern, says his business is fifty per cent better than it was this time last year.

The J. H. Wearn Company of Charlotte, extensive dealers in builders' supplies and manufacturers of desks, etc., reports fine business at present. The Carolina Manufacturing Company of Charlotte, also large dealers in hardwood and other varieties of lumber, says its business is the best since the first of the year.

The Gatling Lumber Company, another concern of Charlotte, reports fine business. E. P. Gatling, secretary and treasurer of the concern, says: "The winter outlook for trade is fine. We are having all the orders we can handle from builders and contractors. I have been in the lumber business for fifteen years and conditions were never more favorable, in my opinion."

A new concern which has just commenced business with fine prospects is the Carolina Box Manufacturing Company of Charlotte, manufacturers of boxes, crates, shooks, cases, etc. H. E. Everhardt is manager of the company. He says that the business has started off so well that the company will build an addition to its plant at an early date.

The gunnig tight stove mill known as the Moore Lumber Company of Washington, N. C., was totally destroyed by fire a few days ago, entailing a loss estimated at \$10,000, with no insurance. The plant will be rebuilt at once on a larger scale. L. I. Moore is president of the company.

The \$10,000 breach of contract suit of John E. Patton of Asheville, N. C., against the Bailey Lumber Company of Mitchell county, North Carolina, which was in progress at the Asheville court for two weeks past, has just ended in a victory for the plaintiff. Mr. Patton was granted damages in the sum of \$2,948.48, with interest. The costs of the actions were taxed against the defendant.

W. M. Moore, expert on forestry, who has been detailed by the National government to make a forest survey of South Carolina, has just taken the field in Oconee county. He will be assisted in the work by Captain Miller of Commissioner Watson's office, who has had experience with the forestry business in the West. The counties of Oconee, Pickens, Greenville, Anderson, Spartanburg, Cherokee, Union and Laurens will be surveyed and then the forester will commence to work toward the coast. The survey is made with the view of securing certain data, the ultimate end to be the reforestation of the lands of the state.

### CLEVELAND

The Vermillion Lumber & Manufacturing Company of Cleveland has increased its capital stock from \$10,000 to \$35,000 on account of its rapidly increasing business.

The Simons Brothers Lumber Company is the name of the reorganized Simon Lumber Company, which is disposing of its stock preparatory to moving to a new location on West Fifty-third street near Walworth Run. Several new buildings are being erected for the accommodation of the company and the location promises to afford many facilities, the railroad trackage being especially convenient.

The call for mahogany for interior finish is reported quite active by the Martin Barriss Company, dealers in hardwoods. So promising is the outlook that the company is adding several drying kilns to take care of its rapidly increasing business. W. B. Martin, with his wife, took an automobile trip to Boston a few days ago.

J. J. Wemple, secretary and manager of the Ohio Sash & Door Company, has been elected president of the Wholesale Merchants' Board of the Chamber of Commerce. This board embraces nearly all the big wholesaling concerns of Cleveland and to become its head is a distinct honor. Mr. Wemple formerly occupied the position of vice-president. The board is considering a trade extension tour of the western states, taking two weeks' time, next spring. Cities between Chicago and Omaha would be visited in search of new fields to conquer. A number of the Cleveland wholesale lumber concerns are members of the board.

The Interstate Lumber Company is having a busy season in its regular hardwood lumber de-

partment and in its cedar pole section. Over fifty cars of poles have been sold to railroads and similar corporations during the past few weeks.

Walter Cook has joined the forces of the Robert H. Jenks Lumber Company and will cover the central Ohio district for the firm.

E. M. Carleton of the Mills-Carleton Company was married to Mrs. Anna Rouse on Oct. 12. They left immediately for a wedding tour in the East.

One of the visitors to the local market during the past week was S. E. Smith of the Tri-State Lumber Company of Uniontown, Pa. He reports trade active, with a good call for both high and low-grade hardwoods.

H. M. Loud, hardwood manufacturer of Au Sable, Mich., called on the local trade during the past week, as did also George D. Jackson, a lumber inspector of Bayfield, Mich.

The box business throughout this territory is said to be slowly picking up again, although dealers declare that the revival in their branch of the industry is not as rapid as in some of the others. It is believed that the winter trade will be much improved.

H. G. Irwin, salesman for the Erie Lumber Company of Erie, Pa., and C. M. Zengerle of Detroit, who is interested in the Georgian Bay Company, were visitors in Cleveland this week.

C. A. Krauss of the Lake Shore Saw Mill & Lumber Company took an auto trip to Buffalo during the past week. The trip going was very pleasant, but bad weather and a great deal of mud was encountered on the return.

The F. T. Peitch Company reports a good line of orders for hardwoods. The company recently received two cars of African and Mexican mahogany as the beginning of a large stock which will be carried by the concern.

F. D. Jenks of the Port Huron Lumber Company called upon the local trade during the past week.

John Wagner of the Central Lumber Company met with a bereavement during the past week when his father died at New Philadelphia, O. Two sons, John and P. J. Wagner, survive. The latter is a lumber dealer at Canal Dover, O.

At the art exhibit held in the Rose building during the past week one of the interesting exhibits was that of Philippine mahogany, used for interior finish. It was the exhibit of the Nicola, Stone & Myers Company, which deals extensively in this wood. There were also some fine displays of hardwood furniture from local arts and crafts shops.

### COLUMBUS

The next meeting of the Union Association of Lumber Dealers, which includes Ohio and Indiana and parts of Pennsylvania and Kentucky, will be held at the Southern hotel, Columbus, Ohio, the third Tuesday in January. The place and time were decided at a meeting of the executive committee held in Columbus recently. There are more than 600 members in the association, of which a majority always attends the annual meeting, and an especially large attendance is anticipated in Columbus because of the central location. Columbus members of the executive board are M. J. Bergin, Edward A. Hildreth and H. S. Adams. The program will be arranged at a later meeting of the committee.

R. L. Gilliam, secretary of sales for the W. M. Ritter Lumber Company, says: "Trade so far in October warrants the belief that the month will be a record breaker as far as orders are concerned. Orders are coming in well from every section of the country and there are now not many weak spots in the territory covered by us. Railroads are buying more lumber, and the same thing is true of factories of all kinds. Dealers are also stocking up better, contrary to the usual custom at this time of the year, when retailers prepare for the annual inventory. I believe

there will be advances in some lines, which are still too low when market conditions are taken into consideration."

F. Everson Powell of the Powell Lumber Company has returned from a two months' business and pleasure trip to the Northwest. He visited Vancouver, Portland, Seattle and other places in that section. He reports that fifty per cent of the mills in that section are idle.

The Columbus syndicate, headed by Charles L. Kurtz, which purchased a tract of 54,000 acres of timber land on the island of Vancouver, British Columbia, is making preparations for the erection of a large mill which will have a capacity of 100,000,000 feet annually. The tract was purchased from the Canadian Pacific Railroad Company and the sale is carrying out the policy of Sir Thomas Shaughnessy, president of the road, to part with all timber holdings to concerns which will develop them immediately.

The capital stock of the National Lumber Company of Hamilton, O., has been increased from \$150,000 to \$200,000.

Fred A. Wilson, a well-known traveling salesman, who was employed by the W. M. Ritter Lumber Company and later by the Domestic Lumber Company, has taken up new territory for the General Lumber Company of Columbus. He started October 11. The increased business of the concern made it necessary to increase the traveling force.

H. E. Smith of Benton, O., who makes a specialty of large oak timbers, was in Chicago recently taking orders. Ohio white oak is used for the heavy timbers which are used for heavy construction work and dredges.

Lumbermen in central Ohio are watching with great interest the outcome of the campaign started by the Ohio Shippers' Association and kindred organizations against the proposed intention of traffic managers of railroads to increase freight rates. It is claimed that the present rates on lumber are sufficiently high to net a nice income to the railroads. Figures have been collected showing the rate of net income per mile of the principal railroads.

H. W. Putnam, president of the General Lumber Company, reports a better demand for lumber, especially from manufacturing establishments. He has returned from a two weeks' business trip in Michigan and Canada, where he booked a number of orders. Mr. Putnam, being quite a baseball fan, attended several of the world's series games at Pittsburg. Recently he left to inspect the mills of the company on the Big Sandy river in Kentucky. Mr. Putnam reports an increasing demand for hardwoods from manufacturers and that the railroads are now buying in larger quantities.

The General Lumber Company is operating its large mill on the timber tract up the Big Sandy river in Kentucky. The company has also cut about 2,000,000 feet of logs along the banks of the Big Sandy, which will be floated down to the mill at Ashland, Ky., as soon as high waters come. Then the mill at that place will be started.

The George W. Worch Lumber Company of Sidney, Ohio, has been succeeded by the William Klipstein Lumber Company, recently incorporated under Ohio laws.

Reports from Ohio, western Pennsylvania and West Virginia for the week ending October 13 show that contracts awarded amounted to \$1,032,000, as compared with \$1,388,000 during the corresponding week in 1908 and \$1,352,000 in 1907. Since January 1 contracts awarded amounted to \$78,487,000, as compared with \$57,518,000 in 1908 and \$61,876,000 in 1907.

M. J. Bergin, head of the lumber company bearing his name, reports slow trade in retail circles. He looks for a pretty quiet winter but considerable activity in the spring.

J. E. Cummins of the Columbus Sawmill Company says the demand for hardwoods is much better both in this country and in Europe. The company does considerable export business, espe-

cially in walnut. Hamburg, Germany, is taking considerable walnut at present.

Kenneth McLeod, president of the American Hardwood Company, because of a press of business was not able to leave for England the early part of October, as he had planned. Instead, he will sail about the first week in November for London and Liverpool.

A. C. Davis of the A. C. Davis Lumber Company reports a falling off in demand in retail circles and steady business in the jobbing trade. He looks for continued improvement in conditions from this time on.

C. E. McLaughlin, general manager of the McLaughlin-Hoffman Lumber Company, reports a better demand for hardwoods. Prices, he says, are steady.

Sherwood D. Morgan of the Kile & Morgan Company returned recently from a business trip to Cleveland, where he found trade conditions favorable.

George B. Jobson, secretary of the A. C. Davis Lumber Company, who has been in the South for several weeks buying lumber, returned recently to Columbus.

## CINCINNATI

The meeting of the Ohio Valley Improvement Association, which is pushing the nine-foot stage of water in the Ohio river from Pittsburg to Cairo, will be held here at the Sinton hotel Oct. 14 and 15. About 200 delegates are expected and every lumberman is interested in this matter, for it will be a big help to the lumber industry here to have a stage of water of this kind.

W. P. Hilton of the Peter Kuntz-Hilton Lumber Company called on his trade here recently and as usual booked some nice business.

Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, left for New York Oct. 11.

A delegation of the Cincinnati furniture manufacturers recently spent a pleasant day at Carrollton, Ky., as the guests of the Carrollton Furniture Company, operated by the Shuerman Brothers, inspecting their new plant. While the party was there a shipment was made of a Louis XV suit to Juarez, Mexico, that will be for the special use of President Diaz during his stay in that city when he meets President Taft. The party was treated to a Kentucky dinner at the home of Henry Shuerman and entertained at the Commercial Club.

King & Trimble, wholesalers of cypress lumber, report business coming along nicely.

L. G. Banning, wholesale hardwood lumber, says that business is good and improving slowly all the time.

The Freiberg Lumber Company is getting its share of trade and reports business "looking up." This company is a manufacturer and wholesaler of mahogany, hardwood lumber and veneers.

The Farrin-Korn Lumber Company has no complaint to make. Its business is fully up to the average, with prospects good.

Bennett & Witte report trading good in every line.

William Hubbell Fisher, a well-known patent attorney, died a few days ago at the age of sixty-six years. Mr. Fisher was an expert on forestry and made this his life's study. He once addressed the Cincinnati Lumbermen's Club on the subject.

The Tyler Box Company suffered a slight loss by fire recently. The fire was discovered in the shaving chute in time to prevent the destruction of the plant.

The Graham Lumber Company has no fault to find with trade. Its business is increasing continually.

James A. McEntee, agent for the J. M. Card Lumber Company of Chattanooga, Tenn., says that business with his concern is fully up to normal.

The Cincinnati River Poplar Company was recently adjudged bankrupt. G. A. Roy was appointed receiver. The concern has timber land and large lumber plants in this county and other points in this section, estimated to be worth about \$250,000. The receivership was asked for by creditors.

The Ferd Brenner Lumber Company says business is good and the outlook points to a good fall trading.

E. V. Babcock & Co. are getting their share of business. They say that trade is up to the average with prospects favorable.

Dulmeier Brothers report a steady growth in trading the past two weeks.

The Sterritt Lumber Company has recently enlarged its business, incorporating the same with a capital stock of \$10,000.

Information has reached Cincinnati from the outside of the formation of the Independent Tie & Lumber Company, whose headquarters will be at Cincinnati. No one seems to know who this concern is, although there is an impression in some quarters that it is a new name for Ben Ryan, who made several very disastrous failures, as far as his creditors are concerned, in the past few years. It will be well for any one receiving orders from this concern to investigate carefully.

I. M. Asher has withdrawn from the Middle West Tie & Lumber Company to go in business on his own account in the name of the Asher Lumber Company.

Vice-President W. J. Eckman and W. H. Ames of the M. B. Farrin Lumber Company, with C. F. Korn, president of the Farrin-Korn Lumber Company, were in Chicago recently. They attended a meeting of the Oak Flooring Association held there.

J. H. P. Smith, president of the Hardwood Lumber Company, recently left for a business trip to Chicago.

J. J. Linehan of the Linehan Lumber Company of Pittsburg called on the trade a few days ago.

The Ault & Jackson Company reports business good in every line and prospects favorable.

The Kentucky Lumber Company has no fault to find with business conditions which, it reports, are improving daily.

Mr. Blodgett, a wealthy capitalist of Grand Rapids, Mich., who is largely interested in southern timber investments, was a recent visitor here.

## TOLEDO

Toledo hardwood dealers are beginning to feel the effect of the car shortage, and while it has not worked any great inconvenience yet and has been noticeable only in the delaying of shipments beyond the normal time required, it is expected that the situation will tighten up considerably. Farmers are just beginning to unload their crops in earnest, and about all available equipment has already been pressed into service.

The Ellsworth Manufacturing Company has been incorporated at Toledo by L. D. Gottshall, J. W. Gottshall, A. J. Frazier, J. W. Goodyear and E. R. Ellsworth. The concern has an authorized capital stock of \$25,000 and will engage in the manufacture of wood and metal furniture. It has leased a plant of the Lake Shore road and will begin operations in the near future. E. R. Ellsworth will be president of the concern.

The Federal Cresositing Company has purchased eighteen acres more land, making a total of about seventy-five acres comprising its site for the new Toledo plant. The company now has more than a mile and a quarter of railway frontage, which is more than that claimed by any other industrial concern in Toledo. Splendid progress is being made in the construction of the new plant and it is expected to have it in operation by January 1.

## INDIANAPOLIS

With prices advancing and the largest demand of any time during the year, local hardwood interests are well satisfied with the present situation. The outlook for the winter trade is unusually bright. For the first time in almost two years some of the local hardwood plants are now working night forces in an effort to catch up with orders of the last two or three weeks. The demand for all grades of oak is heavy and there is considerable improvement in mahogany.

J. H. Lang has returned from a business trip to Chicago.

A voluntary petition in bankruptcy has been filed in the Federal Court here by Edward R. Richmond of Seymour.

C. H. Comstock, vice-president and manager of the Interior Hardwood Company, is making an extended business trip through the Southwest. The company reports a nice business and the plant is running full time.

W. A. York of the Mahogany Interior Trim Company has just returned from Houston Texas, where he superintended a large contract for a twelve-story office building.

The Central Veneer Company has been granted a switch connection with the belt railroad across Winter avenue to its plant on Keystone avenue by the board of public works. An ordinance ratifying the contract is pending in the city council.

Owing to increased business, the Talge Mahogany Company is working a night shift. The company has recently established a lunch room in the plant for the accommodation of its employees and officers.

Local hardwood manufacturers and woodworking plants report they are having great difficulty in getting sufficient workmen. The manager of one of the largest of the local plants predicts that the situation will become even more serious next year owing to renewed activities in all industrial lines.

The Mahogany Interior Trim Company is working on large contracts for the new government building at Atlanta, Ga., and on a contract for a twelve-story office building at Youngstown, O. The company is running its plant night and day at the present time.

## EVANSVILLE

Bedna Young of Young & Cutsinger left this week on a business trip to Indianapolis and other points.

The Schelosky Table Company will begin operations in its new building at First avenue and the Belt railroad this week. The new building is three times as large as the old one. In the past only extension tables were manufactured, but in the future a general line of tables and complete dining room outfits will be made. The company will employ about sixty or seventy men.

The large mill of the Helfrich Lumber & Manufacturing Company closed down temporarily this week. It has a large supply of timber on hand and will start up again soon.

F. M. Cutsinger of Young & Cutsinger and Claude Maley of Maley & Wertz returned this week from Lexington, Ky., where they were attending the races.

The mill of the Brown Milling Company and the yard of the J. A. McHaley Lumber Company at Spencer, Ind., were destroyed recently; loss \$25,000, with insurance on mill of \$2,500 and on lumber \$4,400.

W. A. Guthrie, receiver for the Standard Veneer Company of Indianapolis, Ind., has sold the company's property to the Gemmer Lumber Company, in which J. Frank Hanly, former governor, is interested, for \$4,850.

Luther D. Morgan, a lumberman of Owensboro, recently filed a petition in bankruptcy in

the United States court. His liabilities are \$2,046.50 and his assets are listed at \$1,233, excluding \$385 which he claims as exempt.

The Blount Plow Works of this city are making plans for a new factory to be several times as large as the present one. It will be built on a ten-acre tract which was acquired recently.

Thompson, Thayer & McCowen have started their Fort Smith (Ark.) plant running, after a shutdown of some time. They are also operating their local plant at night to take care of increasing business.

The Coquillard Wagon Works of Henderson, Ky., have made an assignment to the Ohio Valley Banking & Trust Company and James E. Rankin. The company was capitalized in 1902 at \$200,000. The president of the company stated that the company owed no accounts other than current monthly bills. He stated further that the terms upon which wagons were sold by competitors were such that it required more capital than could profitably be employed.

## MEMPHIS

One of the large operators in this market is authority for the statement that during the past two or three weeks there have been sales of between 5,000,000 and 6,000,000 feet of low-grade cottonwood and gum by manufacturers in the Memphis district. He points out that prices were not what sellers could have wished but that they represented some advance over the figures at which this class of lumber sold earlier in the year. The heads of several of the larger firms here state that they are doing more business than for the past two years, and two of them declare that they are enjoying the largest trade in their history. One company, which is not among the biggest ones here, reports that during the first ten days of October it shipped about 1,000,000 feet of hardwood lumber, and a partner in a big Arkansas firm states that in the past six weeks he has booked orders for ninety-five cars. Some idea of how good his business is may be judged from the fact that he cannot ship more than thirty to forty cars in a month. It is also notable that practically all of the lumber he has sold is for shipment to Europe, consisting mainly of plain and quartered oak and ash. The railroads report a large increase in the volume of lumber traffic they are handling throughout the Memphis territory.

J. W. Hale of Hale & Keiser, with headquarters in the Tennessee Trust building, reports that both of the mills of the company are running on full time and the demand for hardwood lumber is steadily increasing. Mr. Hale states, however, that the mill of the Shreveport Cottonwood Company, in which he is interested, has been forced to close down on account of the low water, which has made it impossible for the company to bring in its timber.

L. W. Ford of the Goodlander-Robertson Lumber Company, says that business is very satisfactory with his firm. Mr. Goodlander has just returned from an extended business trip to the northern and eastern markets and has brought back with him a nice lot of orders. Mr. Ford calls particular attention to the improvement in the demand for ash.

Mr. Wright of the Wright-Bachman Lumber Company, Portland, Ark., was in Memphis recently and stated that his firm was doing a very satisfactory volume of business at good prices. He also reported that the Bliss-Cook Oak Company, Blissville, Ark., which was closed down a short time ago, had resumed operations. He states, however, that there are some mills in that section which are out of operation for the present.

W. H. Russe of Russe & Burgess, Inc., says that there is a satisfactory demand and conditions are gradually approaching normal again. He states that his firm has had about as good a business this year as at any time in its history.

Mr. Russe has recently given the greater portion of his time to the collection of money with which to defray the expenses of the entertainment for President Taft and his party, who will be here for a few hours October 27 en route to New Orleans. Some idea of what he has had to do may be gained from the statement that \$10,000 will be required for this purpose.

J. W. McClure of the Bellgrade Lumber Company, Belzoni, Miss., states that the outlook is very good. This firm reports that it is finding a good demand for both domestic and export lumber, about twenty-five per cent of their shipments going abroad.

C. R. Ransom of the Gayoso Lumber Company left Memphis this week for a selling trip. He will include New York and other eastern markets in his itinerary. This company has been doing a splendid business during the past few months and reports record-breaking shipments since October 1.

The Anderson-Tully Company has not resumed operations at both of its box factories here, but it has increased the operating time of one of them to twelve hours daily. Another firm engaged in the same line here is also working on fuller schedule. There is some improvement in the box business, which accounts for the increased activity at the box factories.

It may also be noted in this connection that the box factory of the Lamb-Fish Lumber Company, Chauncey, Miss., has resumed operations within the past fortnight. The bender plant at Charleston is working on full time and the band mills of the company at both points will probably begin operations again within the next three weeks.

The big mill of McPherson Brothers, near Lambert, Miss., has recently resumed operations, and dispatches from that point indicate that all the mills in that territory which were closed down during the financial depression are now working on full time and are finding business good enough to justify this course.

The car shops of the Louisville & Nashville Railroad Company, Decatur, Ala., have started on the order for 1,100 box cars booked some time ago, and there is so much increase in the amount of rush order business at the plant that it is estimated that it will require at least a year to complete this order. The shops have also booked an order for 200 cars to be used exclusively for the shipment of automobiles, and this is to be undertaken at an early date.

Dispatches just received here state that the Seaboard Air Line has placed an order within the past two days for 1,000 box cars, and some of the other roads in the South are finding it necessary to increase their equipment. In fact, the list of idle cars has been exhausted and there is so much increase in the volume of traffic that new rolling stock is absolutely necessary.

Lumber interests here report that they are not having any difficulty in getting all the cars they want in Memphis or in the greater portion of Mississippi, but conditions are quite the reverse in Arkansas, where the congestion of freight has become such that the railroads are meeting with much difficulty in filling the needs of lumber shippers. As usual, they are making the lot of the lumberman hard by giving instructions to those who control the placing of cars to take care of cotton shippers first. The railroads do not seem to be able to get over the fact that Memphis and the Memphis territory have long since ceased to be purely a cotton city and section any more than the banks, and discrimination in favor of cottonmen and against the lumberman is just as pronounced as ever.

The Meto Valley Railroad Company, which runs out of Lonoke, Ark., has been completed and placed in operation for a distance of seven miles out of that town and is now being used for the development of the large timber resources along that line. The Estabrook Lumber Company, W. J. Miller and others have exten-

sive timber holdings in the section traversed by the road. It is probable that it will be extended to Humphries, where connection will be made with the St. Louis Southwestern.

The Great Southern Automobile Company has been granted a charter under the laws of Alabama. It is capitalized at \$100,000, all paid in, and will have its headquarters at Birmingham. It will engage in the manufacture of automobiles, specifications for which will be adopted at an early date. It will also maintain a complete repair department. E. F. Enslen is president. Ike Adler is vice-president and E. F. Enslen, Jr., is general manager. This is the first automobile plant to be erected in the central South.

J. W. Brown, Junction City, Ark., and A. E. Silvertown, St. Louis, Mo., have purchased the controlling interest in the Interstate Lumber Company, with headquarters at Columbus, Miss. The former will assume control of the management of the big plant, which is located at Columbus. The purchasers also have acquired control of the railroad the corporation had under construction from Steens, Miss., to Winfield, La., and there is some probability that the latter will be built into Columbus, thus giving that town another independent railroad. Connection will be made at Winfield with the Frisco System. This is one of the larger transactions in lumber circles south within the past few months, more than \$500,000 being involved. A. E. Silvertown has extensive holdings of pine and hardwood timber lands in Arkansas and Mississippi, owning a big mill at Ellisville, Miss.

Deeds have been recorded at Brookhaven, Miss., showing the sale of the entire holdings of the Pearl River Lumber Company, Brookhaven, to Frank L. Adams, Cadersport, Pa., for a consideration of \$750,000. It is shown that \$100,000 was paid in cash and that notes have been given for the remainder, secured by trust deeds on the property transferred. Although this deal was consummated in July, the records have been filed only within the past fortnight. Included in the purchase are 3,597 acres of timber lands lying in the Pearl river valley. The Pearl River Lumber Company was formerly included in the Goodyear syndicate, and no reason whatever is given for the sale of its holdings by the company.

John H. Watkins, formerly a prominent banker here, but now a handler of securities in New York, has, together with southern associates, purchased the Dyersburg Northern railway, which runs from Dyersburg, Dyer county, to Tiptonville, Lake county, western Tennessee, a distance of about thirty miles. The price paid was \$316,000 and the new owners have announced their intention not only of extending the road to Hickman, Ky., a distance of about fifty miles, but also of greatly increasing the rolling stock on the present line and materially improving the roadbed. The line runs through a splendid timber section, some of the property being owned by lumbermen of Memphis. The latter are much pleased with the prospect of decided improvement in the service afforded by this line.

A new wholesale hardwood and yellow pine firm has opened offices in the Scimitar building under the name of D. C. Furniss & Co. I. L. Fenimore, a prominent lumberman of north Mississippi, and D. C. Furniss, formerly with the Wabash Screen Door Company of this city, are the owners of the new company.

Mr. Krebs of the Krebs-Scheve Lumber Company, with headquarters at St. Louis, has been spending a few days in Memphis recently.

John T. Latham of the Monarch Lumber Company, Philadelphia, is another northern lumberman spending a few days at Memphis.

Ernest Louis Max, Marseilles, France, was here during the past week. He is engaged in the lumber brokerage business and while he reports some improvement in business conditions in France he does not give a very glowing account of the hardwood lumber outlook, declaring that there is a tendency to substitute something

else for hardwoods at the prevailing price of the latter.

W. A. Gilchrist of the Three States Lumber Company is back in Memphis after a somewhat extended absence from this city.

Much regret is expressed in lumber circles here over the recent death of W. W. Cargill, owner of the Sawyer & Austin Lumber Company, Pine Bluff, Ark. His home was at Racine, Wis., but he had very extensive lumber interests in the South, principally at Pine Bluff. He was quite an important factor in the development of the section tributary to that town, having, in addition to the purchase of large quantities of timber land and the establishment of the big Sawyer & Austin plant, built the logging road from Pine Bluff to Benton, which was afterward sold to the Missouri Pacific System for \$1,000,000 and which now forms a part of the Pine Bluff & Western.

The Anderson-Tully Company and the Jorgensen-Bennett Company, both of which recently suffered loss by fire to the extent of \$10,000 to \$20,000, fully covered by insurance, have set about repairing the damage. One of the sheds of the Anderson-Tully Company stored with dry lumber was completely burned, while the plant of the Jorgensen-Bennett Company was materially damaged.

J. W. Dickson of J. W. Dickson & Co. is congratulating himself and associates on the splendid work done by the fire department a short time ago, when what threatened to be a very serious conflagration at its yards in East Memphis was gotten under control before damage exceeding \$4,000 was done. Mr. Dickson has had some very trying experiences with fire during the past few years, having lost his mill in East Memphis within the past twelve months. Since that time the company has had its mill site at Edmondson, Ark., operating only its yards in East Memphis.

## BRISTOL

The outlook in the lumber market in this section is still bright. There is a continued steady advance in price and demand. Stocks, generally are moving well, while the market is characterized by a better demand for the lower grades. Most of the mills are running and will get in as much time as possible during the winter, in view of the improved and rapidly improving conditions of the trade. There is a serious fear of the car shortage soon among the lumbermen and other shippers in this district, but they have resolved not to climb the hill until they get to it. The railroads have impressed all of their cars into service in the past few weeks.

C. L. Matthews of Corry, Pa., special traveling salesman for the Climax Manufacturing Company, was in Bristol this week and received some nice orders, including an order for a Climax locomotive from the Rockcastle Lumber Company, which recently started its new band mill at Meek, Ky. Some important purchases of machinery have recently been made by lumbermen here.

W. G. McCain of the Peter-McCain Lumber Company has returned from a trip in the mountains, where he was looking over some timber boundaries his company contemplates purchasing. Mr. McCain is also at the head of the firm of W. G. McCain & Sons, which is operating a band mill at Nera, Johnson county, Tennessee.

Joseph Dunwoody of Fleck & Dunwoody, Philadelphia, was among the buyers in the Bristol hardwood market this week and brought news of further and more rapid improvement in the condition of trade in the East. The new firm of Fleck & Dunwoody has just been formed and is composed of Paul W. Fleck, for years in business in Bristol, and Mr. Dunwoody.

The Consuaga Lumber Company is going forward rapidly with its operations at Consuaga,

Polk county, Tennessee. The Pendergrast Lumber Company of Marion, O., started a band mill at Duckton, near the Consuaga property, this week.

L. F. Jackson of Honaker, Va., has gone to Lindsides, W. Va., where he has started a new mill.

Lee McChesney, the well-known Bristol lumberman, returned this week from Mississippi, where he has purchased additional lumber interests.

Among the hardwood buyers on the Bristol market last week was W. E. Douglas of the Crosby & Beckley Lumber Company of New Haven, Conn. This company has done an extensive business in this section for several years.

C. W. Wallis of the J. R. Dronney Lumber Company of Olean, N. Y., came to Bristol this week to pay a brief visit to the local lumbermen. He left for Erwin, Tenn., to look after timber interests in that section.

L. J. Bailes of White, Frost & White, well-known hardwood dealers of North Tonawanda, N. Y., was a visitor on the Bristol market last week and left some orders.

Work is going forward on the three new band mills being erected at Honaker, Russell county, Virginia, by the Honaker Lumber Company for the development of a large area of timber land it has acquired in that section. It is expected that the mills will be ready for operation not later than March 1, 1910.

W. W. Pruitt, superintendent of the Wood Lumber Company of Carter, Tenn., and Miss Ida Belle Slimp, a daughter of the late Capt. Fredrick Slimp, were married in Bristol this week and left for New York and Boston for a three weeks' honeymoon.

A. G. House will erect a new mill at Weldon, N. C., for the development of a tract of hardwood timber in that section.

"Business is improving right along," said B. B. Burns of the Rockcastle Lumber Company and allied concerns of this city. He thinks that the improvement will continue through the winter.

F. C. Knight of the Tug River Lumber Company is back from a trip to points in Kentucky, where he has been looking after mills.

W. S. Whiting of the Whiting Manufacturing Company was a recent visitor in Bristol, on his way to Abingdon, Va., to look over his company's property at that place.

The Carolina, Clinchfield & Ohio railroad, the new trunk line from eastern Kentucky to southwest Virginia to the south Atlantic seaboard, in which W. M. Ritter of the W. M. Ritter Lumber Company of Columbus, O., is interested, will be completed to Spartansburg, S. C., a distance of 225 miles, on October 29. The last spike will be driven on that day and a special train will immediately be run into Spartansburg bearing officials who go to attend a celebration in the form of a barbecue, given on the occasion of the completion of the important line to that city.

Lumber corporations of other states, which formerly did business in Tennessee and have retired, but still own stumpage, are protesting against the action of the officials of that state in compelling them to pay taxes just the same as if they were doing business. This also applies to concerns proposing to enter the lumber business in Tennessee which buy timber and have their charters recorded but which have not yet started to work.

R. L. Wilson of New York was a visitor on the local market this week.

## LOUISVILLE

The Louisville Hardwood Club is getting ready to celebrate an important anniversary, namely, the first birthday of that organization. It will be observed about the middle of November and

will be accompanied by the annual election of officers. Right now it looks as if A. E. Norman of the Norman Lumber Company, who has made an efficient head of the club since its inception, will be re-elected, though he says that he is not hankering for the job and will hold on only if the members of the club desire it. T. M. Brown of W. P. Brown & Sons Lumber Company has been spoken of prominently, because Mark happens to be one of the shrewdest diplomats and one of the most hustling lumbermen in this part of the country. But Mr. Brown said nay when the suggestion was first broached to him and declared that he wants to remain a private in the ranks.

The Board of Trade of Louisville through its transportation committee is preparing to take up the matter of an advance in railroad rates which according to the newspapers is being considered by the railroads. Members of the Hardwood Club heard that this was proposed some time ago and have consequently been on the alert, as it is believed that any advance would affect lumber. Several hardwood men are on the Board of Trade committee and will be able to speak for hardwood interests when the committee meets to discuss the situation. It is hoped that the railroads will decide that the time is not propitious for any advance.

Official information received by the Hardwood Club from the railroads has been that the protest of the club regarding rates from Louisville into northern Illinois and Michigan has been sustained and that a reduction in the rates will be made. The reduction has not yet gone into effect, but the hardwood men have been assured by representatives of the roads affected that they will be put on an even footing with other Ohio river gateways. This action is not only a big victory for the Hardwood Club, but means much to the city. The transportation committee of the club deserves much credit for the hard work it did in putting the matter squarely before the railroads.

A. E. Norman of the Norman Lumber Company said that business is fair but there is no rush.

T. M. Brown of W. P. Brown & Sons Lumber Company has returned from Detroit, where he witnessed the defeat of the Tigers by Pittsburg. Mr. Brown is a dyed-in-the-wool baseball fan and rooted hard for Clarke's men to win. He saw the opening games in Pittsburg. He was one of the men responsible for the victory of Louisville in the American Association. He said that business is fine and prices are about steady. Nearly all kinds and grades are now moving. His company has been buying freely of late and recently secured a big block of poplar from a Nashville man. It looks for a rising market.

The Ohio River Sawmill Company, of which John F. Smith is the local manager, is taking a great deal of interest in the Hardwood Club, which it recently joined, at the same time becoming a member of the National association. H. A. McCowen, the head of the company, was in the city recently to attend a meeting of the club. He has been in the East on business recently. Mr. Smith said that business is good, with prices steady, and that a lot of lumber is being gotten in from the South.

A big sewer being built by the Louisville Sewer Commission as part of the \$4,000,000 system now in course of construction is being run through the yards of both the Ohio River Sawmill Company and C. C. Mengel & Bro. Company. It has a big trench, wide and deep, and a lot of machinery and men. The work is not interfering with the handling of lumber, however.

C. R. Mengel, president of C. C. Mengel & Bro. Company, is in Grand Rapids and Chicago, where the company has a branch house. J. C. Wickliffe, secretary, has been in Nashville on business. The company has just chartered another boat to bring a 1,000,000-foot cargo of mahogany logs from Africa. It will probably get back in December. The Mengel company has

announced its thirty-second anniversary by sending out cards to its trade. It began business in 1877 and has been at it steadily ever since. Post cards showing the cargoes of mahogany imported by the company have also been issued. C. W. Clinch, who represents the Mengels in Axim, Africa, was in town recently. He lives in Michigan and is home on a vacation. Reports from New York have referred to trouble which mahogany importers have been having getting their logs in Africa on account of the natives becoming fractious. Officials of the Mengel company report, however, that they have had no difficulties of this nature.

One of the most interesting social events of the year in Louisville was the wedding of Miss Julia Morsel Mengel, daughter of Col. C. C. Mengel, and Dr. Culbert Thompson, which occurred October 12 at high noon at St. Andrew's Episcopal church. After a breakfast at the home of Mr. and Mrs. C. C. Mengel, Dr. and Mrs. Thompson left on their wedding trip. They will be at home in their apartment in the Weissinger-Gaulbert after November 15.

The Louisville Point Lumber Company is having a good business, and H. J. Gates said that a trip through the North and East produced good results. The makers of automobiles have been buying steadily right along, he said, and their business is holding up well. The company is contemplating the erection of a planing mill, as it handles a lot of lumber that has to be dressed, and which now requires the services of local planing mills. Prices on the higher grades have advanced somewhat.

Claude Sears of Edward L. Davis Lumber Company has returned from Chicago. Mr. Sears' father, who lives in Indianapolis, was seriously ill a short time ago, and Mr. Sears went to see him. He has improved considerably since then. Mr. Davis reports business good, and the company's mill turning out a large quantity of lumber. All the local hardwood men are looking after production now as much as sales, because they believe that the selling end will take care of itself in a few months.

A feature suggested by some of the members of the Hardwood Club in connection with the annual convention of the National Hardwood Lumber Association, which will be held in Louisville next year, is a trip around the city, taking in all the hardwood plants. The belt line which circles Louisville touches practically all the yards, and it is believed that arrangements can be made for this. It is thought that the trip would be of general interest to the visitors. Automobile rides and other entertainment features have also been broached informally at club meetings.

Though the Robinson Hardwood Company has not yet filed articles of incorporation, it has practically completed its organization, which is as follows: C. W. Robinson, New Orleans, president; R. G. Robinson, New Orleans, secretary, and C. H. Stotz, Louisville, treasurer. Mr. Stotz, who was formerly the manager of the Louisville Hardwood Company, is in active charge of the business, having established his offices in the Keller building here. He recently said that the company will incorporate with a capital stock of \$25,000. The hardwood business will be done on a mills-to-consumer basis, and no local yard will be established. In addition to hardwoods, the company will handle the output of C. W. Robinson's three yellow pine mills and a cypress mill in Louisiana, and Mr. Stotz said that business along these lines is already developing satisfactorily. Orders are already booked from customers in Connecticut and on the Pacific coast.

The rotary cut veneer men held an important meeting recently at the Seelbach for the purpose of discussing prices. Owing to the general belief that the price of timber is going up while its quality is going down, thus making the cost of producing veneers higher, the meeting went on record in favor of higher prices, and the opinion was expressed that a new schedule, to

cover all branches of the veneer trade, will be put before the national meeting in December and adopted. P. B. Raymond of Adams & Raymond, Indianapolis, acted as chairman of the meeting, and Howard S. Young, assistant secretary of the National body, was secretary. D. E. Kline of the Louisville Veneer Mills and J. C. Wickliffe of C. C. Mengel & Bro. Company were Louisville veneer men who were present. Mr. Kline also attended a recent meeting in St. Louis, where the gum men from Tennessee, Arkansas and the Ohio valley got together. The feeling at that meeting, Mr. Kline said, was also that the veneer men are selling too low. Another meeting of the gum cutters is scheduled for Memphis next month. S. B. Anderson of the Anderson-Tully Company of Memphis presided at the St. Louis meeting.

George Kretschmer of the Southern Veneer Company said that the mill is being kept busy all the time. The furniture and piano manufacturers are buying in large volume and prices are steady.

Business is picking up, according to Treasurer Geiger of the Kentucky Veneer Company. There is considerable improvement in the piano trade, these manufacturers having just begun to buy in their old volume. Prices are still not what they ought to be, he said. H. M. McCracken of the company has been slightly ill, but is now considerably improved.

Many lumbermen attended the annual convention of the Ohio Valley Improvement Association at Cincinnati October 13 and 14. "A nine-foot stage from Pittsburg to Cairo" was the slogan of the meeting. C. C. Mengel, D. E. Kline and Frank J. Fulton of the Kentucky State Company were among those present at the meeting. River improvement talk has started people in southern Kentucky, through which the Cumberland river flows, to working for the improvement of that stream, and many of them will attend the convention of the Cumberland River Improvement Association in Nashville November 12. If it were improved the lumber business in that part of the state would be greatly benefited, since railroad transportation facilities are very meager.

The Coquillard Wagon Works at Henderson, which is a heavy consumer of hardwood lumber, has assigned to the Ohio Valley Banking & Trust Company and its president, James E. Rankin. It is capitalized at \$200,000. Its bonded indebtedness was a load that it could not finance.

A syndicate of eastern capitalists, headed by M. J. Purkhurst of New Haven, Conn., has purchased a basket plant at Paducah and will operate it with 500 employees.

## ASHLAND

W. H. Dawkins Lumber Company is receiving a larger number of orders and inquiries than at any time during the past two years. It advises prices materially advanced within thirty days and that more orders for firsts and seconds and panel stock have been received than it is able to supply at the present time. The company is operating its mill at Ironton, O., full time and has enough timber to keep it running until Jan. 1. W. H. Dawkins, buyer of the company, is planning to get more timber the coming season than he has ever contracted for before. The company makes a specialty of poplar and has one of the finest and best equipped yards of this section.

C. C. McGuire of the Midland Lumber Company, Cincinnati, O., was a business caller in the city this week. He bought several cars of stock from lumbermen here which he is loading for his company. He advises business greatly improved the past thirty days, with good future prospects.

W. E. Heyser of the Hardwood Lumber Company, Cincinnati, O., was calling on our several lumbermen this week. He advises that the com-

pany in its new location is prospering very well and is receiving a large amount of business.

W. A. Cool of W. A. Cool & Son, Cleveland, O., recently spent a few days in the city and vicinity.

The W. G. Ward Lumber Company, Ironton, O., is doing a very good business and advises a great increase the past thirty days in both the retail and wholesale departments. This company operates, in addition to its wholesale business, a planing mill and retail yard and has on hand a large number of building contracts.

The Wright-Saulsberry Lumber Company has sawed out its present supply of timber and will not be likely to operate any more this season. It has run its mill steadily since the first of the year, which is a very good record for an Ohio river mill, especially during the past two or three years, on account of the very low stage of water. The company is operating its timber tracts very heavily and expects to get out more lumber next year than in 1909. It has on hand a large amount of stock which will be ready for the market soon.

The Clearfield Lumber Company, Clearfield, Ky., reports business very satisfactory in both oak timbers and lumber. The company is operating its mill day and night and will probably continue for several months.

B. E. Darling of Blakeslee, Perrin & Darling, Buffalo, N. Y., was here recently, talking lumber with our several manufacturers. Mr. Darling is very optimistic regarding the future of the lumber dealer. He advises everything very satisfactory with the new company which was recently organized, made up of experienced lumbermen. Mr. Darling was formerly in the sales department of Taylor & Crate, Buffalo.

H. E. Kester of the Southern Hardwood Company will spend some time on a business trip through Alabama and Mississippi in the interests of the company.

## ST. LOUIS

According to the St. Louis hardwood operators, there is a great deal of trouble in securing cars in which to ship lumber from their mills. This is causing many hardwood mills to curtail their cut. Stocks are reported as being badly broken.

The lumber inspected and measured by the Lumbermen's Exchange of St. Louis during September was as follows, as reported by Secretary A. H. Bush:

	Feet.
Plain oak .....	243,867
Quartered oak .....	239,405
Poplar .....	267,739
Cottonwood .....	29,362
Ash .....	39,832
Gum .....	61,794
Chestnut .....	10,662
Cypress .....	73,050
Elm .....	11,691
Cedar .....	5,134
Maple .....	24,510
Yellow pine .....	21,367
Hickory .....	5,565
Sycamore .....	60
Walnut .....	870
Linn .....	730

Total ..... 1,035,638

The committee appointed at a recent meeting of the Lumbermen's Club of St. Louis to find out where the compiler of a lumber price list published in Washington, D. C., obtained his information, is about ready to report and it is very likely that it will do so at the next meeting of the club. The members of the committee are: Thomas C. Whitmarsh, general manager of the W. T. Ferguson Lumber Company, chairman; Henry Boeckeler of the Boeckeler Lumber Company and R. F. Krebs of the Krebs-Scheve Lumber Company. The cause for the investigation was the fact that the Forestry Bureau has been giving the compiler of the price list information obtained by the bureau from the lumbermen themselves given to the bureau in confidence.

Julius Seidel of the Julius Seidel Lumber Company was one of seven to subscribe to a half million dollar fund to be raised by St. Louis business men to induce manufacturers to locate in St. Louis. The subscription was given at a "Get Together" banquet given the last day of centennial week.

It is understood that the Garetson-Greaseon Lumber Company of this city will, on November 1, establish a Chicago office and that the office will be in charge of W. W. Dings, one of the company. This will necessitate Mr. Dings' moving to Chicago to live and it is greatly regretted by his many St. Louis friends.

The new band mill of the Alf Bennett Lumber Company, located at Powe, Mo., is now running in nice shape and getting out a line lot of oak. It is putting all the boxed hearts in car material. This company has just closed a nice big contract for 500,000 feet of gum. The hardwood department of the company is growing very rapidly and the business in this line is getting larger. Mr. Page has been down at the Powe mill off and on for the past three weeks, ever since the mill began operations. He wanted to see that everything was working right.

## BIRMINGHAM

The Alabama hardwood market shows a condition on the whole satisfactory to manufacturers. Prices are not quite as firm as a few weeks ago, and demand is by no means as brisk, but best posted lumbermen regard this situation as perfectly normal, following the recent advance, and declare that there is no reason for pessimism. They look forward to a decided improvement after the first of the year. Poplar seems most in demand, although many inquiries are being received for oak. Other lines are more or less inactive in this section. The railroads furnish the bulk of business, although there is a healthy inquiry in manufacturing lines.

Car shortage continues to be the topic of great interest. With the cotton crop well under way, there is little chance for an improvement in the situation. On the other hand, the congestion is more likely to grow worse as the crop comes in heavier and as general business conditions continue to improve. Complaints on this score are to be heard from all over Alabama, showing the situation, for a long time trouble some, is becoming serious. Production of hardwood, however, is off, but the output of yellow pine is nearer normal than at any time for two years.

The Jefferson County Building Material Men's Exchange, composed of building material men of this district, has moved into its new quarters in the Chamber of Commerce building, where it occupies a handsome suite on the second floor. The exchange is growing rapidly in numbers and influence. A smoker christened the new quarters of the association and a concatenation of Hoo Hoo is next.

J. J. Elliott of the firm of Oden-Elliott, the largest hardwood dealers in Birmingham, has bought a home on the Highlands and will move his family here from Childersburg, Ala. The company is now occupying a suite of four offices on the ninth floor of the First National Bank building, the quarters being much more commodious than the rooms formerly occupied in the same building.

## NEW ORLEANS

It is announced from Alexandria, La., that A. Wyckoff & Son Company of Elmira, N. M., will build a wood-pipe factory at that place.

Considerable interest attaches to the announcement that the Chickasaw Cooperage Company of Gretna, opposite New Orleans, has let the contract for extensive improvements to its factory. It will erect a new plant on a site measuring

150x198 feet. C. G. Evans is the manager of the concern.

A \$50,000 company known as the Lena Improvement Company has been organized at Alexandria and will shortly establish a big mill at Lena. It controls large holdings in Rapides and Natchitoches parishes.

The Monroe Lumber Company, one of the largest lumber concerns in Louisiana, has organized under the laws of Mississippi and will now operate in that state. The concern in capitalized at \$100,000 and controls extensive holdings in Louisiana.

It is stated from Meridian, Miss., that the Wymond Stave Company has closed negotiations for the purchase of the Meridian Box Company's plant at Meridian. The box factory had been idle for some months, but will be operated by the purchasers. The transaction involved \$50,000.

The Georgetown Manufacturing Company at Georgetown, Miss., will erect a large plant to manufacture spokes, shingles and boxes. The capacity will be two cars daily. H. T. Ross is the manager.

The Fetterman Bowl & Column Company has been incorporated at Itta Bena, Miss., with \$25,000 capital to manufacture wooden boxes and colonial columns.

A new organization, the Queen City Wagon & Manufacturing Company, has been launched at Meridian, Miss., with an authorized capital of \$10,000. W. G. Jackson of Forest, Miss., and B. F. Padgett of Meridian are the incorporators.

R. S. Huddleston of the Huddleston Marsh Lumber Company of Chicago is here on a business trip.

Announcement of the plans of the Coast Manufacturing Company, recently organized here with an authorized capital of \$50,000, shows that this company expects to engage extensively in the export business. The new concern will take over a part of the plant of the Louisiana Export, Box & Lumber Company, which includes a private wharf erected some months ago. Shipments for export handled by the new company will be loaded at this wharf at Algiers, across the river from New Orleans. F. Salmen, N. W. Murphy, J. B. Carnal and others are the incorporators of the company.

Not a little interest attaches to the joint conference of southern governors and conservation commissioners which will be held in New Orleans, November 1 and 2, at which time the Lakes-to-the-Gulf Deep Waterway Association will be in session here. The conference has been called by Governor Sanders at the suggestion of Gifford Pinchot, chairman of the Joint Conservation Commissions. Mr. Pinchot and a large number of conservation commissioners from the various southern states will be present. President Taft and a number of other distinguished speakers will address the conference. The State Forestry Association of Louisiana will meet here at the same time.

## MILWAUKEE

With a capital stock of \$10,000 the W. E. Allen Company has been incorporated at Milwaukee by W. E. Allen, C. E. Derkin and E. M. McVicker to carry on a general wholesale and commission lumber business. W. E. Allen recently withdrew from partnership with George Eller, retained the former company's name and opened new offices at 1202 Majestic building. Mr. Eller has incorporated the George Eller Lumber Company and has opened offices at 1407 Majestic building.

T. H. Nichols and son, C. H. Nichols, of Moquah have erected a portable sawmill at Kakagon, Wis., where they will saw "deadheads." More than half a million feet of logs will be sawed this fall.

The Stevens Lumber Company of Rhinelander, Wis., has sold to the Rhinelander Paper Company its entire lot of hemlock timber, which will be

cut the coming winter at the Stevens camps near Parish. The Stevens company will also cut about 1,000,000 feet of hardwood and will operate three camps.

The Mellen Lumber Company, recently incorporated, has taken over all the interests of the Glidden Veneer Company and the Shanagolden Lumber Company, including the vast timber tracts owned by the last two companies, together with the logging railroad and sawmill of the Glidden Veneer Company. The timber land turned over to the Mellen Lumber Company included about 70,000 acres and together with the 30,000 acres already owned by the company, it now controls nearly 100,000 acres. It is expected that the sawmill of the Glidden Veneer Company will be torn down.

The Upham Manufacturing Company of Marshfield, Wis., has purchased the standing timber and lumber in pile owned by the Blodgett-Booth Lumber Company at Durand, Wis. The timber land included one of the finest tracts of oak in Chippewa county and when sawed into lumber will be brought to Rhinelander for use in the furniture plant of the Upham Manufacturing Company. It is understood that the consideration was \$28,120.

Daniel Wells, son of J. W. Wells, a wealthy lumberman of Menominee, Mich., recently returned to Marinette, Wis., from British Columbia, where he completed one of the largest purchases of timber made in the West this year. He closed a deal for 700,000,000 feet of timber in the island of Vancouver.

Announcement has been made that the Creamery Package Manufacturing Company will stock and operate both its mills at Butternut, Wis., this winter. There were rumors that the plant would be moved from Butternut, but this is now denied.

The Phoenix Manufacturing Company of Eau Claire, Wis., will erect a large plant next spring for the exclusive manufacture of logging machinery.

The new sawmill at Pennington, erected by Evans & McGregor to replace the plant destroyed by fire last spring, has been placed in operation. A half million feet of lumber will be cut this season.

Work is rapidly progressing upon the new sawmill of the Diamond Lumber Company at Green Bay, Wis. The new structure will be completed by the close of the year and will replace the plant destroyed by fire early in the summer.

The new sawmill of the Kurz-Downey Company near Bayfield, Wis., has been completed and is now in operation. The company will erect a large box factory next spring.

The Cleerman Land & Lumber Company of Green Bay, Wis., has purchased of the Sarah Selner estate 1,000 acres of virgin hardwood and cedar timber lands at Baldwin, Delta county, Michigan. It is estimated that the tract contains 10,000,000 feet.

The Roddis Lumber & Veneer Company at Marshfield, Wis., is crowded with orders and more than 200 employes are being kept busy. The manufacture of veneered doors which has been added as a side line has greatly added to the business of the company.

The Central Lumber Company of Prentice, Wis., has begun the erection of a new planing mill which will adjoin the company's sawmill at Prentice. The building will be 50x70 feet and will be modern in every respect.

Gibson & Donie, loggers at Merrill, Wis., have secured a contract to cut 3,000,000 feet of logs at Saynor, Wis., for the A. H. Stange Company of Merrill. The firm will also cut 3,000,000 feet of lumber for the Heineman Lumber Company in the same county.

United States Senator Isaac Stephenson, Wisconsin's leading lumberman, recently passed through Milwaukee on his way from Marinette to Asheville, N. C., where he will visit his son, Watson Stephenson. The latter is rapidly improving in health. Senator Stephenson will

return in time to make the trip down the Mississippi river with President Taft.

The busy sawmill season in Wisconsin is fast drawing to a close and lumbermen are now preparing to devote their attention to their logging interests. The mills of the Alexander Stewart Lumber Company and the Mortenson Lumber Company at Wausau will run until the river freezes over. The Barker & Stewart Lumber Company's plant will close a little earlier. The F. Schubring Lumber Company's mill at Wausau, which has been idle most of the summer, will be placed in operation about Jan. 1. The plants of the John Week Lumber Company, the Clifford Lumber Company and the W. W. Mitchell Company at Stevens Point have already been closed because of the unusually low stage of water in the river.

The Eau Claire Trunk Company at Eau Claire, Wis., has purchased a site and will erect a new \$15,000 plant next spring. The building will be three-story, 100x80 feet and strictly fireproof.

The work of extending the branch of the Chicago, Milwaukee & St. Paul Railway from Johnson's Creek in the town of Knowlton, Marathon county, Wisconsin, is being rapidly pushed. A 100,000,000 foot tract of timber will be opened by the new road. The United States Leather Company owns the tract and will begin cutting at once.

W. B. Baker of Stevens Point, Wis., has taken a force of millwrights and carpenters to Panama, where he is installing a sawmill for the American Land & Lumber Company.

Prof. C. K. Leith of the department of geology of the University of Wisconsin may be lost in the Canadian woods, where he is on a trip of exploration. No word has been heard from him for months. Lumbermen friends of Prof. Leith say that he is too good a woodsman not to be able to care for himself.

The United States government is transferring all its forest products work to Madison, Wis., where the new government forestry laboratory is being erected. The \$50,000 structure will be completed by the close of the present year. The work of the new laboratory will be assigned to five different divisions, including wood preservation, wood chemistry, wood distillation, technology and maintenance. Garvey Cline will be placed in charge, and W. L. Hall, assistant forester, will continue in charge of the branch of products. The headquarters of the wood utilization department will be located at Chicago.

The Wisconsin legislative committee on water powers is making a thorough investigation of the forest reserve lands of the state. The committee will also investigate the methods of slash piling and burning carried on by the Weyerhaeusers at Cass Lake, Minn.

The S. E. Heise planing mill at Orangeville, Wis., has been purchased by E. F. Timm. A sawmill will be erected and new power will be installed by the new owner.

A new planing mill is being installed at Zenoni, Wis., by H. D. White and George Gray. Flooring, siding and ceiling will be turned out.

A new \$15,000 factory will soon be erected at Eland, Wis., by Joseph and John Wolfinger, woodenware manufacturers and pea packers of Dundas and Brillion, Wis. The plant will be completed by next spring and will employ seventy-five men.

E. D. Washburn of Marinette, Wis., has been made assistant superintendent of the Birds & Wells Lumber Company at Wausau, Wis.

News has reached Wisconsin lumbermen that the plant of the I. Stephenson Company at Wells, Mich., recently destroyed by fire, will be rebuilt at once. The loss was estimated at \$35,000, covered by insurance.

Leander Choate, wealthy ex-lumberman and prominent banker of Oshkosh, Wis., recently passed away at the age of 75 years. Death was caused by slow paralysis following a runaway accident of a few weeks ago. Mr. Choate be-

came associated with the late J. M. Bray in the lumber business at Oshkosh in 1862, the firm continuing until the present time. The firm owned a number of sawmills in northern Wisconsin, especially on the Wisconsin and Oconto rivers. Mr. Choate was interested in some fifteen banks of the state.

The new \$25,000 plant of the Miller Manufacturing Company at Park Falls, Wis., manufacturers of crates and boxes, was destroyed by fire recently. The fire started in the dry kilns and had gained such headway that it was impossible to cope with it. The loss is partly covered by insurance.

The Rhinelander-Portland Timber Company has been incorporated at Rhinelander, Wis., with a capital stock of \$200,000 by F. S. Robbins, Hattie L. McIndoe and Niles A. Colman. The company will deal largely in Washington timber lands.

The Paulson-Ellingson Lumber Company has been incorporated at Hawkins, Wis., with a capital stock of \$15,000 by A. M. Paulson, Alfred Paulson and Christ P. Ellingson.

The Milwaukee Lumber Company is erecting a \$11,000 building to replace the structure destroyed by fire last summer.

## MINNEAPOLIS

A. E. Peterson of the Peterson-Moore Lumber Company, St. Paul, wholesalers of hardwood lumber, has recently become part owner of the St. Paul Box & Lumber Company. This concern operates a box factory in that city, and as the Peterson-Moore company handles a considerable amount of low-grade stock suitable for the manufacture of that product, the new arrangement will enable it to dispose of this class of stock in its most salable form.

Hamilton Broughton, who until recently was secretary of the Forbes-Everts Lumber Company, with offices in Minneapolis and hardwood mills at Van Buren, Mo., has severed his connection with that concern and gone West to engage in the fruit raising business.

Frankland Powell, sales manager of the Rice Lake Lumber Company at Rice Lake, Wis., was a recent Minneapolis visitor. His company has a good stock of hardwood lumber on hand, and can ship it in straight cars or with pine and hemlock.

Wholesalers of hardwood lumber in this market who are interested in stocks in Wisconsin are hoping that the efforts of the Wisconsin manufacturers to secure a return to the east-bound hardwood rates which were in effect two years ago will be successful.

## SAGINAW VALLEY

The maple flooring industry is lively just now, every plant in the valley running full time and all are booking lots of orders.

S. L. Eastman stated that an extraordinary demand has come over from Europe for maple flooring owing to a roller skating rink craze both in England and on the Continent. A goodly portion of the flooring manufactured here is now going abroad. Prices could be a little higher to suit manufacturers. The demand is good and Mr. Eastman's company is moving considerable stock.

W. D. Young & Co. are running their sawmill with night and day crews, and the flooring plant is crowded to its capacity. New dry-kilns have been added and the entire outfit is in a fine condition.

Almost daily there comes down over the Mackinaw division of the Michigan Central to Bay City more than 100 carloads of saw logs, the average quantity handled by the road approximating 135,000,000 feet a year. A number of the lumbering firms here have twenty to thirty years' stock of timber and they are buying everything desirable that joins them.

The manufacturers of box material are calling for large quantities of low-grade beech, maple, basswood and birch for use in the manufacture of boxes, and all available dry stock has either been taken or spoken for.

The Wylie & Buell Lumber Company will cut and ship almost 50,000,000 feet of logs the ensuing year. The company stocks the Kneeland, Buell & Rigelow sawmill at Bay City, Bliss & Van Auken's mill at Saginaw, and supplies some other firms with logs. It will employ about 700 men.

The John D. Mershon Lumber Company at Saginaw is handling a large quantity of hardwood lumber and, although starting in business last January, trade has exceeded the expectations of the company.

The Briggs & Cooper Company, Ltd., is doing a large volume of business. It buys hardwood stock wherever it can be found, taking a large quantity from railroad and interior mills north of the Saginaw river.

Yuill Brothers of Vanderbilt, operating a sawmill at Logan, will finish their season's cut in two weeks. The output this year will approximate 15,000,000 feet and it comes by rail to the Saginaw valley.

Work is being vigorously pushed in the building of the Hanson-Ward Veneer Company's new flooring plant at South Bay City. It will be equipped with the latest machinery and will have all the stock it can handle for many years.

Plans are being made for the new wood alcohol and charcoal iron plant to be built on the old Kern manufacturing plant at Bay City, 160 acres having been bought some time ago for a site. Construction will be started as early as possible in the spring. It is expected the initial outlay will approximate \$300,000 to \$500,000. It will require a vast quantity of raw material and it is rumored the White Brothers of Boyne City may furnish the wood, or at least a portion of it. It is reported the Wood Products Company of Buffalo will take the products of the new plant. It is also stated that there is a possibility that a large hardwood sawmill will be erected on the site and operate in connection with it.

## DETROIT

Luther Lyman, a former Wyandotte (Mich.) lumber dealer and also at one time connected with the Delta Lumber Company at Thompson, Mich., has located at Cheboygan, Mich., to take charge of the northern interests of the Brownlee-Kelly Company of Detroit. He is superintending the lumbering of 400 acres of hardwood timber near Cheboygan for the company. He is also buying logs and lumber at points along the Michigan Central railroad. The logs are being shipped to Bay City to be manufactured. The Brownlee-Kelly Company for several years has done some manufacturing at Bay City, but the company expects to largely increase this branch of its business.

M. M. De Haas of Skanee, Mich., large manufacturer of hardwoods, spent several days in Detroit on business last week.

C. R. Duggan, representing Tindle & Jackson in Detroit, is out of the city on a business trip.

The steamer A. L. Hopkins arrived at the River Rouge docks of the Brownlee-Kelly Company last week with a cargo of ash, elm and hemlock from the Lake Superior district. The Brownlee-Kelly Company has been making a specialty of basswood this season and reports a good demand and firm market for this class of stock. A good portion of it has been shipped to the eastern markets.

Detroit hardwood men are much interested in the Lumber Bowling League, which has just started its season. Eight lumber concerns are represented in the league, and of these, two teams can be classed as "hardwood teams," al-

though all of the dealers represented in the league handle hardwoods to a more or less extent. The H. W. Harding Lumber Company and E. W. Leech, however, are big dealers in hardwoods, and it is peculiar that in the league standing to date the two hardwood teams should be widely separated. The Harding team is roosting in first place, while Mr. Leech's warriors are at present camping in the cellar. "We may be last now," says Mr. Leech, "but we'll make them hump before the season is over."

The building permits in Detroit during the present year are reported to be nineteen per cent larger in number and thirty-six per cent larger in estimated cost than they were last year, and are larger than in any other city of the same class in the country. Of the \$19,350,000 to which the cost foots up, \$1,550,000 is for buildings in connection with manufacturing plants, a larger amount than in any previous year. This is exclusive of the immense automobile plant under construction in Highland park.

J. M. Clifford of J. M. Clifford & Co. said that the local hardwood market is now in better shape than it has been for several years past. Conditions are decidedly encouraging and prices are showing considerable improvement. Poplar, birch and maple are the leaders in point of demand, and stock is moving along nicely.

H. W. Harding of the Harding Lumber Company is optimistic over market conditions. He says that everybody in the trade seems to be rushed to death. The factory trade is steadily improving, with prices advancing.

The last cargoes of the season have been unloaded at the docks of the Thomas Forman Company on the River Rouge. The steamers King, Green and Carter arrived at the docks the end of last week with large cargoes of maple. This factory is very busy because of the big demand for maple flooring, and Mr. Forman reports that general conditions are very satisfactory.

"Business is certainly looking up," said E. W. Leech to the RECORD correspondent. "We are already looking forward to a fine, healthy business for next year. Prices are much better and the demand for first and second grades is very good. Commons, too, are moving along much better than for some time.

Alfred E. O. Allen of Allen Brothers, who was injured while cranking his automobile, is able to be around and attend to business again.

Manufacturers of veneers and panels in this vicinity report an increased demand for their products. This has been a big item in the general prosperous condition of the hardwood market.

The Dwight Lumber Company reports an excellent business, with a strong demand for its special pattern of thin flooring.

In the past two weeks the C. W. Kotcher Lumber Company has unloaded 10,000,000 feet of lumber at its Detroit docks.

The Murphy Chair Company has started work on a big building for additional warehouse

space. The building will be five stories high, 100x130 feet.

Game Warden Charles Pierce of this state has reported to the Public Domain Commission that the railroads are taking an active interest in the work of preventing forest fires. Every road operating through the forest districts in the northern part of the state has equipped its locomotives with spark protectors and fire screens. The commission is considering plans for establishing a large forest reserve in Luce county on the shore of Lake Superior.

The lumber firm of Murray & Fenton, consisting of Charles F. and Daniel E. Murray and Joseph Fenton, has been organized at Hessel, Mich., to engage in the lumbering of 4,000 acres northeast of Hessel. Extensive camps will be built for the operations.

Hard luck is certainly trailing along after the Brayman family, large dealers in hardwoods at Custer. A fire causing \$10,000 damage was followed inside of a week by two smaller fires doing an aggregate damage of \$4,000. A large quantity of maple lumber, already contracted for by a Saginaw concern, was destroyed.

## GRAND RAPIDS

A. L. Dennis of the Dennis Brothers Salt & Lumber Company returned October 21 from an inspection trip to the company's mill at Dighton.

J. V. Stimson, of Huntingburg, Ind., was in the city on October 21 and 22.

H. J. Dudley of the Dudley Lumber Company was in Detroit last week.

George Engel of the Engel Lumber Company was looking after the work at the company's city yards when the RECORD correspondent called at the Murray building offices. Mr. Engel has not fully recovered as yet from his protracted illness, but is improving.

George B. Daniels, the well-known hardwood lumber dealer, is closing up his business affairs in Grand Rapids, preparatory to going to Quincy, Ill., November 1, where he accepts a responsible position with the W. I. McKee Lumber Company. Mr. Daniels has a son who is making good in the East as a furniture salesman, with New York City as his headquarters.

Charles H. Cox of the Nichols & Cox Lumber Company reports an excellent flooring trade. The company's mill is being operated up to nine o'clock each night.

All the Grand Rapids furniture factories are running full time and it is probable that a number of them will be operating on overtime schedules soon. The American School Seating Company is running its big plant twelve hours daily.

Marshall F. Butters of Ludington, president of the Grand Rapids & Northwestern Railroad Company, was in the city recently. He says the steam road is completed from Ludington to Walkerville and will be put through to Grand Rapids next season.

# Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

## CHICAGO

The local yard men are all busy; in fact, many of them are obliged to employ a good deal of outside teaming in order to receive and deliver their stock. The office wholesalers are enjoying an excellent trade, with every evidence of its continuance for months to come. Some items of quartered oak and wide poplar are extremely short locally, but otherwise every yard has a well-balanced assortment of stock. Every one is very much pleased with the situation and optimistic over the outlook for a continuation if not a bettering of present satisfactory conditions.

## NEW YORK

The hardwood market at New York shows up in fair proportion, although the volume of business is not what it should be. The scarcity of and fair demand for good grade hardwood are taking care of the present situation in that department of the market very nicely, but the low-grade market, while improving as regards the demand, nevertheless shows a keen competition for desirable business in the matter of prices. However, taking the hardwood market as a whole, both the reports and feeling in the trade are of an encouraging nature, and the market seems assured of stability between now

and spring. The local manufacturing trade, such as furniture, piano, cabinet workers, etc., is experiencing some revival in business, which is bringing low grades into the market for hardwood supplies, and as this class of trade increases, the hardwood market should correspondingly improve. The demand at present runs largely to poplar, oak, ash, chestnut and birch.

### PITTSBURG

Hardwood matters are in better shape than they have been for years. The demand for all grades of first-class hardwood is becoming so strong that it is evident a shortage of dry stock will be about the next thing on the program. This will come the sooner if the threatened car shortage materializes this fall.

While the hardwood market has shown no sensational gains in any direction during the past two weeks there is a constantly stronger undercurrent of buying sentiment. Even the yards which have held aloof from making large purchases are now buying good sized lots. Country mills have just begun to ship their product. There will not be enough of this to have a bad effect on prices; on the other hand, the probable shortage of lumber at most of these plants is going to emphasize more strongly the really low condition of all hardwood stocks. Many plants will not be in shape to ship before December or January.

The call for fine hardwood to be used in the manufacture of furniture, carriages and especially automobiles is a big feature of the market. The fact that most hardwood in stock is not suited to these purposes tends to increase both prices and the willingness of purchasers to pay what is asked for good lumber. Hardwood lumbermen in this district are practically a unit in declaring that the hardwood situation is extremely encouraging. More evidence of good times in hardwoods is found in the increasing demand for good hardwood timber tracts. Local agents say that there is more call for these properties this month than there ever was before and the buyer wants anything from a 50-acre tract of oak to a 1,000-acre tract of mixed hardwoods.

### BOSTON

The general undertone of the hardwood market is stronger and dealers are reporting more inquiry. Consumers are met with firmer and higher prices, especially on the better grades. Owing to the higher prices for one's and two's, there has been more demand for No. 2 common at stronger prices. Few buyers have been willing to pay top asking prices. The demand for low-grade lumber has improved, the stocks being materially reduced during the past two months so that today they are not large enough to have any depressing effect upon the prices of the better grades. The yard trade is better and a further increase in demand is expected. Furniture manufacturers have been forced to replenish their stocks. Interior house finish manufacturers have been very busy this fall and still have considerable business in sight.

Quartered oak is very firm at high prices. Offerings of the best western stock are small. It is reported that one-inch one's and two's have sold as high as \$90. Plain oak is well held under a better demand. Chestnut is in fair call and ash is selling in larger lots. High-grade walnut is scarce and high. Whitewood is in fair sale.

### BALTIMORE

The developments in the lumber trade are all in the direction of greater activity and better prices. Though the gains have been slow they are fairly continuous and members of the trade

generally take a hopeful view of the situation. All report that business has increased, and that the demand is steadily expanding, while some make the assertion that they are doing a larger trade at the present time than they did even before the depression, and—what is not less important—that it compares favorably with that period in point of prices. Such is the situation that holders of stocks feel able to mark up their figures from time to time. One local firm recently advanced its No. 1 common oak \$2 per thousand. The firm makes a specialty of this grade, to be sure, but similar increases are being made from time to time all along the line. When a buyer now halts at a rise in quotations he runs the risk of having to pay more by the time he finally concludes that he wants the lumber. To be sure, the high-grade lumber is never offered in such quantities as to constitute a weight upon the market, but even the common grades are moving with such freedom that accumulations are kept down, and this division of the trade is no longer the problem it was months ago.

Furniture and other hardwood consuming factories are calling for lumber in fairly large quantities, and the demand everywhere is such as to keep down the supplies to proportions which cause no trouble. The home requirements have been reflected in greater strength abroad. Being large enough to absorb extensive quantities of lumber, there was comparatively little left for shipment abroad, and the accumulations there have been diminishing. Foreign buyers are accordingly less captious, and better prices are being offered. Shippers have taken contracts for foreign countries of late at figures which must be regarded as attractive. This applies not only to poplar but to oak and other woods. Even in walnut logs there is a decided improvement. A sale held not long ago at Hamburg realized surprisingly good prices. Shipping on consignment, however, is still to be avoided; in fact, the exporter must know his territory and must be familiar with the conditions of the market to which he sends lumber.

### CLEVELAND

The Cleveland hardwood market seems to be picking up, according to the local dealers. The call for interior finish is strong, especially for maple and oak flooring. More of the latter is being used each year as builders find that it is comparatively inexpensive for the effects secured.

There is an inclination towards stiffer prices on most grades of hardwood. Oak and poplar, particularly, seem to be firmer, although the call for all other lines of commercial hardwood is better than it has been for months. The vehicle trade is good, especially the automobile line, which makes a strong bid for fine wide poplar boards for use in auto bodies.

### COLUMBUS

The hardwood market in Columbus and central Ohio continues to improve. One of the best features of the trade is the good movement of all grades, and there is no accumulation of stocks in any one grade or variety. The better movement of the lower grades has stiffened the entire list, and manufacturers and jobbers believe that prices will continue to advance. There are some grades in which quotations have not yet reached a point that is warranted by market conditions, and it is believed advances will soon occur. There is also a better demand from manufacturing establishments. While they have been buying only as their needs warranted, still the general improvement in trade conditions has caused a necessity for more raw materials. Railroads are buying more lumber of all kinds, and the same is true of factories making furniture, implements and vehicles. Dealers are also in-

creasing their stock, and a better feeling is shown on all sides.

The demand for quartered oak is so strong that large premiums are offered for spot stock. The supply is limited. Plain oak is also in good demand and the amount is being decreased because mills are making all quartered oak possible. The demand for poplar continues strong, and wide sizes bring almost any price. Chestnut is in good demand, especially for firsts and seconds and No. 1 common. Ash is still weak, although no reductions in prices have been made recently. Hickory is in good demand and manu-

## TOO LATE TO CLASSIFY

For other Wanted and For Sale  
Matter See Page 53

### FOR SALE

20 cars dry Walnut squares.  
10 cars 1" Walnut lumber, cull, common and better.

LANGTON LUMBER CO., Pekin, Ill.

### WANT TO CONTRACT

With reliable millmen for 1,000,000 feet Oak car material. Will accept green from saws, inspect at mills and pay spot cash.

KEITH SAWERS,  
624 Gravier St., New Orleans, La.

### WANTED

We will need during the next six months 3 to 5 cars 1x24 to 27" soft yellow poplar, 1sts and 2nds, panel and No. 1. Must be choice stock. Give us your best price for prompt cash and state time of delivery.

AMERICAN LBR. & MFG. CO., Pittsburg, Pa.

### WANTED—LUMBER AND SHINGLES

Wanted, high grade lumber and shingles to sell on commission or salary. Ten years' experience. Strictly sober and not a "pool or card shark" nor a "\$5 per car man." Open for immediate engagement with a first-class firm.

Address BOX 544 E, Elkhart, Ind.

### ALABAMA TIMBER LAND

1,050 acres rich bottom land in central Alabama for \$10,000; 850 acres in good timber, balance in cultivation. Located on navigable water within two miles of a branch, now under construction, of the M. & O. R. R. Titles perfect.

This is a splendid property to carry as an investment or for a mill proposition. It is all good land and no danger from forest fires. Address "ALABAMA," care HARDWOOD RECORD.

### EXTRAORDINARY

Bargain in veneer mill.

V. J. HILL, Narrows, Va.

### WANTED—A PARTNER

With about \$20,000 to go into lumber business, wholesale, handling oak, chestnut, poplar, ash, etc., by a young man who has bought and sold hardwoods for the last 10 years. Young man with practically no capital.

Address "BOX 7," care HARDWOOD RECORD.

### FOR SALE

One No. 6 McGiffert Log Loader and Skidder in first-class repair; immediate southern delivery. Bargain price.

Address "BOX 9," care HARDWOOD RECORD.

### EXPERIENCED MILLMAN

Wanted that will invest some of his own money in a company that owns forty-two hundred and fifty (4,250) acres of timber land, on which stands Red Gum, Oak, Ash and Cypress. A forty thousand dollar (\$40,000) full equipped mill is on the place, and a road will be built from the mill connecting with the railroad. Only an experienced sawmill man and one who will invest some of his own money will be considered. Address

FEDERAL STAVE & LUMBER COMPANY,  
Evansville, Ind.

### FOR SALE

400,000 feet 4/4 Sound Wormy Chestnut, widths and lengths fine. Address  
BOX 275, Ft. Wayne, Ind.

### FOR SALE

Two adjoining tracts of Cypress and Hardwood timber, 9,000 and 14,000 acres respectively, 150 miles from New Orleans, well located. Rail and river facilities. Timber runs 5,000 feet to acre. Good circular mill and full logging equipment included. Sell all or part. Address  
"BOX 20," care HARDWOOD RECORD.

Sales Office: RIDGWAY, PA.

# A GIFT

TO HARDWOOD RECORD  
 SUBSCRIBERS

Lightest, smallest, most accurate gauge  
 ever produced. Made of best quality  
 steel, heavily nicked.

Can be conveniently carried either in  
 the hand or pocket of the Inspector.  
 As it weighs less than a half ounce it  
 makes an attractive watch fob.

**PRICE 50 CENTS**

One of these gauges given with every  
 New Subscriber to HARDWOOD RECORD,  
 when accompanied by remittance of  
 \$2.00. Old subscribers can secure one  
 by remitting \$2.00, thus extending  
 their subscription one year.

facturing plants are increasing their orders.  
 Other hardwoods are steady.

### CINCINNATI

The hardwood market continues to improve  
 slowly. Prices remain firm. The common grades  
 of hardwood are still weak, although a slight  
 improvement has been noticed. The upper grades  
 are in good demand. Poplar and oak continue  
 to be the leaders, with gum, basswood, ash, cot-  
 tonwood, birch, beech and hickory following in  
 about the order named. Cypress remains fair.  
 The demand for this wood seems to be a trifle  
 heavier, the supply not large and prices firm.  
 The oak flooring market is good. Orders and  
 shipments continue to be quite heavy, largely  
 in excess of last year's business, which was the  
 best year oak flooring manufacturers had ever  
 experienced.

Collections remain about the same.

### TOLEDO

Dealers here express themselves as well pleased  
 with the hardwood situation and the result of  
 this year's business. There have been practically  
 no weak spots in the market aside, possibly,  
 from poplar, which has been a trifle uncertain.  
 Box materials of all kinds have found a much  
 better demand recently. Small retailers are  
 buying almost exclusively in small lots from the  
 wholesalers as needed to fill orders. Maple floor-  
 ing has attracted considerable attention recently,  
 and prices have advanced about \$2, with very  
 limited stocks and a limited supply in sight.  
 Orders for several cars were turned down at the  
 mills last week for the reason that cars are sold  
 far ahead and the firm could accept nothing for  
 immediate shipment. Nor would they agree to  
 send half of the order in six weeks and the bal-  
 ance in three months. Oak is still moving  
 actively, and there is a good market for hickory,  
 ash, chestnut, basswood, and even elm. Local  
 stocks are in good working condition, generally  
 speaking, but they are carrying little surplus.  
 Orders are being liberally placed and receipts  
 have been normal. There is still a strong de-  
 mand from builders for all kinds of house finish-  
 ing and flooring. Prices have shown no decline  
 and none is apprehended.

### EVANSVILLE

The hardwood market in this section continues  
 to improve. Lumber is moving more uniformly  
 and the demand is better and more general.  
 Prices on quartered oak are good. Plain oak is  
 in fair demand and it is conceded that prices  
 on this wood will advance as the quartered  
 stock goes higher.

### MEMPHIS

There is a better feeling in the hardwood  
 lumber circles and the volume of business shows  
 a considerable increase over that of even a very  
 short time ago. Some of the leading members  
 of the trade here state that they are enjoying  
 the best business they have had for more than  
 two years, while others declare their volume is  
 the largest ever experienced. There has been  
 some improvement in prices of low-grade stock.  
 One of the features of the situation is the  
 placing of orders for considerable quantities of  
 ash. There has also been a considerable increase  
 in the demand for cypress, and the quantity of  
 this stock moving is fairly large. Thick ash is  
 in particularly good demand, but a considerable  
 quantity of inch stock is also being sold. A  
 considerable increase is noted in the demand for  
 cypress. The situation in plain and quartered  
 oak is as strong as at any time this season.  
 Prices are good and the demand includes a

considerable amount of No. 1 common and some  
 No. 2 common. The latter, however, is com-  
 paratively slow. The upper grades of gum and  
 cottonwood are moving in moderate quantities,  
 but prices are unsatisfactory. There is some  
 improvement in the box business, which should  
 help the cottonwood and gum situation. There  
 is not much poplar for sale in this market, and  
 what is offered is readily taken.

Views regarding the export situation differ.  
 Some claim that there is a very satisfactory vol-  
 ume of business, while others claim that there is  
 not. Some say that prices are good, while others  
 say they are unsatisfactory. The fact remains,  
 however, that a large amount of hardwood is  
 being sent to Europe and that conditions are bet-  
 ter in that quarter than they have been for a  
 long while. The large amount of business now  
 being done indicates that important buyers have  
 entered the market, and the trade here is facing  
 the future with an unusual amount of confidence.

### LOUISVILLE

The tone of the hardwood market in Louis-  
 ville is healthy, and the general situation is sat-  
 isfactory. The demand is improving in nearly  
 all lines, and a movement in the lower grades,  
 which have been practically inactive for two  
 years, has begun. The chief movement, of course,  
 is in the higher grades, on which prices have  
 strengthened somewhat. Quartered oak is in  
 fine demand, and is being sold at top-notch  
 prices. Poplar and plain oak are going well  
 also. The mahogany manufacturers are import-  
 ing and manufacturing largely, and the building  
 trades and the car manufacturers are using a  
 large part of their output. The veneer men  
 report that business is considerably improved,  
 but that prices are still below the figure which  
 ought to be demanded.

### ASHLAND

The hardwood situation of this section con-  
 tinues to improve and prospects are encouraging  
 in both orders and better prices. The railroads  
 are buying more freely than at any time during  
 the past two years and prices are better than  
 have been received before. A great many of  
 the mills are shut down at the present time on  
 account of log supply, and have on hand only  
 a reasonable amount of stock, the larger portion  
 of which is not dry enough for the market.  
 No. 1 and No. 2 common oak is in very strong  
 demand with both the furniture and flooring fac-  
 tories. The stocks are considerably broken and  
 low at this time but inquiries plentiful, coming  
 from all sources, chiefly furniture and imple-  
 ment factories. It is predicted by our lumbe-  
 rmen that it will only be a matter of a short  
 time until it will be very difficult to secure this  
 stock at nominal prices.

A very noticeable firmness is found in all the  
 lower grades of hardwoods, and the demand is  
 steady and larger than before. Box factories  
 are buying more freely of sound wormy and No.  
 3 common chestnut and substituting it for other  
 woods, which they find a very good substitute.  
 Poplar continues to head the list as being in  
 the strongest demand and prices received. The  
 large mills which make a specialty of poplar  
 have their plants in full operation. The panel  
 stock and firsts and seconds poplar supply is  
 far less than the demand and prices are advanc-  
 ing with stocks decreasing.

### ST. LOUIS

While the hardwood trade is not what was ex-  
 pected it would be at this time of the year, it  
 is considerably better than it has been since last  
 spring. There is more buying but it has fallen  
 short of the boom that was looked for. One  
 gratifying feature is that the furniture and box

manufacturers are coming into the market. Herebefore the planing mills and sash and door factories were the only ones to buy freely. The upper grades in all woods are most in demand. In oak all stock is being purchased. No. 1 common and firsts and seconds and plain and quarter-sawn oak, both red and white, is particularly sought. In other woods, the lower grades, while not now in demand, are gradually being bought. Gum and cottonwood are stronger than they have been for some time. The cut of the former has been curtailed somewhat in the producing territory. As, however, the stocks were pretty heavy, the curtailment has not yet been felt. The lower grades in cottonwood are showing more life than they did, but as there is also a plentiful supply of low-grade lumber there is no fear of a scarcity. Poplar is moving well and the box factories are taking lots of low-grade stuff.

### NEW ORLEANS

The general lumber situation in New Orleans as applied to hardwoods and export lumber, though somewhat better than it was a fortnight ago, is still quiet, according to the leading local exporters, and while the outlook is believed to be favorable, it is indicated that no great volume of business will be transacted for some time yet. The hardwood mills in this territory are running steadily and turning out good quantities of stock. Most of their output, however, is being absorbed in the interior, as the European buyers are not the least active and little exporting is being done.

### MILWAUKEE

The total amount of business received during the month of September exceeded that of any other month in the past two years. General trade was good as a result of the boom in building lines, a brisk demand from the factories on increased activity in furniture manufacture and a gradual resumption of buying by the railroads. At present, however, there seems to be something of a lull, although business is far from being quiet. It is generally conceded that trade has reached its highest this fall and that from now on a steady and normal trade will be in evidence. The fall building season is far advanced and the bulk of orders for this field has been placed. While the sash and door plants and other manufacturing concerns are still placing good orders, they are now sailing more to the weather and proceeding carefully. The furniture plants are still buying and it is expected that they will continue to do so for some time. The railroads are in the market for heavy stocks as well as for repair material.

Oak is still in the lead, although the demand for the upper grades of birch and poplar is also good. Basswood, maple and elm are wanted.

### MINNEAPOLIS

During the past two weeks the hardwood trade of this section has not undergone any material change. There is a steady flow of orders, but not an unusually heavy demand. The tendency is toward greater strength, largely due to the fact that available stocks are reduced to a very low point. Particularly is this true of the upper grades of all woods marketed in this section. There is a more plentiful supply of the lower grades, but they are stiffening because of the increased demand from box makers and other consumers of that class of stock. Birch continues in good demand, with some recent sales at higher figures than have been obtained before for two years. Oak is staple and strong. Basswood is doing better after a long period of weakness. The sash and door factories are still busy on odd work, and are buying supplies steadily, since none of them have been carrying much raw material for two years or more.

### SAGINAW VALLEY

Trade is reported good all along the line. Dry lumber is scarce and everything available is finding a customer. The largest manufacturers in the valley say that orders are coming by every mail and by wire. Thick maple is in active demand at good prices with the prediction that it will go still higher. There is very little basswood, beech and birch available for shipment that has not been taken. Even culls are \$1 a thousand higher and most of the manufacturers have sold all the dry stock in this line they had on hand. Maple flooring is moving briskly. All the plants are full of business. A larger stock of logs than usual will be cut this winter.

### DETROIT

Improvement is shown in every branch of the hardwood trade in Detroit and vicinity. Many dealers declare that business almost approximates the boom years of 1906 and 1907. The mills and factories are about taxed to their capacity. Poplar, birch and maple are the leaders in point of demand and distinctly fair prices prevail.

Perhaps the most prominent feature of the hardwood trade in this vicinity is the activity in maple flooring. Flooring factories and mills are having about as much as they can do to meet the demand. Prices are firm, being fully as high as in 1906 or 1907. The healthy condition of the maple flooring trade has served to advance prices in rough maple lumber and this has had its effect on the Michigan mills.

Birch is moving steadily at fair prices, but is not yet bringing prices that producers believe that it should. The birch, hard and soft maple market feels the competition of West Virginia producers. Much southern hardwood lumber is being shipped into the Detroit market and local consumers state that the southern product is usually better in thickness and width and finds favor on this account. About the only thing in the local hardwood trade giving producers or dealers any uneasiness is "No. 3." or mill culls. This stock is moving slowly in the lower peninsula of Michigan and some very low prices have been quoted recently.

### GRAND RAPIDS

Stocks of dry maple are broken. The demand for good birch continues strong, with stocks on hand low. There is plenty of low-grade birch in the market. Beech is in good supply with inquiry somewhat improved. There is enough elm to go around, especially of four-quarter stock, and prices are no higher. Good-grade ash moves readily. Michigan oak is in fair demand, with supply limited.

### LIVERPOOL

The prosperous outlook in the Liverpool timber market of some weeks back has completely died away. No revival is looked for until after the general election, which, it is anticipated, will take place in January. Shippers are advised to be careful not to ship large quantities of any lumber until this is over.

The mahogany position still remains keen and values continue to advance, though American buyers are told there is no real foundation in this market for this wood, as a decline is expected soon. Prices have gone up out of proportion to the ordinary law of supply and demand, and information is received that quite a large quantity of wood will arrive in a few days, which is bound to bring down values.

Hickory is very scarce and any shipments now

would bring good prices. It is reported that, all told, there are not one hundred logs in Liverpool at the present time, and this coupled with the fact that it will be almost three months before much of the new wood arrives, must force buyers to pay almost any figure asked by the shipper. Ash is very much the same. Shippers are advised to send moderate quantities and to decline to make any contracts for second-growth wood except at high prices, as shipments on consignment would be more remunerative. Other hardwoods are weak generally. There is some life in the wagon oak business, mainly owing to the small stocks, and prime parcels with a quantity 15½ feet and up would bring good prices. Oak boards 1¼ No. 1 common are wanted, as are also prime whitewood logs, which are scarce here. Birch is weak and should not be shipped. Maple is poor; even the flooring stock is not in much demand now.

## OAK FLOORING

An artistic volume by Henry H. Gibson, editor Hardwood Record; 40 pages, in colors, on heavy India tint paper; tells all that's worth knowing about Oak Flooring, its hygienic qualities and low cost; as well as the proper finishing and care of oak floors.

Profusely illustrated, an ornament to any office or library table; contains no advertisements, and constitutes an authoritative text-book on this important subject. Of special interest to architects, builders, house-owners and women. Price 50 cents. A limited number have been purchased by leading oak flooring manufacturers who authorize distribution FREE (until supply is exhausted). Copy will be sent on receipt of 10 cents in 2c stamps to cover cost of packing and mailing. Address quick: Book Dept., HARDWOOD RECORD, 355 Dearborn St., Chicago.

## LOGGING EQUIPMENT FOR SALE

### FOR SALE.

One or two Lindsay logging wagons, 8 wheels, as good as new, offered cheap. Address "BOX 8," care HARDWOOD RECORD.

## BUSINESS OPPORTUNITIES

### FOR SALE.

Large tract of hardwood timber, principally cottonwood, considerable oak, ash and gum, with 35,000 circular mill. Plenty of good houses, office building, tram road and cars, mules, loading dock and switch. Everything complete and in first-class condition for manufacturing. Mill logged by river and teams. Now running. In Oklahoma. Address "BOX 5," care HARDWOOD RECORD.

### FOR SALE.

Circular sawmill complete, new outfit; also teams and wagons; a going proposition. Will require \$2,000 cash. Will contract output and take balance on time.  
J. T. MORGAN LUMBER CO., Paducah, Ky.

### FOR SALE.

A new J. A. Fay & Egan 6' band mill, now in operation six miles east from Albany, Ga., on Flint river, 587 acres land in fee, estimated to cut 4 million feet, cypress, poplar, oak, hickory, ash, gum and long-leaf yellow pine. This is fine pecan land. Timber can be bought at a low price 100 miles up the river to keep this mill running 20 years. No competition in the river. This is the best mill proposition in Georgia. Reason for wanting to sell is that I have too much other business and can't give the mill business the proper time and attention, and have no experience in the mill business. Write for full particulars and terms. Capacity of mill 20 to 30 M. Address

M. A. JARRARD, Albany, Ga.

### CLOSE TO THE STUMP.

A woodworking plant at the junction of the "Soo" and Great Northern railways is offered for sale, or rent on easy terms, owing to the desire of the owner to retire.

The plant covers an entire block; main building 40x160 feet outside of engine room; finishing and packing rooms 36x80 feet and 40x80 feet; new 80-horsepower boiler and engine; dry kilns and office.

Plenty of hardwood timber supply at a low price.

A live furniture or woodworking man can secure a bargain and a splendid money-making business.

For full particulars address

L. J. BROWN, Alexandria, Minn.

### FOR SALE.

Circular saw mill complete, capacity 15,000 ft. per day; in first-class condition, including lath and shook mill. Will be sold at a bargain.

R. B. BARNESGROVE, Tioga, W. Va.

### FOR SALE.

Veneer plant in good location for cheap timber. Good trade. Write for a bargain. Address "VENEER PLANT," care HARDWOOD RECORD.

## DIMENSION STOCK WANTED

### WANTED—MAPLE OR BIRCH SQUARES.

2x2 15" and 18" long.  
1 1/2"x1 1/2" 15" and 18" long.  
PAUL SCHMECHEL, 537 Monadnock, Chicago.

### WANTED—DIMENSION STOCK.

We are in the market for several carloads of oak and hickory dimension stock.

ESTABROOK-SKEELE LUMBER CO.,  
Fisher Bldg., Chicago, Ill.

## RAILWAY EQUIPMENT FOR SALE

### LOCOMOTIVES FOR SALE.

Narrow or standard gauge from 7 tons to 70 tons; over 165 locomotives of various types at our shops.

SOUTHERN IRON & EQUIPMENT CO.,  
Atlanta, Ga.

## MISCELLANEOUS

### GRAPHOPHONE EQUIPMENT FOR SALE

Three Columbia graphophones practically unused, of modern type, in perfect order, including shaver with electric motor attachment. These machines for commercial dictation will effect an economy of about forty per cent in time.

The entire equipment will be sold at a bargain. Address

"H. H. G.," care HARDWOOD RECORD.

### ADDRESSOGRAPH EQUIPMENT.

An up-to-date addressograph equipment, including machine, cabinet, chain links, type cabinets and type enough to carry seven thousand addresses, for sale at a bargain.

This equipment can be utilized for the addressing of letters, envelopes, pricelists, circulars, wrappers, etc., and is now being used by HARDWOOD RECORD for addressing its mailing list. The increased subscription list has necessitated the purchase of a paper-roll wrapper addressing machine, and therefore this first-class equipment will be disposed of at a great bargain.

Delivery can be made immediately.

Address HARDWOOD RECORD, Chicago, Ill.

11	Gum	20	Veneers and panel stock

SPECIMEN STATE GUIDE CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

- Name of state and town
- Name of concern
- Name of buyer
- Line manufactured
- Kinds, grades and thicknesses of lumber
- Kinds and sizes of dimension stock
- Kinds and thicknesses of veneers
- Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

**HARDWOOD RECORD, Chicago**

# PERSONAL LETTERS

*Mr. Business Man  
Good Times  
Personal U.S.A.*

## The Writerpress

Makes it possible to send out from 8,000 to 10,000 **Personal Letters** daily. Not printed forms, but actual typewritten letters bearing the name of the recipient and having all the earmarks of a letter pounded out on the typewriter.

Multiply your best selling arguments by the number of names on your mailing list and the result is largely increased business.

By a new method possible only with the WRITERPRESS, names and addresses can be filled in on the Writerpress at the same time the body of the letter is made, doing away with the typewriter in making form typewritten letters.

### The Direct Inking Carriage

converts the Writerpress into a complete printing plant, enabling the business man to print his own office forms, quotations, price lists, filing cards, cost prices, advertising copy, etc.

Send for descriptive booklet and sample of work.

**The Writerpress Co.**  
410 Writerpress Bldg., Buffalo, N.Y.

### SPIRAL GROOVED AND BEVEL POINTED KILNED HARDWOOD DOWEL PINS

The Spiral Groove holds the glue, and gives holding power similar to a screw. **Means better product.** Pins with good Bevel Point drive quickly, means more output. Only pin for Dowel Door Manufacturers.

Automatic Wood Turnings of all kinds.  
Samples and special discounts on application.  
**STEPHENSON MFG. CO., SOUTH BEND, IND.**

**Saranac Machine Co., St. Joseph, Michigan**

Spitzbergen, Sept. 15, 1909.

It was no trick at all to cut down the North Pole. Used an Atkins Silver Steel Saw.

Signed, } COOK  
PEARY

They make work easy and save a lot of time besides. The most economical Saws in the world. Used in the largest operations everywhere.

## ATKINS Silver Steel SAWS

"FINEST ON EARTH"

Silver Steel is our own exclusive product and is, by test, the most perfect material now used in Saw Blades. It is hard and tough, but not brittle. It holds its edge.

All Silver Steel Saws are Segment Ground—thinnest at center on back and taper gradually from the top of gullets to the thinnest point. They pull easy because they have ample clearance.

Atkins Finest Saws have "Silver Steel" on the blade. If you don't see the words "Silver Steel" on the blade, you will know that it is not one of our Finest Saws.

If your Dealer or Jobber will not sell you an Atkins Silver Steel Saw, write to the nearest address given below and we will take care of you in double quick time.

### BURN YOUR REFUSE UNDER YOUR BOILERS,

utilizing the heat to run your mill.

This enables you to dispose of it without expense, and permits you to

### SELL YOUR WOOD,

for which there is a large and rapidly-growing demand, at good prices.

### THE GORDON HOLLOW BLAST GRATE

gives as good results with wet, green or frozen sawdust as a draft grate gives with dry wood.—Equally efficient with wet or green slabs.—Generates from 25 to 50% more steam than an ordinary grate.—Gives you perfect control over your fire.—Makes you independent of the weather.—Saves labor in firing.—Lasts a lifetime.—Adapted for either ordinary furnaces or Dutch ovens, and for any number of boilers.

It often

PAYS FOR ITSELF IN ONE WEEK'S TIME.

**GORDON HOLLOW BLAST GRATE CO., GREENVILLE, MICHIGAN.**  
(Please mention this publication.)

## THE DODGE LINE

of hangers, pillow blocks and bearings makes the best "Roadbed" for Power because it is made to reduce friction to a minimum.

You can replace your plain bearings with Dodge Self-Oilers and save enough in six months in oil and maintenance to pay for them.

Ask for booklet G-100 "The Oil Patrolman."

**DODGE MANUFACTURING CO.**  
Station H-55, :: Mishawaka, Ind.

# "IT PLANES AS SMOOTH AS GLASS"

THAT'S WHAT THEY SAY ABOUT OUR NO. 156  
SMOOTHING PLANER AND IT'S THE TRUTH

No. 156 SMOOTHING PLANER.

Get a piece of walnut or maple and run a hand plane over it, then write for one of the samples done on our No. 156 and place them side by side. Pass your hand over them and you will notice no difference in the smoothness of the surface.

It is the work a machine does that sells it. We don't need to talk to you after you have seen the work. Of course, we will be glad, if you are interested, to enter into the reasons why. We even will be pleased to show you that our machine is better built and that higher mechanical principles enter into its construction. We can show you why no knife marks are left on the wood when stock is planed on this machine.

Write for Pamphlet, No. 3-A and Samples.

**J. A. FAY & EGAN CO.,** 414-434 W. FRONT STREET,  
CINCINNATI, OHIO.

## New Hoosier Improved Short Log Sawing Machine

Made especially for sawing veneer cores and small logs, up to 20 inches diameter and from 2 to 12 feet long.

The machine is built with a heavy cast iron husk frame that carries the feed works and mandrel which runs in self-oiling boxes. It is equipped with a variable friction feed, with cable attachment to carriage. Feed is strong and rapid.

The dogs are of an entirely new style, and dog the log, or piece to be sawed, in the end instead of top and bottom, and can be instantly changed to grip any length log that the carriage will accommodate.

The machine consists of but three pieces, the husk frame, track frame and carriage. It can be quickly and easily moved, and can be operated with a 10 H.P. engine. The machine will saw from 3,000 to 6,000 feet per day and weighs 3,500 lbs.

The largest saw that can be used is a 48-in. diameter.  
For further information, address :

**THE SINKER - DAVIS COMPANY, Indianapolis, Indiana**

The Best Skidding Engines are none too good for the service demanded.

This is the principle that has guided our design and construction.

## **RUSSEL COMBINED Skidders and Loaders**

**LOGGING TOOLS  
LOGGING CARS**

Catalogs on Request

**RUSSEL WHEEL & FOUNDRY COMPANY**  
DETROIT, - MICHIGAN

## **RESULTS**

in steam skidding depend largely on keeping the machine busy **at skidding** and in getting the logs up to track at the **nearest** spot.

Frequent moves from one point to another are accomplished quickly by the

### **CLYDE SELF-PROPELLING STEAM SKIDDER**

and require no more time than walking down the track.

The steam guying-drums enable a set to be made while the tongs are being taken out to the first log.

These important features are exclusive in the **Clyde Skidder** and are what determine the **average results** for the month, the year or any other period.

A half million may be skidded with our machine in a single day, with large logs, in thick timber, close to track but the **correct test** of

any machine is the **average** in all kinds of timber, scattered growth and from the long haul as well as the short haul.

It's in the **final results** that the **CLYDE SKIDDER** outclasses them all. Let's send our testimonial booklet giving such results from scores of customers.

## CHECKING, SPLITTING, ROTTING POSITIVELY PREVENTED

by Henke's Wood Protector, a thick liquid to be applied to either timber, lumber or  
manufactured goods at a trifling cost.

It will not discolor or injure the wood, neither will it interfere with its subsequent  
working or painting.

It requires no preparation before use, no heating or mixing, and is easily applied  
by unskilled labor.

L. A. Schwarzwaelder, Manufacturer of Bank and Office Fixtures, Chichester, N. Y., writes us  
under date of August 29, 1909

"I have given your material a test on some lumber, and find that it has fulfilled all that you claim  
for it. Please ship me a barrel of 600 lbs. at your earliest convenience.

**You need not pay for it if it does not  
do all we say. That is our guarantee.**

# Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock THAT IS IN SHAPE TO GLUE.

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawn Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. THE GLUE WE USE IS GUARANTEED HIDE STOCK.

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed THE BEST.

Factory and Veneer Mill: ALGOMA, WIS. Veneer and Saw Mill: BIRCHWOOD, WIS. Home Office: ALGOMA, WIS.

# CHICAGO

THE GREATEST HARDWOOD MARKET IN THE WORLD

## A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

## SUPERIOR ELM

Our Soft Gray Elm is better than ordinary Soft Elm. It has less shake, is not as hard and is much less liable to warp.

It makes excellent interior finish and is especially desirable for furniture, refrigerators, pews, chairs, tables, etc., and forms a good base for veneers.

# *General Electric Company*

## Induction Motors for Sawmills and Woodworking Factories

Bank of General Electric Company's Induction Motors each Driving a Matching Machine

Some of Their Characteristics:

**Rugged Mechanical Construction**

**Large and Long Bearings**

**High Efficiency over Wide Load Range**

**Approximately Constant Speed at All Loads**

**High Overload Capacity**

**Low Heating Characteristics**

**Exceptionally High Starting Torque**

The installation of the General Electric Company's Induction Motors ensures the greatest possible output and a low cost of operation and maintenance.

The frame is so designed as to combine great strength and rigidity with minimum weight. The open type of construction exposes the outside of the stator laminations directly to the air, materially improves the cooling of all parts of the motor, and avoids spaces for the accumulation of dust.

The bearings are self aligning, of ample size, and have liberal wearing surface. The oil wells are closed by tightly fitting covers and the opening in the bearing housing at both ends is closed with a washer which pre-

vents the entrance of dust and dirt into the bearings. The bearings are fitted with brass oil rings and the reservoirs are provided with visible gauges which indicate the amount of oil they contain.

An especially valuable feature of these motors is the entire absence of sparking, permitting their installation in places where sparking might cause the ignition of fine dust or even an explosion.

They can be operated in any position, it being only necessary to turn the bearing bracket 90° and 180° relatively to the frame to permit of their being mounted on the wall or ceiling.

**These motors are supplied in all capacities and for all the standard voltages and frequencies. Write for Bulletin 4641-2.**

# ATKINS SILVER STEEL SAWS

"FINEST ON EARTH"

The most profitable Saw in the world. There is scarcely a commissary in the United States but what sells them. They are in nearly all large lumber camps exclusively. The most satisfactory Cross-cut Saws, because they are made of finest material and constructed on most scientific principles. They run easier, cut faster and hold their edge longer than any other Saw. We are the originators of all the popular styles of teeth on the market.

## DO YOU BUY THEM?

If not, now is the time to begin. Ask your Jobber or Dealer for an Atkins Silver Steel Saw and be sure the name, "E. C. Atkins & Co." is on the blade. It is not a genuine Atkins Saw unless our name is plainly etched upon the center of the blade. If you have any difficulty in getting an Atkins Silver Steel Saw, please write to the nearest address given below.

### Coming Association Meeting

#### HARDWOOD MANUFACTURERS' ASSOCIATION OF THE UNITED STATES.

The eighth annual meeting of this association will be held at the Sinton Hotel, Cincinnati, on Tuesday, Wednesday and Thursday, January 18, 19, 20, 1910.

LEWIS DOSTER,  
Secretary.

R. M. CARRIER,  
President.

### General Market Conditions

There seems to be a growing strength in demand for the general run of standard hardwoods, which is especially noticeable in firsts and seconds and No. 1 common. Say what you please, although there have been some big blocks of No. 2 and No. 3 sold during the last few weeks, the coarse end of hardwood is the slow seller. The demand for firsts and seconds in nearly all varieties exceeds the supply. No. 1 common is in good second call wherever it can be utilized for remanufacturing purposes. In fact, wise remanufacturers of hardwoods are buying every foot of No. 1 common they can on account of the lower price and relatively higher cutting value, but the call for firsts and seconds is strong because manufacturers of furniture and other woodworking lines have to have a considerable quantity of firsts and seconds to secure a percentage of necessary long cutting lengths that cannot be had out of No. 1 common.

Specifically the better end of poplar, especially in good widths, is in strongest call and apparently there is not nearly enough to go around; especially is this true in the automobile trade. The RECORD office is deluged with inquiries for wide panel stock. There

will probably be no large output of this variety ready for the market before June. As is usual between now and spring, there will be a fair quantity offered, if the mountain river tides do not fail.

Quartered white and both plain and white oak in firsts and seconds is in heavy demand with No. 1 common a close second.

The demand for gum is daily improving, while all other southern hardwoods are in fair and good demand.

The situation in the north country is that very little lumber remains in first hands. In Michigan the manufacturers have unsold less than one hundred million feet of ash, basswood, beech, birch, rock elm, gray elm and maple, and it is doubtful if more than 50 per cent of this quantity is in the hands of manufacturers in the state of Wisconsin. This is more than 25 per cent less than manufacturers held a year ago. The stock represented by these figures is nearly all No. 2 and poorer, the No. 1 common and firsts and seconds being practically exhausted.

In the east there is an increasing demand for firsts and seconds chestnut and the demand for sound wormy is improving at slightly increased prices.

The mahogany and other foreign wood trade is showing the effects of large furniture sales and manufacturers of high-class goods are buying quite freely. Prices still range comparatively low on foreign woods.

The trade in black walnut, sycamore, cherry and the minor lines of high-class hardwoods is normal, but somewhat featureless.

Both northern and southern beech is in but moderate request, but it is gradually going into substitution for other woods and an advance in value may be expected.

Southern soft maple is attracting a good deal of attention and the prices are ranging somewhat higher. This wood is an especially good furniture material and works up to good advantage in medium and low price goods.

The oak and maple flooring manufacturers are busy and from a surplus stock of nine months ago of more than fifteen million feet flooring is oversold today in some grades and thicknesses to the extent of more than ten million feet. This promises to be a busy season for hardwood flooring makers.

The hickory handle trade is still featureless. There is no unanimity among the handle makers to secure a just price for the product and the market is still overloaded. Buyers are having their own way about prices, with a result that there is very little money in the hickory handle trade at the present time. The output of broom and mop handles seem to be fully up to standard requirements, and while the average broom handle manufacturer is getting a little profit out of the business, he is not receiving nearly the price that his output warrants.

Veneer manufacturers are generally awakening to the fact that they are not receiving as high prices for their goods as they should. The market in most lines is still overloaded and the factories are still busily engaged in filling old orders at low prices. Doubtless when these orders are filled, an attempt will be made to secure a considerably higher range of values, but until that time comes there are very few people in this business that are making any money. Undeniably, there are too many people going

into the veneer business and the majority of these newcomers in the trade are distinctly "amateurs" who have not yet learned to figure cost with any accuracy. The result is that "there is a sucker born every minute" and there are wise buyers out to get the benefit of his ignorance.

### Cincinnati as a Hardwood Center

The exposition of Cincinnati, Cincinnati's lumbermen and Cincinnati lumber institutions in this issue of the RECORD will undoubtedly be interesting to the larger proportion of hardwood manufacturers, jobbers and wholesale consumers throughout the country. The facts contained in this story will doubtless surprise the majority of lumbermen, in many cases even Cincinnati lumbermen themselves. The article presents the Cincinnati hardwood situation as never before recorded in printed and pictured form.

Cincinnati from small beginnings, owing to its advantageous geographical situation midway between the great producing fields and the greater consuming regions of southern Wisconsin, southern Michigan, Illinois, Indiana, Ohio, Pennsylvania and New York, where about 85 per cent of the total hardwoods used commercially are consumed, together with the energy and forcefulness and constantly growing coterie of hardwood manufacturers and jobbers, has grown to an enviable position as one of the foremost hardwood markets of the United States. While Chicago, directly or indirectly, handles perhaps twice the volume of hardwoods that pass through the hands of Cincinnati dealers, and Memphis actually manufactures more lumber, Cincinnati is surely in a position that ranks close to that of the great lumber market of St. Louis. There is no group of lumber institutions that has grown with such rapidity during the last decade as have those of Cincinnati, and almost every week brings a new factor into the trade of that great hardwood center. Present indications show that Cincinnati bids fair to outstrip all its important rivals in the quantity of hardwoods handled.

The feature of the article that will appeal most strongly to the average manufacturer and wholesale consumer is the stand taken by the Cincinnati hardwood element, backed by the Cincinnati Lumbermen's Club, in regard to trade morals. The plan adopted by the Cincinnati Lumbermen's Club and endorsed by the majority of Cincinnati lumbermen, insures to every seller or buyer of hardwoods an absolutely square deal in doing business in that market. It is sincerely to be hoped that the good example set by the Cincinnati lumber trade will be followed by other leading hardwood markets of the country, for by such means only can the atmosphere be cleared of at least suspicions of unbusinesslike and unmercantile conduct on the part of all elements of the trade.

On this policy of a square deal the RECORD is with the Cincinnati contingent first, last and all the time, and it urges both the lumber manufacturing and wholesale consuming elements of the trade that they back Cincinnati in this renaissance of what perhaps might be called old-fashioned business methods just as seriously as Cincinnati lumbermen have taken up the project of playing fair with every man.

Cincinnati means business and business it will get.

### The End of Substitution

In the history of the hardwood lumber trade, when a particular wood has grown scarce and the price has ranged high, substitution has promptly been resorted to and some other wood has been employed in place of the old standard favorite. Twenty-five years ago, with a growing scarcity of high types of black walnut which was the favorite furniture wood of the country, there was a cessation of its use for furniture purposes and oak and mahogany became prime favorites, and since that time walnut has been employed only for special purposes. The effect of this transformation has been that walnut goes on the market today with an annual output of less than thirty million feet at a price less than prevailed a quarter of a century ago.

Rock elm, only a few years ago, was a wood that was regarded as indispensable for many uses, especially in the agricultural implement trade. The stock grew short, prices ranged high, and today rock elm is one of the few dragging features of the hardwood market.

Less than five years ago black ash was considered an indispensable material for the manufacture of refrigerators. This wood grew short in supply and prices ranged higher than the quality, as compared with available substitutes, warranted. The result has been that refrigerator manufacturers have learned that other woods could readily be substituted for their favorite black ash and hence this wood is another slow seller, with prices ranging

comparatively low.

Right now, with every prospect of a manifest shortage in oak of all types, the furniture, interior-finish and other remanufacturers of hardwoods are making strenuous endeavor to utilize substitutes which will take the place of this king of the hardwood forest. The result is manifest: Birch, which has been one of the pariahs of the northern forest—a magnificent wood whose quality was but little esteemed for years—is fast becoming a favorite furniture material and is taking the place of oak. So strong has been the demand for birch that practically every foot of available supply in first hands has now gone into the hands of the jobbing and remanufacturing trade.

Red gum is another wood which is fast becoming a favorite

### MAKE GOOD

Make good.  
Cut out "if," "could," and "should,"  
And start in to saw wood.  
You can still have the best  
Things in life, like the rest  
Of the men who've achieved  
Just because they believed  
In themselves. You're deceived  
If you think fortune comes  
With a rattle of drums  
And a fanfare of state  
To hand yours on a plate.  
That isn't the way  
That she visits today.  
You must get out and rustle and bustle and hustle;  
You need all your muscle, for you've got to tussle,  
Plunge into the fight,  
Hit to left and to right,  
And keep crashing and smashing.  
Don't let up with your striking  
Till things meet your liking.  
For God's sake, stop bawling—  
Instead, do some mauling.  
It makes the world bitter  
To look at a quitter;  
Fate scowls when she sees  
A grown-up man on his knees.  
A man with his health  
Is a mine jammed with wealth  
Full of unexplored lodes.  
Why, the freckled-backed toads  
Have the sense to keep jumping—  
And here you are frumping—  
Come now, strike your gait—  
It isn't too late,  
There's no such thing as fate!  
Drop that fool talk of "luck,"  
Get a grip on your pluck,  
And buck.  
Begin  
To grin  
And win.

—H. B. R. Kaufman.

material in the furniture manufacturing trade as a substitute for oak, especially in the production of medium and low grade lines.

This recourse to substitution on the part of manufacturers cannot go on indefinitely. It would seem that substitution is about at an end, for where can other low priced woods be found to substitute for those in current use? Undeniably future evolution in the hardwood trade will be for a finer manipulation and a more thorough utilization of the coarse end of standard hardwood products. This surely means the cutting up of a large portion of hardwood lumber, from the coarse ends of No. 1 to mill culls, into the form of dimension stock, and delivering this clear lumber to remanufacturers in the exact sizes which they require in their various lines of production.

Again, it is more than likely that American inventive genius will eventually succeed in producing from lumber and woods offal a compound lumber that shall take the place of many varieties of hardwood for the cores of veneers and for other purposes where grain and figure are not an essential element, especially in furniture and coffin construction and interior finish.

### The Low Grade Problem

More and more of a bugbear, and more and more of a menace to possible profits, is the low-grade problem that faces every manufacturer, and especially those who are manufacturing hardwoods at points remote from regions of consumption. The hardwood manufacturer so located that he can reach furniture and kindred trades with his product on freight rates of from 6 to 10 cents a hundred has no particular difficulty in unloading his low grades at a satisfactory price even if there is a cutting waste of from 40 to 50 per cent in them, but the man shipping hardwoods on rates ranging from 22 to 35 cents a hundred is in trouble. Paying freight on a lumber product where 50 per cent goes under the boilers can by no possible chance show a profit in manufacture and, on the contrary, it shows such a distinct loss that the profits on the good end of the output are pretty well absorbed in the total transaction.

Undeniably, the solution of the entire low grade hardwood problem lies in the proper seasoning, kiln drying and intelligent cutting up of everything but the good end of No. 1 common and firsts and seconds into dimension stock at the points of production. The shipping of high-class, clear dimension stock to remanufacturers would simplify grading problems and end once for all all controversies on grades and qualities. It is the logical evolution of the hardwood business where manufacturing is carried on at a point remote from a large consuming demand. Today a considerable portion of table and furniture material is in standard dimension sizes. When lumber manufacturers succeed in analyzing these various sizes they can establish a trade for dimension material in a sequence of sizes that will be salable not only to one customer but to thousands.

### Relative Oak Values

At a recent meeting of table manufacturers held in Chicago an analysis was made of the average clear cutting value of firsts and seconds and No. 1 common oak. Reports secured from something like twenty-five leading table manufacturers were collated and an average made of the total reports. These figures showed that table manufacturers were able to produce 80 per cent of the net quantity of lumber in the form of their finished tables from firsts and seconds and 67 per cent from No. 1 common. While there was no expressed opinion on the subject of the waste entailed in the utilization of No. 2 or lower grades of oak, it went by inference that the percentage of waste in the lower grades was too heavy to consider these grades as worthy of attempted utilization in table manufacture.

The percentage of results of net cutting shown in firsts and seconds and No. 1 are worthy the earnest consideration of the grade and price makers of hardwood lumber. No. 1 common, on the basis of present grading, has been ranged along about two-thirds of the

price of firsts and seconds. If the net cutting results as herewith shown are borne out by general experience, it goes without saying that No. 1 common is worth more than 75 per cent as much as firsts and seconds to remanufacture, or, to put the matter in other words, either the price of No. 1 common is too low or the grade is too high as compared with the grade and price of firsts and seconds. Table makers and other remanufacturers of hardwood lumber apparently are purchasers of firsts and seconds only in a minor quantity and then for the purpose of securing the small proportion of long cutting lengths that they are not able to get out of No. 1 common. Let any lumberman figure the matter out for himself, for on the basis of present grades and prices No. 1 common is more than \$11 a thousand cheaper than firsts and seconds for the ordinary uses into which lumber is remanufactured.

At the furniture meeting referred to there seemed to be a sentiment on the part of the table makers that they could do even better in their purchases if they could coax manufacturers to split No. 1 common into two grades and give them the opportunity of buying the selected No. 1 common. This scheme would be all right for the table and furniture makers without doubt, but it would not have a satisfactory outcome for lumbermen. Apparently, the truth of the matter is that No. 1 common has got so out of range in quality and value that the wise remanufacturer has now found a particularly "soft spot" in the lumber market, and wants to hold on to it. This is self-evident from the fact that while firsts and seconds and No. 1 common in oak are active sellers, the No. 2 and No. 3 grades are manifestly dragging. Right here is an opportunity for an awakening of lumber manufacturers to equalize grade and value in sundry oak qualities.

### About Red Gum

Red gum—this erstwhile despised wood of the Mississippi valley and the Gulf and lower Atlantic coasts—is fast coming into its own. Through a long campaign of education in manufacture, curing and utilization, makers of furniture, interior finish and kindred lines have learned that red gum is a very likely and reliable wood which can be utilized for a great variety of purposes, and especially is a desirable commodity for the manufacture of medium and low grade furniture, for interior finish, for doors, for coffins and sundry other purposes.

The region of the Middle West has recognized for years, following the example of Great Britain, that gum was a wood worth consideration, but it is only during the last year or two that the great eastern section of the country has been willing to consider red gum as a worthy lumber commodity. Today red gum is essentially the wood that is being substituted for oak, poplar and sundry other types that have been regarded as high class and particularly adaptable for specific purposes.

There is a general impression that red gum grows in almost inexhaustible quantities. It is well known that there are large stands of this wood in southern Missouri, throughout a large portion of Arkansas, in Mississippi, Louisiana, Texas and along the fringe of the Gulf and Atlantic coasts as far north as the Pamlico and Albemarle sound region of North Carolina. A close study of the range and growth of this wood and the average stand leads the RECORD to the belief that the supposed quantity of red gum is very much overestimated in the public mind. Students of timber growth who are well equipped to figure out this stumpage have spent much time in an analysis of it. The RECORD has made a considerable investigation along the same lines and it is practically safe to say that the total stand of red gum existing is not to exceed eleven billion feet. This quantity is very small when compared with the aggregate possibilities of gum consumption during the next few years, and it may safely be stated that gum stumpage values, on the basis of the paucity of stand, is perhaps the best timber purchase in the country today and that surely values will accrue to this wood within a very short time that will make timber investments particularly profitable.

## Pert, Pertinent and Impertinent

### Syndicated Virtues

"Be good, be clever let who will!"

Thus runs the saying trite.  
The sound of it is pleasing; still,  
Mere goodness will not turn a mill  
Nor shoe a horse nor pay a bill—

It doesn't work out right.  
It might, however, if we could  
Draw dividends for being good.

The clever get a lot of rocks,

As every one admits.  
This talk may not be orthodox;  
The proper man it always shocks  
When one some precept coldly knocks  
Or tears it into bits.  
Yet wealth is his, and that's a fact,  
Who's full of cleverness and tact.

A combination, don't you see,

Might work the way it should.  
To syndicate the virtues we  
Should feel ourselves completely free;  
For it is good to clever be  
And clever to be good.  
Were we to work upon this line  
Perhaps we'd all be doing fine.

Old age is useful—it  
teaches us that one can  
get enough of a good  
thing.—Wm. Walker At-  
kinson.

It's easy to make a  
woman do what you  
want her to if you can  
keep her from knowing  
what it is.

A man's idea of an  
affinity is a woman who  
will tolerate the kind  
of a man he is.

The shortness of  
many a woman's breath  
is due to the length of  
her tongue.

It is easy to look on  
the bright side as long  
as it is turned your  
way.

It isn't so much  
knowing a lot as know-  
ing a little and how to  
use it that counts.

Some men waste a  
lot of time telling how  
honest they are.

An optimist is a man  
who believes that there  
is such a thing as hon-  
esty in politics. A pes-  
simist is a man who  
did, but doesn't.

All men are supposed  
to be born free and  
equal. Suppositions are  
inexpensive.

Conscience is some-  
thing those who need it  
haven't got.

The average man is a  
poor judge of his own  
importance.

## To be Expected

Never judge the tax-  
es a man pays by the  
diamond in his shirt  
front.

Most people expect a  
dollar's worth of thanks  
when they hand out a  
fifty-cent present.

If you are sufficiently  
magnetic things are  
sure to come your way.

When you see a  
young man making love  
to a young woman it is  
a safe bet that they are  
not married.

A truthful man can-  
not see any fun in go-  
ing on a fishing trip.

Many public speakers  
are like wheels—the  
longer the spoke the  
longer the tire.

Do as you please and  
you will be the only  
person pleased.

Never say fail. Just  
go ahead and fail and  
your creditors will soon  
hear of it.

Some women look kill-  
ing and others look  
daggers.

Some people have  
better clothes than man-  
ners.

A man always re-  
members the person  
who did him a favor—  
when he wants another.

When you hear a  
man say that money  
can do anything, it is  
a safe bet that he can't  
show thirty cents.

**CLINTON CRANE**  
CINCINNATI, OHIO

# Builders of Lumber History

Number LXXXV  
CLINTON CRANE

(See Portrait Supplement.)

In this special Cincinnati issue of *HARDWOOD RECORD*, it is timely that particular reference be made to that city's foremost lumberman, Clinton Crane. Mr. Crane is not only a builder of lumber history in the particular section where his gigantic operations are carried on, but is also one of the chief, if not the foremost, hardwood lumber producer in the United States. While Cincinnati boasts of a number of men of note in hardwood affairs, Clinton Crane, a striking and lifelike picture of whom forms the supplement of this issue, is preëminently foremost. His life history is closely interwoven with that of the Ohio valley during the past thirty years. He is recognized as a man of forcefulness, clear perception and almost unerring judgment. These attributes, combined with his indefatigable energy, have placed him in the front rank in the lumber industry of this country.

Clinton Crane was born on a farm three miles southeast of Eaton in Preble county, Ohio, October 11, 1844. His father died in the old Black Bear Hotel, in the fall of 1845, while on a business trip to Cincinnati. His mother continued to live upon the farm, operating it herself. Here Clinton spent his early childhood, attending school during the winter months, and working on the farm during the summer. When just past eleven years of age, in the fall of 1855, he first began to earn money by buying cattle, sheep and hogs at Eaton, and selling them in Cincinnati at the old Brighton stockyards.

In the fall of 1857 he stocked with hogs and sheep the Sam Smith slaughter house at John and Findlay streets, Cincinnati. He sold his product on the Cincinnati markets and disposed of the tallow to the soap factory of Procter & Gamble, at that time located at Central avenue and York street.

In the spring of 1861 Mr. Crane removed to Grand Prairie, northwest of LaFayette, in Benton county, Indiana, where he established a cattle ranch, handling and selling cattle for three years, and wintering at Peru, Ind., continuing in the stock business until the fall of 1864.

In the spring of 1865 Mr. Crane entered the log business in Indiana with his brother, W. B. Crane, and continued until the fall of the year 1870, when he formed a partnership with James O. Cole of Peru, Ind., in the lumber business. Here he continued until the spring of 1880, when he went to Cincinnati, on June 15, and started in the sawmill and lumber business in the East End, his present location.

In February of 1894, the partnership of

Cole & Crane was dissolved and an incorporation under the laws of Indiana was formed. This was known as C. Crane & Co., James O. Cole and C. Crane being the principal owners.

Cole & Crane, as a partnership, own large tracts of timber land in West Virginia, partly in fee and partly only stumpage rights, in all about 300,000 acres. The land is located on the Guyandotte River, in Logan, Wyoming, Mingo and Raleigh counties, and 60,000 acres on Little Cole.

In Cincinnati C. Crane & Co. operate three big sawmills on the banks of the Ohio River, the operation stretching for a mile along the river front. This is one of the sights which is never overlooked by visitors to the Queen City. The photographic view presented with this issue was taken especially for *HARDWOOD RECORD* from the hill-tops in Eden Park, which overlooks the great plant.

Three plants, which operate seven band mills, are located on this property, together with a large planing mill. The capacity of the plant is 250,000 feet per day of ten hours, the mills being equipped with electric lights, so that in busy times two turns are operated, when 500,000 feet of hardwoods are cut per day. The mills are equipped with the latest improved machinery, and with every labor-saving device which will expedite the successful operation of the plant. The great yards carry on stock from 30,000,000 to 50,000,000 feet of lumber. The stock at present aggregates more than 40,000,000 feet, and consists of oak, poplar, chestnut, ash and walnut. There is also a good stock of West Virginia hemlock and basswood. The yards are equipped with numerous switches and side tracks, as the Pennsylvania Railroad runs directly through the plant. The yards can load out from twelve to twenty cars per day. The retail trade of the concern handled by wagon-load locally reaches about 150,000 feet per day.

C. Crane & Co. are members of the Hardwood Manufacturers' Association of the United States. James O. Cole is president and C. Crane is secretary-treasurer and general manager of the house.

Mr. Crane says the sawmill end of the business has not been particularly profitable for the past two years on account of the expense attached to getting timber out of the forest, high wages and increased price of stumpage. The timber purchased by Cole & Crane years ago has been very profitable, showing even greater profits than was expected at the time it was acquired.

There are logs enough in the Ohio River at present to run the plants at Cincinnati

until Christmas, with about two-thirds of next year's cut on the banks of the Guyandotte River, ready for the spring run. On account of having a heavy stock of logs on hand this spring the firm has not arranged for a large crop for next year.

C. Crane & Co. own sufficient timber to run their mills for twenty years, all of it virgin growth in West Virginia. In fact, it is the finest poplar, oak and walnut ever logged in that state, as it stands ten to twenty miles back of the main floating streams at the head of creeks and on rich coves, where the finest poplar and walnut grow. Heretofore it has been considered too expensive to build and maintain tram roads so far into the woods. About 100,000 acres of the timber land owned by the concern contains some of the best beds of coal in West Virginia.

Clinton Crane is a big man, physically and intellectually. He is thoroughly democratic and mingles on terms of familiarity with his humblest employe. A visit to Mr. Crane is a matter requiring no formality; there is no liveried sentinel at his office door who requires the presentation of a card to gain access to his presence. Dignity is an unknown element in his makeup and he does not in the least resent being called "Clint" by any of his familiars. The amount of work of which he is capable is astonishing to the average man. He rises early, and often he can be found about his mills or yards at six o'clock in the morning and rarely closes his day's work before six or seven in the evening. He carries his years well, and appears ten years younger than he really is. He is a man of marked characteristics, strong prejudices, and decided personality. While regarded as a man of the strictest integrity, whose word is as good as his bond, he has always been credited with a shrewd trading ability. He makes close bargains, but if by any chance he gets the "hot" end of a deal, he laughs good-humoredly and "takes his medicine."

The great and varied interests which Mr. Crane handles would be appalling to the average business man when handled on the lines that he employs. C. Crane & Co. is essentially a one-man institution. Mr. Crane is absolutely czar. He personally handles every detail from making the plans for buying a 50,000-acre tract of timber, logging a hundred million feet annually, getting this immense quantity of timber to his mills, the details of the manufacture, and the employment of labor, down to the selling of a single carload of lumber. All these things come within his personal care and these transactions are often handled without contract or memo-

randum. Therefore his wonderful memory is a marvelous part of the make-up of this mentally and commercially great lumberman.

In the east end of Cincinnati where the

big Crane plants are located, he is personally known and respected by every man, woman and child. He takes a vast interest in everything that concerns the welfare of Cincinnati and is public-spirited to a

marked degree. Mr. Crane is a member of the Chamber of Commerce and other business organizations and is always ready with his purse to aid in any movement that looks to improvement of the Ohio Valley.

## Fall Meeting Michigan Hardwood Manufacturers' Association

The fall meeting of the Michigan Hardwood Manufacturers' Association was held at the Pontchartrain Hotel, Detroit, Thursday, October 28. The meeting brought out an attendance of representatives of thirty-two houses allied with this organization, or more than half the total number.

The meeting was called to order promptly at 10 o'clock, with President C. A. Bigelow in the chair and Secretary J. C. Knox recording.

After roll call, the minutes of the annual meeting held July 23 last were read and approved.

The secretary presented the following applications for membership: Jerry Madden Shingle Company, Rapid River; W. D. Young & Co., Bay City, and S. F. Derry & Co., Millersburg.

On motion the applicants were admitted to membership.

Secretary Knox then presented his report as follows:

### Secretary's Report

To the officers and members of the Michigan Hardwood Manufacturers' Association, Gentlemen: We have come together at this time to consider and discuss matters of vital importance to each manufacturer of hardwoods, and also of hemlock lumber, in Michigan, and we present to you today the eleventh stock report issued by this association, which we consider one of the most complete reports given you.

The stock report of one year ago contained only ten pages, while the one you have before you contains twenty pages besides the cover. This report was printed on the *Writerpress* in our own office at a nominal expense as compared with printers' bill of something like \$40 for each issue. Your Market Conditions Committee today will present report based on the stocks reported to you in this report, making comparisons with other years, etc.

We have called your attention at previous meetings to the seeming carelessness in which some of the stock reports are presented. We do not lay the blame so much on the manufacturer himself as to the carelessness of some clerk making out the report. The present figures have been carefully scrutinized as the reports have been opened at our office, and if any question has arisen as to their correctness we have communicated with the members by letter and if there was not sufficient time by telegraph or telephone. It is our aim to present to you from time to time figures that can be relied upon, and the manufacturer can aid the secretary in making these reports more complete by looking over his figures carefully before sending to the secretary's office. It is not our aim to be critical or technical in this matter, but to present to you figures that can be depended upon.

In our call for this meeting one of the important subjects to be considered was the handling of hemlock generally along with hardwoods. This question came up at our meeting in Saginaw in February, 1908, at which time a motion was

passed to the effect that "We handle hemlock as we are handling hardwoods, and that the manufacturers pay the same relative amount of expense to gather the statistics on the hemlock as on the hardwoods." Since that time the secretary has gathered stock reports on hemlock handled by our own members, and the Market Conditions Committee will present to you a report covering stocks, prices, etc., for this quarter. Owing to the seeming disinclination of some of our members interested in hemlock, we have only based our assessment on the hardwoods. We trust the question can be settled on a basis satisfactory to each and every member of the association.

The secretary in canvassing for members, especially in the Upper Peninsula of Michigan, has been assured of additional members if we would handle hemlock as we are handling the hardwoods.

C. A. BIGELOW, PRESIDENT.

Several trips have been made by the secretary calling on members and those who should become members of our association, with partial success, and there are several large manufacturers in the Upper Peninsula who should be brought into our association. They have been invited to be present at the meeting today, and we trust we shall see at least some of them here.

Since our last meeting we have enrolled as members W. D. Young & Co. of Bay City; S. F. Derry & Co., Millersburg; Jerry Madden Shingle Company, Rapid River.

The Danaher Hardwood Lumber Company of Dollarville has completed its entire cut and will probably discontinue the manufacture of lumber in Michigan as soon as it disposes of its stocks on hand.

Individual members can aid the secretary in securing additional members if they will. We have made request on you several times and a few of the requests have been acted upon, but the majority of the members have not paid much attention to this subject. Your own in-

fluence would be greater than that of the secretary in lining up manufacturers of your vicinity and I trust you will aid us in this respect as much as possible.

In our last report we announced a withdrawal of four large manufacturers from our association, but we come before you with the same number of reports as shown last year and several reports of new members which are not in this report, as the figures arrived too late to be printed.

The secretary attended the annual meeting of the Hardwood Manufacturers of Wisconsin at Milwaukee September 8. He found among the Wisconsin manufacturers a general optimistic feeling regarding hardwoods in general, the prospects for birch being especially good. The Wisconsin manufacturers had at that time a larger amount of stock on hand than a year ago, but contend that they will be able to dispose of it at fair prices.

There is a movement on foot for the consolidation of the Hemlock and Hardwood Associations in Wisconsin and a committee of three has been appointed by each of the associations to draft a new constitution, by-laws, etc., to take effect January 1, 1910. It was the general impression there that hardwood manufacturers generally hold hemlock and that the work of gathering statistics, etc., could be done at the same time and at about the same expense.

At the fall meeting of 1908 it was voted to levy an assessment of two cents per thousand feet on hardwood lumber actually shipped. The full assessment was levied, having in mind the entertainment of the National association in Detroit, June, 1909. Our treasurer's report shows amount on hand October 1, \$770.51, but this amount will not last us until our next meeting in January sometime, so it will be necessary for the director to levy an assessment to cover expenses for the ensuing year.

Some time ago we made complaint before the Interstate Commerce Commission against the Trans-Continental Freight Bureau for excessive rate on lumber and forest products from the Lower Peninsula of Michigan to the Pacific Coast terminals. This case is on the docket and we are likely to be called on at any time to substantiate the charges made therein. This we expect to be able to do, and have been told by railroad men that we have a good case and are likely to win out, which we hope to be able to do.

Trust the above report is respectfully submitted.

J. C. KNOX, Secretary.

Secretary Knox then read a detailed report on behalf of C. T. Mitchell, treasurer. It showed that the balance on hand September 30 was \$770.51.

On motion the reports of both the secretary and treasurer were accepted.

Chairman Bruce Odell, of the Market Conditions Committee, then made a report, which follows:

### Report of Market Conditions Committee

Your Committee on Market Conditions submits the following report:

From the compilation of stocks as shown by your secretary's report, northern hardwoods gen-

erally are in only moderate supply, with no accumulation in any one wood, while the important wood of Michigan, hard maple, is shown to be low in stock, with not only an unusually heavy demand at this time but every indication of an increased demand for the future.

It is the opinion of this committee that the hardwood manufacturers of Michigan should give especial attention to Michigan hard maple that it be not wasted in cutting or sacrificed in selling. Hard maple has found many new uses as a substitute wood during the past two years, because of the comparatively high prices and limited supply of such woods as ash, hickory, rock elm, etc., and has proven so satisfactory for many purposes that it can no longer be called a substitute but for many of the purposes it is the wood.

The primary use of hard maple, as you all know, has for several years been for maple flooring, for which there is a constantly increasing demand. The real value of maple as a floor is becoming better known, with the result that it is going into more general use and will continue to grow in favor.

Statistics of the manufacturers will show that during the years 1906, 1907 and 1908 the amount of maple used in the manufacture of flooring averaged approximately 250,000,000 feet per year and the year 1909 promises the great-

June 1, 1909, the maple flooring manufacturers had a surplus of maple flooring representing about 25,000,000 feet of maple lumber, while on October 1, 1909, they were oversold an amount of flooring that will require 25,000,000 feet of maple to produce, a reversal of conditions representing 50,000,000 feet in nine months.

The scarcity of No. 2 common and better maple and the higher prices for maple flooring will stimulate the use of No. 3 common maple for factory flooring, which we think will bring the supply well within the demand.

Michigan of course does not produce all of the hard maple, nor does this association include in its membership all of the manufacturers of Michigan, but the state of Michigan does produce the best hard maple in the world and it produces most of it, just as this association includes in its membership the best manufacturers of the state as well as most of them, so that not only the manufacturers of maple lumber in this as well as other states, but the consumers of maple the world over look upon this association as the leader in hard maple. It therefore becomes our duty to see that hard maple brings its true value in the markets of the world. This it has not done heretofore, but with the present awakening it should do so within a very few years.

Beech is the only wood showing any accumulation of stock, which is probably due to the box business, but a large amount of beech is now going into the cooperage and basket business as a substitute wood and as an advance in the price of maple has always been followed by an increased use of beech at advanced prices, we think beech will be in good demand during the coming year.

Birch during the past two years has been growing in favor at constantly advancing prices and with the lightest stock in years we consider the birch market strong.

From the secretary's report you will note there is 25,000,000 feet less of hemlock in stock October 1, 1909, than on October 1, 1908, which indicates much better conditions in the hemlock market.

We believe that the Market Conditions Committee report submitted herewith reflects the present condition of the northern hardwood and hemlock market and that about the values as shown by the report may be obtained for northern hardwoods f. o. b. cars or over rail or vessel and for hemlock on dock, except as noted.

Respectfully submitted,

BRUCE ODELL,  
D. M. KNEELAND,  
JOHN C. ROSS,  
G. VON PLATEN,  
OSCAR L. LARSON,  
W. L. MARTIN,  
F. L. RICHARDSON,  
W. C. HILL,

Market Conditions Committee.

Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, was then introduced by President Bigelow and delivered an interesting address on the subject of "Hardwood Conditions in the South," excerpts from which follow:

#### Mr. Doster's Address

I have listened with great interest to the reports of the several committees. The interests of the northern and southern hardwood manufacturers are practically identical when it comes to marketing stocks and it is the intent of the southern producers to keep in close touch with the hardwood affairs in the North.

To explain the conditions of trade among the interests I represent, I will state that southern hardwoods come from three sources: the ash, oak and chestnut from the mountain sec-

tion, the hardwood belt in Ohio, Indiana and vicinity, and the oak, cottonwood, gum and kindred woods from the far South. Intermingled with all this is the maple, beech, birch, ash, basswood, sycamore, elm, etc.

Owing to climatic and financial causes, hardwood production has been curtailed from 60 to 70 per cent of normal. Many of the smaller mills have gone out of business on account of financial conditions and the larger mills have been unable to market their product at more than cost of production and have been closed for considerable periods of time in certain territory. The lower grades formerly moving slowly are showing decided improvement. Buyers are studying the necessity of using lower grades, when formerly higher grades only were purchased.

The price of the higher grades of hardwoods held firm through the panic. Prices on poplar and oak increased, owing to a very large demand, and plain oak advanced in sympathy with quartered stock.

In conclusion I will say that the association I represent wishes to keep in close touch with the Michigan association for the mutual interchange of pertinent information.

Considerable discussion then prevailed on the analysis of market conditions as sub-

J. C. KNOX, SECRETARY.

est use of maple flooring of any year in the history of the business, at least 20 percent over that of the past three years, or 300,000,000 feet of maple going into the manufacture of maple flooring, just about 1,000,000 feet for each working day in the year.

Your secretary's report will show that of 4/4 maple better than No. 3 common there was in the hands of the manufacturers October 1, 1909, about 53,000,000 feet, with 44,000,000 feet sold and only 9,000,000 feet unsold. The corresponding period for October 1, 1908, showed 62,000,000 feet in stock, 33,000,000 feet sold and 29,000,000 feet unsold, and October 1, 1907, 63,000,000 feet in stock, 39,000,000 feet sold and 24,000,000 feet unsold.

The manufacturers of maple flooring will require in the eight months from October 1 to June 1, the time at which the new crop will be available, at least 200,000,000 feet of maple. The members of this association could not possibly furnish more than 50,000,000; have the maple flooring manufacturers the other 150,000,000 in stock?

As indication of the increased use of maple we have only to refer to the fact that on

BRUCE ODELL, CHAIRMAN MARKET CONDITIONS COMMITTEE.

mitted by the Market Conditions Committee. Further discussion was postponed until the afternoon session.

On motion of F. A. Diggins, an assessment of 1½ cents per thousand on shipments of hardwoods, including stock handled by the flooring factories, from October 1, 1908, to October 1, 1909, was made to provide for funds to carry on the association work for the coming year.

Bruce Odell stated that the association had filed a complaint before the Interstate Commerce Commission against the Trans-Continental Freight Bureau for a reduction of freights from 85 cents to 75 cents to Pacific coast points from southern Michigan peninsula territory. This action was taken to place southern Michigan shippers in as good a position as those of the northern peninsula and of northern Wisconsin.

Secretary Knox explained in detail the

effort he had made before the Trans-Continental Freight Bureau for this reduction without having recourse to a complaint before the Interstate Commerce Commission. He stated that it would probably be necessary to employ an attorney to present the association's case in the hearing.

F. A. Diggins offered a resolution to the effect that the matter of employing an attorney for this purpose be left with the Board of Directors of the association, with power to act, and that the expense incurred should not exceed \$200. This resolution was adopted.

The meeting then adjourned until 2 p. m.

#### AFTERNOON SESSION

On reconvening at 2 p. m. the discussion on market conditions was resumed, and on motion of R. Hanson the report was approved as originally presented by the committee.

The president introduced C. F. Lusk of Owen, Wis., assistant secretary of the Wisconsin Hardwood Manufacturers' Association, who addressed the meeting on the work of that organization. He stated that the organization of which he is assistant secretary and chief inspector, is working in harmony with the Michigan Association and is meeting with excellent success.

There was then taken up the subject of hemlock statistics and the handling of hemlock inspection, etc., in connection with the work of the Michigan Hardwood Manufacturers' Association. There was a great deal of discussion on the subject. Bruce Odell stated that there was no uniformity on hemlock grading in various parts of the state. He said that Cadillac has a system in force, involving the separation of hemlock into six grades, which has been employed for the past eleven years, and which

is entirely satisfactory to the Cadillac contingent. He doubted if any change in the hemlock inspection would be satisfactory to these manufacturers.

W. L. Martin, of Cheboygan, stated that he saw little chance for uniformity in hemlock inspection between the water-shipping points and the interior car-shipping points so long as the water shippers had recourse to the employment of inspectors to pass judgment on grading.

R. Hanson advocated the exclusive hemlock manufacturers joining the hardwood association as they would receive the benefit of the good work done by the organization in the matter of securing statistics and other information.

F. L. Richardson, of Alpena, stated that there were no hemlock statistics obtainable covering the output of the Huron shore, although such figures were supposedly prepared. He stated that he could see no object in the water shippers abandoning their present organization and joining the Michigan Hardwood Manufacturers' Association.

G. von Platen suggested that hemlock statistics be obtained at the expense of the hardwood organization and that no charge be made against the hemlock contingent.

Ralph Gilchrist, of Alpena, advocated the union of the hemlock and hardwood interests.

W. C. Hull, of Traverse City, stated that hemlock inspection in the state of Michigan had never advanced beyond the stage where an inspector threw a 2x4 over a jack and if it didn't break in two it "went"; otherwise it didn't.

After further discussion, on motion of Mr. Hull the entire subject of hemlock grading was referred to the Grading Committee with the request that a report be made at the next meeting.

Ralph Gilchrist suggested to the meeting

and for the attention of the Grading Committee that a Bureau of Hemlock Grades be established, and that competent inspectors be employed to review the grading of the various members.

On motion of R. J. Clark the next meeting of the association was scheduled to be held at the Pontchartrain Hotel during the latter part of January, 1910. On motion the meeting adjourned.

There were present:

R. J. Clark, Peninsula Bark & Lumber Co., Sault Ste. Marie.  
J. C. Knox, secretary Michigan Hardwood Manufacturers' Association, Cadillac.  
John C. Ross, Ross & Wentworth, Bay City.  
Charles A. Bigelow, Kneeland-Bigelow Co., Bay City.  
S. M. Kneeland, Michelson & Hanson Lumber Co., Lewiston.  
G. von Platen, Boyne City.  
J. Sullivan, Cedar.  
D. H. Day, Glen Haven.  
W. C. Hull, Smith & Hull Co., Oval Wood Dish Co., Traverse City.  
R. Hanson, Salling-Hanson Co., Grayling.  
O. S. Hawes, Johannesburg Manufacturing Co., Johannesburg.  
M. L. Williams, Williams Bros. Co., Cadillac.  
O. L. Larson, Buckley & Douglas Lumber Co., Manistee.  
E. R. Coolidge, Southern Lumberman, Nashville.  
G. A. Damon, American Lumberman, Detroit.  
F. A. Diggins, Murphy & Diggins, Cadillac.  
W. L. Martin, Embury-Martin Lumber Co., Cheboygan.  
F. L. Richardson, Richardson Lumber Co., Alpena.  
H. M. Stack, Escanaba Lumber Co., Masonville.  
C. R. Duggan, Tindle & Jackson, Pellston.  
Bruce Odell, Cummer-Diggins Co., Cadillac.  
F. A. Kimball, Churchill Lumber Co., Alpena.  
C. F. Lusk, assistant secretary Wisconsin Hardwood Manufacturers' Association, Owen, Wis.  
M. H. Robertson, East Jordan Lumber Co., East Jordan.  
E. C. Groesbeck, Stearns Salt & Lumber Co., Ludington.  
N. M. Langdon, Antrim Iron Co., Mancelona.  
Bruce Green, Williams Bros. Co., Cadillac.  
Lewis Doster, secretary Hardwood Manufacturers' Association, Cincinnati, Ohio.  
Henry H. Gibson, HARDWOOD RECORD, Chicago.  
Walter N. Kelley, Kelley Lumber Co., Traverse City.  
Robert H. Rayburn, Island Mill Lumber Co., Alpena.  
F. W. Gilchrist, Alpena.  
Ralph E. Gilchrist, F. W. Gilchrist, Alpena.  
George M. Clifton, Louis Sands Salt & Lumber Co., Manistee.  
O. J. Smith, R. G. Peters Salt & Lumber Co., East Lake.

## Educational Meeting Extension Table Manufacturers

A mass meeting of the various clubs affiliated with the Central Bureau of Extension Table Manufacturers was held at the Auditorium Hotel, Chicago, Tuesday, October 26. The meeting was held in the banquet hall of the hotel and there was a large and enthusiastic attendance. These general mass meetings are usually of an educational character, and they have been of inestimable benefit to the members of the bureau. Secretary Wulpi is a man of energy and insight and invariably gets up profitable and interesting programs.

The sessions were presided over by President J. A. Conrey of Shelbyville, Ind., who upon motion was chosen permanent chairman of the meeting. The first business was the roll call of membership, and then followed the commissioner's annual report. This covered the work done by the bureau during the past year, including what had

been accomplished by the collection department, which is doing excellent service in taking care of disputed and bad accounts for members at very low cost. This feature of the bureau is showing rapid growth, and practically all the collection business of the members is now handled through this means.

Next on the order of business was the report of A. M. Weinhardt, treasurer, followed by reports from the local clubs affiliated with the organization on the condition of membership. These brought out the fact that the membership of the bureau has been almost doubled in the past year. This practically completed the routine business which was to come before the meeting, and the special features were then taken up.

A most interesting topic that Secretary Wulpi had worked out and which he illustrated by means of figures and charts was the problem of factory lumber waste. The

subject brought out a great deal of interesting and helpful discussion, which consumed the time up to the luncheon hour.

#### How to Buy Lumber and Get a Square Deal

When the meeting was called together again for the afternoon session, Lewis Doster, of Cincinnati, secretary of the Hardwood Manufacturers' Association, entertained the attendants with a valuable talk on "How to Buy Hardwood Lumber and Get a Square Deal." This address contained many valuable hints on the buying and grading of hardwood and was as follows:

Mr. President and Gentlemen: The pleasure of being invited to appear before your association at this time is more than I can express. To thoroughly demonstrate to you the methods of hardwood handling used by the organization I represent is what I hope to do here, and I hope the subject will prove interesting to you.

My career in the lumber business has led me

through the different stages of the product from the log to the finished article, but the past seven years have been entirely devoted to organization work, and the publicity which has been given was mainly along the line of how to organize. In this work I appeared before different organizations who were in development, the same as we had been in the past, and worked with them for uniformity on all matters in the manufacture of lumber and of lumber products. After these various stages devoted to the establishment of this work, we find ourselves in a position to show results and what we propose to do at the present time.

My subject, I am glad to state, is something which is of interest to you as well as the entire hardwood industry, and our development has been interwoven with it to such an extent that I can deal frankly, intelligently and successfully with this vital and important subject, "How to Buy Hardwood Lumber and Get a Square Deal."

The Hardwood Manufacturers' Association of the United States, which I have the pleasure to represent, authorizes me to convey to you greetings from an organization representing over three hundred and fifty concerns, who, at times, operate nearly seven hundred sawmills, and when conditions are favorable prepare for the markets lumber to the amount of nearly one billion feet annually.

Our organization work is divided into various departments, bureaus, etc., and it is not my intention to elaborate on our entire organization work, but to select the important bureau—the one which is the most expensive, that we spend the most time and thought on, and which develops a "square deal" policy, and that is the Bureau of Grades.

Our policy is to grade lumber for everybody, and to grade it right. We have a grading rule book which is written in language so clear as to avoid any misinterpretation by inspectors. The rules have emanated from a careful study of the different sources of supply to the different sources of consumption, separated into different series of grades for the expensive, medium or cheaper classes of work which are necessary to cover the different needs of consumption.

The lumber buyer, or your purchasing agent, may not be an expert in the grading of lumber and sometimes not a thorough lumberman, and, as a rule, required to buy everything needed for the finished article, such as hardware, glue, leather, varnish, besides lumber. While interested in all, he is not able to thoroughly understand the various aspects of the raw lumber product as he is other similar commodities, and the word of others must often be taken to guide him in his deliberations. That is where we come in as a factor.

To faithfully promote the duties of our rule book, intelligent inspectors are placed in the different consuming markets where lumber is used, and on the appearance of any complaints these men are sent to the yards of the purchaser to grade the lumber. Their visit there is an important one. They give quick action; they will separate, if necessary, all the grades they find; they will explain all the grades as they come before them to your men, when such information is desired. As soon as the work is complete, a report is made out; a copy is given to you as a customer, the duplicate to the shipper, so that both are intelligently advised as to the exact condition of this car.

At times, when we find lumber which is either manufactured poorly, improperly shipped or graded, we send to the mills the very man who discovered such lumber in the markets, and through his influence and instructions we are able to correct such evils. It is our endeavor to overcome disputes. They retard the movement of the lumber in transit from the sawmill to cutting up for the finished product. They cause a bulk of correspondence and delay, which should be reduced. They cause a feeling of enmity between the purchaser and the seller, and when such are

avoided the channels of commerce through the industry are smoothed out for quick action and results.

Purchasers of lumber, after receiving the copy of inspection reports, have an assurance of obtaining the proper grade; if they object to the same, it can be reinspected by an acting or chief inspector, who gives a businesslike investigation for your benefit. Again, lumber produced that is not desirable for your needs is reported.

Under the subject of grading, we might state that there is one matter which has destroying influences in the industry. Many people have found time and opportunities to criticize our methods, but, gentlemen, let me tell you, from the investigation we give all complaints, we find active knocking is usually a good boost, for it so often develops methods which are not what we consider wholesome business, one of the most troublesome of which is the "mixing proposition." We all know the furniture trade do, and always will, purchase certain grades according to their desires, but the mixing evil I refer to is occasioned by the man who will buy from the shipper of lumber a car of firsts and seconds containing 20 to 35 per cent of No. 1 common in the car thoroughly mixed. He will buy a car of No. 1 common with 20 to 50 per cent of No. 2 common thoroughly mixed. He will buy a straight car of No. 2 common, and then all is invoiced as a straight higher grade. Naturally, there are a great many complaints created when the lumber arrives, and it has been a "tune" that has been played long, but not with so much success lately, placing the cause on grading under the Hardwood Manufacturers' Association rules. It has not received support from us, and the manufacturers of lumber in the association I represent deprecate this habit by giving to the buyer the true grading, using their official book, with the yellow back and double red stripe across the face.

With a system of reports, we keep before the manufacturers the kind, thickness and grade of stocks which are short items. It has been our work to watch this point and have ready for the buyer quickly all short items to insure a more even market. *A high price on a short item does not make money for the industry; a medium price on a general stock is a much more healthy condition.*

In the manufacturing end of the business the larger operators who can afford to produce the lumber find it advantageous to assist the smaller producers to properly manufacture and grade their material uniformly, and it helps to keep the price uniform. *Cheap lumber for a customer is expensive when not manufactured or graded for his wants.*

Everything we have in our association tends to bring together the producer and the purchaser. However, all policies of cooperation must be based on close affiliations. The manufacturer alone cannot do all that is wanted to bring the trade together. The consumers of the various products must work with him. You, as table manufacturers, are one of the important parts of the chain to mutually provide the links of uniformity. We ask you to work with us. When we are together we learn each other's ideas, what is to be done for you, and by such methods you will be better off. Remember, the manufacturers of hardwood never want to produce or sell anything the consumer does not want.

Consumers of lumber are eligible to membership in this association. They join us with the intention of obtaining information from time to time of what we are doing and what they desire. You are eligible and can come in if you wish to take advantage of an organization which is mutually in sympathy with the principle which you desire as a purchaser of hardwood lumber, and which we want as producers—"a square deal." We guarantee it by asking you to buy on the methods of the Hardwood Manufacturers' Association of the United States.

Supplementing Mr. Doster's address, Henry H. Gibson, editor of HARDWOOD RECORD, Chicago, gave an interesting talk on "The Evolution of Hardwood Production." Mr. Gibson's introductory remarks follow; from this point on, his address was practically a repetition of an editorial in the October 10 issue of HARDWOOD RECORD, entitled "The Logical Evolution of the Hardwood Lumber Business":

I thank you for the pleasure of appearing before you today, and wish to talk on the possibility of some practical economics in the purchase of the hardwoods employed in your manufacturing institutions. As a "reformed" lumberman, and as editor of the only hardwood newspaper published, it may be that I can suggest some things to you that may prove of interest.

About half of the hardwood lumber manufactured in the United States is produced north of the Ohio river. The remaining half is manufactured south of that stream. Hardwood lumber is consumed where we make things out of wood, and 85 per cent of the total consumption is utilized in the very small spot on the great big map of the United States involved in southern Wisconsin, southern Michigan, Illinois, Indiana, Ohio, Pennsylvania and New York.

An intimate acquaintance with hardwood production, running back through a good many years, makes it possible for me to state with a good deal of authority that very few hardwood lumbermen who have operated north of an east and west line drawn through the Straits of Mackinaw, or south of an east and west line through Greenville, Miss., have ever achieved any material profit from their operations. On the other hand, good financial results have been secured from hardwood manufacture in central territory, where hardwood is employed for remanufacturing purposes. These results have been attained simply because it has been possible to market in this territory low grade hardwood on a low freight rate.

The area of hardwood timber growth involved in the region that consumes the greater portion of it is fast becoming depleted; it is growing smaller and smaller every year; and you, as buyers of hardwood lumber must needs recognize that you will have to go farther and farther from the point where your factories, your labor and homes are located in order to secure your supplies.

The table of net cutting results of various grades of lumber shown on the diagram exhibited in this room, shows conclusively that you are paying freight on from 20 to 50 per cent of lumber that eventually finds its way into your fire room.

These two addresses brought out considerable interesting discussion and the two men were given a vote of thanks by the association.

The balance of the session was taken up by an address on "The Value of the Cost System," and a discussion of the subject by the various members present. J. A. Conrey was again chosen president of the bureau and it was decided to hold the next meeting at Indianapolis some time during the month of May.

U. M. Guilford of West Branch, Mich., has purchased a body of timber on the Lincoln branch of the Detroit & Mackinac railway, in Alcona county. It contains 5,000,000 feet of hemlock and hardwood. Mr. Guilford will cut the timber this winter and expects to establish camps at once.

## Hardwood Record Mail Bag

[In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.]

### In Commendation

FORT WAYNE, IND., Oct. 27.—Editor HARDWOOD RECORD: We commend the article on page 16 of the issue of HARDWOOD RECORD of October 25, under the caption "The Logical Evolution of the Hardwood Lumber Business" as sound common sense. We believe manufacturers generally have failed to recognize the cost of producing clear dimension stock.—HOFFMAN BROS. COMPANY.

The RECORD is glad to receive this endorsement of its position on the dimension stock proposition from this foremost hardwood lumber, veneer and dimension stock concern. If there is any house in the country whose opinion on this subject is worth having, it is that of Hoffman Bros. Company.—EDITOR.

### Wants Market for Gum Veneers

GARLAND CITY, ARK., Nov. 7.—Editor HARDWOOD RECORD: As you will note, we are in the gum veneer business. The most of our cutting is heavy stock, principally one-quarter inch. We therefore have quite a large core left, as heavy stock cannot be cut down as closely as thin stock. We are looking for a market for some thin stock not to exceed one-eighth of an inch, and less would be better, in narrow widths. Will you kindly place us in correspondence with buyers of this class of material?

The above concern are manufacturers of rotary cut gum veneers, and anyone desiring to communicate with them with a view of purchasing the stock mentioned can have the address by writing this office.—EDITOR.

### Quick Returns from Record Ad

SOUTH BEND, IND., Nov. 5.—Editor HARDWOOD RECORD: We thank you for your promptness in sending us lists of buyers of our class of material and beg to ask if these are to be returned and, if so, how soon you require them.

## News Miscellany

### J. W. Wells Discontinues Menominee Operations

J. W. Wells, president of the J. W. Wells Lumber Company of Menominee, who for thirty-three years has continued most successfully lumber operations in that section of Michigan, has decided to discontinue work at that city. The decision follows the burning of the Menominee mill a short time ago, coupled with the fact that the companies Mr. Wells controls are in Wisconsin, where he has large modern mills. Although he will discontinue manufacturing at Menominee, Mr. Wells will still retain his head offices at that place, and will continue to be a prominent and influential figure in the lumber trade of the state. Mr. Wells has extensive timber interests both in the United States and Canada; he operates mills at Dunbar and Wausaukee, Wis., and these interests will be augmented in the near future by the addition of a hardwood flooring factory, which it is said will be the largest in the world.

J. W. Wells was largely instrumental in building up the immense organization of the I. Stephenson Company of Wells, Mich., of which he is general manager. The mills, railroads and lumbering business created by Mr. Wells represent the greatest commercial proposition in the

We are pleased to advise that we have received one order from a new concern in response to our advertisement in RECORD, which we think is rather quick work, as the advertisement had its first insertion on October 25.—STEPHENSON MANUFACTURING COMPANY.

### Revised Rules for Grading Oak Flooring

PHILADELPHIA, PA., Oct. 29.—Editor HARDWOOD RECORD: Can you supply me with the grading rules under which oak flooring is manufactured and shipped? Thanking you for any information you can give me along this line.

The latest revised rules for the grading of oak flooring, adopted by the leading manufacturers of this material in the country on October 5, 1909, are as follows.—EDITOR.

The grades of oak flooring shall be known as clear, sappy clear, select, No. 1 common and factory.

#### QUARTERSAWED.

Clear—Shall have one face practically free of defects, except  $\frac{3}{8}$  of an inch of bright sap; the question of color shall not be considered; lengths in this grade to be 2 to 16 feet, not to exceed ten per cent under 4 feet.

Sappy Clear—Shall have one face practically free of defects, but will admit unlimited bright sap. The question of color shall not be considered. Lengths in this grade to be 1 to 16 feet.

#### PLAIN SAWED.

Clear—Shall have one face practically free of defects, except  $\frac{3}{8}$  of an inch of bright sap; the question of color shall not be considered; lengths in this grade to be 2 to 16 feet; not to exceed ten per cent under 4 feet.

Select—May contain bright sap, and will admit pin-worm holes, slight imperfections in dressing; or a small tight knot, not to exceed 1 to every 3 feet in length; lengths to be 1 to 16 feet.

No. 1 Common—Shall be of such nature as will make and lay a sound floor without cutting. Lengths 1 to 16 feet.

Factory—May contain every character of defects but will lay a serviceable floor with some cutting. Lengths, 1 to 16 feet.

members of the association through his connection with the Massachusetts Forestry Association, of which he was secretary and treasurer for a number of years, and also because of his activity in the American association, particularly in pressing the Appalachian-White Mountain bill. At the last meeting of the organization he was elected to the Board of Directors.

Mr. Start is a man well versed in forestry matters and a very happy choice for the place of secretary. He will give special attention to the Appalachian-White Mountain legislation and other special interests for which the American association stands.

### C. L. Harrison Married

At noon on October 20 occurred the marriage of Miss Maud Genevieve Rozier of Ste. Genevieve, Mo., and Charles Luce Harrison of Cape Girardeau.

Miss Rozier is a descendant of one of the oldest and most aristocratic French families in America, being a branch of the well-known Valle family. She is a young woman of splendid

C. L. HARRISON OF MOREHOUSE, MO., RECENTLY MARRIED.

accomplishments, and is the daughter of Mr. and Mrs. Henry L. Rozier of Ste. Genevieve.

Charles L. Harrison, as is universally known among the hardwood trade, is the popular and efficient young secretary of the Himmelberger-Harrison Lumber Company of Cape Girardeau.

The bride and groom left on the evening of the wedding for an extended trip through southern California.

The RECORD extends its heartiest congratulations to the young couple.

### Meeting Executive Board Hardwood Manufacturers' Association

On October 30 was held a meeting the Executive Board of the Hardwood Manufacturers' Association in the offices of the organization, First National Bank building, Cincinnati.

A full representation of the board was in attendance and President R. M. Carrier was in the chair.

After dispensing with the reading of the minutes of the last meeting of the board, Secretary Foster reported his movements since the last meeting, including the conventions which he had attended, at all of which he was invited to make addresses.

The work of the New York office was carefully gone over, including the report system at that end, inspection matters, certificates issued, etc., all of which was approved by the board.

### New Secretary for the American Forestry Association

At a meeting of the Board of Directors of the American Forestry Association, which was held in New York city, October 18, Edwin A. Start of Boston, Mass., was elected secretary of the organization. Mr. Start is well known to the

A new statement of market conditions was discussed and the secretary was instructed to proceed with the issuing of same, starting a canvass immediately.

The present condition of the finances of the association was thoroughly gone into, but no action on this subject was deemed necessary at this time.

It was decided to hold the annual meeting of the association at Cincinnati, January 18, 19 and 20, 1910, at the Sinton Hotel.

The question of a program was taken up, and it was the desire of the board that Gifford Pinchot, head of the United States Forest Service, be present in person at the next annual meeting, and an invitation will be extended to him.

The manufacturers will be requested to bring their stock lists to the forthcoming annual and they will be notified regarding the new feature of trading on the floor. There will be a blackboard, on which will be arranged a form, so that the different stocks can be offered and the selling take place in the regular program. Three hours or more will be devoted to this feature.

On motion, duly seconded, the board decided to appoint a committee of five as a permanent committee to carry on the important work of contracts, as to terms of sale.

The secretary was instructed to use his judgment regarding convention buttons or badges. A number will be given to each one present at the annual, and at the end of each day a register will be made up and printed in convenient pocket form, so that the different delegates and others present can become acquainted with each other.

After other general subjects of interest to the association were taken up and action decided on for the guidance of the secretary's office, the meeting adjourned *sine die*.

#### Meeting Technical Publicity Association

The Technical Publicity Association, an organization composed of the advertising managers of leading machinery manufacturers and other technical concerns of the country, held its first monthly meeting for the season of 1909-10 in its headquarters, 14 Gramercy Park, New York, October 14. There was a good attendance, and all present enjoyed the informal dinner and the interesting program which followed.

The president of the association, Charles S. Redfield, advertising manager of the Lale & Towne Manufacturing Company, was toastmaster. The only extended address was that of George French, editor of Advertising and Selling. Preceding his remarks the attention of the members was occupied with reports of committees. The chairmen who were called upon outlined the work to be done during the winter months.

Howard M. Post, advertising manager of the Western Electric Company, told of plans for

a systematic, analytical study of effectually tracing results from trade paper advertising. The keying method, he said, has proved inadequate. There should be some way of determining the effect of such advertising, he declared. At the conclusion of a discussion on this subject, in which every point of view was presented, Mr. Post was made chairman of a committee to outline this study work for the association.

"It is about time for advertisers to cease to shy at that word psychology," said Mr. French. His remarks were an interesting presentation of the psychological and artistic aspect of advertising. His hearers were taken into the field of optics, and shown the effect advertisements have upon the eye of the reader.

Mr. French took as his text the postulate of Hugh Chalmers in a recent address at Louisville. Mr. Chalmers he referred to as "the greatest salesman, perhaps the greatest advertiser, in the country." This postulate is that every sale by anyone anywhere is made in a man's mind—the mind of the one to become the purchaser.

In concluding Mr. French restated his thesis in these words: "It is from science and pseudo-science, from art and physiological-psychological questions such as optics, the groundwork of advertising, that we can gather a great fund of strength and knowledge. Not only that, but it is a delightful field to grub around and study in."

Mr. French spoke throughout with much earnestness. His talk was highly appreciated by the advertising men present, among whom were a number of trade publishers. Questions were asked during the course of his remarks and a lively discussion ensued at the close.

After disposing of business matters the association adjourned, to meet again in the same place on November 11. All voted the October meeting a highly interesting and profitable one.

#### Sailed for Germany

Dr. C. A. Schenck, head of Biltmore Forest School, accompanied by forty of his students, sailed on Tuesday for a tour of the German national forests. The remainder of Dr. Schenck's household will continue their studies in the Pisgah Forest during the coming winter and on the return of the German contingent will enter upon their forest duties in April at Townsend, Tenn., at the operation of the Little River Lumber Company. Later in the season the entire school will be removed to Tomah, Wis., at the operations of the C. A. Goodyear Lumber Company, and perhaps at a later date will visit some logical point in Michigan. The address of Dr. Schenck and his students who are abroad for the next few months will be Darmstadt, Germany.

Dr. Schenck is doing a splendid educational work, and his increased success as the years go

by is certain. The accompanying picture shows part of his students, and was recently made at Biltmore, N. C. They are surely a manly and energetic looking set of chaps and every one of them deserves success.

#### Wisconsin Land & Lumber Co. Make Big Purchase

The largest auction sale ever held in the Menominee valley was conducted recently when the entire holdings of the William Mueller Lumber Company were sold by Court Commissioner John E. Tracy to R. C. Flannigan for the Wisconsin Land & Lumber Company of Hermansville, Mich., for \$375,000. The entire holdings of the concern, including 30,000 acres of land, much of it covered with valuable timber, a town and a railroad, were disposed of.

The circuit court, in ordering Commissioner Tracy to wind up the affairs of the company, had authorized him to accept not less than \$375,000. The assets of the company are estimated by conservative lumbermen to be worth about \$1,000,000. Many of the most prominent lumbermen of Michigan and Wisconsin were present at the sale. The William Mueller Lumber Company was established in 1868 in Schoolcraft county, Michigan, where it absorbed large holdings of timber. It became one of the largest and most prosperous firms in that section, holding immense tracts of timber in Schoolcraft, Menominee, Dickinson, Marquette and Chippewa counties, with office at Blaney, which town it owned. It also built and operated a railroad six miles in length. Its enterprise in 1902, when it purchased immense tracts of timber in Chippewa county and founded the town of Blaney, resulted in financial ruin, and after a long struggle against adverse fortune the company turned its property over to its creditors in 1906.

#### John R. Davis Plant Burned

Fire in the large sawmill of the John R. Davis Lumber Company of Phillips, Wis., recently utterly destroyed the building. Although rain prevented the spread of the flames to other buildings, the sawmill was soon beyond control and in less than an hour it was in ruins. The loss is estimated at \$150,000, partly covered by insurance.

The John R. Davis company built this mill about thirty years ago to take the place of one which was also destroyed by fire. It was one of the largest sawmills in the state.

#### A New Southern Hardwood Operation

The Leavitt Land & Lumber Company, a Chicago-Arkansas corporation, has for several months had under course of construction a large band mill at Dermott, Ark. This mill is now practically completed and the company expects to have it in operation by November 15. The

GROUP OF BILTMORE FOREST SCHOOL STUDENTS

plant will be one of the most up-to-date hardwood mills in the South and will be fitted up with modern machinery and labor-saving devices of all descriptions. It is equipped with a Filer & Stowell 14-inch bank mill and a 6-foot resaw will be put in shortly. It will have a capacity of 50,000 feet a day. Later the company expects to install a hardwood dimension mill at this plant. The company owns 30,000 acres of timber land and the property on which the mill is located comprises 235 acres, situated on Bayou Bartholomew.

The starting of operations at Dermott has necessitated several changes in the active force of the Leavitt Lumber Company of Chicago. E. J. Petteys, who has been connected with the Leavitt operations for six years and who recently has been in charge of the office and yards in Chicago, will be located at Dermott as manager of the mill. Mr. Petteys has had abundant experience in this line and is in every way competent for his new duties. He will be succeeded at Chicago by W. G. Ramshaw of this city, who has been connected with the trade here and in the South for some years. The superintendent of the mill at Dermott will be Fred Emory, who has been associated with the company at Hollywood, Miss., for several years, and T. P. Dawkins, an expert woodsman, will have charge of the logging operations.

The company has already gathered a large quantity of logs at the new mill and has everything in excellent shape to begin business as soon as the mill is ready.

The officers of the company are: President, Jerome G. Leavitt, general manager of the Twin Tree Lumber Company, Maplesville, Ala.; vice-president, William H. Morris, treasurer of the William Morris & Sons Company, Chicago; treasurer, H. B. Leavitt, president of the Leavitt Lumber Company, Chicago; secretary, E. J. Petteys, for some time manager of the Leavitt Lumber Company's Chicago yard.

### Lumber Mayor Celebrates Seventieth Birthday

John M. Woods, the well-known mayor of Somerville, Mass., and head of the firm of John M. Woods & Co. of Boston, celebrated his seventieth birthday on October 22 by a large reception at his home, to which were invited all of the people of Somerville. Mr. Woods is a man of broad appreciation and this general invitation was very characteristic of him. He knew most of the guests by name, and there were a large number of them, and none received a formal invitation. Many out-of-town guests of prominence also attended the reception, and there were many congratulations and regrets from those who were unable to attend.

The Woods' home was beautifully decorated with roses, chrysanthemums and carnations, the upper rooms being draped profusely with autumn leaves. An orchestra provided music throughout the evening, and his two daughters, Mrs. Charles H. Sherburne and Mrs. Walter K. Godfrey, assisted their parents in receiving. The garden of the Woods' home was brilliantly lighted with strings of electric lights, and the guests roamed about through the trees and enjoyed the evening immensely.

It was a typical neighborhood gathering, and its lack of formality and the general good spirit which prevailed showed the popularity of this man, who was celebrating a milestone in a long and useful life.

### Meeting Memphis Lumbermen's Club

The regular semi-monthly meeting of the Lumbermen's Club of Memphis was held at the Gayoso Hotel, November 6. C. M. Kellogg, first vice-president, was in the chair in the absence of Robert Greenawald. The attendance was

fairly large and the occasion was highly enjoyable. The usual luncheon was served.

James E. Stark, chairman of the River and Rail Committee, brought to the attention of the club the obstinacy of the agents of the Southern and Western inspection bureaus in accepting estimated weights on carload shipments of lumber and, on motion of W. R. Barksdale, the following rather strong resolutions on the subject were adopted:

Whereas, It is reported by a number of members of the Lumbermen's Club that the Southern Weighing & Inspection Bureau and the Western Weighing & Inspection Bureau decline to accept reasonable proof of the estimated weights of lumber in adjusting overcharges in weights of carload shipments, but on the contrary are arbitrary and very unreasonable in their rulings. Therefore be it

Resolved by the Lumbermen's Club of Memphis, Tenn., That we condemn the present practices as enforced by said bureaus as being unreasonable, unfair and unjust, and recommend that our River and Rail Committee take this matter up with said bureaus with a view of protecting our members against these unjust practices.

Secretary Thompson read a letter from the Illinois Manufacturers' Association, asking the club to take some action against the proposed increase by the Western Union and Postal Telegraph companies in charges on code messages which becomes effective in December and which will hit the lumbermen rather hard. Members of the club had not received notice of the proposed increase in cost of sending codified messages, and a committee, consisting of A. L. Foster, James R. Blair and George W. Fooshe, was appointed to investigate the matter and report back to the club at its next meeting.

On motion of W. R. Barksdale, it was unanimously voted to amend the by-laws of the club so as to throw the election of officers on the first Saturday after the second Monday in December. This will make it possible to elect officers before the end of the year and also for the officers elected to be installed at the first meeting of the new year.

Frank R. Gadd of the Wisconsin Lumber Company of Chicago, but with offices at Deering, Mo., was elected an associate member of the club and the names of two other lumbermen were brought to the attention of the meeting. Votes on their applications will be taken at the next meeting two weeks hence.

### Death of a Prominent Detroit Lumberman

Alden O. Carter, well known to the hardwood lumber trade as secretary of the Dwight Lumber Company, Detroit, Mich., died Wednesday, November 3, after an illness of over a year's duration, although he was not confined to his house except at intervals until the last few weeks of his life.

Mr. Carter was born in Chelsea, Mass., in 1848; he came of old New England stock. His father, Horace Carter, was one of the first Massachusetts volunteers in the Civil war, and gave his life for the Union. After a grammar school education Mr. Carter entered commercial life in Boston. In 1872 he went to Detroit and entered the employ of William M. Dwight & Co., and on the organization of the Dwight Lumber Company he became its secretary, which position he held until his decease.

Mr. Carter was a man of strict integrity, affable and courteous in his manner, wise and cautious in judgment, and faithful to all his duties. Mr. Carter's business life of nearly forty years gave him a large acquaintance in the lumber trade in New York state and through New England and among the hardwood manufacturers of Michigan and the South. His knowledge of the business and his courteous manner won him the esteem and regard of all with whom he came in contact.

Mr. Carter is survived by his widow, a son, Horace E. Carter, cashier of the Dwight Lumber Company, and a daughter, Mrs. S. J. Young.

### Meeting Philadelphia Exchange

The Lumbermen's Exchange of Philadelphia held its regular monthly meeting, preceded by the usual luncheon, November 4, President Herbert P. Robinson in the chair.

At this meeting the Cummer Lumber Company, N. B. Gaskill, manager, and the Whiting Lumber Company were elected members of the exchange.

A letter was received from the Philadelphia Car Demurrage Bureau, stating that 1,687 cars of lumber were reported to the department by the various stations of all lines of railroads within the city during the month of September, 1909, which contained 25,305,000 feet of lumber. For the same month of 1908 the total was 1,049 cars, or 15,735,000 feet of lumber, showing an increase over last year of 9,570,000 feet. The receipts for September, 1909, showed the largest amount received during any month since August, 1907.

A communication was received from the National River and Harbor Congress calling the attention of the exchange to the fact that the sixth annual convention of this body will be held at Washington, D. C., on December 8, 9 and 10, and requesting that the exchange send delegates to same.

A resolution was passed authorizing the president to appoint five delegates to represent the exchange at this meeting.

### November Meeting Cincinnati Lumbermen's Club

The November meeting of the Cincinnati Lumbermen's Club was held in the parlors of the Gibson House on November 2. A most delightful dinner was the opening feature of the meeting, after which, the members enjoying their cigars, President Cliff S. Walker called the attendants to order and Secretary Sterrett read the minutes of the previous meeting, which were approved.

A letter from the secretary of the National Wholesale Lumber Dealers' Association was read, setting forth the intention of that body to meet elsewhere than at the city of Washington. On motion the club decided to extend an invitation to the association to hold its next annual meeting in Cincinnati. The president was authorized to appoint a committee to put forth its best endeavors to bring this convention to the Queen City, and W. A. Bennett, Lewis Doster and B. F. Dulweber were named.

Chester F. Korn, the energetic member of the Farrin-Korn Lumber Company, is a candidate for election to the Board of Directors of the Business Men's Club, and the attendants decided to take up his candidacy and do everything possible to elect him in order that the lumbermen may have a representative in the governing body of that organization. Mr. Korn is endorsed by Messrs. Bennett and Moffett.

A letter from the Anti-Tuberculosis League was read in regard to raising funds for outdoor hospitals. During the talk on this subject Clinton Crane remarked that he would be willing to give \$10,000 to see this dread disease driven from the country.

After disposing of these special matters, the regular business of the meeting was taken up. The most important subject which was to be decided was the adoption of the new constitution and by-laws, proof sheets of which were distributed among the members present.

All went fairly well until section 5, article 1, was reached, and the floodgates of oratory were opened. Every word and sentence was carefully scrutinized and analyzed according to the varying lights of the speakers. After the original section 5 was disposed of as not worthy, the section embodied below was adopted. The constitution was then adopted as a whole, as follows:

### CONSTITUTION.

#### PREAMBLE.

The Lumbermen's Club of Cincinnati is organized and incorporated, not for profit, but for the

purpose of advancing and promoting the interests generally of those engaged in the lumber business, by social intercourse and by the opportunity thus afforded of exchanging views and harmonizing diverse interests; by united action to better make the demands of this organization forcible; and, above all, in demanding and maintaining a high standard of commercial honor and integrity among those engaged in the lumber business in this vicinity.

## ARTICLE I.

## ORGANIZATION — OFFICERS — THEIR POWER AND DUTIES.

Section 1. The name of this club shall be The Lumbermen's Club of Cincinnati.

Sec. 2. The officers of the club shall consist of a president, a first and second vice-president, a secretary and a treasurer. Said officers shall perform the duties usual to their respective offices.

Sec. 3. An executive board, composed of the officers of the club, shall have entire control of its internal affairs. No moneys in excess of fifty (\$50) dollars shall be expended or appropriated by them without the affirmative vote of the majority of the members at any regular meeting, except the expense of the regular monthly dinners.

Sec. 4. These officers shall be elected annually on the first Monday of May, and shall serve for one year, or until their successors are elected and qualified.

Sec. 5. The president shall, on receiving a request from any responsible firm, corporation or individual, appoint a special committee with power to act (composed of five members of the club), three to be chosen by the president and one each by each of the principals to the transaction, for the purpose of investigating the complaints of buyers or sellers, foreign or domestic, in this market, against any member of this club, or nonmember, of unfair or unmercantile conduct, with the exception of matters of inspection of hardwood lumber, which shall be submitted to and finally decided by a regularly licensed inspector of some recognized inspection bureau.

It shall be the duty of this commission to investigate such charge or charges, and it shall be empowered to call on club members or the principals to a dispute for information and evidence, and shall render a finding to the executive board of the club; said finding to be transmitted in writing to said principals, and a copy to be retained by the club.

It shall be expressly understood that in submitting a case for arbitration to said special commission that both the principals agree to accept the decision of the special commission as final and binding.

Any member refusing to abide by the decision of the special commission, or who declines to submit his case to said special commission, shall be subject to expulsion from the club by a unanimous vote of the executive board.

Any principal to a dispute, not a member of the club, who refuses to abide by the decision of the special commission, shall forfeit all right to again call on the Lumbermen's club for arbitration.

## ARTICLE II.

## MEMBERSHIP.

Sec. 1. The membership shall consist of three classes, namely: Active, associate and honorary.

Sec. 2. The active members of the club shall be firms, corporations or individuals engaged as wholesale dealers, or those maintaining a branch office, or in the manufacture of lumber, located within Hamilton county, Ohio, and Campbell and Kenton counties, Kentucky.

Sec. 3. The associate members may be elected from any auxiliary or accessory branch of the lumber trade upon the payment of dues and fees prescribed by the by-laws, which shall entitle them to all the privileges of the club except to vote for the election of officers or in the active management of the club. Associate members shall not be eligible to office.

Sec. 4. Each year not to exceed one honorary member may be elected from such names as may be presented to the executive board by the members prior to the annual meeting, the election by the board to be ratified by the club at a regular meeting.

Sec. 5. No firm, corporation or individual shall be proposed for membership by the committee on membership until the executive board has, by unanimous vote of all present, recommended such firm, corporation or individual. After such recommendation the membership committee may receive application for admittance to club membership, and transmit it to the secretary for action by the club at the next regular or called meeting; three-fourths of those present concurring, applicant shall be declared elected.

Sec. 6. The executive board shall have power by a majority vote to suspend or expel a member for cause, provided such person be given the opportunity to appear in his own defense at the next meeting of the club before final action is taken.

Sec. 7. The executive board shall have power to fill all vacancies until the annual election.

## ARTICLE III.

## NOMINATIONS AND ELECTIONS.

Sec. 1. Two months prior to the annual meeting two nominating committees, of three members each, shall be named, one of which shall be selected by the chair, the other nominated from the floor, these committees to be announced at least one month prior to the annual meeting. It shall be the duty of each committee to nominate for officers one person for each of the offices to be filled; and they shall, at least two weeks before the date of the annual meeting, submit such nominations in writing to the president, who shall, immediately, through the secretary, announce by mail said nomination to the general membership.

Sec. 2. After such nominations have been announced any member may, at the annual meeting, prior to balloting, make additional nominations from the floor. The secretary shall prepare the ballots, upon which shall appear the names of all persons nominated. Said names shall be arranged alphabetically on said ballot under the designated office to be filled, and distributed among the members, whereupon the election shall be held by secret ballot. A majority of the votes cast shall be sufficient to elect, and in case of a tie the judges shall decide the election by lot.

Sec. 3. In balloting for subjects before the club to be decided upon, or in balloting for the election of officers, members in good standing only shall be privileged to vote. Each member or firm shall have one vote, represented by a member of the firm or an officer of the company or branch manager.

Sec. 4. Members in good standing may be allowed to resign at any time.

## ARTICLE IV.

## MEETINGS.

Sec. 1. The annual meeting of the club shall be held on the first Monday of May.

Sec. 2. The club shall meet monthly on the first Monday evening of the month, a quorum to consist of twenty members, except during July and August, and except at such times as the executive committee may deem it advisable to change the day, which they shall have authority to do. The place of meeting shall be designated by them with power to delegate the selection of the regular entertainment committee.

Sec. 3. A dinner may be served at each regular meeting at an expense of not to exceed \$2.50 a plate, payable out of the club treasury.

Sec. 4. Any member may invite friends to attend any monthly meeting of the club other than at the annual meeting.

## BY-LAWS.

The by-laws adopted defined the duties of officers, prescribed fees and dues, order of business, etc. The only matter of general importance was found in section 1, article 2, of the by-laws, as follows:

Sec. 1. The president shall annually appoint the following standing committees, of five members each, from the general membership:

Entertainment.  
Inspection.  
Statistics.  
Law and Insurance.  
River and Rail.  
Credit and Terms.  
Arbitration.  
Transportation.  
Membership.  
Advertising and Publicity.

He shall also appoint from the membership such other committees as occasion may require.

Lewis Doster, secretary of the Hardwood Manufacturers' Association, was given the floor on a question of privilege. He stated that he was compelled to catch a train for Chicago, where he was billed to make a speech before the National Furniture Manufacturers' Association on Tuesday evening. He further stated that at a meeting of the Executive Board of the Hardwood Manufacturers on Saturday, October 30, it was decided to hold the annual convention of the association at Cincinnati at the Sinton Hotel, on January 18, 19 and 20, 1910. The association will send out invitations to ten thousand consumers of lumber, inviting them to be present, and Hon. Gifford Pinchot, chief forester of the Department of Agriculture, will be asked to be present and address the convention; a number of prominent lumbermen will also be present and deliver addresses. Thanking those present for their kind attention, Mr. Doster withdrew.

On motion, a committee of three was appointed to co-operate with the Manufacturers' committee in entertaining the delegates and use their best endeavors to have the association

make Cincinnati its permanent convention city, as well as its permanent headquarters. W. E. DeLaney, Charles F. Shiels and B. F. Dulweber were named.

On motion a committee was asked for to take under consideration a plan for the establishment of permanent headquarters for the Cincinnati Lumbermen's Club, which would be open at all times.

After discussion it was left in the hands of the chair to appoint the committee.

On motion the meeting adjourned.

Those present were:

C. Crane.	J. N. Powers.
Lewis Doster.	W. M. Asher.
A. W. Gilchrist.	W. A. Hussey.
F. H. Duling.	Will S. Sterritt.
J. V. Rash.	A. Y. Jackson.
H. K. Mead.	C. F. Shiels.
W. H. Flinn.	C. N. Asher.
H. A. Hollowell.	R. C. Whitbrell.
Edward Barber.	Geo. W. Hand.
Geo. F. Massmann.	F. C. Linz.

## Building Operations for October

Official reports from forty-five representative building centers in various parts of the United States, compiled by the American Contractor, Chicago, show a loss, in the aggregate, of three per cent as compared with October, 1908. While thirty-three cities show a gain of from four to 349 per cent, the loss is caused by the decline of building in Greater New York of some eight million dollars for the month. The gains of over fifty per cent are: Baltimore, 168; Buffalo, 66; Duluth, 349; Hartford, 64; Louisville, 76; Manchester, 115; Memphis, 97; New Haven, 149; New Orleans, 293; Oklahoma City, 136; Portland, Ore., 105; St. Paul, 86; Syracuse, 66; Salt Lake City, 257. Twelve cities show a loss of from three to eighty-four per cent.

City.	October, 1909. Cost.	October, 1908. Cost.	Per Cent Gain Loss
Baltimore .....	\$ 744,525	\$ 285,411	168 ..

### I. Stephenson Company's Mill Burned

On October 15 fire broke out in the I. Stephenson Company's mill No. 1 just as work for the day was being started. The company has a splendid fire department of its own, which immediately set to work to endeavor to save the building. The flames spread rapidly, however, and this was impossible. The planing mill, which adjoins the main building destroyed, was not damaged in the least and trams leading up to the mill were also saved. It was a remarkable sight to see the mill building burning at one end and the planing department running at the other end of the mill and loading lumber on cars as if nothing unusual were happening.

This fire will not interfere in any way with the company's shipment of orders, as it has a good stock of lumber on hand, and the planing mill remains intact. The company's hardwood mill is running day and night, and the big flooring factory is being operated on full time, turning out the usual excellent quality of product.

The matter of rebuilding the burned structure will not be decided until after the loss is adjusted.

### Activity of a Philadelphia Concern

The Henry A. Sheip Manufacturing Company put up this summer one of the largest cedar mills in the country, adjoining its plant at Philadelphia. Cedar is now brought direct from the forests of Cuba and Mexico and manufactured into cigar box lumber, without the inconvenience and expense of importing it by way of New York. The heavy storage charges and the expense of lightering and measuring, together with the continual objection of the few sawmills to undertake the sawing of the cedar, which have always been a serious handicap in the cigar box business, have now been overcome.

The machinery newly installed in the company's building consists of five large veneer saws, one drag saw and one large band mill. In addition are three other band mills, four band ripping mills, two circular sawmills, a battery of fourteen planers and four scrapers which belonged to the old equipment. With twenty or more dry kilns and several acres of air drying space which have been provided, the Henry A. Sheip Manufacturing Company is prepared to manufacture direct from the log to the box the finest Spanish cedar in the world, at the lowest possible cost. A cargo of wood can be loaded at Cuban or Mexican ports and brought up the Delaware almost to the door of the mills. Two new yards for the storage of logs have been secured. Such cedar as comes into New York can also be easily shipped to Philadelphia, as the loading from ship to ship can be accomplished without extra cost. The new yards were filled with logs a month ago and the big saws are already working on the supply to meet the present enormous demand for cedar from all parts of the country.

### Miscellaneous Notes

The Douglass & Walkley Company has moved its headquarters from Columbus to Painesville, Ohio. This concern operates a large mill at Drew, Miss., and enjoys patronage that is countrywide.

The Rice Lake Lumber Company of Rice Lake, Wis., has recently transformed its large plant into a hardwood mill and has rearranged its lumber yards.

The plant of the Washington Veneer Company at Meeker Junction, Wash., was destroyed by fire October 16. The loss is approximately \$85,000, with about \$7,000 insurance. The plant was worth \$75,000 and the standing lumber in the yards \$10,000.

Lombard & Rittenhouse of Cheboygan, Mich., have discontinued their yards at Alpena and Newberry, and are shipping their stock of poles to Cheboygan, where will be located the general distributing yard.

The Standard Veneer Barrel Company was recently organized at Atlantic Highlands, N. J., with a capital stock of \$200,000.

The East Buffalo Mill & Lumber Company is a new concern for Buffalo. It is capitalized at \$10,000 and will operate a planing mill. The incorporators are Anthony and A. H. Klaus and J. Frederick Berner, all of Buffalo.

The St. Mary's Mineral Lands Company recently sold to the Wisconsin Veneer Company of Rhinelander, Wis., a tract of timber in Keeweenaw county, regarded as one of the largest hardwood stands in that county. It is roughly estimated that 1,500,000 feet of red oak alone will be taken out of it. A camp is being established in the heart of the tract.

Chris Eby, the land man of Rhinelander, Wis., has closed a deal with the Goodman Lumber Company of Goodman for the sale of a large tract of hardwood timber located in Forest county.

The hardwood sawmill at East Tawas, Mich., owned by John J. Kantzler & Son of Bay City, has shut down for the season, having manufactured all the logs on hand.

Arthur Jones, manager of the Hickory Jones Company, with a hardwood sawmill at Dodson, La., has purchased the plant of the Little Pine Lumber Company near Tannehill, La. He will begin cutting the hardwood at an early date.

It is reported that the Eastern Canadian Lumber & Construction Company, Ltd., said to have been incorporated in New York by New York men, has purchased the lumber stocks and sawmill of Isaac Prescott located in Albert county, New Brunswick, for approximately \$1,000,000. The company will develop the hardwood lumber industry in that section and will reopen the Albert Southern railway.

Fire in Pittsburg on the night of October 20 destroyed considerable property belonging to the R. A. McCall Lumber Company, the Jones & Rogers Company, the S. W. Means Lumber Company and the United Planing Mills Company. The planing mill buildings, valuable machinery, 10,000,000 feet of lumber piled in the yards and a number of horses were burned. The loss is estimated at \$100,000.

At a consideration of \$300,000, Detroit capitalists have recently acquired the controlling interest in the Cheney Lumber Company, which had a new cypress and hardwood mill in operation at Monroe, La. Charles E. Cheney, now president and general manager, will continue in charge. John T. Shaw, president of the First National bank of Detroit, is treasurer and director of the company. A. L. Stephens and W. J. Gray, also of Detroit, are the other directors. The new interests in the company will spend \$250,000 in increasing the activities and acquiring additional stumpage.

A. M. Kinney of Pittsburg is starting a new mill on the Pittsburg & Lake Erie railroad, near Pittsburg, to cut off a tract of fine white oak timber. This will be used mostly for trestle stuff and car timbers and will be marketed in the Pittsburg district and Buffalo. He is also getting a considerable quantity of first-class hickory, ash and cherry.

The American Mahogany Company is a new concern recently organized at Tampa, Fla.

Sheridan L. Walden, a popular foreman, has been promoted to superintendent of the Portsmouth Veneer Works at Portsmouth, Ohio. Mr. Walden has been in the employ of this company for a number of years and is well equipped to fill the position of trust.

The Wolverine Lumber Company of Bay City, Mich., expects to get out about 5,000,000 feet of pine and hardwood at Menominee and about 27,000,000 feet at Little Current. The company's principal operations this winter will be carried on in the vicinity of the Georgian Bay, near Webbwood, Ont.

Lake commerce during September, as measured by the volume of shipments in the domestic trade from all lake ports, continued practically

at the same high rate as during the preceding month. The total shipments for the thirty days of September, as reported to the Bureau of Statistics of the Department of Commerce and Labor, amounted to 12,527,865 net tons, compared with 9,458,605 net tons during September, 1908, and 11,137,927 net tons during September, 1907.

The lumber shipments for the month, 163,801 M feet, were 23,965 M feet in excess of the September, 1908, shipments, though 11,095 M feet below the September, 1907, total. Considerable gains as compared with September, 1908, figures, are shown in the lumber receipts at North Tonawanda, Cleveland, Buffalo and Ludington, though Chicago receipts for the month, 41,837 M feet, show a decline of 9,860 M feet as compared with September, 1908, receipts. The season shipments to the end of September, 834,422 M feet, were about 30 per cent larger than for the corresponding portion of the preceding year.

Automobiles have displaced carriages to such an extent that carriage builders will be obliged to retire from business or devote their attention to the construction of automobile bodies. This was the statement made by Maurice Connolly of Dubuque, Iowa, president of the Carriage Builders' National Association, which convened in its thirty-seventh annual meeting in Washington, October 19. The situation of the carriage builders as presented by President Connolly in his annual address is so serious that already many carriage manufacturers have relinquished their business or have directed their energies along somewhat different lines.

Consul Theodosius Botkin of Campbellton calls attention to the activity of American lumbering enterprises in New Brunswick. Fire destroyed the mills at Mission Point on August 7; new machinery was quickly procured from the United States and sawing recommenced on September 8, with a capacity of 50,000 feet per day. The permanent plant will be rebuilt at once. At Bathurst an American company has purchased a large lumber mill, wharves and timber rights on 30,000 square miles of crown forest lands, on which they will cut 30,000,000 feet or more this winter. The disposing company furnished shingles to the American market and deals to Europe, while it is stated that the new concern will erect a new lumber mill to supply the American market; also an extensive pulp plant.

The Carriage Factories, Ltd., has been formed by the combining of the E. N. Heney Company, Ltd., of Montreal and Quebec; the Tudhope Carriage Company, Ltd., at Orillia, Ont.; the Canada Carriage Company at Brockville, Ont., and the Munro & McIntosh Carriage Company, Ltd., at Alexandria, Ont. These companies have been established for many years and are in excellent financial condition. The headquarters of the new company is to be in Montreal. The capitalization is \$2,000,000. The physical value of real estate, buildings and machinery of the four original companies is \$378,210, not including buildings now in the course of construction. The liquid assets of the combined companies are approximately \$1,325,414, the current liabilities \$345,936, leaving a surplus of \$979,478. It is thought that the new company will derive all the benefits possible from the concentration of management and the standardizing of the output of the component parts.

The Elmore Veneer Company has been organized at Conneaut, Ohio, by H. H. Truesdale, C. M. Cooke, A. J. Vacker and F. L. Maxton. The capital stock is \$30,000.

The Northern Coopersage & Lumber Company of Gladstone, Mich., plans the erection of a flooring mill as an addition to its present plant. The mill will produce several million feet of flooring a year, and will require a number of additional employees.

The Moos Land & Lumber Company is a new concern at Marked Tree, Ark., incorporated by Paul Westbrook, W. L. Black and others. Its capital stock is \$12,500.

Sigler, Butcher & Co., manufacturers of rotary cut veneer at Parma, Mo., has been succeeded by Sigler, Brorien & Co. The firm consists of C. L. Sigler, W. G., J. F. and D. C. Brorien. J. W. Thompson, formerly of Cadillac, Mich., is manager of the plant, which will make a specialty of gum veneer.

H. F. Donigan of Louisville, Ky., has purchased, for \$12,000, the plant of the Skinner-Russell Company of that city, and will establish a plant to be operated by the recently organized Kentucky Rim & Shaft Company. This concern will absorb both the Louisville Spoke & Bending Company and the Louisville Woodstock Company. The site for the plant consists of about 1,500 feet along the line of the Louisiana & Nashville, and is well supplied with shipping facilities.

H. J. Barnard of the Central Veneer Company, Indianapolis, Ind., states that his concern has purchased a tract of property and is now engaged in constructing a modern plant which will be thoroughly equipped with all the latest machinery for veneer manufacture. There will be two brick buildings, one for a machine room and the other to be devoted to dry kilns, warerooms, offices, etc. The company expects to occupy the new buildings by December 15. The concern makes a specialty of high-grade spliced white oak veneer.

The Williams Brothers Company of Cadillac, Mich., recently shipped the last consignment on an order for 1,500,000 rough ten-pin blocks which it has been supplying the Brunswick-Balke-Collender Company's plant at Muskegon, Mich. In the future the Brunswick-Balke people will manufacture their own ten-pin blocks at their mills at Big Bay. Lumber from the mills operating on the big timber tract in Marquette county, which the company purchased last spring, will be shipped by water to Muskegon, which city will be the distributing point in shipping the lumber to the factories of other cities. The timber in the upper peninsula district will not be exhausted before 1913 at least.

W. H. Rhodes, Coldbrook, N. Y., is running his factory, manufacturing button molds, night and day at its fullest capacity. These molds are turned from hardwood, one man operating a machine and turning out thousands of the tiny buttons per day. Quite a large amount of timber is annually consumed in this line of production. Mr. Rhodes ships his product all over the country and enjoys an extensive trade.

To President Harrison must be given the credit for establishing the first national forest reserve. On March 30, 1891, he set aside the Yellowstone National Timber Park Reserve. On February 22, 1897, President Cleveland, on the recommendation of the National Academy of Science, created thirteen additional forest reserves containing 21,379,840 acres.

One of the finest oaks in the state, which stands in the middle of a road at Edgewood, W. Va., has recently been saved by the aid of a tree surgeon. Decay had set in and each year the rains and insects added to its deterioration until it began to look as though its years were few. A tree surgeon looked into the situation, diagnosed the tree's disease, and with his assistants, ladders, cement, skill and knowledge brought the tree back to health and strength to defy the storms of many years.

The Beaumont Export Company has been organized for the purpose of engaging exclusively in the exporting of lumber to Europe and Africa. The concern is a partnership and is backed by ample capital to make it most successful. The two principals are J. Frank Keefe and B. R. Norvell, both of Beaumont, Tex. Strong connections have been formed by the firm in the various important ports of Europe.

The Mansfield Hardwood Lumber Company is the new name under which the Stamps Hardwood Lumber Company of Stamps, Ark., is now operating at Mansfield, La. The concern moved recently from Stamps to Mansfield, supplement-

ing its old machinery with some additional equipment, and is now turning out band-sawn equalized forked leaf white oak, thin oak and ash specialties, as well as a general line of southern hardwoods. The firm is composed of A. S. Johnson, president; R. M. Burton, vice-president, and M. B. Harrel, secretary and treasurer.

## Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

### CHICAGO

Chester F. Korn, president of the Farrin-Korn Lumber Company of Cincinnati, backed by the Lumbermen's Club of Cincinnati, is a candidate for director of the Business Men's Club of Cincinnati, whose annual election was held last evening and the result of which is not yet known. The Lumbermen's Club of Cincinnati endorses Mr. Korn for this position and the RECORD trusts that he has been duly elected.

The RECORD had the pleasure of a call on November 9 from W. J. Fletcher, representing the Little Lumber Company of St. Louis, Mo. Mr. Fletcher enjoys a handsome trade in the Chicago market.

G. W. Critten, sales manager of the Northwestern Cooperage & Lumber Company, with headquarters at Minneapolis, and sawmill and cooperage plant at Gladstone, Mich., was a caller on the RECORD on November 8.

E. D. Galloway of the Galloway-Pease Company of Cincinnati was a Chicago visitor October 30.

B. C. Miles, secretary of the Charles K. Spaulding Logging Company of Salem, Ore., was a RECORD caller on November 2.

G. P. DeWitt, representing the Horace G. Hazard Company, hardwood factors of Philadelphia, paid his respects at the RECORD sanctum on October 30.

R. M. Cunningham, the aggressive head of the Louisville Lumber Company and sales manager of the Kentucky Hardwood Flooring Company of Louisville, Ky., spent a couple of days in Chicago last week. Mr. Cunningham says business is in very fair shape and looks to improved conditions as the season advances.

The well-known hardwood lumber people of Nashville, George C. Brown & Co., have recently had under consideration the removal of their general headquarters to Cincinnati, and news items to this effect have been published. This concern advises the RECORD that it has decided not to remove to Cincinnati, at least for the present, and will continue to conduct its business from the Nashville headquarters.

The Chicago Wholesale Lumber Dealers' Association held a monthly business meeting and lunch at the Hotel La Salle on Tuesday noon, at which many subjects of interest to the trade came up for discussion.

On October 24 Charles F. Spaulding, a millionaire lumberman of Chicago, well known in the business and financial world of the country, died after an illness of three weeks. Acute jaundice complicated with kidney trouble was the cause of his demise. Mr. Spaulding was president of the Spaulding Lumber Company and was also interested in several Chicago banks as well as banks and other commercial concerns in other cities. He was a prominent clubman and was a well known athlete, being an active advocate of all outdoor sports.

Charles F. Kerry of the Kerry & Hanson Flooring Company, Grayling, Mich., was in Chicago the latter part of last month visiting his many friends in the trade.

J. M. Hester, sales manager for the Marsh-Hathway Company, is making an extensive trip through Florida and Louisiana, visiting the sawmill plants in those states.

In response to a recent decision of the Interstate Commerce Commission, the Chicago & North-Western Railway Company has paid \$155.83 as overcharges to the Oshkosh Logging Tool Company of Oshkosh. The Oshkosh company has also received \$73.36 from the Chicago, Milwaukee & St. Paul railway, also as reparation for excessive charges.

S. L. Eastman of the S. L. Eastman Flooring Company of Saginaw, Mich., was a recent Chicago visitor. He reported that his concern is busy and that business generally is active.

R. S. Huddleston, president of the Huddleston-Marsh Lumber Company, returned a few days ago from a week's trip to New Orleans.

Charles Willey, son of the big mahogany and veneer manufacturer, C. L. Willey of this city, stopped at Chicago for a few days recently on his way home from the East. The younger Mr. Willey is manager of the Memphis business of C. L. Willey.

C. G. Powell, vice-president and general manager of the Fullerton-Powell Hardwood Lumber Company, South Bend, Ind., and Frank Wilson, traffic manager of the same concern, were recent Chicago visitors.

Lucius Holbrook Wheeler, who has charge of the Chicago office of the Wheeler-Timlin Lumber Company of Wausau, Wis., was married Tuesday, October 26, to Miss Wilhelmina Hoffman of Logansport, Ind. After December 15 Mr. and Mrs. Wheeler will be at home at 5641 Wayne avenue, Chicago. The many friends of Mr. Wheeler are extending to him their warmest congratulations on his recent marriage.

W. W. Dings, the popular secretary of the Garetson-Greaseon Lumber Company of St. Louis, Mo., who, as announced in the last issue of the RECORD, will open a branch office for his concern at Chicago, has announced that he will be located in the Fisher building. He has secured accommodation at Room 1416 in that structure, and commenced operations about the first of the month. The Garetson-Greaseon Lumber Company, with headquarters in the Times building, St. Louis, Mo., and with mills in Arkansas and Louisiana, has had a steady and rapidly increasing business in Chicago during the past several years. Mr. Dings has been furthering this business very largely, and has catered notably to Chicago wholesalers and manufacturers until he found that he was compelled to spend so much of his time in Chicago that it would be more advantageous for him to locate here permanently. Mr. Greaseon will continue to maintain general charge of the manufacturing end of the business as well as that part of the trade pertaining to the St. Louis field, and the general headquarters of the concern will remain at St. Louis. Mr. Dings is well known to the hardwood trade not only in St. Louis but in the country at large, so that there will be few lumbermen in Chicago to whom he is a stranger. He is an active force in hardwood affairs and a most welcome addition to Chicago's lumber fraternity.

William Clancy, president of the Lumbermen's Credit Association of Chicago, returned a few days ago from a two weeks' automobile trip. On August 13, accompanied by his wife and two daughters, he left for the East, going by way of South Bend and Detroit. The party visited various eastern cities, going up into Canada and taking in Toronto. The trip home was made by rail, but the party covered 3,000 miles of territory without a breakdown. It is needless to say that Mr. Clancy had a most delightful trip.

John W. Dickson of the John W. Dickson Lumber Company of Memphis, Tenn., was a Chicago visitor on November 2.

J. H. P. Smith of the Hardwood Lumber Company recently located in Cincinnati, Ohio,

was in town November 2 on a business trip.

On October 26 the office of the Cardwell Mill & Lumber Company at Cardwell, Mo., was destroyed by fire. This concern's head office is at Decatur, Ind., where the president, R. K. Allison, resides.

Among other Chicago visitors on November 2 were W. W. Mitchell of Cadillac, Mich.; H. C. Crawford of the Lidgerwood Company of New York City, and Frank H. Whiting of the Whiting Lumber Company of Philadelphia, Pa., and Abingdon, Va.

W. A. Gilchrist of the Three State Lumber Company, Memphis, Tenn., was a welcome visitor to the city November 2.

## NEW YORK

Gordon C. Edwards of W. C. Edwards & Co., Ltd., and vice-president of the Canadian Lumbermen's Association, Ottawa, Can., accompanied by Frank Hawkins, secretary of the association, spent several days in town last week in the interest of association affairs.

Among the visitors in town last week were W. E. Terhune of W. E. Terhune Lumber Company, Pittsburg, Pa.; G. G. Barr, Beecher & Barr, Pottsville, Pa., and Lewis Dill of Lewis Dill & Co., Baltimore, Md.

S. E. Slaymaker of S. E. Slaymaker & Co. is on a business trip to the big spruce mills of his firm at Cass, W. Va., where business is reported excellent.

The Hueston Manufacturing Company has been incorporated in New York City to manufacture hardwood floors, trim, etc. The capital stock is \$10,000, and the incorporators are Wm. S. Hueston, Benjamin F. Bates and Winfred A. Kelly, all of Brooklyn.

Norris H. Norden, for many years one of the best-known selling representatives in the Metropolitan district, died October 31 at St. Luke's hospital, aged fifty-three years.

The first informal dinner of the Lumbermen's Club of New York occurred at headquarters, 6 West Twenty-fourth street, on the evening of October 20, and was well attended. The objects of this dinner was to give the members an opportunity for social intercourse after business hours, which is not possible in all cases during either lunch or business hours. The house committee, composed of C. O. Shepherd, M. W. Teufel and Nelson C. Holland, was right on the job with a fine little menu, good music and a hearty reception to everybody, which rounded out an exceptionally pleasant evening. It is planned to hold these informal dinners once a month, the next taking place November 17. The membership of the club is increasing steadily and now includes a representative number of wholesale and retail dealers of the district, together with a large associate membership from other cities. The club is filling a distinct social niche in trade circles, which will unquestionably be further increased as time goes on.

There was a meeting of the creditors of Soble Brothers, wholesale hardwoods, 1 Madison avenue, held October 19, in this city, against whom a petition in bankruptcy was filed some time ago, and judgment of bankruptcy entered. At this meeting the application of Soble Brothers for a discharge from bankruptcy was considered, and none of the creditors objecting, they were discharged therefrom.

The Mershon, Eddy, Parker Company has appointed H. W. Alexander to succeed W. D. Mershon, resigned, in the local management. Mr. Alexander has been representing the firm in southern New Jersey and Pennsylvania for some time and is an able and popular lumberman. Under his management the company will continue to render the excellent line of supplies and general service that has earned for it the present large eastern constituency.

H. F. Raybuck, who was formerly associated with the selling staff of C. E. Page & Co., Man-

hattan, has engaged in business on his own account at 169 South Eleventh street, Newark, N. J., where he will conduct a wholesale business in North Carolina pine, spruce and hemlock.

E. H. Barton of Barton, Thompson & Co., the large timber brokers of London, E. C., Eng., arrived last week for his annual visit to the States. Mr. Barton left almost immediately for western and southern mill points, where he will negotiate his year's supplies. Mr. Barton is a genial gentleman as well as an able lumberman, and we know that it is always a pleasure for the manufacturing and wholesale trade who are interested in the export trade to have a call from him.

George J. Barker of Barker & Co., Inc., Boston, and 18 Broadway, New York, was in town last week after just concluding an extensive trip to the Pacific Coast, on which he went as far north as Alaska.

John L. Kaul of the Kaul & Hall Lumber Company, Birmingham, Ala., accompanied by Mrs. Kaul, passed through the city last week en route home after an automobile trip through northern points.

O. M. Shepard of the local office of the Shepard & Morse Lumber Company, 17 West Forty-second street, has just returned from a brief vacation. H. B. Shepard of the company recently returned from Europe via Quebec.

Other visitors during the fortnight were J. M. Hastings, J. M. Hastings Lumber Company, Pittsburg, and the Davison Lumber Company of New York, en route home from a trip through the Ottawa district; E. V. Babcock, E. V. Babcock & Co., Pittsburg; John N. Scatcherd, Scatcherd & Son, Buffalo, and L. E. Reighard, secretary and treasurer of the Mt. Mitchell Lumber Company, Swannanoa, N. C.

S. E. Barr, local sales manager for the Lilly Lumber Company, hardwoods, 1 Madison avenue, has just returned from a business trip to southern and middle west mill points in the interest of business, which he reports as active. He says hardwood flooring seems to be in especially good shape at present.

On the night of November 2 fire totally destroyed the large lumber yards of the C. H. O'Neill Lumber Company, Jersey City, N. J., entailing a loss of \$40,000, fully covered by insurance. The company will rebuild at once.

## BUFFALO

The news in hardwood lumber is, of course, that Frank A. Beyer was elected county treasurer by a majority of 4,351 where all majorities were small and with some of his own party papers against him. He will try to be a lumberman a while, at least, before going into office.

"Yes, we shut down and went to work for Beyer," said one of the hardwood dealers last week, and they worked without regard to party or the work that they might have done in lumber if they had stayed at home. There is time enough for lumber now, when the election is over, for the trade is a little slack and promises to remain so till after the first of the year. It is quite commonly so and it does not appear to mean anything more than that buying had been pretty brisk and the consumers found that they could get along without taking in much more to inventory and they did not go after it. Stock that they especially want they take just the same.

The hardwood dealers have not got into line for regular meetings yet, for they have had too many outside things to do on the last day of the week and they have all done them with a will. There seems to be a large amount of such work in the city for the lumbermen to look after, and now that the exposition and the election are over some of them will go at the problem of better railroad terminals, hoping that the new legislature will help them, as the old one did not.

There is always business enough for T. Sullivan & Co., with Frank T. Sullivan in the East selling stock and the yards full of lake hardwoods and Pacific coast fir and spruce.

J. N. Scatcherd speaks of conditions as peculiar, for if the demand was really big there would be no stock in a short time, so it is not called so very bad if the demand is a trifle light, especially as it is sure to be larger soon.

H. A. Stewart has been back to his old stamping ground in West Virginia, getting out a lot of oak and other hardwoods for direct shipment to customers, and buying some cherry for the home yard. Good sales of poplar are reported.

The yard of O. E. Yeager has lately received liberal additions to its stock of hardwood, mostly from south of the Ohio, where the best stock in his line seems to be found. Plain oak is looking up.

The southwestern mills of the Hugh McLean companies are active this fall, cutting out mostly oak and trying hard to make the quartered stock show up enough to meet the demand for it. Hugh McLean is almost always selling stock on the road.

The yard of G. Elias & Bro. has just received two lake cargoes of mostly white pine and hemlock, which closes the lake season for the firm and insures a big stock of all of the many sorts of lumber that they always carry here.

F. W. Vetter has a nice wagon trade in hardwoods, and reports a big lot of that sort of orders on hand now, including factory stock and car orders, as all shops and woodworking mills are filled up with business this fall.

T. H. Wall went off on a hunting trip into Canada last week and forgot about the election, as it was about the only time he could get off. The office reports that the Memphis yard of the Buffalo Hardwood Lumber Company has over 1,000,000 feet of quartered oak in it.

The sales of the Standard Hardwood Lumber Company are made up chiefly of oak, chestnut and poplar, with white ash a good second. Birch is waking up and elm goes if you have any. The table mill is running strong and doing well.

A. Miller always breaks the record when he sets out for it, in yard or automobile. When the hardwood man went out into the country the other day to work for the election of Frank A. Beyer his auto made ninety-six miles.

## PHILADELPHIA

The Righter Lumber Company has recently engaged A. A. Bell, formerly of the Marbury Lumber Company, Marbury, Ala., as salesman to cover eastern and central Pennsylvania. A. J. de la Cova of this house recently made a trip to the South to look after some special interests of the company.

Owen M. Bruner of the Owen M. Bruner Company reports an acceleration in trading, a satisfactory influx of orders and a promising outlook. H. A. Prock of this house is on a buying trip in South Carolina. Mr. Bruner, with a party of eleven, recently participated in a jolly trip to the Egypt Mills club house, Pike county, where they remained several days enjoying a round of pleasurable entertainments. All pronounced it an exceptionally agreeable outing.

William A. Reed reports a gradually returning vitality in trading. He is convinced that by spring business will have reached a sharp activity.

Norman A. Perry of Robert C. Lippincott admits a comparative laxity in trading during the last fortnight, prices in some lines a little wab-bly; but on the whole he says business is about as fair as could be expected for this time of the year. He is hopeful of a brisk turn by spring.

John W. Coles says while he cannot report a rush in trading, some fair orders are coming in right along and the outlook gives decided

encouragement. He made a short trip recently through the southern lumber camps to get a line on the stock situation.

Wistar, Underhill & Co. report business well sustained and the salesmen busy in their respective territories.

Samuel B. Vrooman of S. B. Vrooman & Co. recently returned from an enjoyable trip to Montana.

Daniel B. Curll does not hesitate to pronounce business good. He has secured some very desirable orders of late and is consequently optimistically disposed as to the outlook. He has recently spent considerable time at the mill in Glen Ray, near Alderson, W. Va., in which he is interested. The plant there is working full capacity to get out orders, but it is difficult to obtain sufficient cars for shipping.

H. Billetter, manager Philadelphia branch of the Lumber Insurers' General Agency, has been very busy in the eastern field of late. He reports a sustained activity all along the line and is much pleased with the amount of insurance written up during the last month.

H. B. Tomb of the Tomb Lumber Company is much encouraged over the amount of business coming in. William N. Lawton, the popular sales manager of this house, is touring northern New Jersey and bagging good orders at satisfactory prices right along. The company's mill at Watoga, W. Va., is pushed to the limit, but unfortunately it is unable to obtain necessary cars to fill orders. W. A. Tomb, who has been quite ill during his visit to the mill, has returned home for a time to recuperate.

Among the recent visitors to the local trade are E. H. Wilkinson, Bristol, Va.; L. E. Reighard, Swamanoa, N. C.; James C. West of the Midland Lumber Company, Parkersburg, W. Va.; A. A. Wilson, Wheeling, W. Va.; Frederick S. Pyfer of the B. B. Martin Company, Lancaster, Pa.; Thomas J. Jamison and Charles W. Wainright of Norristown, Pa.; Claude S. Wetherill and Joseph Buckman of Doylestown, Pa., and F. S. Hepler of the Atlantic Lumber Company, Atlantic City, N. J.

H. K. Beecher of Beecher & Larr reports a little slide from the usual activity of late, but he looks for a quickening in all the lines soon.

On October 28 fire visited the large sawmill of the Saltkeatchie Lumber Company at Schofield, S. C., which is controlled by Schofield Brothers of this city, destroying the entire plant and causing a loss of about \$75,000. The many friends and patrons of the Schofield Brothers will be glad to learn that the works will be immediately rebuilt and the company in readiness to ship lumber in about four months.

The yard of the Charles H. O'Neil Lumber Company, Jersey City, N. J., was destroyed by fire November 1. The loss is estimated at \$100,000.

The Continental Motor Car Company, Philadelphia, was incorporated October 20, with a capital of \$10,000.

The Philadelphia Picture Frame & Moulding Company, Camden, was incorporated under New Jersey laws, October 26, with a capital stock of \$5,000.

The Elk Garden Company, Jersey City, N. J., obtained a charter under New Jersey laws October 26. It is capitalized at \$2,000 and will deal in timber and logs.

## PITTSBURG

Taylor & Crate, wholesale hardwoods, Buffalo, have been buying considerable hardwood lumber from Pittsburgh wholesalers lately. The Newell Bros. Lumber Company secured one of the best contracts of this kind.

E. V. Babcock of E. V. Babcock & Co. attended the monthly meeting of the National Spruce Manufacturers' Association at Philadelphia last week.

The J. R. Wheler Company of this city is

being incorporated by J. R. Wheler, Wilson H. Cralle, Thornton Jeffress and Will McLain, who have been identified with the firm of J. R. Wheler & Co. The new concern is being formed to increase the business of these interests.

Final losses estimated in the big east end lumber fire which occurred October 30 have been announced as follows: S. W. Means Lumber Company, \$90,000; R. W. McCall Lumber Company, \$30,000; United Planing Mill Company, \$25,000; Jones & Rodgers, \$1,000. The United Planing Mill Company is cleaning up its yards and stocking up again with lumber to replace the 400,000 feet of rough and dressed stock which was burned. It is probable that the other firms will resume business largely at the old plant also.

J. W. Reeves of the firm of Dean & Reeves of Fairmont, W. Va., and M. Limburg of the West Virginia Culvert Company are preparing to build a plant at Fairmont for the manufacture of spokes and handles and are ordering machinery. They will be ready buyers of second growth hickory or tough butts of red hickory and also locust timber.

A. J. Diebold of the Forest Lumber Company made quite an extended trip through eastern markets two weeks ago and returned much pleased with the outlook.

A. M. Turner of the Allegheny Lumber Company has been speeding around through West Virginia and other southern states and looking up stock and making new connections with the southern mills. He is confident that the market is getting in better form every day.

H. V. Curll Lumber Company announces that its mills at Glenway, W. Va., are running full time and that the new Glenray railroad, which will open up a big tract of timber near that place, is progressing finely. Mr. Curll reports the poplar market getting to a point where buyers will have to work hard to get any assortment of desirable stocks.

The Mead & Speer Company is doing a nice business in dimension hardwood, chiefly oak. Its new plant at Strange Creek, W. Va., is turning out a fine lot of lumber, a considerable part of which it sells in Ohio and the Middle West.

The Croft Lumber Company, which is controlled by the Kendall interests of this city, made its first run at Alexander, W. Va., two weeks ago, cutting 7,000 feet per hour. Its average capacity is 70,000 feet per day. This is the largest lumber plant in Upshur county, West Virginia, and will be fed by a twenty-mile railroad known as the Alexandria & Rich Mountain railroad.

J. W. Hulse, Pittsburgh manager of the Pennsylvania Lumber Company, reports trade improving and stocks of lumber at the mills diminishing. The company's shipments in September and October were fine. Especially in late he notes a shortage which is going to be extremely hard to satisfy.

The W. P. Craig Lumber Company is cutting 500,000 feet a day at its West Virginia plant. Its chief difficulty is to get cars to move out its lumber on time. The B. & O., C. & O. and Western Maryland are all short of cars and the situation is getting more aggravated in the Little Mountain state every day.

The Kinzua Lumber Company, which is operating at Morrison, Pa., has secured 5,000 acres of the most valuable timber land at Morrison Run, Hemlock Run, Watsonville and other adjacent points in Pennsylvania. The company is building a modern sawmill which will be ready to operate about December 1 and will have a large capacity. The principal owners are A. W. Hamm and J. H. Wickham of Kane, Pa., and C. A. Strong of Mt. Jewett, Pa.

A. C. Schuyler is making things hum in the newly organized hardwood department of the Railroad & Car Material Company. Mr. Schuyler knows the trade, hardwood and the business, and his efforts are going to put this concern right up to the front of hardwood wholesalers.

The Hertzler Lumber Company has been formed by Harry Hertzler, W. H. Crider and Peter Geesaman, all of Carlisle, Pa., and will have its headquarters in that city.

The McNitt, Hewitt Lumber Company of Bellefonte, Pa., has closed a deal with the Pennsylvania Match Company by which it agrees to deliver more than 4,000,000 feet of lumber to that concern in the next three years. The total amount involved in the deal is over \$100,000.

William R. Cornelius, one of the best known individual hardwood wholesalers in Pittsburg, assisted his friend, Floyd E. Longwell, manager of the Oneida (N. Y.) office of the National Casket Company, at his wedding to Miss Edith Snell, a popular young lady of Kenwood, N. Y. Mr. Cornelius has been picking up some excellent stocks in West Virginia and Kentucky recently and finds the hardwood business on the gain.

The Kendall Lumber Company shipped 712 cars of lumber from its plant at Crellin, Md., during the months of July, August and September. Its October shipments from this point practically made new records. The company is oversold along several lines and is doing a booming business.

Manager Brewster of the Sun Lumber Company of Weston, W. Va., called on the Pittsburg trade last week. His company operates a big planing mill at that point.

J. L. Kendall has been touring West Virginia recently in the interests of the Kendall Lumber Company, of which he is president. He finds high-grade poplar scarce, but plentiful in the low grades. All stocks are much depleted, he says.

A. M. Kinney recently booked an order for 400,000 feet of oak car stuff and also 127,000 feet of mine tipple stock, both to be delivered in the Pittsburg district. Mr. Kendall is starting a new mill this week down the P. & L. E., which will give him four plants cutting hardwood—mostly oak—within easy shipping distance of Pittsburg.

Frederick Siebert, one of the best known wagon manufacturers of Pittsburg, died at his home, 1301 Meyran avenue, on October 26. He came to Pittsburg in 1859 and for more than thirty-five years had been identified with the wagon business.

The Union Lumber Company of Warren, Pa., has sold to the Clear Lake Lumber Company and the Day Lumber Company of Seattle, Wash., 300,000,000 of standing timber in Skagia county, Washington, and a big operation will be started very soon. The timber is in one tract covering about 3,500 acres.

The R. J. Munhall Lumber Company announces that business is considerably improved and Mr. Munhall looks for prosperous conditions to prevail by the first of the year. The company does not anticipate any great gain in local building before spring.

The Pittsburg Hardwood Door Company announces that business is the best it has been for many months. Manager Schoville says that the firm is not working new business hard at present, as the shortage of lumber in the hardwood market makes it difficult to get stock. Many country consumers have lately doubled their usual orders, showing that building is coming up right along in the outside districts. Mr. Schoville says that the company has at present enough orders in its office to run its entire plant steadily for the next three months, and adds that "Hard business is not thought of in our office."

The car shortage is becoming every day more of a reality. The Pennsylvania lines have been away behind of cars enough to satisfy the lumber shippers. The B. & O., the C. & O., Norfolk & Western and Western Maryland have been especially backward, according to reports, in furnishing cars for West Virginia and Kentucky points and shipments there have been greatly delayed on this account. Wholesalers in this city complain that it is almost impossible to

get suitable cars for first-class lumber and that they have during the past week been obliged to accept cattle cars rather than to have their orders delayed longer in shipments. Thus the car shortage, they maintain, is going to bring the retailer and consumer to their senses in a very short time, and by January 1 wholesalers anticipate that there will be no more sentimental howling about extravagant prices charged for hardwoods.

Washington county, Pennsylvania, has discovered that its rocky soils are growing a species of the mahogany family. A writer in the Washington Observer has been gathering seeds enveloped in a bean-shaped pod and about as large as a lima bean, resembling that of the honey locust. Frequently there are a dozen seeds in one of these pods and they are very hard and of a deep brown or black color. Between Middle Run and Brown's Run on the Monongahela river there is quite a grove of these trees growing, which belong to Hon. H. J. Gilmore and Asbury Struble. Other small groves are found scattered through the Monongahela valley. Careful examination of the wood and seeds has been made by timber experts, who claim that this species of mahogany could be grown to excellent advantage in many parts of southwestern Pennsylvania.

On November 2 the city of Pittsburgh, by a decisive majority of about 8,000, voted to spend \$6,775,000 for municipal improvements. This includes the cutting down of the hump, additions to the filtration plant, raising the streets in the flood district and building of a garbage disposal plant and other large projects. Already ordinances are being shaped up to get the bonds in definite shape for market, and it is expected that work on the improvements will be started shortly after the first of the year. This bond issue in full means that an enormous quantity of timber and lumber will be needed for these particular improvements, but also that following these improvements there will be a tremendous amount of good building done, all of which will redound to the profit of the Pittsburgh lumber interests.

## BOSTON

William E. Litchfield has returned from a trip to Philadelphia and Washington.

C. O. Skinner of the C. O. Skinner Company, Boston, attended the launching of the "Frank M. Lowe" at Camden, Me., recently. This vessel was built especially for the lumber carrying trade.

The will of the late George Van Dyke was recently filed for probate. The executors and trustees are Thomas H. Van Dyke, a brother, West Stewartson, N. H., Judge Irving W. Drew of Lancaster, N. H., and George S. Lewis of Holyoke. They are authorized to continue the business. Mr. Lewis has been associated with the business for many years. The will creates a trust fund of \$50,000 for the benefit of his mother and sister. Substantial amounts are left to several heirs. Provision is made for five churches, each being left \$1,000. The residue of his estate is bequeathed in equal shares to his brothers and sister.

Building has been handicapped this season to considerable extent by the inability of contractors to get steel. Many new buildings are being planned and it is said that next season will open up with a large volume of business on hand.

J. W. Murray of Hartford, Conn., has leased the woodworking shop of the late Charles W. Shea. This is a well equipped plant and Mr. Murray plans to materially increase his business.

All of the lumber holdings of Adams, Burns Company, Ltd., at Bathurst, N. B., have been transferred to the Nepisiguit Lumber Company. Fred S. Morse of Springfield, Mass., is the managing director of the latter concern. The

A. Sherman Lumber Company of New York is also interested in the company.

The dry house of Blacker & Shepard, Cambridge, has been destroyed by fire. The house was full of hardwood lumber in the process of drying. The loss is estimated at \$3,000.

Haskett Wood, son of William H. Wood, has filed a voluntary petition in bankruptcy. His liabilities are placed at \$37,908.13, with doubtful assets.

The Massachusetts Wholesale Lumber Dealers' Association held its twentieth annual meeting Friday evening, November 5, at Young's Hotel, Boston. The various officers and committees made their reports. The subject of selling shingles by the bunch instead of by the thousand in this market was discussed. The guest of the evening was Mr. Ives, manager of the traffic department of the Boston Chamber of Commerce. The officers elected were: H. B. Fiske of the George McQueston Company, president; Frank W. Lawrence of Lawrence & Wiggin, vice-president; E. C. Hammond of the Edward J. Hammond Company, secretary and treasurer, and A. M. Moore, with William E. Litchfield, assistant secretary and manager. The executive committee is to be elected by the officers.

## BALTIMORE

Robert McLean, general manager of the Norva Land & Lumber Company of Wallaceton, Va., is home after several months spent abroad, principally in Scotland and England. He placed some attractive contracts while there and reports that he found conditions decidedly improved, especially with regard to poplar, which wood was bringing good prices and was being called for in large quantities. The improvement in prices is very noticeable, Mr. McLean states, and there is every indication that quotations will go still higher, as supplies are running rather low. He has now gone down to the mill of the Norva company, and will also visit his own operation on the James river in Virginia, where hardwoods are being produced. The plant is being run at its full capacity. Mr. McLean has lately placed large quantities of gum, which is being manufactured at Wallaceton. In the past week contracts for the delivery of 750,000 feet in Philadelphia and New York have been closed. Much of this gum is being used for interior finish.

The managing committee of the Baltimore Lumber Exchange held its monthly meeting November 1, President E. P. Gill occupying the chair. Only routine business was transacted.

G. W. Eisenhower of the Eisenhower-MacLea Company, dealer in hardwoods, has gone for several weeks to Asheville, N. C.

Miss Henrietta Thomas Lawton, a daughter of William T. Lawton of the mill firm of Joseph Thomas & Son, was married October 26 to John Thomas Morris of St. Mary's county, Maryland. Mr. and Mrs. Morris will reside with the parents of the bride.

R. E. Wood of the R. E. Wood Lumber Company of this city spent several days last week at Buffalo, and Williamsport, Pa. His company is about to build a hotel at its mill at Fontana, Swain county, N. C., the plans having been drawn by G. L. Wood, vice-president of the company. It is estimated that the timber supply there will last fifteen to twenty years, aggregating 200,000,000 feet, and that this length of time will justify the erection of the hotel. The structure will be two stories, with a front of fifty feet and extending back in two wings, separated by a court.

Charles I. James of the Pigeon River Lumber Company, at Mount Stirling, N. C., visited the plant ten days ago and found everything to be working satisfactorily. The mill is turning out about 80,000 feet per day and is kept running steadily.

Among the out of town lumbermen here last week was C. W. Manning of New York, who

stopped over on the way south. He intended to be gone ten days or more. Mr. Manning stated that trade in his section is improving and that the demand for hardwoods is on the increase.

John Cant of Cant & Kemp of Glasgow, Scotland, was in Baltimore last week. He has started on a tour through the West and South which will take several months. It is Mr. Cant's first trip to the United States, and he will give close attention to the business conditions here. He reported the lumber trade at home as showing considerable improvement.

Another foreign visitor here about the same time was Norman A. Wright of Leary & Co., London. Mr. Wright will also make a tour of the lumber markets of the country.

## CHARLOTTE

R. T. Lambeth of Thomasville, N. C., and associates from Virginia and York, Pa., have made arrangements to build at Thomasville the largest veneering plant in the state. The company will manufacture veneering for high-grade furniture and interior work and will market most of its output in the Middle West. Work on the plant will commence at once. The company will start business with a capital stock of \$40,000.

The Kinston & Carolina Railroad & Lumber Company line running from Pink Hill to Kinston, N. C., a distance of twenty-five miles, has just been sold to the John L. Roper Lumber Company for \$35,000 and the assumption of indebtedness amounting in the whole to \$100,000. The John L. Roper Lumber Company operates extensively in North Carolina and Virginia and is owned by the Norfolk & Southern Railroad Company.

Something like half a million dollar loss was sustained by owners of the plant of the Salkahatchie Lumber Company, located at Schofield, S. C. About 5,000,000 feet of lumber were burned along with the plant. It was the property of Schofield Brothers of Philadelphia. Amount of insurance is not known, but it is not thought it will cover the loss. Whether the plant will be rebuilt is not yet known. The company had been cutting timber along the Salkahatchie river for about two years and was doing a big business. It employed 300 hands and the output of the mill was 50,000 feet per day.

The plant of the Massie Lumber Company, located at Dovesville, S. C., was burned recently. The loss is estimated at \$25,000. About 150,000 feet of lumber, dry kilns and planing mill were burned.

R. D. Stinson, proprietor of a new shuttle block factory at Newton, N. C., is scouring the country for dogwood timber.

Extensive improvement to the lumber-drying plant is being made by the Weldon Lumber Company of Weldon, N. C. The addition will be equipped with six large dry kilns.

An interesting suit involving the title to about 50,000 acres of land lying in Graham county, N. C., has by order of Judge Ferguson been removed from the superior court of Graham county to the United States circuit court at Asheville, N. C. These lands are known as the Belding lands and there are already several suits pending involving title to the property.

A meeting of creditors of J. A. Forbes, an extensive sawmill operator of Eaglerock, N. C., has just been held. Liabilities of the bankrupt concern are stated at \$30,000, with assets of \$10,000.

In the case of G. F. Buell against the Kanawha Lumber Company, just heard by Judge Pritchard at Asheville, N. C., Receivers John H. Howard and W. H. Chadbourne reported that neither E. B. Freeman of Norfolk, Va., nor the Elizabeth Land & Lumber Company had complied with terms of the order by which the prop-

**A Little About Its History—The Importance of Its Hardwood Industry—The Source of Its Hardwood Supply—Transportation Facilities—The Immense Volume of Hardwoods Handled—Sketches of the Various Concerns—Illustrations of Office Buildings—Local Lumber Housing—Various Facts of Yards and Manufacturing Institutions**

When John Filson and his sturdy band of pioneers, a little over a century ago, made the first survey and platted the village of Losantiville, little did they dream that from that small beginning would grow the proud Queen City of the West. Never in the wildest flights of fancy could they have foreseen that in a hundred odd years would spring from their pioneer work the center of one of the richest commercial and manufacturing empires in the world, but such has been the result of their planning and building.

At a recent convention of the Ohio Valley Improvement Association, held in Cincinnati, statistics were presented by the field secretary of the National River and Harbors Congress which almost staggered belief, but the proof submitted was irrefutable. These figures demonstrate that the commerce of the Ohio valley, floated on the broad bosom of the Ohio river alone, annually exceeds in tonnage that of the five greatest seaports of the world combined. Cincinnati is the financial center and metropolis of this great Ohio river valley, and from the vast area its great and varied products are brought to her markets to be distributed throughout the entire world. From the forests of Virginia, West Virginia, Kentucky, Tennessee, North Carolina, Mississippi and Arkansas are brought the choicest varieties of hardwoods to be found in the entire country, while from the illimitable coal fields are annually

freighted thousands upon thousands of tons of coal.

Back in the early thirties two small sawmills represented the hardwood industry of Cincinnati. Today the hardwood interests of the Queen City are greater in proportion to the general volume of business transacted than in any other city in the United States. Cincinnati houses are credited with manufacturing and handling a grand total of over a billion feet of hardwood lumber annually.

Geographically, Cincinnati is most advantageously located, being the natural gateway between the South and the North. A vast virgin or semi-virgin area of timber wealth lies within easy reach of this gateway and it is through this route of transportation that a very large portion of the lumber and other products of the South move northward. Hence it is that Cincinnati is the natural distributing point which has grown from small beginnings in hardwood manufacturing and distribution to be one of the foremost hardwood markets in this country.

#### A VAST INDUSTRY

Few people, unless they have analyzed the situation carefully, have any idea of the vastness of the hardwood industry of which Cincinnati is the commercial center. The city has been known as a hardwood market for a good many years, but it is only within the last decade that the business has grown to great importance through the location of

well towards a hundred hardwood houses in that metropolis. Some of these institutions have their manufacturing plants at Cincinnati; others at various points throughout the South; others group their stocks at the gateway for distribution to the West, North and East. Involved in the varied hardwood industries of the city are numerous manufacturing plants producing finished manufactured products in the form of veneers, hardwood flooring, interior finish, dimension stock, etc.

Logically and commercially, Cincinnati has become the hub of the hardwood industry for a large range of territory. While some of the northern hardwoods from Ohio, Indiana, Wisconsin, Michigan and Canada are handled in Cincinnati, the great bulk of the business in that city is the manufacture and distribution of southern hardwoods. The heaviest bulk of this business is in oak and poplar, although the market is a foremost one in ash, basswood, beech, butternut, cherry, chestnut, cottonwood, cypress, elm, red and tupelo gum, hickory, black walnut, mahogany and other foreign woods.

#### CHARACTER OF THE TIMBER TRIBUTARY TO CINCINNATI

There is one feature that appeals strongly to lumber buyers and that is the character of the timber from which is manufactured the hardwoods that find a market through the Cincinnati gateway. The city's oak sup-

ply comes from the highest type of this wood that grows in the known world. The famous old-time white oak of Ohio and Indiana is reproduced in practically the same quality in Kentucky and Tennessee, in West Virginia and Virginia, and the prototype of the red oak formerly growing in profusion in northern Indiana and Ohio, southern Michigan and Wisconsin, is available for Cincinnati's lumbermen throughout the great lower Appalachian range, where it is known as mountain oak. This species, however, is of exactly the same botany and of equal character with the famous red oak of the more northern ranges of early lumber history.

Cincinnati has for more than half a century been the center for the manufacturing distribution of the magnificent yellow poplar of the Ohio valley, Kentucky and West Virginia and the more remote regions of Virginia and North Carolina. It is still the chief commercial center for this magnificent wood. Cincinnati's favorable freight rates enable it to reach out for sources of supply of southern white and red oak to all parts of the great Mississippi valley and no considerable amount of the oaks of that region are marketed by its dealers. In lesser, but still great quantities, is available the splendid chestnut of Kentucky, Tennessee and North Carolina; the hickory from a wide range of territory; the white ash from more remote southern fields, and during the last few years the city has developed as a center for the distribution of a large quantity of red gum and latterly is handling a good deal of tupelo. Certainly Cincinnati is a very catholic market, for there is scarcely a wood of commercial importance that grows in the United States, or for that matter in foreign countries, that cannot be found in a considerable quantity ready for immediate shipment in the various yards of the Cincinnati lumber contingent.

The hardwood export trade of Cincinnati is a considerable factor in the total of its annual handlings. Several houses located there do nothing but an export business; some in oak, poplar and ash, others in walnut and sundry other woods.

#### THE GREAT WATERWAY

The Ohio river is a tremendous factor in contributing to Cincinnati's success as a lumber market, as more than two hundred million feet in logs and lumber are annually floated down that stream from the timber tracts along the Ohio, Big Sandy, the Guyandotte, the two Kanawhas, the

Licking, Kentucky and Green rivers. Cincinnati owes a large share of its furniture, piano, carriage and wagon making factories to its favorable location with respect to sources of supply.

#### RAILROAD FACILITIES

While Cincinnati is the terminus of half a dozen great railroad systems, tapping on the east the rich forests and heavily wooded mountain slopes of Virginia and West Virginia; on the south, Kentucky, Tennessee, Alabama, Georgia and the two Carolinas, and on the southwest, Mississippi, Arkansas

New York Central Line (the Cleveland, Cincinnati, Chicago & St. Louis), the Louisville & Nashville, the Pennsylvania Lines (the Pittsburgh, Cincinnati & St. Louis), the Norfolk & Western, the Erie, the Cincinnati, Lebanon & Northern and the Chicago, Cincinnati & Louisville railroad. There are also numerous electric lines which materially increase and extend the facilities and conveniences in the movement of persons and freight from and into the city.

#### STATISTICS

The last reports available from the Chamber of Commerce show that in 1907 there were handled in the Cincinnati yards of the railroads 149,772 carloads of lumber, which represent a little less than 65 per cent of the actual lumber business transacted annually, as a large portion of the lumber sold by Cincinnati dealers is shipped direct from the point of manufacture to the ultimate wholesale consumer. During that same year by river 10,665,000 feet of lumber were shipped. The freight tonnage of Cincinnati in 1907 was approximately 25,000,000 tons.

#### ALLIED BUSINESS ENTERPRISES

Outside of the woodworking institutions, which form a large portion of Cincinnati's manufacturing greatness, it also produces a vast quantity of tools and appliances that are dependent upon the lumber industry for their sale. One of the largest, if not the largest, manufacturer of woodworking machinery in the world is located in this city, the J. A. Fay & Egan Company, and there are more than a score of minor concerns making sawmill and sundry woodworking tools.

Cincinnati's receipts of manufactured iron and steel in 1907 were more than 572,000 tons, and the estimated value of machinery made in that city annually is more than twelve million dollars. Cincinnati, makes more than eighteen million dollars' worth of shoes; eighteen million dollars' worth of clothing; twenty-three million dollars' worth of soap, and ten million dollars' worth of furniture, office equipment and coffins.

#### A FINANCIAL CENTER

As a financial center Cincinnati stands high for strength and soundness. Its banking institutions have always been conducted along conservative lines and never in a case of financial depression has Cincinnati been a severe sufferer. The average annual bank clearances for the past five years have been in excess of \$1,250,000,000. The credit of her financial institutions is equal to the best in the land. As a demonstration of Cin-

BAYOU LAND & LUMBER COMPANY.

and Louisiana, which overlap the rich sources of forest products, it is the only city in the land that has the distinction of owning a great trunk line railroad. This is the Cincinnati Southern, extending from Cincinnati 330 miles southward to Chattanooga, and is under lease as one of the main lines of the Southern Railway System, with branches penetrating to every section of this great southern empire of wealth.

The various railroad lines entering Cincinnati are the Baltimore & Ohio, the Chesapeake & Ohio, the Cincinnati, Hamilton & Dayton, the Southern Railway (the Cincinnati, New Orleans & Texas Pacific), the

cincinnati's prosperity, it may be mentioned that the savings per capita of population is greater than that of any city or town in the United States. In population Cincinnati

ranks fifteenth in the list of the great cities of the country. The census of 1890 gave her a population slightly below 350,000. These figures create a false impression of

the population of the region of which Cincinnati is the immediate center, as great villages and cities surround Cincinnati on all sides and really are an integral part of

the metropolis. No small portion of this contiguous population is on the Kentucky side of the river, where Covington, Newport, Bellevue, Dayton and a dozen smaller towns hold the residences of a large number

of Cincinnati's business men. As a matter of fact Cincinnati is the business center of a population of about 600,000, of which not more than 60 per cent reside in the corporate limits. Among the northern sub-

urbs is Norwood, which alone has a population of over 50,000.

The Chamber of Commerce of Cincinnati (a view of this magnificent commercial structure is shown in this article) is the

base about which are grouped numerous allied commercial organizations, including the Business Men's Club, the Cincinnati Lumbermen's Club and sundry others. All of these institutions work in close har-

mony for increasing the commercial greatness of Cincinnati's business institutions.

#### The Hardwood Manufacturers' Association

A year ago there was located in Cincinnati

the principal office of the Hardwood Manufacturers' Association of the United States. This association numbers among its members the majority of the hardwood manufacturers of the entire southern coun-

ty and involved in their production are more than a billion feet of lumber annually. Of this institution, R. M. Carrier of Sardis, Miss., is president, and Lewis Doster is secretary, with headquarters at Cincinnati.

The association occupies handsome offices in the First National Bank building and from this point the work of the organization is directed. The organization also has a branch office at 1 Madison Ave., New York.

#### The Cincinnati Lumbermen's Club

Nearly all the hardwood houses of the city, both manufacturing and jobbing institutions, are allied with the Cincinnati Lumbermen's Club. This is an institution which

is organized and incorporated not for profit, but for the purpose of advancing the inter-

ests of the Cincinnati lumber trade generally and of those engaged in lumber enter-

prises. The club attempts to harmonize various interests and secure united action to

GOVERNMENT SQUARE, WITH FOUNTAIN SQUARE IN DISTANCE. ON EXTREME LEFT ALLEN BUILDING CONTAINING OFFICES OF LELAND G. BANNING. ON RIGHT POSTOFFICE.

WILL S. STERRETT, PRESIDENT STERRETT LUMBER COMPANY.

make the tenets of the organization more forcible. Above all, it attempts to demand and maintain a high standard of commercial honor and integrity among those engaged in the lumber business in that vicinity. The result of the good work attained by the organization is daily manifest and there is no market in the United States today that stands higher for commercial uprightness than do the Cincinnati hardwood manufacturers and jobbers.

A brief history of this club, which has the welfare of the Cincinnati hardwood market as its prime inspiration, may not prove uninteresting at this time. The club was organized in May, 1896, and held its first meeting in the Burnett house. The first president was the late M. B. Farrin, who was followed in succession by W. A. Bennett, W. B. Wiborg, J. Watt Graham, T. J. Moffett, T. B. Stone, F. M. Possell, C. F. Korn, B. A. Kipp, I. M. Asher, T. J. Moffett for the second term, B. F. Dulweber, and the present incumbent, Cliff S. Walker. W. B. Hay served as secretary for the organization for seven years and he was succeeded by Ed J. Swayne, who was suc-

ceeded by Emil J. Thoman, who served for four years, and who in turn is now succeeded by W. S. Sterrett.

The charter members of the Cincinnati Lumbermen's Club were Bennett & Witte, the M. B. Farrin Lumber Company, A. V. Fuhrman, the Graham Lumber Company, Goodman & Wright, the T. B. Stone Lumber Company, Wiborg & Hanna, J. F. Taylor, L. B. Lewin, Frank Littleford & Bro., B. A. Kipp & Co., Bosken & Co., Charles F. Shiels & Co., Ferd Brenner, John Dulweber & Co., L. G. Banning, George Waters, Betts & Hines, W. H. Justice, E. C. Handley, X. Culbertson and R. N. Archer.

Today the club numbers among its membership more than three score of the lumber institutions of Cincinnati, which comprise the larger number of the important houses of the city.

The club took a prominent part in the building of the lumbermen's exhibit at the Paris Exposition of 1890, W. A. Bennett being chairman of the Executive Committee which carried out the enterprise and secured the financial aid necessary.

The club invariably sends delegates to

the annual meetings of all important lumber organizations and to any other conventions where it can be of service in assisting in the general good of the lumber trade.

The club has frequently been the host of the various lumber organizations and in 1899 entertained the annual convention of the National Hardwood Lumber Association. It also assisted in entertaining the convention of the Hardwood Manufacturers' Association of the United States, which met in Cincinnati in 1908.

As a municipal business body the club has always been in the front rank of all movements for improvement in hardwood conditions. It had delegates at the recent meeting of the Ohio Valley Improvement Association and also sent delegates to the Rivers and Harbors Congress at Washington.

Much good work has been accomplished by the Cincinnati Lumbermen's Club and from the character of its membership much more can be anticipated. The institution's pioneer work, involving the important subject of commercial morals in the hardwood industry, is well worthy the attention of

all other hardwood associations, exchanges and clubs throughout the country.

A visitor desiring to make a tour of the hardwood institutions of Cincinnati, on arriving at the Grand Central depot, would adopt the most convenient plan of visiting the downtown concerns first. After a walk of five minutes from the depot he would find himself at the office of

#### Bennett & Witte

One of the best known lumber concerns in the country, making a specialty of hardwoods, is Bennett & Witte. The firm was organized Jan. 15, 1884. It first had an office on the Public Landing or river front, which was continued for four years, when it was moved to the Mitchell building, 9 West Fourth street. Here the firm remained until 1897, when it moved to its present quarters in the Western Methodist Book Concern building, 220 West Fourth street. The firm was originally composed of W. A. Bennett and Charles Witte. In 1896 Mr. Witte died, and Mr. Bennett continued the business under the original name. A few years ago George C. Ehemann, a young man

who had been in the employ of Mr. Bennett since 1889, was admitted to partnership with Mr. Bennett, but the style of the firm has remained the same. Mr. Ehemann has charge of Bennett & Witte's office at Memphis, where the firm has operated several years.

E. J. Thoman, sales manager of the firm, has been with Mr. Bennett since 1901. He is one of the brightest men in the hardwood trade. He served as secretary of the Cincinnati Lumbermen's Club for several years, but owing to the pressure of business was compelled to retire. He enjoys the supreme confidence of Mr. Bennett and is never so happy as when transacting the business of his employer.

A. W. Euler, manager of the export department and European representative of the house, puts in all his time touring Europe in quest of business. The concern's foreign trade has grown extensively in recent years, largely through the efforts of Mr. Euler.

Bennett & Witte are general hardwood lumbermen, with interests and stocks in various parts of the Middle West and South, handling vast quantities of oak and ash. They make a specialty of red gum for the export trade,

and ship vast quantities to Europe. Mr. Bennett is a believer in red gum and has always been an ardent supporter of the wood, being of the opinion that its qualities are not yet thoroughly understood by manufacturing consumers.

Mr. Bennett has been in the hardwood business since 1872 and is now classed as one of the veterans. As a business man, he stands in the front rank. He has served the interests of the hardwood industry in many capacities, attending association conventions, serving on important committees and filling various offices. He is a member of the Chamber of Commerce of several years' standing, and in 1908 was chosen its president. During his term of office he inaugurated many reforms, refusing the nomination for reelection in 1909.

Mr. Bennett is a man of strong character and prompt in his almost unerring judgment of men. Strong in his likes and dislikes, and while a faithful and true friend to those he admits to his favor, he is never discourteous to those who do not favorably impress him. He is strictly honest in all his dealings and has not the slightest tolerance for anyone who is crooked or shady in any way. Being asked why he always surrounds himself with Germans in his business, his characteristic reply came promptly: "Because I have always found them honest."

#### C. C. Boyd & Co.

A walk of five minutes from the offices of Bennett & Witte brings the visitor to the corner of Fifth and Race streets, and the Glenn building, on the fourth floor of which is located the office of C. C. Boyd & Co. Mr. Boyd is the oldest member of the hardwood trade in Cincinnati. He operates a band mill of about 10,000 feet daily capacity at North Bend, Ohio, and a veneer mill which was the first in the West, and which now runs three saws, with a capacity of 5,000

feet per day. The firm handles general hardwoods and specializes in sawed veneers.

#### The Bayou Land and Lumber Company

Leaving the office of Mr. Boyd, a walk of three minutes to Fourth street, brings one to the Mitchell Building, on the seventh floor of which is the office of the Bayou Land & Lumber Company, of which Cliff S. Walker is president; George W. Hand, secretary and treasurer; Samuel A. Conn, general manager of the land department, and Fred K. Conn, vice-president. The company handles a general line of hardwoods and operates a circular sawmill at Itta Bena, Miss., with a capacity of about 15,000 feet per day. It makes a specialty of red gum. President Cliff S. Walker is noted as a student of political economy, an advanced thinker, and is also president of the Cincinnati Lumbermen's Club.

#### C. Crane & Co.

The giant hardwood institution of Cincinnati is the great manufacturing plant of C. Crane & Co., occupying a full mile of water front along the Ohio river, where

three big modern sawmills are located. At Covington, C. Crane & Co. have another large band mill and also have several smaller sawmill plants located in timber sections owned

Walking east on Fourth street a half block, we come to the Fourth National Bank building, on the sixth floor of which

**The Dwight Hinckley Lumber Company**

One floor below is the office of the Dwight Hinckley Lumber Company, of which Dwight Hinckley is the head. The com-

excellently arranged for the receiving and shipping of lumber.

**The Graham Lumber Company**

Crossing Fourth street from the Fourth National Bank, we come to the Fosdick building. On the fourth floor is the office of the Graham Lumber Company, which has the distinction of having as its secretary the only woman actively engaged in the lumber business in Cincinnati, who possesses a rare knowledge of the trade and is a thoroughgoing "lumberman." The president of the company is J. Watt Graham, and the secretary Miss M. S. Graham. The company handles a general stock of hardwoods, operating mills in Kentucky and Tennessee. It gives special attention to oak, poplar, chestnut and basswood. Fred Duling is the energetic sales manager.

**T. B. Stone Lumber Company**

At the northwest corner of Fourth and Walnut streets stands the Union Trust building, on the tenth floor of which is located the T. B. Stone Lumber Company, officered by T. B. Stone, president; W. W. Stone, vice-president and treasurer, and W. T. Johnson, secretary. The company operates

a mill of 25,000 feet daily capacity at Inverness, Miss., sawing gum, oak and ash; two mills of 25,000 feet capacity at Buckeye, Tenn., sawing oak, poplar and chestnut; also a yard at Hartsville, Tenn. It has a large yard at Hopkins and McLean avenue in this city. The company's line is general hardwoods, including yellow pine and cottonwood. It makes a specialty of poplar panel stock.

#### The Stearns Lumber and Coal Company

On the fifteenth floor of the Union Trust building is located the office of the Stearns Lumber and Coal Company, of which J. S. Stearns is president; W. T. Culver, vice-president and general manager, and R. L. Stearns, secretary-treasurer. The company's manufacturing is done at Stearns, Ky., where it operates a mill with two band saws and a gang saw, with a capacity of about 50,000 feet per day. A general line of hardwoods is handled. J. O. McCloskey is the local manager for the company.

#### The New River Lumber Company

On the eleventh floor of the Union Trust building are the offices of the New River Lumber Company, a recently organized and wealthy enterprise. The officers are H. C. Yeiser, president; C. F. Hofer, vice-president; J. E. Blaine, secretary; W. H. Hopkins, treasurer. The company owns 60,000 acres of timber land on New River and has installed the most approved machinery. At Norma it operates a band mill with three saws, with a capacity of 100,000 feet per day, while at New River its mill, equipped with a band saw and gang saw, cuts 50,000 feet per day. Spurs from the Tennessee railroad run up into the lands and the company has its own tracks through the timber, all logging being done by rail. The concern specializes in oak and poplar.

#### The J. W. Darling Lumber Company

On the sixteenth floor of the Union Trust building are located the offices of the J. W. Darling Lumber Company, of which J. W. Darling is the head. The concern began

business eight years ago and makes a specialty of cottonwood and gum. It manufactures the greater part of the lumber handled, operating mills in Louisiana and yards at Joppa, Ill. R. C. Gilbert of the company looks after the sales department, while J. W. Darling attends to the buying, manufacturing and shipping.

#### The St. James Cedar Company

On the fourteenth floor of the Union Trust building is the office of the St. James Cedar Company, of Detroit, Mich., of which B. A. Scott is president. The local office is in charge of Arthur S. Dennis and Omar Farrell as managers. The company specializes in ties and wholesale lumber.

#### The Hardwood Lumber Company

The fourteenth floor of the Union Trust building is also the location of the offices of the Hardwood Lumber Company, of which J. H. P. Smith is president; W. P. Heyser, vice-president and treasurer, and H. F. Williams, secretary. The company handles all

varieties of southern hardwoods.

Leaving the Union Trust building, we cross to the southeast corner of Fourth and Walnut streets, and enter the First National Bank building, an eighteen-story structure. On the sixteenth floor of this building are located the offices of the Hardwood Manufacturers' Association of the United States, in charge of Lewis Doster, secretary.

#### Yale Lumber Company

In the same building are located the headquarters of the Yale Lumber Company, which were opened October 1, 1909. H. R. Stone is the resident manager, and M. H. Stone looks after the affairs at the company's plant at Yale, Ky., where it operates a double band mill with a capacity of about 40,000 feet daily. The concern handles general hardwoods, making a specialty of oak and poplar. It also operates a heading mill at Yale and does a heavy business in railroad ties.

#### Shawnee Lumber Company

On the fourteenth floor is the office of the Shawnee Lumber Company, in charge of J. C. Rash, with J. H. Hardwick and F. D. Shore as managers of the yellow pine division. This is the Cincinnati office of the

Brodhead-Garrett Company, with plant at Clay City, Ky. H. G. Garrett is president of these allied concerns. The company has a band mill with a capacity of 40,000 feet daily. It handles general hardwoods and operates mills on the L. & E. railroad and the Red river.

#### James Kennedy & Co., Ltd.

On the seventh floor of the First National Bank building are the offices of James Kennedy & Co., Ltd. The headquarters of the concern are at Glasgow, Scotland, and it operates yards and offices at London and Liverpool also. The Cincinnati office, which is devoted to buying, is in charge of Stuart Menzies. The concern handles general hardwoods, and specializes in wagon and dimension oak for export. The company was established in Glasgow in 1871 by James Kennedy, the governing director.

#### The Ferd Brenner Lumber Company

On the fifth floor of this building is the elegant suite of offices of the Ferd Brenner Lumber Company, of which Ferd Brenner is president; W. F. Best, vice-president; L. G. Banning, treasurer, and R. C. Witteck, secretary. The company always has on hand a well assorted stock of southern hardwoods, specializing in oak and ash and

gum for export. It operates mills at Alexandria, La., and has offices and large yards at Salisbury, N. C. It has branch offices also in many of the leading capitals of Europe.

#### The Kentucky Lumber Company

On the tenth floor of the First National Bank building are the offices of the Kentucky Lumber Company, of which C. Minshall is president and treasurer; J. H. Keyes, vice president; Ralph McCracken, secretary and sales manager. W. E. DeLaney is general manager. The company operate a band mill at Burnside, Ky., of 50,000 feet daily capacity, and another at Williamsburg with a capacity of 40,000 feet daily. The company handles a general line of southern hardwoods and specializes in poplar. It has a local yard at Burns street and the C. H. & D. railroad.

#### Schrader & Skiles

On the same floor with the Kentucky Lumber Company is the office of Schrader & Skiles, formerly of Knoxville, Tenn., when they operated for nineteen years before coming to Cincinnati, locating there two years ago. They are general hardwood commission merchants. C. G. Schrader presides at the Cincinnati office.

**The Louisiana Red Cypress Company**  
 on the eighteenth floor of the First National Bank building is the office of the Louisiana Red Cypress Company. The officers are R. H. Downman, president; F. H. Bolser, first vice-president; G. W. Dodge, second vice president; J. A. Hilliard, secretary and general manager. The company operates numerous mills with a daily capacity of 3,000,000 feet of lumber, 2,500,000 shingles and 1,000,000 lath; making a specialty of red cypress. The Cincinnati office is in charge of S. Earle Griffen.

## **Blackburn & Bolser**

on Walnut street, a half block north of the First National Bank building, is the Mercantile Library building, where on the sixth

floor is the office of Blackburn & Bolser. The company is officered by J. E. Blackburn as president; J. H. Bolser, vice-president; H. O. Kapp, secretary and treasurer. It handles general hardwoods and has yards at Mountain City and Shouns, Tenn. The local office is in charge of J. A. Bolser, vice-president of the concern.

## **Richey, Halsted & Quick**

Next door to the Mercantile Library building is the Traction building, on the seventh floor of which is the fine suite of offices occupied by Richey, Halsted & Quick. The firm is composed of S. W. Richey, L. D. Halsted and Walter Quick. They handle a general line of hardwoods and make a spe-

cialty of poplar and oak. Only high-grade lumber is handled by this firm.

## **Midland Lumber Company**

On the sixth floor of the Traction building are located the offices of the Midland Lumber Company, the officers of which are: M. Y. Cooper, president; F. H. Kinney, secretary; W. H. Flinn, treasurer and general manager. The company handles all lines of hardwoods and specializes in oak and poplar.

## **Illingworth, Ingham & Co.**

Crossing to the west side of the street after leaving the Traction building, we come to the office of Illingworth, Ingham & Co., exporters of hardwood lumber, on the sixth floor of the Johnston building. The office is

PANORAMIC VIEW OF BUSINESS DISTRICT OF

ARK, SHOWING OHIO RIVER AND KENTUCKY HILLS IN THE DISTANCE.

in charge of Edward Barber, who buys hardwoods for the English trade. The company has yards and mills at Leeds, England, with yards also at Goole and Manchester. The lumber is shipped to Manchester, Hull and Liverpool. The firm specializes in dimension stock for export, such as wagon plank and scantling cut to special sizes. The company also operates a branch at Clarksburg, W. Va., in charge of C. E. Gay.

#### Galloway-Pease Company

At a short distance from the Traction building is the Second National Bank building, at Ninth and Main streets, on the eighth floor of which are located the offices of the Galloway-Pease Company. E. D. Galloway

is president and treasurer; Max L. Pease, secretary, and W. S. Hope, sales manager. The company operates a circular saw-mill at Johnson City, Tenn., with a capacity of 50,000 feet per day; also a band mill at Poplar Bluff, Mo., of 35,000 feet daily capacity, which is devoted almost exclusively to cutting oak. The company handles all the southern hardwoods and specializes in sound wormy chestnut.

#### King & Trimble

At Sixth and Vine streets, in the Bell block, is the office of King & Trimble, successors to Gage & Possell, who for years carried on an extensive business with cypress lumber as a specialty. James King, for

many years with the original firm, is the head of the partnership. While specializing in cypress the concern also handles a general line of hardwoods.

#### Chicago Lumber & Coal Company

One square north of the Bell block, on Vine street, is the new building of the Provident Bank & Trust Company, on the ninth floor of which is the office of Colonel S. B. Stanberry, who represents the Chicago Lumber & Coal Company. The company specializes in railroad and construction timber. Colonel Stanberry is one of the active business men of the city and takes a deep interest in its welfare. He is a prominent member of the Business Men's Club.

W. P. HEYSER, VICE-PRESIDENT AND TREASURER HARDWOOD LUMBER COMPANY.

DWIGHT HINCKLEY, PRESIDENT DWIGHT HINCKLEY LUMBER COMPANY.

**Concerns with Out-of-Town Headquarters.**

There are other small yards and operators, among whom might be mentioned J. A. McEntee, agent of the J. M. Card Lumber Company, Chattanooga, Tenn., with office on West Eighth street.

The Cincinnati Poplar Company, which has recently moved its yard to Newport, Ky., across the river, with Thomas Orr, well known to the local trade, in charge.

E. V. Babcock & Co. of Pittsburg, Pa., operate a yard on Winton road, with Harry Mead in charge.

The Wilson Lumber Company of Toronto, Canada, has an assembling yard and depot at Winton place, on the Baltimore & Ohio Southwestern railroad.

No account of the Cincinnati hardwood trade would be complete without mention of James Buckley of Brookville, Ind., whose business is closely connected with the Cincinnati trade, and in which city he is a popular favorite. Mr. Buckley is a member of the Cincinnati Lumbermen's Club and never misses a meeting.

The visitor having completed the tour of

the downtown offices now takes a street car, and after a ride of twenty minutes arrives at the head of the local yards of the Cincinnati Southern railroad, where are located the yards and offices of

**The Asher Lumber Company**

Owing to the fact that the railroads coming from the hardwood regions of the South enter the city on the West Side, a large number of lumbermen have established yards along the lines of the railroads in order to have switching facilities into their yards.

Starting at the northwest end of the Cincinnati Southern terminals the yard of the Asher Lumber Company, which has the distinction of being the most recently incorporated concern in Cincinnati, is first encountered. The concern succeeds the Middle West Lumber & Tie Company, and has the following officers: I. M. Asher, president; C. J. Johnson, vice-president, and G. A. Roy, secretary-treasurer. The company has large yards with excellent shipping facilities; it handles all kinds of hard-

woods, making specialties of poplar and oak.

**T. P. Scott & Co.**

After leaving the Asher Lumber Company, a walk of three minutes along the line of the Southern tracks brings one to the yard of T. P. Scott & Co., at the corner of McLean avenue and York street. T. P. Scott retired early last spring, owing to ill health, and disposed of his interest to his son, Francis L. Scott, who is now sole proprietor of the business. Shortly after the change T. P. Scott passed over to the silent majority.

Francis L. Scott is one of the younger members of the trade and has been associated in business with his father at this point since 1901. He makes a specialty of general hardwoods for woodworkers, dealing in oak, poplar, ash, chestnut, etc.

**John Dulweber & Co.**

Crossing the tracks of the Southern Railroad and walking about two hundred yards brings one to the large and well-stocked yards of John Dulweber & Co., now owned

FRONT OF ONE OF THE YARDS OF MOWBRAY & ROBINSON

VIEW OF YARD, DWIGHT HINCKLEY LUMBER COMPANY.

EDWARD BARBER, CINCINNATI MANAGER ILLINGWORTH, INGHAM & CO.

and operated by his handsome and smiling son, Ben F. Dulweber, one of the most popular and acute business men in the trade. The yard is located at Findlay street and McLean avenue, and is filled with a well assorted stock of oak, poplar, ash, hickory and general hardwoods. Mr. Dulweber is a firm believer in system, and the firm's office and yard are operated with clock-like regularity. The yards always present an appearance of business activity, being invariably lively even when most operations are dead.

#### The Freiberg Lumber Company

Crossing to the east side of the tracks, after leaving the Dulweber yard, we come to the mills and yard of the Freiberg Lumber Company, which covers an entire city block. The office of the company is located on Poplar street, near McLean avenue. Harry Freiberg is president and manager, and the company makes a specialty of

Cuban mahogany, which it manufactures into lumber and veneers. The mill contains a band saw, with edgers, trimmers, etc., and is well equipped with labor-saving appliances. In the veneer mill adjoining are veneer saws of the latest and most efficient type, and preparations are being made for installing slicing machinery. The company has the distinction of having brought to Cincinnati the largest cargoes of Mexican mahogany in the city's history. The yards also carry a selected stock of oak and Spanish cedar, with a line of general hardwoods.

#### Nicola, Stone & Meyers

One square south of the Freiburg mill is the big yard which Nicola, Stone & Meyers of Cleveland, Ohio, maintain at Cincinnati. George M. Morgan is manager of this local branch. The company carries a large stock of general hardwoods, specializing in poplar, oak and southern basswood. The branch was opened in 1900. The yards are equipped with switches connecting with the Southern railroad.

#### The E. E. Beck Lumber Company

Crossing to the west side of the Southern railroad we find the yard of the E. E. Beck Lumber Company, which has just added extensively to its yards and placed switches and sidetracks to facilitate the handling of business. The company is officered as follows: E. E. Beck, president and treasurer; Charles B. Stevens, vice-president; W. J. Pugh, secretary. The company specializes in poplar and hardwoods.

#### Ault & Jackson

Just across the street is the office of Ault & Jackson, surrounded by commodious yards. The partners in this concern are G. C. Ault and A. V. Jackson. The yards contain a heavy stock of hardwoods of all classes. The firm specializes in wide poplar.

#### Duhlmeier Brothers

Walking south on McLean avenue, we come to the yards and offices of Duhlmeier Brothers, consisting of C. F. and W. F. Duhlmeier, sons of W. F. Duhlmeier, one of the oldest furniture manufacturers in Cin-

PLANT OF OHIO SCROLL & LUMBER CO. AT COVINGTON, KY.

cinnati, now retired. It is but natural that these bright young men should specialize in the hardwoods used by furniture manufacturers, and besides a large stock of fine native hardwoods. They also handle mahogany. The Duhlmeiers are interested in mills at McKinney, Mo.; Kings Mountain, Ky., and Winchester, Ohio.

#### C. R. Hall Lumber Company

Continuing south along the railroad, a walk of five minutes brings one to Kenner street and the yards of the C. R. Hall Lumber Company, which claims to be the largest shipper of high-grade chestnut in the country, making a specialty of long chestnut for builders of hardwood interiors. The company has a branch office at Buffalo, N. Y. Poplar, oak, chestnut and other hardwoods make up the stock in the yards. Mr. Hall is one of the young men in the lumber business who have sprung rapidly to the front, but a few years ago being employed in the office of a local lumber manufacturing company. The downtown office of the company is in the Commercial Tribune building, on Walnut street.

#### The T. B. Stone Lumber Company

A stone's thrown from the location of the C. R. Hall Lumber Company is the yard of

the T. B. Stone Lumber Company, situated at the corner of Hopkins street and Dalton avenue, facing the tracks of the Southern railroad, from which switches and sidetracks cross the yards. The yards are stocked with hardwoods of all classes. The offices of the company are in the Union Trust building, at Fourth and Walnut streets.

#### L. W. Radina & Co.

A fence is the dividing line between the yards of the T. B. Stone Lumber Company and those of L. W. Radina & Co. L. W. Radina is another Cincinnati man who has forged his way from the ranks of the workers to the top round of successful lumbermen. Mr. Radina has associated with him his brother, Fred Radina. The firm deals in all classes of hardwoods and is classed as one of the most successful in the city. L. W. Radina is also interested in manufacturing enterprises.

#### Shrimpton Lumber Company

One-half block south of the Radina place of business is the yard of the Shrimpton Lumber Company, of which William E. Shrimpton is the proprietor. General hardwoods constitute the line of business, with poplar and oak as specialties. Mexican mahogany is also handled.

#### Chas. F. Shiels & Co.

A walk of one square west on Gest street brings one to the yards of Chas. F. Shiels & Co., the firm consisting of Charles F. Shiels and Joseph E. Shiels. These men are general dealers in hardwoods and specialize in stock for wagon and carriage manufacturers. Charles F. Shiels is a prominent member of the Cincinnati Lumbermen's Club and takes an active interest in all its affairs. The firm's yards are situated on the Cincinnati Southern railroad and are conveniently arranged for shipping.

#### George Littleford

On Richmond street, close to McLean avenue, is the yard of George Littleford. He handles general hardwoods and makes a specialty of lumber used by furniture manufacturers. Mr. Littleford is an active member of the Cincinnati Lumbermen's Club and one of the most popular men in the organization.

#### Fullerton-Powell Hardwood Lumber Company

Crossing the tracks of the Cincinnati Southern, after leaving George Littleford's yard, one comes to a large yard heavily stocked with hardwoods, a branch of the well known Fullerton-Powell Hardwood

Lumber Company of South Bend, Ind. The local manager is E. C. Bradley. The yards are situated at the junction of the Cincinnati, Chicago & Louisville and the Cincinnati Southern, and are well located for shipping.

#### The Edwards Lumber Company

Within a stone's throw of the great Southern railroad bridge and the Eighth street viaduct are the new yards of the Edwards Lumber Company. The yards are at the terminus of the Cincinnati, Chicago & Louisville railroad, from which switches cover the yards. E. L. Edwards is president and treasurer and J. E. Tuthill vice-president and manager. A branch office is maintained at Dayton, Ohio. The yard is well filled with hardwoods, principally oak, poplar, chestnut and ash. The company makes a specialty of exporting hardwoods.

#### Leland G. Banning

At the entrance of the Eighth street viaduct is one of the largest and best stocked

hardwood yards in the city, containing an infinite variety of hardwoods of all dimensions. It is the yard of Leland G. Banning. The office is located in the Allen building, at Fifth and Main, in charge of Earl A. Hart, a lumberman of superior attainments. Jim Van Orsdel is sales manager. This is one of the best known of the uptown lumber offices. Leland G. Banning is known all over the lumber world as one of the largest and most expert operators in the trade. He is one of the foremost exporters of hardwoods in the country and has alliances in all the leading European lumber centers. He is at present making an extensive tour of Europe in the interest of business.

#### Western Lumber Company

Before reaching the west end of the Eighth street viaduct, one sees over the railing on the south side the lumber yards of the Western Lumber Company. "Hardwoods," reads the sign which can be read from a great distance, and the company

carries a large stock of all kinds. The company is composed of Max Schmidt and Eugene Zugelter. It makes a specialty of finely figured quartered oak for furniture manufacturers.

#### Maley, Thompson & Moffett

At the west end of the Eighth street viaduct lies the mill, yard and office of Maley, Thompson & Moffett. The plant is one of the sights of the west side of the city, covering a large area of ground, with immense concrete buildings for the saw and veneer mills. In the rear is the large hardwood yard. The mill contains a large band mill and a full equipment of dimension machinery. In the veneer mill are several veneer saws and a huge slicing machine. The company manufactures mahogany and quarter-sawn oak veneers. It has a mahogany mill at Havana, Cuba, and also operates mills in Kentucky.

The officers of the company are Thomas J. Moffett, president; E. W. Robbins, vice-

president and manager; C. L. Smith, secretary. Thomas J. Moffett is one of the most prominent business men of the Queen City and is a member of the Chamber of Commerce, the Business Men's Club and is prominent in the Cincinnati Lumbermen's Club, serving on many of its most important committees and as its president. He is public spirited and takes great interest in all municipal movement for the betterment and improvement of the city.

#### Cincinnati Veneer Company

Among the important factors in the Cincinnati trade, a man who succeeded in building up three aggressive institutions before his Maker called him home, was Frank Unnewehr. His estate, with George Unnewehr as president and W. J. Afsprung as vice-president and general manager, is operating as the Cincinnati Veneer Company at 1251 West Sixth Street. This concern manufactures thin lumber of every description, Spanish cedar, mahogany and hardwood lumber. It has been operating at this point since 1898 and is the largest manufacturer of veneers and thin

lumber in the city. Under the title of the Frank Unnewehr Company the same interests operate a cigar and packing box manufacturing plant at Cincinnati, and under the name of the Bay Poplar Lumber Company they operate at Mobile, Ala., an immense plant manufacturing cigar box lumber.

#### Mowbray & Robinson

On West Sixth street, in the midst of the Big Four and the Baltimore & Ohio Southwestern railroad yards, is located the big hardwood establishment of Mowbray & Robinson. This firm handles more oak than any concern in this section, in both heavy and light stock. The picture gives but a faint idea of the yards, which cover an entire block in the rear streets, and are heavily stocked with poplar, oak and other hardwoods. The concern also makes a specialty of chestnut. The firm consists of F. W. Mowbray and E. O. Robinson, both of whom are popular with the lumber trade. Fred Mowbray has been in poor health for some time and is now sojourning at Hot Springs, Ark.

#### W. F. Galle & Co.

Although William F. Galle & Co. are located in apparently the most out-of-the-way corner of the West End, their yard is well known to the trade as one of the most prosperous in the city. The firm carries a general stock of hardwoods and specializes in the furniture lines. William F. Galle is the active head of the concern. The yards are located at 1262 Budd street and are near the approach to the Cincinnati Southern railroad bridge, and in a convenient place for receiving and shipping lumber.

#### Riemeier Lumber Company

In the heart of the carriage manufacturing district on the west side of Millcreek is the yard of the Riemeier Lumber Company, on property formerly occupied by the Cincinnati Hardwood Lumber Company. The concern is composed of H. D. Riemeier and G. H. Reimeier, both young men, full of energy. It makes a specialty of quartered and plain oak and carries a general stock of hardwoods. A branch office is maintained at Buffalo, N. Y., where M. E. Cummings is in charge as sales manager.

W. E. HAY, RECEIVER FOR WIBORG & HANNA COMPANY.

#### The Queen City Lumber Co.

A square north of the Riemeier yard is the plant of the Queen City Lumber Company. This concern operates dry kilns, and does kiln-drying for the trade. The enterprise has never met with the encouragement expected.

#### Acme Veneer Company

Located at the corner of Eighth and Harriett streets, is the new three-story warehouse and factory of the Acme Veneer Company, of which Frank Sudbeck and H. Hartke are the proprietors. The company makes a specialty of all classes of veneers for furniture and woodwork manufacturers.

#### Ohio Veneer Company

In a district, absolutely devoid of yards or mills, in the west end of the city, fronting on Colerain avenue and extending through to the Miami and Erie canal, is the large plant of the Ohio Veneer Company, importers and manufacturers of mahogany and foreign woods. The company is composed of Ferd Bosken and Joseph Bosken, and makes a specialty of Circassian walnut, mahogany and all kinds of fine veneers. The concern also carries a large stock of plain rotary cut thin woods, sawed and

sliced veneer. The yards are always provided with a large stock of hardwoods.

#### The Wiborg & Hanna Company

Situated in the extreme northwest section of the city, in what is known as North Fairmount, and right at the mouth of Millcreek Valley, are the large mill and yards of the Wiborg & Hanna Company. The mill is one of the most complete for the manufacture of thin-sawed lumber, drop-siding and interior-trim in the country, being equipped, without regard to expense, with modern machinery and labor-saving appliances throughout. The facilities for receiving and shipping lumber are unsurpassed anywhere. The company makes a specialty of red gum, besides popular and general hardwoods. It also operates sawmills in Mississippi. It is composed of Harry P. Wiborg and John P. Hanna. The company is at present in the hands of receivers, Edwards Ritchie, attorney, and William B. Hay, the noted mill expert, formerly with the M. B. Farrin Lumber Company, officiating in that capacity.

Mr. Hay says that the mill is doing well and is busy. Mr. Wiborg spends his time on the road in a very successful hunt for

business, while Mr. Hanna is looking after the producing mills in the South. Under the present favorable conditions it will not be very long before the receivership will be lifted.

#### The Farrin-Korn Lumber Company

Continuing up Millcreek Valley one comes to the plant of the Farrin-Korn Lumber Company, of which Chester F. Korn is president and Paul Richardson, secretary-treasurer.

The plant is entirely new, having been rebuilt after a disastrous fire of a little over a year ago, and is a perfect model of up-to-dateness, electricity being the motive power. Each machine is operated by an individual motor, and as a consequence, shafting and belting are conspicuous by their absence. About fifteen acres are covered by the plant, which embraces flooring mills, lumber yard and a newly added box factory. The company also produces at its mill in Mississippi, oak, cypress and gum, and makes a specialty of the export trade. At the Cincinnati plant it manufactures oak flooring, moldings and trim, gum and cypress planing mill products, cigar-box lumber and milled furniture parts.

#### The M. B. Farrin Lumber Company

Across Station avenue, and adjoining the plant of the Farrin-Korn Lumber Company, is the mill of the M. B. Farrin Lumber Company, one of the most extensive manufacturers of oak flooring in the world, its product being known as "Century Oak Flooring" to the trade. The plant, like that of its neighbor, is along the line of the C., H. and D. Railroad, and switches and tracks penetrate every portion of the mill and yard, and a hundred cars could be conveniently handled by both companies at one time. The officers are H. J. Pfister, president; W. J. Eckman, vice-president; A. Metcalfe, secretary and treasurer. The company's great specialty is Century Oak Flooring and poplar. Its yards have large stocks of all classes of hardwoods. The plant is electrically equipped, the president being an electrical expert, and at one time electrical engineer of the city of Cincinnati. The power plant is a model for getting the greatest amount of energy for the coal consumed.

The same interests which control this company also operate the Southern Lumber Company at Valley View, Ky., which is officered by H. J. Pfister, president; D. L.

Farrin, vice-president; W. J. Eckman, secretary, and C. F. Korn, treasurer. The mill has two band saws and a gang saw, and has a capacity of 60,000 feet daily. It has four miles of booms in the Kentucky river.

#### Talbert-Zoller Lumber Company

A half-mile above the Farrin plant, along the line of the C., H. and D. Railroad, near its junction with the B. & O. Southwestern, lies the mill and lumber yard of the Talbert-Zoller Lumber Company. The company is officered by W. E. Talbert, president, and James A. Zoller, secretary-treasurer, with F. R. Gorbald as mill superintendent.

The company operates a single band mill, with a capacity of about 15,000 feet per day, and manufactures oak, poplar, walnut and ash. It has adjoining the mill a yard well stocked with hardwood lumber. In addition to the sawmill the concern operates a veneer mill of about 5,000 feet capacity per day, making a specialty of finely-figured quarter-sawed oak.

#### The Francke Lumber Company

A drive of a mile up the valley from the Talbert-Zoller plant brings one to the operations of the Francke Lumber Company on

the Carthage pike, in the town of St. Bernard. The company has an ample yard, with a band mill of 15,000 feet capacity per day. The plant is managed by Alex. Schmidt, and is operated as an assembling point for hardwood lumber which is shipped to the Francke Lumber Company at Berlin, Germany. The concern also conducts here a general lumber business, which is operated by Alex. Schmidt and A. Heidt. The plant makes a specialty of black walnut, plain and quarter-sawn oak, also ash and cherry.

#### The K. & P. Lumber Company

Situated on Carthage pike, in St. Bernard, a quarter of a mile east of the Francke Lumber Company, is the yard of the K. & P. Lumber Company. The officers are Max Kosse, president; P. V. Shoe, secretary; I. O. Wood, treasurer. The company makes a specialty of walnut and carries a general line of hardwoods. The concern operates a mill at Tallega, Ky., which has two band saws, with a capacity of about 40,000 feet daily. The yards of the company are conveniently located on the line of the Baltimore & Ohio Southwestern Railroad.

#### The Lockland Lumber Company

Continuing up Millcreek Valley about four miles above the K. & P. yards, along the tracks of the Big Four Railroad in the town of Lockland, one comes to the yards of the Lockland Lumber Company. The concern carries a general line of all classes of lumber. Its officers are E. R. Stearns, president; A. M. Stearns, treasurer, and D.

C. Snook, secretary. C. E. Thornell is yard manager. The yards stretch along the railroad tracks for half a mile and are convenient for receiving and shipping lumber.

#### The Standard Millwork Company

Crossing Millcreek Valley to the east, the visitor comes to the city of Norwood, and the first plant he sees is that of the Standard Millwork Company, which manufactures hardwood doors and interior trim. The officers are A. B. Ideson, president; C. H. Pease, vice-president; F. J. Bachelor, secretary. The plant has a capacity of 500 doors per day, and also manufactures sash and blinds. The concern makes a specialty of hardwoods. The plant employs 300 hands and is very busy at present working overtime.

#### The Dexter Lumber Company

On the east side of Norwood, at the corner of Montgomery pike and the Baltimore & Ohio Southwestern, is the plant of the Dexter Lumber Company, manufacturer of building and hardwood specialties. The company is officered by T. J. McFarlan, president, and A. L. McFarlan, secretary-treasurer. The plant is one of the oldest in the suburbs, the incorporated city of Norwood where this concern operates being a suburb of Cincinnati.

#### The Perry Lumber Company

Located in a most picturesque situation is the office of the Perry Lumber Company actually surrounded by Eden Park, with

flowers and trees on every hand. The officers of the company are Lucien Wulsin, president; A. P. Hagemeyer, vice-president and treasurer, and W. E. Johns, secretary. The Perry Lumber Company is affiliated with the Baldwin Piano Company, and has its offices with that concern. It makes a specialty of hardwoods and mahogany.

#### B. A. Kipp & Co.

Right in the heart of the business district of Cincinnati is located the yard of B. A. Kipp & Co., at No. 818 West Sixth street. B. A. Kipp, its smiling proprietor, is certainly one of the most popular hardwood lumbermen in the city. His yard is filled with high-class hardwoods for furniture and wagon manufacturers. He is familiarly known as "Honest Ben Kipp," and it is an actual fact that lumber delivered by Ben Kipp to any of the local consumers is never looked over, but unloaded and, if dry, is put right into the kiln. His grading and measurements are never disputed, but on the other hand, like a shrewd Scotchman, which he is not, he always exacts his due.

#### The Ohio Scroll and Lumber Company

Across the Ohio river from Cincinnati is the plant of the Ohio Scroll and Lumber Company, at the corner of Russell and Stewart streets, in the city of Covington. It is operated by E. C. Feuss and Charles Feuss, and makes a specialty of hardwoods and manufactures hardwood specialties for furniture manufacturers and wagon and carriage builders.

GENERAL VIEW OF PLANT AND YARDS, FREIBERG LUMBER COMPANY.

## HARDWOOD NEWS

Continued from page 36

erty of the Kanawah Lumber Company was sold to Freeman for \$62,000, and by him assigned to the Elizabeth Land & Lumber Company of North Carolina. An order was made by the court directing that they show cause why they do not comply with the terms on which the property was sold.

## NORFOLK

Lumbermen at present are giving much of their time to the annual convention of the Atlantic Waterways Association, which will be held in Norfolk on November 17-22. President Taft will visit the city at that time and undoubtedly will address the meeting.

E. M. Terry, secretary of the National Lumber Exporters' Association, was in the city recently making a thorough report as to the hardwood situation.

J. C. Walker, of the Dixie Lumber Company, Columbus, O., passed through the city on November 4 on his way to Rocky Mount, N. C., and several hardwood markets in this vicinity buying hardwood lumber for the Russell Wheel & Foundry Company of Detroit.

The National Wood Product Company of Michigan has started a large plant at Lamberts Point, a suburb of Norfolk, for the purpose of making hardwood butter dishes, plates, etc.

The Trexler Lumber Company of Allentown, Pa., with mills in Virginia, North Carolina and Tennessee, has opened offices in the National Bank of Commerce building, Norfolk.

The most prominent railroads are placing large orders for all kinds of standard cars in order to relieve the embarrassing situation which lumber people are finding by not being able to secure cars for shipment of lumber in time to fill orders.

H. R. Lennard, formerly with the Norfolk Hardwood Company, who recently went out of business, has opened an office in Norfolk and is doing a general hardwood business.

The Boice Lumber Company, formerly of Tennessee, has opened offices in our city with large piers at Lamberts Point. It has a capital stock of from \$50,000 to \$100,000 and deals especially and largely in export of manufactured hardwoods to Germany and England. It also embraces a large mill of the Boice Pleasant Lumber Company in North Carolina and two or three other plants.

The John L. Roper Lumber Company of Norfolk controls the Norfolk & Southern railroad and has just purchased the Kinston & Carolina Railroad & Lumber Company and has large lumber manufacturing interests at Kinston and Pine Hill, N. C.

## COLUMBUS

The report of the city building inspector for the month of October shows that the month was one of the best of the season. During the month 174 permits were issued, having an estimated valuation of \$386,885. For the corresponding month in 1908, 140 permits, valued at \$305,555, were issued. October has been surpassed by only March and June of this year. In June the permits numbered 184, with an estimated valuation of \$401,470.

W. L. Whitacre reports strength in all grades of hardwoods. He says that future prospects and the general market conditions are very bright.

D. W. Kerr, who had been with the Columbus branch of the Crosby & Beckley Company for a number of years, has associated himself with W. L. Whitacre in an important capacity.

H. W. Putnam, president of the General Lumber Company, reports a better demand for hardwoods from manufacturing establishments. He says that where orders were for one or two cars

a year ago, they are now for five, ten or fifteen carloads. Purchasers are now desiring more prompt shipment.

F. A. Wilson, recently attached to the General Lumber Company, left recently for Pittsburg and surrounding country to open new territory for the company.

C. H. Holden, representing the Pardee & Curtin Lumber Company of Clarksburg, Ky., was a visitor upon Columbus hardwood wholesalers recently. He reports a much better demand for the product of the company.

Reports carefully compiled from Ohio, West Virginia and western Pennsylvania show that contracts awarded for the week ending October 27 to be \$1,142,000, as compared with \$1,163,000 in the corresponding week in 1908 and \$890,000 in 1907. Since January 1 contracts awarded amount to \$81,271,000, as compared with \$59,716,000 in 1908 and \$64,021,000 in 1907.

Announcements have been sent out that the Chillicothe Lumber Company of Chillicothe, O., has been changed to the H. S. Adams Lumber Company. The announcement says there will be no other changes except in the name. Mr. Adams is secretary of the Union Association of Lumber Dealers, which will meet in Columbus, January 18 and 19.

John R. Gobey, head of J. R. Gobey & Co., left November 1 for Chattanooga and New Orleans on a business trip. He will check up the two-cent overcharge which has been declared illegal and the railroads will have to refund a large amount of money. Mr. Gobey is a large shipper from the southern states. He reports a scarcity in the supply of all varieties of hardwoods and says that prices are becoming stiffer. The only drawback now is the car shortage, which is affecting the trade from Michigan to Louisiana.

R. L. Gilliam, secretary of sales for the W. M. Ritter Lumber Company, left recently for a business trip to the mills at Mortimer, N. C., and by way of eastern cities back to Columbus. W. M. Ritter was called to Washington, D. C., and other eastern points on business. R. W. Horton, assistant in the sales department, says that the market is holding its own in every way. There is a stiffening in prices in several grades of hardwoods. While the higher grades have been in good demand, a good movement of the lower grades is also noted. The demand for the wide sizes of poplar continues strong and premiums are being demanded for that class of stock.

A. C. Davis, president of the A. C. Lumber Company, reports the market unchanged. Hardwood prices are holding stiff and there is a disposition to make advances in poplar and other varieties. The better grades of red and white oak are also in good demand. George B. Johnson, secretary, left recently for Baltimore, Washington, Newark, N. J., New York and Boston, to sell a large amount of stocks accumulated during a recent buying trip in the South.

General manager C. G. McLaughlin of the McLaughlin-Hoffman Lumber Company reports a better demand on the part of railroads and implement factories. He says there is also a good demand for heavy construction timbers. An improvement is noted in the yard trade and the general condition of the market is good.

F. Everson Powell of the Powell Lumber Company returned recently from a ten-weeks' trip throughout the West. He reports a lack of activity at the mills of the company.

M. A. Hayward of M. A. Hayward & Sons left recently for a business trip to Cleveland.

Hardwood shippers in Columbus are taking an active interest in the exposition to be held under the auspices of the Chamber of Commerce in June of next year. W. D. McKinney, commissioner of the industrial bureau of the Chamber of Commerce, has visited a number of cities and gained ideas to be followed in the Columbus show. The exposition is styled "Made in Columbus" and the idea is to exploit everything manufactured in Columbus and vicinity. Lumber

dealers who supply manufacturing establishments with hardwood stocks are greatly interested.

## CLEVELAND

One of the interesting events of the past week was the sawing up of the largest mahogany log in the world at the plant of the Martin Barriss Company in this city. It was a problem for the owners to determine just how to dispose of it. It finally had two big ends sawed off. Then two sections, six and eight feet long, were cut. These were sawed again in half and sent to New York for veneer purposes. The log was found to be sound throughout and to contain some excellent patterns ofrotch mahogany. The veneers which will be obtained will be at least thirty-six inches wide and of excellent design.

While going up a hill in a buggy near Cleveland a few days ago A. C. Klumph, manager of the Cuyahoga Lumber Company, had a narrow escape as did also his wife and two children, who accompanied him. An automobile which was ahead started to back down hill, frightening Mr. Klumph's horse. It began to shy and threw the occupants of the rig into the ditch. Mrs. Klumph was dashed against a tree and had two ribs broken, while Mr. Klumph and the children were all badly bruised. Mrs. Klumph will recover, but will be confined to her home for some weeks.

W. B. McAllister is executing the woodworking contract on the new \$4,000,000 Cuyahoga county courthouse and his plant is very busy. There is to be some elaborate wood carving done in the building by the Louis Rohrheimer Company, which has already started work on its contract. The building will not be completed for a year.

There still continues to come to Cleveland a great stream of lumber from upper lake ports. The carriers are all busy rushing stock to this market in anticipation of an early closing of navigation. Considerable hardwood is coming along with the other lumber, although Cleveland secures a good proportion of its hardwood from the South. It is expected that navigation will close about December 5.

E. M. Carleton of the Mills-Carleton Company upon his return from his honeymoon a few days ago was met by a delegation of fellow lumbermen at the Lumber Club and presented with a handsome mahogany table and two chairs. The presentation was made by George Myers of the Peters Mill & Lumber Company.

The Builders' Exchange, which includes in its membership most of the lumbermen of the city, will hold its annual meeting on November 10, when reports for the year will be presented and a board of directors elected. The exchange is sixteen years old and in a highly satisfactory condition, having a surplus of over \$20,000, which may be invested in a new building soon.

W. B. Martin of the Martin-Barriss Lumber Company is back from a trip to Boston by auto. He looked into the hardwood situation in the East and found it to be in a good condition. Mr. Martin reports business at the local yards of the company in good shape.

Three cars of fine mahogany have been received by the F. T. Peitch Company, a part of the new stock of mahogany which is being carried by that concern. There has been a perceptible increase in the use of mahogany for interior finish recently and the company decided to meet the situation fairly by having an extensive stock on hand.

The Advance Lumber Company reports a good call for hardwoods, its southern mills being worked to capacity. The furniture trade has been supplied with some good orders recently and other branches are also said to be requiring good-sized orders of hardwoods.

F. S. Graddon of the Pidgeon River Lumber Company of Mount Sterling, N. C., was a recent visitor in the city.

An increase of forty-one percent in the num-

ber and value of buildings erected during the first ten months of this year, as compared with 1908, is noted by City Building Inspector Lougee. The total for the first ten months of this year amounted to \$11,411,139, which is \$3,500,000 more than a similar period last year.

### CINCINNATI

The Business Men's Club of Cincinnati yielded to the request of the lumber fraternity that they be recognized in the official board of directors of the Business Men's Club and have nominated Chester F. Korn, president of the Farrin-Korn Lumber Company as one of the four directors to be elected. The Cincinnati lumbermen, many of whom are members of the Business Men's Club, are determined to elect Mr. Korn, although with his usual modesty he prefers to remain a private in the ranks.

It has been definitely ascertained that the New Independent Tie & Shingle Company of this city is a new name under which Ben Ryan is starting business again. Mr. Ryan has made several disastrous failures as far as his creditors are concerned in the past few years, so that mills should be very careful to get their money before filling any orders for this concern.

At a recent meeting of the Queen City Furniture Club it was announced that the Hardwood Manufacturers' Association of the United States would hold their convention in Cincinnati at the Sinton hotel on January 18-20, 1910, and that an invitation had been extended to 10,000 consumers of lumber to attend. As the furniture manufacturers are the largest consumers of hardwoods, it was decided to attend the convention as a body. President Onken named W. J. Sextro, Henry Francke and E. C. Feuss as the committee to arrange the regular ticket to be voted on at the annual election to be held the first Wednesday in December.

The Swan-Day Lumber Company of Clay City, Ky., is making arrangements to open up an office in Cincinnati.

Representatives were present at Cincinnati on October 19 at the meeting called by the associated organizations of Cincinnati. At this meeting the fallacy of the McCain statement on railroad matters was clearly proven and the convention adopted resolutions protesting against the railroads advancing freight rates and disturbing the general business of the country by any action along this line. It was clearly shown that the railroad companies have dropped this matter for the present and that there is now no likelihood of rate conditions being altered. This has been quite a big thing for the business interests of the country and E. E. Williamson, commissioner of the Receivers' and Shippers' Association of Cincinnati, is largely responsible for the fact that the railroads have finally given up this idea.

Hugh McLean of Buffalo, N. Y., spent a few hours in the city recently.

A number of Cincinnati capitalists have organized a half million dollar company to develop a tract of 12,000 acres of timber land in Colombia, South America. The concessions were secured through the consul-general of Colombia, who was also heavily interested in the projects. The timber is mostly hardwood, and sawmills to cut it will be installed at once. The company will be known as the Colombia Trading & Mining Company and will have a main office in New York City. Alfred H. Juettner is at its head.

E. E. Goodlander of the Goodlander-Robertson Lumber Company and C. R. Ransom of the Tenn., were recent very welcome visitors in Cincinnati.

It was reported in business circles of the Mill-creek valley that the Ritter Folding Door Company of Covington had closed a deal with the Ross estate for a factory site at St. Bernard. Steps have been taken toward the erection of a

plant just south of the Harkness & Corning Company's new home. The new improvement is to be ready for occupancy in several weeks.

The J. Dornette & Brother Company, desk manufacturers, has made a new departure, and is adding a line of sectional bookcases to that of its desk trade.

The secretary of the Rivers and Harbors Congress, Captain J. F. Ellison, has issued invitations to the members of the Ohio Valley Improvement Association to attend the convention to be held in Washington on December 8-10, 1909.

The Galloway-Pease Company, with its main offices in the Second National bank at Cincinnati, announces that it has purchased the output of white and red oak manufactured by the Quercus Lumber Company of Poplar Bluff, Mo. It is understood that the stockholders of the Galloway-Pease Company have purchased a substantial interest in the capital of the Quercus Lumber Company, which will enable the Galloway-Pease Company to secure large and sufficient quantities of red and white oak for years to come. Quietly this company is working its way to the front since its inception, seven years ago, in Detroit, Mich.

The St. James Lumber Company of Detroit, Mich., has opened an office in the Union Trust building, with Omar Farrell and Arthur S. Dennis in charge. The new departure is called the "hardwood department," and will carry at all times a complete line of southern hardwoods.

The Yale Lumber Company has opened offices at 1608 First National bank. The company quietly secured quarters and moved in on October 1. It operates mills at Clay City, Ky., and has hardwood interests at various other points, so that it is in good position to give its customers satisfactory service.

W. E. DeLaney of the Kentucky Lumber Company left for a short stay at the Williamsburg, Ky., plant of the company.

Chester F. Korn and Colonel Stanberry, both prominent lumbermen, are candidates for member of the board of directors of the Business Men's Club.

John J. Mertz, manager of the Greenville (Ohio) Lumber Company, was here looking after stock for future business.

Col. S. B. Stanberry of the Chicago Coal & Lumber Company has removed his offices from the Mercantile Library building to the new building of the Provident Savings Bank & Trust Company at Seventh and Vine streets.

Thomas Orr of the Cincinnati Poplar Company is mourning the death of his grandmother, Mrs. Dr. Thomas J. Orr, at the ripe old age of eighty-nine. Mrs. Orr was one of the pioneers of this city and died from the results of a fall at her home.

Among the lumbermen who have visited in Cincinnati during the past fortnight was D. O. McFarlan, head of the McFarlan Lumber Company of Mansfield, Ohio, and was credited to the buying visitors.

T. J. White, the western representative of Bennett & Witte, stopped over while on a sad mission to his former home in Ripley, Ohio, where he went to attend the funeral of his sister. Mr. White makes his headquarters at Moline, Ill.

H. J. Plumsteel, representing the Whiting Lumber Company of Philadelphia, Pa., was here talking to the lumber trade, with a view to the accumulation of hardwood stock for future sales to the builders and manufacturers of the great Quaker village.

E. L. Edwards of Dayton, Ohio, was in the city, where the E. L. Edwards Lumber Company is now operating a new and extensive hardwood yard at the foot of Eighth street, on the line of the Chicago, Cincinnati & Louisville railroad.

Walter McCabe of the McCabe Lumber Company of Newport, Tenn., dropped in the city to look over conditions and incidentally to dispose of a portion of the product of his plant.

B. F. Dulweber, who operates an extensive hardwood business in the west end, where he has two large yards along the line of the Southern railroad, returned last week from a visit to the mill owned by the John Dulweber & Co. firm at Irvine, Ky. Mr. Dulweber is one of the progressive optimists of the hardwood trade and always doing well. If there is any lumber to be sold you can always rely upon Ben Dulweber to be there with the goods.

C. L. Robinson of the St. Louis branch of the Chicago Coal & Lumber Company was in Cincinnati during the past fortnight and was well taken care of by Colonel Stanberry, the Cincinnati representative of that concern.

The St. James Cedar Company has added its name to the roster of lumber companies with offices in Cincinnati. It will be found on the fourteenth floor of the Union Trust building, with A. S. Dennis in charge. The company's headquarters are at Detroit, Mich.

Edgar Walker, formerly with the Francke Lumber Company, is now taking care of the books of the K. & P. Lumber Company at St. Bernard, Ohio.

Harry Wiborg of the Wiborg & Hanna Company, who is now the hard-working hustler for the road business for that company, was home for three days, covering Sunday, and is out again. Mr. Wiborg expressed himself as well pleased with the outlook, and said that the plant at North Fairmount was very busy, even going into overtime to fill out orders. Under the capable management of W. B. Hay, as receiver, the future looks rosy for the satisfactory settlement of the affairs of the company, which has been operated by the receivers for two years past.

Alex. Schmidt, manager of the plant of the Francke Lumber Company of Berlin, Germany, which is located at St. Bernard, Ohio, has closed down the mill, owing to the very light demand for the export trade. The plant has a fine stock of walnut, oak, ash and cherry manufactured and ready for shipment.

D. H. Moul, secretary and treasurer of the Ohio River Lumber Company at Ironton, Ohio, was a welcome visitor to the local trade during the past fortnight.

Sam E. Barr, sales manager of the Lilley Lumber Company of No. 1 Madison avenue, New York City, was in the city last week on a buying trip. After completing his business he left for Louisville, Ky. He reports improvement in the hardwood conditions in the East and an especially strong demand for good oak and chestnut.

W. W. Wheldon, manager of the Dimension Lumber Company of Foley, W. Va., was here recently, disposing of dimension stock.

C. R. Hall, who is evidently trying to become the chestnut king of the country, says that he handles more chestnut than any lumber concern in the country and will buy all the one's and two's that come his way.

Herbert B. Nields, chief salesman of the Little River Lumber Company at Townsend, Tenn., was here disposing of hardwoods to the local trade.

### TOLEDO

The season is proving one of the best ever known here in the line of hardwood building materials. Not only are building operations heavy, but the general class of residences have been of better quality, utilizing a large quantity of hardwood finish and flooring. The call for hardwoods for this purpose is still holding up total operations for October, amounting to \$231,195, as against \$199,465 last year. The value of new buildings erected during the first ten months of the year aggregated \$2,823,415, compared with \$1,793,548 in 1908.

A strenuous protest has gone up in this section against the proposed increase of freight

rates. The circulation of a pamphlet has led to the conclusion that a general raise of at least ten per cent is contemplated. Hardwood dealers here feel that the rates from southern territory are already exorbitant and any attempt to raise them will meet with decided opposition. A committee representing shipping interests was last week appointed at a meeting held in Cincinnati, to ask a hearing before the Interstate Commerce Commission.

Announcement is made that the Lake Shore Electric has completed the removal of its car repair shops from Fremont to Sandusky, Ohio. It is said the company will eventually manufacture its own cars at these shops, instead of having them built by car companies.

Miss Daisy Culp, daughter of a millionaire furniture manufacturer of Van Wert, Ohio, and Ross L. Brown, a mechanic, were recently married in Pasadena, Cal.

## INDIANAPOLIS

The Spencer Table Company of Marion has increased its capital stock from \$50,000 to \$100,000.

C. H. Comstock, vice-president and general manager of the Interior Hardwood Company, has returned from an extensive business trip in the Southwest.

N. Frank of the Southern Lumber Manufacturing Company of Nashville, Tenn., has been calling on hardwood interests in Indiana during the last ten days.

The factory of George P. McDougall & Son, which was burned recently, will not be rebuilt in this city. The company, which manufactures kitchen cabinets, will locate at Frankfort, where citizens have subscribed a bonus of \$100,000.

A. M. Jackson, a well-known local hardwood dealer, is making an extensive business trip through Kentucky.

During October building operations amounted to \$415,000, as compared with \$498,876. However, for the ten months of this year permits issued reached \$6,350,695, as compared with \$5,895,928.82 during all of 1908. It is believed the 1909 business in this line will reach \$7,000,000.

Mr. and Mrs. Claude Maley of Evansville are spending a few days at a sanitarium at Martinsville. Mr. Maley is a member of Maley & Wertz, hardwood manufacturers.

Adams & Raymond, veneer manufacturers, are running their plant full time. "Business is good. We are having all we can do and prices are satisfactory," said P. B. Raymond.

The Southern Lumber Company and the Central States Lumber Company, allied concerns, are erecting sixteen dwellings, to cost \$2,000 each, for investment purposes.

Figures obtained from the ten local automobile factories are to the effect that 20,000 automobiles will be manufactured in this city during the coming season. All of these companies are heavy users of hardwoods.

A representative of the Mahogany Interior Trim Company states that the plant is still running a day and night shift and that the company has a number of nice contracts in sight that will be closed soon.

H. G. Heilzeim of the Tremont Lumber Company, Tremont, La., has completed a business trip through southern Indiana, where he visited a number of lumbermen.

## EVANSVILLE

Bedna Young of Young & Cutsinger returned this week from Jackson, Tenn., having spent several days at the company's mill at that point. He reports everything moving along nicely at the new mill which was recently started.

Daniel Wertz of Maley & Wertz returned last week from Memphis, Tenn., where his firm

maintains a branch office with Sam Burgess in charge.

E. E. Bryan with the Farrin-Korn Lumber Company of Cincinnati left this week for Cincinnati after having spent several days in this market.

A voluntary petition in bankruptcy was filed recently in the federal court at Indianapolis by Edward R. Richmond, who has been engaged in the lumber business at Seymour, Ind. He stated that his liabilities were \$13,148.92 and his assets were \$8,339.29.

C. W. Talge of the Evansville Veneer Works returned this week from Jackson, Tenn., where he had been making plans for the erection of his new mill at that point.

Handle manufacturers report trade getting better, with good prospects for winter and spring business. Otto Schuttler of the Globe Handle Company says his plant is being operated on full time and that business is improving. President Frank Lohoff of the Evansville Tool Works, which company operates a large handle factory, states trade has been good for the past several weeks.

Otto Hill, who has been in the city for some time, was this week joined by his chief, S. P. Coppock of S. P. Coppock & Sons Lumber Company of Fort Wayne, Ind. Mr. Coppock says his firm is enjoying a good volume of business.

F. L. Donnell of Kennedy & Donnell, Morris, Ind., has severed his connection with that firm to represent Young & Cutsinger on the road with a full line of hardwoods, with headquarters at Indianapolis. Mr. Donnell, though a young man, has had a number of years' experience in the manufacture and sale of hardwood lumber from the stump to consumer. He also enjoys a wide acquaintance with the hardwood trade in the central and eastern states.

The Vaught Furniture Company, Parker, Ind., has been incorporated with a capital stock of \$80,000 to succeed H. C. Vaught Sons & Co., and will continue the manufacture of church furniture under the same management. The company's plant is fully equipped with modern machinery for the production of high-class work and has a capacity for the employment of 150 men. The firm now has on its books a large number of contracts for church furniture and the prospects are that the coming season will be one of the best in its experience.

The sawmill plant of the Wisconsin Chair Company at Mound City, Ill., and factory at Fort Washington, Wis., has been taken over by the Wisconsin Lumber & Veneer Company, a new corporation with a capital stock of \$300,000 fully paid in. The incorporators are J. R. Dennett of Port Washington and Fred A. Dennett of Sheboygan, Wis. The mammoth plant which was built in this city about a year ago will be operated under the same name as before.

Among recent visitors to this market were F. I. Nichols of the Nichols & Cox Lumber Company, Grand Rapids, Karl Faust with the W. A. Davis Lumber Company of Chicago and W. L. Paterson with the Central Veneer Works of Indianapolis, Ind.

Claude Maley of Maley & Wertz made the trip down from Indianapolis in his new touring car the first of last week, accompanied by his family and Henry Wertz of Edinburg, Ind. On the way down he encountered a scary horse driven by a farmer, and a country constable, with the usual results. The horse ran away, tearing up the buggy, and while it was no fault of Mr. Maley's, as the car was running slowly, they were detained by the constable and compelled to put up a cash bond. Outside of this, they had a delightful trip.

Maley & Wertz have been building a new office on the site of their old one at their mill in this city, the latter having become too small for their needs.

The R. A. Hooton Lumber Company, manufacturers and wholesale dealers in hardwoods and cypress, formerly of Terre Haute, Ind., has

opened up an office in the K. of P. building in Indianapolis, and their Indiana, Michigan and Wisconsin business will be handled from this office.

## MEMPHIS

The Lamb-Fish Lumber Company resumed operations at its big band mill at Charleston, Miss., November 8, but will not begin running its mill at Chancy, Miss. It has decided to discontinue operations at the latter point and will consolidate its entire plant at Charleston. This will include its band mill, bender plant, planing mill, dimension plant and box factory. The company is now running its box factory at Chancy on full time, but this will be removed to Charleston as soon as the lumber on hand at Chancy has been worked up. The company reports a very decided increase in demand for the output of this factory and says that it has enough orders to take up all the low-grade stock now on hand at Chancy. The company has about 1,300 acres under cultivation at present. It is clearing other lands now with the result that it will have about 2,500 acres under cultivation next season. John Dwyer, formerly with the Illinois Central railroad, but now traffic manager for the Lamb-Fish Lumber Company, is looking after this part of the work. The recent report that this company would throw open the line between Charleston and Chancy to general traffic is not correct. No traffic but its own will be handled. It does not care to come under the regulations of the Interstate Commerce Commission, and for this reason will confine its operations to its own business. No definite time has been set for the completion of this road, but the company has already begun work on it and it will push it to completion as soon as possible.

Anderson-Tully Company has resumed operations at its second large box factory and has increased the operating time of its other factory to thirteen hours per day as a result of a very decided improvement taking place in box circles. It has had to close down its band mill in Memphis because of the low stage of the water in Wolf river, and it has also found it necessary to discontinue operations at its biggest band mill at Vicksburg because of low water. The smaller mill at that point is in operation and will continue so. The factory of the Morgan-West Company, at Madison, Ark., is also running on full time. It is allied with the Anderson-Tully Company.

The Memphis delegation to the annual convention of the Deep Waterways Association has returned, and to a man they are enthusiastic over what was accomplished in the way of stimulating the movement for "Fourteen Feet through the Valley." The convention was largely attended and action was taken which indicated that the time had arrived for practical work to be done. This was forcibly brought out in the address of former Governor David R. Francis, and in a resolution which he presented calling for the appointment of a large lobby to go to Washington to attend the next session of congress for the perfection of plans looking to the improvement of the Mississippi and other waterways. Memphis sent a very large delegation to New Orleans, who took an unusual interest in the convention.

Bank clearings for October reached \$36,000,000, a gain of more than \$10,000,000 over the same month last year. The high price of cotton and the large business doing in the staple have helped to contribute to this excellent showing, but business men here say that the large movement of lumber has also been a factor in the big increase over last year. A prominent official of the Union railway is authority for the statement that he has never seen the time when local lumber companies were more active than at present. Birmingham is also to the front with

a splendid showing, there being a gain of more than \$2,000,000 for October as compared with last year and the gain since January 1 exceeding \$10,000,000.

Gibson & Whitaker, who have been operating a resaw and veneer plant in Memphis for some months, will install a band mill with edger and trimmer and will manufacture all kinds of hardwood lumber. The additions will be made as soon as possible.

Building operations in Memphis were of record proportions during October, reaching \$571,869, a gain of \$281,751 over the same month last year. This brings the total increase for the first ten months of 1909 to more than \$600,000 over the same time a year ago. There is marked activity in building circles still and November is expected to make a splendid showing in this respect.

The Citizens' Lumber Company has filed application for a charter at Covington, Tenn. The capital stock is \$10,000. The company proposes to take over the branch office of the Hines Lumber Company at Covington and to conduct a general lumber business, wholesale and retail. B. York of Memphis and W. A. Owen, J. A. Buckner and J. R. Swan, all of Covington, are the incorporators.

C. S. McCrosky of Huntington, Tenn., has gone to Jonesboro for the purpose of locating a box factory at that point, which will give employment to a hundred persons. The business men of Jonesboro are enthusiastic over securing this enterprise, which is regarded as assured.

The Michigan-Arkansas Lumber Company has been granted permission to do business under the laws of Arkansas. H. W. Cooley is state agent with headquarters at Jonesboro. The company some time ago bought a large tract of timber land in that state and proposes to establish a plant in Jonesboro. Its capital stock is \$150,000.

An acute car shortage is reported in Arkansas, especially along the lines of the St. Louis, Iron Mountain & Southern, Rock Island and St. Louis & Southwestern. The chief dispatcher of one of these lines states that the first named road is not able to supply more than 25 per cent of the demand for cars and that the second cannot supply more than 35 per cent. He also states that the St. Louis & Southwestern is badly behind in furnishing cars. The heavy movement of cotton is pointed out as being in some measure responsible for inability to get prompt service. The movement of lumber in Arkansas is on a very large scale and the lumbermen find themselves very badly handicapped by the unsatisfactory service. The local situation is all right and lumber shippers here are able to secure all the cars that are necessary, and reports from Mississippi also indicate that very little trouble is being experienced on this score. Arkansas appears to be in worse shape from the standpoint of railroad service than any other state contiguous to Tennessee.

C. L. Wheeler of J. W. Wheeler & Co., who has been spending some time with his son at Roswell, N. M., has returned to Memphis. Mr. Wheeler states that the big mill of the company at Madison, Ark., which was closed down about a month ago, will have to remain out of commission until the water reaches a considerably higher stage than at present.

The North Memphis Fire Protective Association is in process of formation for the purpose of devising better fire fighting facilities in the lumber district of North Memphis, and for the additional purpose of securing lower rates of insurance. The lumber district lies outside of the city limits of Memphis and the fire facilities have never been as good as desired. It is proposed to establish two large tanks at centrally located points in North Memphis and to have a complete sprinkler system. It is proposed to serve not only association members but also non-association members. The latter will of course pay a charge for the service.

A number of business men of Paragould, Ark., have recently purchased about 12,000 acres near Harrisburg, and propose to ship the timber from there to Paragould, where they will have their plant. The logging camp has already been established on the property and a large crew of men is engaged in cutting the right of way for a branch road which will run from the Iron Mountain, a distance of five miles, to this timber.

An authorized agent of the Business Men's Club of Jonesboro has received the signed bonds of a number of gentlemen who propose to establish a woodworking plant at that point, which will have a pay roll of \$50,000 per annum. The city has agreed to put up a bonus of \$3,000. The names of the gentlemen interested are withheld until all the details are perfected. The plant, however, is regarded as assured.

Mr. Long of the Long-Knight Lumber Company, Indianapolis, Ind., was a guest of the Lumbermen's Club of Memphis at its luncheon at the Hotel Gayoso last week.

It is the intention of the Leavitt Land & Lumber Company at Dermott to have its plant ready for operation by the middle of the month. It will have a capacity of 50,000 feet a day. The company will have eight miles of railroad and this will be extended from time to time as necessary. It owns a large amount of timber land in that section. E. J. Petteys, who has been with the company at Chicago for some years, will be superintendent of operations at Dermott and will remove from Chicago to that point.

C. R. Ransom of the Gayoso Lumber Company, who has been to the East and North on a selling trip, has returned to Memphis and reports that he found business good.

Mr. Fritchie of the Lamb-Fish Lumber Company, has recently returned from a business trip through the large cities of the North. Mr. Fritchie says that there is some improvement in business, but that there is a disposition on the part of consuming interests to buy only for more pressing needs.

J. E. Munal & Son are erecting a mill in New South Memphis and will cut for May Brothers. The plant will have a capacity of about 25,000 feet and will be completed soon.

Hugh Ford, for some time manager of the Akron (Ohio) factory of the Pioneer Pole & Shaft Company, has come to Memphis and will have charge of the timber department of the same company, of which he is a member. The change has been made on account of his health. He reports himself as highly pleased with the climate and water of Memphis and thinks he will like it here very much.

## NASHVILLE

More cedar timber was scattered on the streets of the city a few days since than was probably ever the case in the history of Nashville. Trolley wires, telephone and telegraph wires and even the great cables were swung on big cedar uprights. Recently a Kaybe avenue car jumped the track and ran into a post on the corner of Broadway and Sixth avenue, causing the post with its burden of heavy cables to come down. Almost instantly there was a crashing of heavy timber on a number of streets and heavily charged trolley and electric light wires writhed and popped on the ground. Some of the posts were worm-eaten, while others showed remarkable preservation, and these were eagerly gobbled up by the pencil factories in this section. The new poles erected were locust instead of cedar, as there are no more cedar posts in this section to be had now. Fortunately the accident occurred at midnight and no lives were lost. The damage done was between \$10,000 and \$15,000.

The Hermitage National bank, a newly organized institution in the city, of which W. J.

Cude, the well-known Nashville lumberman, is vice-president, has just issued \$50,000 in bank notes, the issue being duly signed by Mr. Cude.

Attorney-General Charles T. Cates has just rendered an opinion to Secretary of State Hal-lum W. Goodloe, in which he holds that so long as a corporation is qualified to do business in the state of Tennessee that it must make annual reports to the secretary and accompany them by the fee prescribed by law. This decision comes in the case of Harris & Cole Brothers, makers of interior finish of Cedar Falls, Iowa. The company formerly operated in the state and still owns some cutover timber lands, but has sought to relinquish its rights to operate after having secured the same. The attorney-general holds that the company, still having the right to operate in the state, must comply with the corporation act. The claim of the company was that to come within the provisions of the act a company must actually be engaged in business. The attorney-general held this claim to be without foundation in law, but at the same time he recommends that the corporation law of 1907 be so amended as to relieve just such cases as this in one of two ways, as follows: First, an amendment by which a foreign corporation could legally withdraw from the state and waive the authority conferred upon it to do business in the state; and, second, amend the corporations act of 1907 so that its provisions would not operate as to foreign corporations merely owning property in the state, yet not attempting to do business in the state.

At a bankrupt sale of the property of John M. Smith Lumber Company, A. L. Moore bid in the property for \$3,700. It consisted of a lumber shed 66 by 187 feet on Delaware avenue in West Nashville and a three-room office building.

The firm of John B. Ransom & Co. shows a substantial increase in business for October over the preceding month of September. During the past week or two this firm obtained the highest price in its history for quartered oak.

The Baker, Jacobs Company reports good business and increasing prices all the while, with a good demand for all grades of stock.

The W. J. Cude Land & Lumber Company reports that a large per cent of its orders are on low-grade stock. This is regarded as most favorable, for this class of stock has been for the most part a drag on the market.

Love, Boyd & Co. report the biggest business done in October since the panic and they expect a big month for November as well. They will run their country mills straight on through the winter. Over in Arkansas, however, they are having some trouble with the car question.

The Prewitt-Spurr Manufacturing Company is running its big plant night and day and reports business good. It recently captured first prize with its exhibit of cedar buckets and woodenware at the Tennessee State Fair and the exhibit of hardwood flooring. With 1,000,000 feet of lumber in the river and trade good it is running its big plant on full time.

A recent visitor to the city was John H. Baskette, formerly with Prewitt-Spurr Manufacturing Company in this city, but now in the woodworking manufacturing business in Helena, Ark.

A big timber deal has just been closed in Wayne county, Tennessee, in which the Lucas Land & Lumber Company of Waverly, Tenn., has bought of T. T. Dickson of Olive Hill and T. S. Hassell of Clifton, Tenn., the poplar and chestnut on some 19,000 acres in Wayne county. The consideration was \$65,000.

The storm which swept over the southern portion of middle Tennessee and northern Alabama a few days since did great damage to timber. Thousands of trees were either blown up by the roots or else broken off above the ground and shattered to pieces.

The new sawmill of W. E. Catchy & Co. at Burns, Tenn., has been put in place and large quantities of timber are being hauled into it.

A sale of 2,000,000 feet of lumber was made last week by the Standard Lumber & Box Company to W. P. Brown & Sons Lumber Company of Louisville. The deal was handled through J. G. Brown and John M. Smith, local manager for the Standard company at Dickson, Tenn.

Secretary of State Goodloe has granted a charter to the Unaka Springs Lumber Company of Sullivan county, capitalized at \$10,000. The incorporators are J. J. Hager, J. W. and H. D. Broce, S. L. King and John C. Anderson.

Cohn & Goldberg report a heavy lumber business and state that they are looking for it to continue all fall and winter.

A new mill supply company in Nashville is that of the Fickling Supply & Machinery Company of the Stahlman building, recently organized by W. H. Fickling, formerly of the Nashville Mill, Mine & Railway Supply Company. Mr. Fickling has secured several valuable agencies, among them being Atlas engines, Disston saws, Crescent band sawing machinery, and others.

Quite a delegation of business men from Mt. Pleasant have recently visited Nashville and attended public meetings at the Board of Trade rooms, putting before the citizens of the city a proposition to get a new railroad into Mt. Pleasant, one opening up new territory. John W. Love of Love, Boyd & Co., who is a live member of the Nashville Board of Trade, attended the meeting and signified a willingness to subscribe to the stock of the line.

The Davidson, Hicks & Greene Company has now almost finished the construction of its railroad in Fentress county connecting its big timber tracts with the Tennessee Central railroad. Mr. Davidson recently went to Colorado on a visit to his son. The concern reports business satisfactory.

Fire recently destroyed the large handle works at Sequatchie, Tenn., near Jasper, entailing a loss of about \$15,000, partially covered by insurance. About \$40,000 worth of timber and handles on hand was saved.

A recent visitor to the city was I. H. Scates, secretary of the Baltimore Builders' Exchange. Mr. Scates was the guest of Secretary T. H. Evans and other members of the Nashville Builders' Exchange and was loud in his praise of the evident growth of Nashville and the surrounding territory. Secretary Evans is working out a plan for an informal bureau at the exchange for the benefit of the building public. The new quarters of the exchange will be located in the Noel building after the first of the year.

John H. Watkins, a New York capitalist, and S. Granger Latta and State Senator Ernest Rice have bought from R. M. Hall, president and builder, the Dyersburg Northern railroad. The line is thirty-one miles long and runs from Dyersburg to Tiptonville, and the purchase price was \$316,000. The road runs through one of the richest timber sections in the state.

Charles Cohn, the Nashville lumberman, was recently honored with the election of presidency to the city council.

Death recently removed a prominent lumberman and manufacturer in this section in the person of William Davis Wade of Scottsville, Ky. Mr. Wade was the father of Mrs. John W. Love, wife of the well-known Nashville lumberman, and of Mrs. Thurman Dixon, also of Nashville. Mr. Wade was a representative of one of Kentucky's oldest and most prominent families. He is survived by a widow and four children.

### CHATTANOOGA

Mr. White, southern representative of Wistar, Underhill & Co. of Philadelphia, was here the past week. He was especially interested in first and second plain white oak and chestnut.

Mr. Duncan, southern representative of the Williamsport Hardwood Lumber Company of Williamsport, Pa., has been mixing with the millmen in this section for the last few days.

A. H. Woerhide of W. E. Kelley & Co., Chicago, Ill., was here a few days ago looking for wide poplar.

W. E. Berry, formerly of the Berry Lumber & Stave Company but now located at Crossville, Tenn., was here recently en route home from a business trip through Alabama.

The Alton Park Lumber Company of Alton Park, a suburb of this city, is a new concern to carry on a wholesale and retail lumber business. J. C. Lamar is general manager.

W. O. Harter, of the W. O. Harter Hardwood Company of Memphis, Tenn., was in town several days last week accompanied by Mrs. Harter, who has just returned from Europe. Mr. Harter has been quite ill for some time and is still hardly able to attend to business.

The railroad shops here are rushing their repair work to their fullest capacity and are using a large quantity of oak car timbers. It seems that they hardly get a car done until they have it engaged for a load. About 400 carloads of freight are handled locally in and out of Chattanooga per day. At this rate the repair shops can hardly more than furnish the demand here.

J. W. Stanfield, agent of the Belt railway, says their business is nearly as good as in 1907, and that the shipments of lumber are fully as good as any other manufactured article.

The Mountain City Cabinet Company is a new firm here, organized to manufacture hardwood mantles and office fixtures. It is doing a nice piece of work in quartered oak for the new city hall. W. B. Bender, formerly with the Lookout Planing Mill Company, is general manager.

The Odorless Refrigerator Company is running its plant to its full capacity. It uses a large amount of plain oak.

### BRISTOL

The new mill of the Croft Lumber Company at Alexander, Upshur county, W. Va., has been started and will turn out 70,000 feet of stock daily. J. Gibson McIlvain of Philadelphia, a prominent eastern hardwood lumberman, is interested in the new company, which has a large boundary of timber in that section.

The Paxton Lumber Company, of Bristol, has just started its new circular mill at Booneford, N. C., where it has purchased a good sized area of timber.

Chancellor Hal H. Haynes of Bristol, on November 4, entered an order dismissing the receiver in the case of the Allen Panel Corporation, on motion of J. N. Powell and others. C. L. Marshall was appointed receiver of the company two weeks ago, on application of C. B. Allen, former president of the company, and the action of Mr. Allen caused considerable surprise, as the financial difficulties of the company had been settled and it was reorganized. In his order the Bristol jurist decreed that Receiver Marshall should forthwith turn over to the officers of the company the entire assets and give an accounting. The assets include a big wood-working plant at Johnson City. The court decided that the relief sought by Mr. Allen could have been secured by a mandatory injunction from his court and that the order appointing the receiver would be vacated.

D. S. Darrow, representing the Gardner Wood Company of New York, was calling on the Bristol lumbermen this week and left some orders. He reports business moving along well.

The Rockcastle Lumber Company of Bristol this week started its new band mill at Meek, Ky., and will soon begin shipping from the new operation. B. B. Burns of the company has gone to Mississippi to spend a few days shooting quail.

H. M. Hoskins of the H. M. Hoskins Lumber Company is recovering nicely from typhoid fever and may soon be able to return to his duties.

J. A. Wilkinson has purchased a new boundary of timber in Mercer county, West Virginia, and will develop it. He has the utmost faith in the future of the lumber business in this section and is gradually increasing his holdings of stumpage.

George W. Peter of the Peter-McCain Lumber Company returned this week from a ten days' trip to Philadelphia. He says the business outlook in the East is good.

"The lumber business is showing great improvement in the South," said M. V. Richards, general industrial agent of the Southern System, who spent a day or two at his branch office in Bristol last week.

Mr. and Mrs. Fred W. Hughes announce the birth of a son. Mr. Hughes is manager of the Bristol office of Price & Heald of Baltimore, and is one of the best known hardwood men in this section.

News was received from New York last week announcing the arrest of Harry I. Soble, who formerly did business as a lumberman in Russell county, Virginia, not far from Bristol, where four indictments have been returned against him, charging fraud and the getting of lumber and money under false pretenses. Mr. Soble's friends allege that the charges against him are absolutely without foundation, and that when the matter is brought up for trial he will be exonerated. It is sincerely to be hoped that Mr. Soble has made no infraction of the law.

G. B. Kittle, representing the Lima Locomotive & Car Works of Lima, Ohio, and Mr. MacLean, manager of the southern department of the Berlin Machine Works of Beloit, Wis., with headquarters at Columbia, S. C., were recent visitors here.

Every car of the Norfolk & Western railroad, a local line of importance to the lumbermen, is now in service and the road faces a car shortage if the steady demand for transportation equipment that has characterized the past few weeks continues. Other roads in this section are up to their limit on cars and despite the fact that much new equipment has been received it is feared that a car shortage is imminent.

"The lumber business is getting in fine shape," said Mr. McCain of W. G. McCain & Sons, operating a large band mill in Johnson county, Tennessee. "At first we were inclined to believe that the increase was a spurt that would recede, but this theory seems already effectually disproved."

W. H. Bolling, a well-known lumber manufacturer of Galax, Va., has returned to his home after a visit to Bristol lumbermen.

The majority of the big mills in this section are running and will get in as much time as possible during the coming winter. It is predicted that the weather will be mild, at least until the first of the year. There is still much stock at the country mills to be hauled to the railroad. One Bristol lumberman says that he needs two hundred or more teams to get stock to the railroads in time for shipment before the approach of the bad weather that is bound to make the roads almost impassable.

An important deal was made last week when the Doss Manufacturing Company of Pocahontas, Va., bought a tract of 10,500 acres of timber in Scott county, Virginia, not far from Bristol, which it may develop before a great while. The timber is near the Carolina, Clinchfield & Ohio railroad and the Virginia & Southwestern.

The Bristol Door & Lumber Company reports business moving along well and a good demand for millwork. The company's band mill and big planing mill here are both running.

The Unaka Lumber Company, recently organized in Bristol, has just purchased a tract of timber and expects to begin operations soon.

E. P. Lewis of Morton-Lewis-Wiley Lumber Company of Grand Rapids is here on a visit to

his company's general offices. The company's band mill here has been closed down for some weeks, having completely exhausted its timber supply.

The band mill of the R. E. Wood Lumber Company at Buladeen, Carter county, and that of the W. M. Ritter Lumber Company at Hampton, both near Bristol, are getting in full time and are turning out much stock. Both have a large amount of timber in that section.

The Carolina, Clinchfield & Ohio railroad was this week completed to Spartanburg, S. C., from Dante, Va. This line penetrates a rich timber region and will be extended westward to Elkhorn City, Ky., and southward to the south Atlantic seaboard from Spartanburg. W. M. Ritter of the W. M. Ritter Lumber Company of Columbus, Ohio, is deeply interested in the new road, which has cost in excess of \$30,000,000.

## ASHLAND

J. H. Kester, secretary of the Southern Hardwood Company, has returned from an extended business trip through the South, buying lumber for his company. He advises business greatly improved in that section and says there is a scarcity now of the higher grades of oak and poplar in the South.

The Whisler & Searcy Company, Ironton, O., has begun sawing on its mill at Farmers, Ky., but has closed down the Ironton mill, having sawed out the present supply of logs. The company is expecting to do a large business at Farmers the coming year, and has a large amount of timber, which will enable the plant to run longer than usual.

Wm. Eckman, vice-president of the Licking River Lumber Company, in charge of the band mill and yards at Farmers, Ky., spent a few days at the company's office here this week. Its mill, which has been closed for two weeks putting in new boilers and doing general repair work, is again in operation and now ready for a steady run, as the company has enough logs to run it for eighteen months. The office reports the receipt of a great many orders and large shipments of stock.

J. L. Lytle of the J. L. Lytle Lumber Company, Pittsburg, Pa., called on our lumbermen this week. Mr. Lytle advises business very satisfactory.

The Reese-Kitchen Lumber Company, with general office here and a band mill at Wrigley, Ky., reports business very good. The mill is running in fine order and the company is putting on stick a large amount of very fine oak and poplar, which will be ready for the markets in a short time.

H. G. Irwin, of the Erie Lumber Company, Erie, Pa., spent a few days in the city recently. He gave encouraging reports for lumber business in his city and advised that his company is receiving a large amount of orders for both hardwoods and pine. The company owns and operates a large mill in the South, which manufactures largely pine and some oak.

The Yellow Poplar Lumber Company, Coal Grove, O., has its band mill closed at present, but is running its planing mill and yard crews on full time. The large concrete splash dam which is the largest of its kind in the world, is nearing completion, and will soon be ready for use. This dam is being built in the Breaks of the Big Sandy and will enable the company to splash logs through the Breaks most any time of the year. While the company has gone to great expense in erecting this dam, it will be a great money saver to it, enabling it to get the logs through the Breaks and to the mill at Coal Grove shortly after they are cut and before the sap is damaged, which was the case prior to this time, as the logs were quite often lunched above the Breaks and left there for years, until very high water floated them out.

C. E. Wilson of the R. G. Page Lumber Com-

pany is on a business trip through Ohio. The company reports business very satisfactory and the receipt of some very desirable orders in car and implement stock.

The Ashland Lumber Company is having a very satisfactory business in its planing mill and retail yards, having on hand more contracts than it is able to fill at present. The band mill is closed now, having sawed out the entire log supply, but the company advises it is busily engaged getting out new timber for next season's run.

## LOUISVILLE

The annual meeting of the Louisville Hardwood Club was to have been held Tuesday evening, November 2, but at that time, when the regular weekly dinner brought the members of the club together, it was decided to postpone the annual affair for two weeks. Tuesday night, also, was the evening of the election, and as most of the hardwood men were interested in its outcome they wanted to get out and see what happened. Mayor Grinstead, the Republican, had been picked as a winner of the mayoralty race by most of the hardwood people, but W. O. Head, the Democratic nominee, surprised everybody by winning easily. There's not a lumberman on the new administration, more's the pity.

It is likely that the annual election will not be as tame an affair as it was thought it might be. Though there was a general feeling at first that A. E. Norman, of the Norman Lumber Company, who guided the club through its first year, would probably be chosen to run things for another year, it looks now as if a good-natured rivalry may develop between his supporters and those of one of the other members. T. M. Brown of W. P. Brown & Sons Lumber Company is a hot favorite for the place, but he insists that he doesn't want it. Ed. L. Shippen of the Louisville Point Lumber Company, who is now vice-president, has also been mentioned, as has Edward L. Davis of the Edw. L. Davis Lumber Company. As a matter of fact, however, whether Mr. Norman or Mr. Brown or Mr. Shippen or Mr. Davis is elected, the club will have a good head, because you couldn't throw a rock into a crowd of hardwood men—and more especially Louisville hardwoodmen—without hitting a man who would make a good executive in most any position you cared to put him.

The reduction of rates out of Louisville into northern Illinois and Michigan has gone into effect, the date decided upon by the railroads being November 1. The Hardwood Club's Transportation Committee secured this reduction, and its members are correspondingly elated over it. The rate proposition will be thoroughly gone into during the next year, and it is likely that by studying conditions and comparing Louisville's situation with other cities the club will be able to secure other advantages for its members.

The general election November 2 knocked out most of the work that was to have been done on that day, at least as far as the hardwood men were concerned. Several mills shut down completely, these including C. C. Mengel & Bro. Company and the Edw. L. Davis Lumber Company. The Ohio River Sawmill Company operated with a small force, and the yards of the other companies were run with so depleted a force of men that comparatively little was accomplished. Business has been so rushing of late, however, that the hardwood men were really glad of a chance to breathe again.

Members of the Hardwood Club say that buyers are coming to the city now in larger numbers than ever before. This is attributed to the aggressive campaign of the club in calling attention to the advantages of buying in this market, which has put Louisville decidedly on the hard-

wood map. So successful has the club been in advertising the city as a hardwood market that its fall and winter advertising efforts will soon be put into effect again. Some of the out-of-town men who have been here lately are Sam E. Barr of the Lilley Lumber Company, New York; K. W. Hobart of Hobart & Co., Boston; Mr. Latham of the Monarch Lumber Company, Philadelphia; Mr. McParland of Chicago; John Smith of Dickson, Tenn., and others.

The Commercial Club, of which most of the Hardwood Club men are members, had a harvest home dinner two weeks ago, and owing to the oddity of the affair, everything that was served having a flavor of the soil and life on the farm, several of the hardwood manufacturers attended it. It happened on Tuesday night, and for a time there was a move in favor of abandoning the meeting of the club and going to the dinner in a body. This was finally given up, however, owing to the number and importance of the trade topics which are considered at meetings these days.

Much interest is being taken by the club in the convention of the National Hardwood Lumber Association, the annual convention of which will be held here next year. The new administration of the club will appoint committees which will start work at once, mapping out the scheme of entertainment and deciding on the various details—that must be considered in connection with the convention. The club intends to make the entertainment interesting and novel as well as elaborate.

Barry Norman, of E. B. Norman & Co. has installed water works at his plant on the point. He happens to be close to the river, and by putting in a pump and other necessary machinery he has eliminated a bulky water bill. He said that the saving in this respect will pay for the plant in two years. Thus it will be seen that while the river creeps up and floods Mr. Norman occasionally it is pretty useful at times also. The company's business is picking up right along. High-grade poplar is getting scarce, Mr. Norman said, and prices on it are stiffening. S. E. Booker, who looks after the box factory, said that business in that direction is picking up right along.

E. L. Shippen of the Louisville Point Lumber Company reported business as good. H. J. Gates of the company has been out of town on a business trip, in which he found the demand for lumber excellent. Mr. Shippen coincided with Mr. Norman's views as to the scarcity of poplar.

T. M. Brown of W. P. Brown & Sons Lumber Company said that business is so heavy that it is getting to be somewhat of a problem to take care of it. Prices are somewhat better, he said, especially with regard to plain oak. Although the lower grades of most items are still moving slowly, they are showing improvement. W. P. Brown, the retired head of the firm, was down from Indianapolis the other day, and John Smith of Dickson, the southern buyer of the firm, was up from Tennessee. Mr. Smith commented on the increasing scarcity and advancing price of timber. That ought to be a pretty good reason for advancing prices on lumber, according to Mr. Brown. J. G. Brown of the company is on the job, as usual and is keeping things moving, too.

R. E. Smith of the Ohio River Sawmill Company, said that the company is having trouble keeping up with its orders, and that business is flowing in from all branches of trade. In order to look after the work at mill points Mr. Smith was out of town most of this week. In order to improve the railroad facilities of the company's mill, the location of which is almost ideal, Mr. Smith said that an L. & N. switch is to be put in shortly. A Southern switch is already in operation. The company will probably erect a new office building before long. It is using temporarily the old residence which came with the land. The building is over fifty years old

and when erected was out in the woods five or six miles from Louisville.

Claude Sears of the Edw. L. Davis Lumber Company has been out on another scouting expedition. He usually returns with scalps dangling at his order belt. Business is good, folks at the company's offices said.

A. E. Norman of the Norman Lumber Company said that while business is not rushing it is picking up some and looks better than it did in October. Mr. Norman is much pleased with the work of the Hardwood Club, which under his direction accomplished many things of value to the local trade during the past year. His annual report will tell about some of them.

Clarence R. Mengel, president of C. C. Mengel & Bro. Company, said that the company has decided to put up a veneer mill, or mills, as it will consist of two buildings, the larger one of which will be 84x100 feet. The company has heretofore been sawing mahogany veneers, but the new plant will have slicing machinery. John B. Hutchings is the architect. Work on the new plant will probably begin in a few weeks, and it will be in operation by May 1, 1910. It will be built of wood. The machinery of course will be the chief item of cost, the total outlay being estimated at \$50,000.

Business with C. C. Mengel & Bro. Company is good. The demand is improving in all lines, the skyscraper people, the car construction companies and the furniture manufacturers all taking mahogany in volume. The Advisory Tax Commission of the state will meet November 15 at Frankfort for the purpose of framing its report on amending the tax system of the state. Mr. Mengel is a member of it and will make recommendations relating to the lumber and furniture proposition. He said that cars are getting scarce locally, as well as elsewhere. Other reports are to the effect that at mill points it is getting increasingly difficult to secure enough cars to take care of traffic.

C. C. Mengel, president of the Mengel Box Company and vice-president of C. C. Mengel & Bro. Company, is breaking into print right along. He was elected vice-president of the Pendennis Club, the exclusive social organization of this town, and was recently a member of the Board of Trade's delegation to the Lakes-to-the-Gulf Deep Waterways Convention at New Orleans. He has just been named by the Board of Trade as a delegate to the National Rivers and Harbors Congress at Washington, December 8. A special train will likely carry the delegates to the national capital. John B. Atkinson, a well-known lumberman of Earlington, Ky., was also appointed by the board. Mr. Mengel was a witness last week in the Brannin will case, a noted piece of litigation in which some of the most prominent people in Louisville are involved.

D. E. Kline of the Louisville Veneer Mills said that the volume of business at his plant was never larger. If prices were to assume their normal level, he added, the Thanksgiving turkey would by no means be out of reach. He said that a meeting of the gum veneer men will be held at Memphis November 12 for the purpose of discussing prices. He is of the opinion that the national convention next month will suggest a schedule of prices to the trade that will be considerably in advance of the present market prices.

The Bell-Coggeshall Box Company is one of those in town which received a rebate from the railroads as a result of the Supreme Court decision involving shipments on yellow pine from the South. It got \$3,300. Harry W. Embry, secretary and general manager of the company, said that cars are short and that at four mill points last month seven cars were the total received, when forty could easily have been used. This is depleting nearly all lines in the company's yards, he said.

James J. Hume of Muskegon, Mich., who, according to local newspapers, is "a millionaire

lumberman," passed through Louisville recently on his way to the South.

The Summers-Johnson Lumber Company has incorporated with a capital stock of \$10,000. It will do a general lumber business at Buechel, a small town near Louisville. J. W. Summers, H. B. Summers, C. A. Seaton, F. W. Curry, J. Fegenbush, T. S. Simpson, F. L. Johnson, J. H. Anderson, J. G. Hikes, Philip Graf and George H. Frey are the incorporators.

The Rockport Sawmill Company has incorporated at Rockport, a town in the western part of the state, with \$100,000 capital stock. Articles of incorporation were filed with the secretary of state at Frankfort.

The Traffic and Transportation Club, which includes several hardwood men in its membership list, has taken permanent headquarters at 128 South Fourth avenue.

A new railroad, said to be planned by the B. & O., is being surveyed through the eastern part of the state to West Virginia. The counties through which the survey is being run are Carter, Lawrence, Magoffin, Knott, Letcher and Perry. If such a line were built it would open up a fine timber belt containing poplar, walnut and oak in large quantities. As there are no streams close to this section the timber is practically untouched.

R. L. Thomas, the turfman, who was stabbed in New York by a jockey employed by him, is a lumberman of Winchester, Ky. He has large interests there.

Building is on a boom in Louisville, 221 permits being issued in October, representing \$428,964, as compared with 244 permits and \$254,695 for the tenth month of 1908. Several large structures were included in those issued last month.

The report of the Louisville & Nashville railroad for the first three months of its fiscal year shows a handsome gain over the same period of last year. Its operating revenues were \$12,138,000, compared with \$11,285,000 for last year, and its operating income \$4,410,000, compared with \$3,643,000 a year ago. According to the railroad commission, which is planning to assess all the railroads in the state, they all did a much larger business last year than in the preceding twelve months, showing a greatly improved condition of business.

One of the features of the November election in which the lumbermen and particularly the hardwood men were interested was the passage of the Bosworth-Wyatt amendment to the state constitution permitting the state to assist counties in building roads. It looks now, though no definite returns have been given out, as if the amendment carried easily. This will mean much to the lumbermen, who say that logging operations have always been hampered by poor roads. The state will probably begin where they are needed worst and where they will do the lumber business the most good—in the mountains.

The sawmill of the Falmouth Milling Company was burned at Falmouth November 3. The loss, according to press reports, was \$10,000.

The sash and door department of W. J. Hughes & Co., a local retail lumber company, was burned, causing a loss of \$75,000. The company will rebuild. The rest of its plant was not damaged, and it continued business the next day, aided by its competitors, who allowed it to use anything needed to fill up its orders. The loss, according to A. P. Witty, president of the company, was covered by insurance. The plant of the company is at Fourteenth and Maple streets.

### ST. LOUIS

Building operations for October, as compared with October last year, showed a considerable falling off. The aggregate of the permits issued by the St. Louis building commissioner, according to his monthly report, was \$1,206,694, or but little more than sixty per cent of the business

for October, 1908, aggregating \$2,280,050. As compared with September, the October figures do not show so badly, but even then a considerable decrease is shown, September having had \$1,784,059, against \$1,483,016 for the corresponding month last year.

The following is a report of the movement in lumber at this market during October: Receipts by rail during October, 1909, were 15,539 cars; during October, 1908, they were 11,510 cars, or an increase of 4,029 cars in 1909. Receipts by river during October, 1909, were 134,000 feet; in October, 1908, they totaled 90,000 feet, or an increase of 44,000 feet this year. Shipments by rail during October, 1909, were 10,125 cars. Shipments by rail during October, 1908, were 11,510 cars, or a falling off this year of 1,385 cars. Shipments by river during October, 1909, were 43,000 feet, as compared with 90,000 feet in October, 1908, a decrease of 47,000 feet.

The lumber inspected and measured by the Lumbermen's Exchange of St. Louis during October was as follows, as reported by Secretary A. H. Bush:

	Feet.
Oak	198,856
Quartered oak	84,448
Poplar	70,584
Cottonwood	46,107
Ash	107,108
Gum	72,207
Cypress	61,526
Maple	15,739
Yellow pine	6,808
Total	663,683

The following circular letter has been sent out to the members of the Lumbermen's Club of St. Louis. The meeting mentioned in the letter, which will be held on November 9, promises to be one of the most important as well as the most interesting of the year:

Your entertainment committee is very proud of its achievement in securing for the speaker of the evening and guest of honor at our next meeting, Tuesday, November 9, at the Mercantile Club, Mr. J. B. White, of Kansas City.

In deference to so prominent a lumberman as Mr. White and in appreciation of the efforts of your committee, it behooves every member of the club to be present at the meeting, and this advance notice of the event is ample to prevent conflicting dates of our members. Make a memorandum on your date tab to this effect.

There will also be committee reports and considerable business to transact. Very truly yours,  
J. B. KESSLER, Secretary.

Capt. White is connected with the Missouri Lumber & Land Exchange of Kansas City and his subject will be "Forest Conservation and the Merchandising of Lumber."

E. L. Page, manager of the hardwood lumber department of the Alf. Bennett Lumber Company, says business has been exceptionally heavy. The sales the company made during the past few weeks were frequent and many of them were for large amounts. Good prices were received for all the sales made. Some of the buyers for the company have placed good-sized orders for hardwood and thus the company is able to accommodate all orders received and to furnish quick shipments.

The company has recently considerably increased its selling capacity by the beginning of the operations of a new mill, just completed by the company at Campbell, Mo., and declared by competent lumbermen to be one of the best equipped mills in the state.

Mr. Page spent some time at the new mill, where he saw that it got a good start. The plant consists of a single band mill, edger, trimmer and all other necessary equipment of the most up-to-date type. It has a capacity of 40,000 feet of hardwood daily.

Business is reported as having been quite good at the Lothman Cypress Company, and E. W. Blumer, sales manager, says that prices are being well sustained. While some little trouble was encountered in getting in shipments from its mills, as every lumberman has, the mills are so located that the delay has not been serious enough to cause any worry to either the company or to the buyers. With the big stock carried in the local yards, it is not handicapped.

Owing to the transfer to Chicago of W. W. Dings of the Garetson-Greaser Lumber Company, Walter L. Jones, a buyer and inspector for the company in the South, has been promoted and hereafter will take charge of the local sales and will give particular attention to handling the railroad material end of the business.

After a visit to the mill in Mississippi, George H. Barnes of the George H. Barnes Hardwood Lumber Company has returned home. He says the car shortage will not hurt his business, as he is well supplied with lumber.

A satisfactory volume of business is reported by Richard J. O'Reilly of the O'Reilly Lumber Company.

A better feeling in the lumber trade is reported by John A. Reheis, president of the St. Louis Lumber Company. While business is not what it should be, the prospects are brighter than they were a short time ago.

Quite a nice business was done during the months of October by the Charles F. Luehrmann Hardwood Lumber Company. Nearly all classes of hardwood lumber were included in the sales made. There was a particularly good demand for oak, which is strengthening.

William L. Boeckeler of the Boeckeler Lumber Company says the volume of business that the company is doing is most satisfactory. Last month's sales were particularly gratifying. The trade in the out-of-town department was particularly good. Having a big stock of lumber on hand, it was able to supply the calls made with quick shipments.

Fifteen striking millmen from the Interstate Planing Mill & Lumber Company of East St. Louis were named in a temporary injunction granted last week by the circuit court at Belleville on application of the concern. The strikers were enjoined from interfering with workmen employed to take their places. The planing mill company represented that sixty of its employees went out October 22 because of its refusal to reinstate two men who were discharged and the posting of a notice that the plant would be an open shop hereafter. It was alleged that strikers were intimidating men employed to take their places by picketing the plant and the homes of the employees and threatened them, and that a mill hand had been assaulted by the strikers and has been in the hospital ever since.

For the second time in five days, incendiaries tried to destroy the lumber yard of the Claes & Lebnbeuter Manufacturing Company on November 3. The first blaze was started Sunday night, when it was kindled under one of the stacks of lumber. Prompt work by the fire department saved the yards. The last fire was started in a similar manner and resulted in \$100 damage.

## BIRMINGHAM

A slight improvement has been noted in the Alabama hardwood market, quotations on poplar showing gratifying improvement. Demand for this wood is growing stronger, and further advances are looked for. Gum ranges next in the activity, this class of stock moving freely. Oak is still dull.

An increase in hardwood output is noted. The mills handling hardwood exclusively are all working on full time and the yellow pine plants in cutting more pine naturally are turning out a larger per cent of the hardwood as a side line. In poplar and gum eastern markets seem ready to take care of the increased output, and other lines are likely to be affected by the general improvement.

Car shortage continues to be the one big feature of the entire lumber trade in Alabama, for not in two years has the congestion been more pronounced. Manufacturers from all over the state report trouble. The principal cause for the inconvenience is the fact that the cotton crop movement is now in full swing, and for several weeks will continue to claim the full

attention of the roads. The movement is officially estimated to be a little more than half finished, so that from now on some relief may be expected.

The Jefferson County Building Material Men's Exchange will hold its monthly meeting on November 11, with prospects for the largest attendance in the history of the organization. It will be the first meeting in the handsome new quarters of the exchange in the Chamber of Commerce building.

A. B. Cleneay, hardwood expert for the Oden-Elliott Lumber Company, has just returned from an extensive trip through southern Alabama. J. J. Elliott of this house has removed his home from Childersburg, Ala., to Birmingham.

Among recent hardwood men in Birmingham was E. Rotha of the Wildberg Lumber Company of Cincinnati.

## NEW ORLEANS

Not a little interest attaches to the announcement that New Orleans will probably supply several million cross ties for use in railroad construction in France during the next two or three years as a result of the activity of the Southern Trading Company of this city. Some time ago this company had been offered a large contract in France and shipped to that country a sample shipment of white, cow post and over-cup oak ties. These samples have proved to be satisfactory and the ties will be bought in America if the prices are satisfactory and in keeping with the views of the French purchasers.

The Grand Rapids Veneer Works, through its local agent, D. B. Alexander, has just closed a contract to install four large dry kilns for the F. B. Williams Cypress Company, which is building one of the largest and most up-to-date cypress mills in the South. The kilns will be on concrete foundations with brick and tile walls and tile roofs.

Announcement regarding the organization of the Opdenweyer-Fischer Lumber Company of New Orleans have excited much interest. Frank Opdenweyer, John Opdenweyer and C. B. Fischer are the incorporators. The new company will succeed the Opdenweyer Cypress Company and has recently purchased about 120,000,000 feet of standing cypress timber in St. Tammany parish from the Salmen Brick & Lumber Company of Slidell. The purchase price for the timber was said to be about \$600,000.

The second annual meeting of the Gulf Coast Lumber Exporters' Association was held at Mobile within the last fortnight, with representatives from all of the Gulf shipping centers in attendance. Many subjects relating to the exportation of lumber were discussed and it was decided to establish agencies of the association in European countries. London will be the headquarters for the agencies and branches will be placed in all the cities with which the members of the organization trade. The reports of the officers showed the organization to be in good shape and the prospects for the coming year to be bright. Officers elected were: Robert Hunter, Mobile, president; G. Eitzen, Pensacola, vice-president; J. O. Elmer, Mobile, secretary, and A. C. Ganahl, Mobile, treasurer.

Announcement is made that W. R. Montgomery will establish at Shreveport a large plant for manufacturing folding furniture.

The McCarroll Lumber Company has been incorporated at Hammond, La., and will establish a large plant there. It has a capital stock of \$40,000. James F. McCarroll is president and treasurer; Harry C. Page is vice-president, and Arthur T. Gomilla is secretary.

M. S. Hill and L. G. Wales have incorporated the Hill-Wales Lumber Company at Canton, Miss., with \$10,000 capital stock.

The Bowie Lumber Company in Assumption parish, this state, has purchased from the Hut-

tig-Moss Manufacturing Company of St. Joseph, Mo., that company's holdings, including about 75,000,000 feet. The consideration was \$390,000.

## MILWAUKEE

Milwaukee lumbermen were shocked by the sudden death recently of John J. Johnson, one of the best-known wholesale lumbermen in the city, formerly president and treasurer of the Johnson Lumber Company. Mr. Johnson passed away in the library of his home, presumably of heart disease. He was sixty-three years of age and had been engaged in the lumber business all his life, for the past fifteen years being in the wholesale business. A few years ago he retired in favor of his three sons, George T. Johnson, now president and treasurer of the concern; W. A. Johnson, vice-president, and T. V. Johnson, secretary.

E. A. Braniff, mill superintendent at the government reservation at Neopit, Wis., has resigned and has been succeeded by A. M. Riley of Rhinelander, Wis. Mr. Riley, until recently, has been superintendent and manager of the Atwood Lumber & Manufacturing Company of Park Falls, and is one of the best known logging operators of northern Wisconsin. His son, A. J. Riley, has received the appointment of logging superintendent of the reservation.

Following the action of the Mellen Lumber Company of Mellen, Wis., in purchasing additional timber holdings and lumber interests, the company has increased its capital stock from \$450,000 to \$1,000,000.

The Wisconsin legislative committee on water powers has completed its work of investigating the water powers, forest reserves and logging methods followed in the state and is now compiling its data at Eau Claire. At Cass Lake, Minn., it also investigated the method followed by the Weyerhaeuser interests in burning hardwood slash. The committee gained the impression that slash burning is most advantageous and not too expensive.

John Fountain, well known lumberman of Appleton, Wis., was a recent Milwaukee visitor.

The Gilkey & Anson Lumber Company of Merrill, Wis., has closed its mill and will dissolve partnership at once. L. N. Anson and his son George will purchase the Gilkey interests and after overhauling the sawmill will operate it. L. N. Anson & Son have extensive timber holdings that will keep the plant in operation for many years. Mr. Gilkey, who is heavily interested in the lumber business at Oshkosh, will later locate in the West, where he owns extensive timber interests.

The Wilson-Weber Lumber Company of Menominee, Mich., owning a line of yards in Michigan and Wisconsin, has sold its interests to the North Star Lumber Company of Minneapolis, Minn.

Knechtel & Trestek, loggers of Manitowoc, Wis., have secured a contract to log 5,000,000 feet of logs for the Long Lake Lumber Company of Forrest county, Wisconsin.

The Wilbur Lumber Company of Milwaukee has sold its entire plant at Beaver, Wis., including planing mill, 500,000 feet of lumber and a large amount of standing timber, to Nelson & Armstrong.

The story that has been going the rounds in Wisconsin newspapers that a discharged woodsman "shot up" the town of Goodman, the seat of the Goodman Lumber Company, has been denied by Robert B. Goodman of the company. The man simply attempted to discharge a gun in the offices of the company, but was intercepted and arrested.

Employment bureaus at Milwaukee and other Wisconsin cities are meeting with an unusual call from lumber companies for men to go into the northern woods this fall. The available supply of men is scarce and wages will be abnormally high.

The Beyer-Morner Lumber Company of Pren-tice, Wis., has been incorporated with a capital stock of \$5,000 by C. G. Beyer, A. E. Kaiser and E. E. Morner.

The Phoenix Manufacturing Company of Eau Claire, Wis., despite the fact that it erected an addition to its plant only a year ago, has decided to begin the erection in the spring of another addition to be devoted to the manufacture of logging machinery.

The Hatton Lumber Company of New London, Wis., has completed its season's cut at its sawmill and will begin the installation of three new boilers, each with a capacity of 150 horsepower.

The Baker-Zellmer Lumber Company of Oshkosh, Wis., has been incorporated with a capital stock of \$25,000 by R. C. Scobre, B. B. Baker and F. E. Zellmer.

The Adams Patent Wheel Company, manufacturer of a new patent wheel, spokes, handles, brackets, pins, etc., will establish a new plant at Cassville, Wis.

Wisconsin lumbermen and coopers have been interested in the announcement that the new sawmill of the Northwestern Cooperage & Lumber Company of Gladstone, Mich., has been placed in operation. The plant is one of the finest of its kind in the West.

The Kaukauna Lumber & Manufacturing Company of Kaukauna, Wis., has decided to install another department for the manufacture of sash, doors, windows, stairwork and veneer work. Work on a new addition is being rapidly completed and this will be equipped with new and modern machinery in order to prepare for the company's new field of manufacture.

The Mellen Lumber Company of Mellen, Wis., has purchased the Glidden veneer plant and the Nash Lumber Company of Shanagolden, Wis. The acquired holdings of the Mellen company now comprise three logging railroads and 100,000 acres of timber lands.

The sawmill of the Owen Lumber Company of Owen, Wis., has been closed for the season.

Joseph and John Wolfinger, the woodenware manufacturers and pea packers of Dundas and Brillion, Wis., are establishing a new \$30,000 woodenware factory at Eland. It will be completed in the spring and will employ seventy-five men.

The sawmill plant of the Kurz-Doweny Company has started cutting box lumber and will continue to run all winter. The construction of the main box factory will be started early in the spring and a force of new men will be employed. The plant now employs thirty-five men.

A new blower system is being placed in the plant of the Phoenix Chair Company at Sheboygan, Wis. The exterior work on the new boiler house is now being done and the new system will be in operation within a short while.

Great improvements have been made on the Heineman Lumber Company at Heineman during the summer. Among the improvements are two new engines and a new engine house. As soon as all the improvements have been completed the mill will be started up and the usual activities around Heineman will be resumed. S. Heineman, president of the company, said that the business outlook was very good and that his company was getting ready to do great work. The hemlock and hardwood business is still unsatisfactory, but improvements are noted monthly.

The C. A. Goodyear sawmill of Tomah, Wis., will soon be completed and the plant, which has been shut down since last May, will resume operations within a very few days. The mill will be ready to start on the completion of the electric power plant, which is to run both saw and planing mills, as well as furnish current for the city lighting and power system.

The sawmill belonging to George Ridder of Amery, Wis., has probably the oldest sawmill crew in the United States. The youngest of this crew is past sixty-five years of age and the oldest is nearly seventy. John Burns is the youngest member and William D. Thompson is the

oldest. The work is so well done that one would think much younger men than these were employed by the mill.

The D. J. Murray Manufacturing Company of Wausau, Wis., well-known manufacturers of logging and sawmill machinery, has nearly completed the erection of its new machine department. The remainder of the work and the work of erecting a new molding department will be resumed next spring.

### MINNEAPOLIS

Hamilton Broughton decided to stay with the Forbes-Everts Lumber Company, instead of going into the fruit raising business in the West. He has gone to the mills of the company at Van Buren, Mo., where he will get into the manufacturing end of the business.

F. A. Nolan, hardwood wholesaler of St. Paul, returned recently from a trip to the West coast. Mr. Nolan visited the Seattle fair and several of the West coast cities.

The Peterson-Moore Lumber Company, hardwood wholesalers of St. Paul, has moved its offices from No. 603 in the Manhattan building to No. 522 in the same block.

R. C. Schulz, with the Goodman Lumber Company, Goodman, Wis., was in Minneapolis recently on a business trip.

A committee of St. Paul members has in hand the preparations for the coming annual meeting of the Northwestern Hardwood Lumbermen's Association, which will be held in that city on Tuesday, December 7, to be followed by the annual dinner of the association in the evening.

### WAUSAU

The MacKinnon Manufacturing Company of Grand Rapids recently sold an order for 1,000 wagons to a jobber in St. Paul.

The A. H. Stange Lumber Company of Merrill is enlarging its dry kiln by adding two more sections. The kiln at present has a daily capacity of 100,000 feet. The company recently completed a large lumber shed, adding to its extensive facilities for handling all kinds of dry stock.

Joseph H. Stenger of Mendota, Ill., recently sold to Alfred J. Wroldstad of Waupaca ten forty-ies of hardwood lands situated in the town of Ainsworth near Antigo. The price paid was \$12,000.

B. F. Wilson, a prominent Wausau lumberman, has gone up into the Alberta country of Canada to look after timber holdings.

On May 16, 1906, the village of Auburndale suffered a severe loss from fire, which started in a pile of 1,200 cords of maple and birch wood belonging to the R. Connor Lumber Company. The wood was piled on the right of way of the Wisconsin Central railway and the fire spread from it to the village. As a result of the fire old line insurance companies paid \$60,000 insurance. Nine mutual companies also carried policies on some of the property and paid losses to the amount of \$10,000. Now these mutual companies have brought suit against the railway company to recover the amount each disbursed. They claim that the fire in the Connor company's woodpile started from a spark from one of the railway company's locomotives, and but for the company's negligence the fire would not have occurred.

George D. Booth has purchased the interest of his partner, C. E. Blodgett, in the Blodgett-Booth Lumber Company, with headquarters in Marshfield. He will hereafter conduct the business under his own name. The company recently sold a large tract of standing oak to the Upham Manufacturing Company of Marshfield, receiving \$28,000 for same.

J. W. McNally of Escanaba, a walking boss for the United Logging Company of Watersmeet,

was attacked a few days ago by a disgruntled employe in the camp office. After the latter had compelled him at the point of a revolver to write a check for \$250, Mr. McNally was beaten into insensibility.

The United States Steel Company has recently made additional purchases of timber lands in northern Michigan. It is the policy of the company not to cut any of its timber, but to buy, cut, what it needs for present use.

Carl Solberg of Philips was recently awarded a judgment of \$2,850 against the Robbins Lumber Company of Rhinelander. He lost two fingers while in the employ of that company and sued for \$8,000 damages. The judgment, if paid, will be paid by a liability company.

Clarence Suess of Ironwood, who sued the Stearns Lumber Company of Ashland for \$5,000 damages, was awarded a judgment of \$3,500 a few days ago. While in the employ of the defendant company he was severely burned by the bursting of steam pipes.

The R. Connor Company's mill at Stratford has closed for the season. The Brooks & Ross Lumber Company's mill at Schofield has closed until after the holidays. The company cut 30,000,000 feet of mixed woods the past season. The Barber & Stewart Lumber Company's mill in Wausau has closed until the first of the new year. The Alexander Stewart Lumber Company and the Jacob Mortenson Lumber Company, both of Wausau, are still in operation, but will close soon. The mills of those two companies and of the F. Schubring Lumber Company will saw stocks of hardwood as soon as good sleighing permits logs being hauled to the mill. The Underwood Veneer Company of Wausau will buy a large stock of logs this winter, as well as cut some from its own lands.

The Mosinee Land, Log & Timber Company has purchased of the Joseph Dessert Lumber Company 3,345 acres of hardwood lands, situated west of Mosinee. The lands, it is said, will cut 21,000,000 feet of logs. There are 200,000,000 feet of timber in that locality, including this tract.

The Wisconsin Fruit Package Company of Crandon is making extensive improvements. A building 86x100 feet, two stories high, is going up. The company is also building a water works plant and an electric light plant of its own. It is erecting a new office building and five cottages, the latter to be purchased by employees on monthly installments. The company will erect twenty-five of these cottages. With the completion of the improvements now under way the concern will be able to turn out 10,000 baskets per day, besides crates, berry boxes and furniture veneer; for the latter there is ever an increasing demand. The company started business six years ago, employing six hands. Now the force numbers ninety.

One thing which will interest all lumbermen, factorymen, manufacturers or employers of labor in Wisconsin will be the action taken by the legislature this winter towards passing an industrial insurance or employers' liability law. A legislative committee has been at work all summer in gathering data to work on and is yet at sea in its conclusions, according to Chairman A. W. Sanborn of Ashland. The chief difficulty of the committee is in formulating a plan of insurance which will not be burdensome to the manufacturer, and yet be a just recompense to the injured employe. Two plans are under consideration. One is to repeal all laws which give a manufacturer an opportunity of escaping an adverse judgment in a damage suit on the grounds of contributory negligence, and furnish a flat rate of insurance, a board of arbitration to settle disputes. The other plan is to assess all employers, the funds to be handled and disbursed by the state, after a board of arbitration has fixed the amount of insurance due the injured employe, or to the beneficiary if the employe be killed. Mr. Sanborn says he has ascertained that the mill and factory men of Wis-

consin have paid out more as judgments in suits with injured employees than they would have done had some form of industrial insurance been in force. The manufacturers are divided in favoring and opposing the passage of such a law.

Louis A. Maier has resigned as cashier of the First National Bank of Medford to manage the affairs of the Mellen Lumber Company, Mellen, lately organized, and capitalized at \$1,000,000.

At a recent meeting of the stockholders of the Edgar Veneer & Box Company it was decided to dissolve and return to each stockholder the money paid in. The company was capitalized at \$15,000.

A. J. Reicke has begun the reforestation of cut-over lands in Marathon county. He has set out 17,000 young trees up to date and will continue the work. The trees are planted in rows eight feet apart.

The Kandy Manufacturing Company of Grand Rapids has completed a large two-story addition to its plant. It was established four years ago and is one of the growing institutions of northern Wisconsin. The company recently imported a shipment of mahogany from Africa, for which it paid \$550 per thousand. The company manufactures all kinds of furniture and fixtures and makes a specialty of old English library tables. It has begun the manufacture of an iceless soda fountain.

### SAGINAW VALLEY

Work on the new flooring plant of the Hanson-Ward Veneer Company at Bay City is being vigorously pushed and the plant will be ready for business early in the winter. The company has timber sufficient to stock the plant for years. Mr. Hanson is also interested in the firm of R. Hanson & Sons and Salling-Hanson Company at Grayling and Michelson & Hanson at Lewiston. The Ward end of it holds 77,000 acres of timber property, estimated to contain several hundred million feet of hardwood.

W. D. Young & Co.'s sawmill and flooring plant are being operated day and night. A heavy business is being done for both the domestic and foreign trade and the company is turning out a fine brand of maple flooring.

Jobbers and loggers are about all in the woods. Owing to the short stocks of both hardwood and hemlock and the increased demand it is expected that every stick that can be made available will be cut during the winter. Lumbering is expensive, due to high wages and excessive cost of supplies.

Yuill Brothers' sawmill at Logan, on the Mackinaw division of the Michigan Central, has shut down. The firm has 5,000,000 feet of stock in the yard and will put in a large quantity of timber during the winter. They cut a large quantity of timber which comes to W. D. Young & Co. at Bay City.

Both the Kneeland-Bigelow Company and the Kneeland, Buell & Bigelow plants at Bay City are running full time, the first day and night and the latter days. These plants cut up fifty-five carloads of saw logs every day. The Kneeland-Bigelow Company is running four camps in Montmorency county and cuts its own logs, while the Kneeland-Buell & Bigelow plant is stocked by the Wylie & Buell Lumber Company. The latter company will put in 50,000,000 feet during the ensuing year, of which 22,000,000 feet will come to the Bay City mill, some 12,000,000 will go to Bliss & Van Auker at Saginaw and the remainder to various parties.

The Batchelor Timber Company at West Branch has made some improvements to its mill and overhauled it for the winter run. The output of this plant is about 12,000,000 feet.

The H. M. Loud's Sons Company of Au Sable some years ago purchased several thousand acres of hardwood timberland in Presque Isle county of Hoeft & Son of Rogers City. Some of this timber was damaged by fire and

logging operations have been started. It is expected that several million feet will be cut this winter.

The Island Mill Lumber Company and the Richardson Lumber Company at Alpena are tied up by reason of the action of the Alpena Power Company. All three of these plants are located along one side of a branch track of the Detroit & Mackinac railway, the Power company next to the main line. It is building a dam and claiming that the land on which the siding is laid and where it joins the main line belongs to it. The Power people tore up the track a week ago to make room for materials for building purposes. Now with rush orders on their hands the two lumber companies find themselves unable to ship out their stock.

### CADILLAC

The A. F. Anderson mill at South Boardman has cut 76,600 feet of hemlock lumber in one day's run of ten hours, and has averaged 70,150 feet of hemlock lumber per day for six days in succession. April 1, 1909, this mill sawed in ten hours 50,100 feet of hardwood lumber, mostly maple.

Eight miles of bounty roads will be built in Wexford county the coming year. These roads are made possible by the liberal contributions from the Mitchell Brothers Company, Cobbs & Mitchell, Inc., Murphy & Diggins and others. The county at large has appropriated \$15,000 for the coming year.

About 250,000 feet of timber has been cut from Marion Island by the owner for the purpose of establishing fire lanes to lessen the danger of fire. The contract for hauling this timber away has been given to Captain Emory of Bowers Harbor, where he will cut the logs into lumber at his mill. There is still considerable valuable timber on the island which will not be cut.

Justice S. Stearns, the millionaire salt and lumber man of Ludington, Mich., has been elected president of the First National bank of that city to succeed George M. Stray, whose stock, together with that of his son, W. H. Stray, constituted the controlling interest of the bank. Mr. Stearns will conduct his duties as president of the bank with that of his salt and lumber interests.

The railroads are taking an active interest in the work of preventing forest fires and employees of several roads have been discharged for removing apparatus used for preventing the spread of sparks.

One year ago Metz and other small towns were destroyed by the terrible forest fires and loss of life occurred. Today the majority of those driven from home are better off than before the fire. Metz has been rebuilt and is as thriving as ever and hundreds of acres of land have been cleared this season as result of the fires. Lumbering has been more extensive and much timber will be cut this season.

There is a movement on foot to have the Pere Marquette railroad build the so-called "Missing Link" in its system between Leota and Stratford. This question has been taken up by the Saginaw and Missaukee counties, as well as in the Traverse City district. Property owners offer the Pere Marquette free right of way.

Another movement has originated in Clare county to take up the present line between Clare and Harrison, and move it in order to take in Coleman, thereby tapping a rich farming district, eliminating many heavy grades and reducing the mileage by ten miles.

D. H. Day, chairman of the Grading Rules Committee of the Michigan Hardwood Manufacturers' Association, located at Glen Haven, Mich., has been made president of the Western Michigan Development Bureau. It is expected that this bureau will aid many western and northern towns in developing their resources.

The question of uniform grading of hemlock lumber is being discussed by many of the Michigan manufacturers, and a movement is on foot having that in view. With that end reached, the marketing of hemlock will not be so much a problem as at the present time.

Bruce Odell of the Cummer-Diggins Company is not only a good man for the lumber business but is an authority on the growing of alfalfa in Michigan. He has published a little pamphlet which will be of interest to anyone wishing to look into this matter.

W. W. Mitchell and wife, C. T. Mitchell and F. J. Cobbs and wife have returned from a month's trip to Oregon, Washington and other western states.

A. W. Newark, secretary of the Cadillac Handle Company, has returned from a trip to his lumber camps near Cross Village. Some of the finest birch timber in the lower peninsula is being cut near Cross Village and loaded on train and brought into Cadillac, where it is sawed.

Howard Edgerton of the Cadillac Handle Company and wife have returned from a trip to Cleveland, Ohio.

M. E. Thomas, sales manager of the Cobbs & Mitchell, Inc., and the Mitchell Brothers Company, is out on a three weeks' trip visiting the trade in the East.

Bruce Odell of the Cummer-Diggins Company has returned from a business trip at Kalamazoo.

Mrs. Frank Harding, wife of Frank Harding of the Wetzell Turning Works, died recently at Wetzell, Mich., and was buried at her former home at Allegan.

### DETROIT

Alden Oliver Carter, secretary of the Dwight Lumber Company, died on Wednesday, November 3. Mr. Carter was known in the hardwood trade from coast to coast. He was sixty-one years of age and although born in Chelsea, Mass., he spent his business life in Detroit. He resided at 66 Forest avenue in this city and is survived by his widow, a son and a daughter.

H. W. Hubbard, Jr., of Toledo, formerly associated in business with his father in Toledo, has become associated with the Advance Lumber Company of this city. Mr. Hubbard is temporarily quartered in the Hotel Pontchartrain.

Arthur Dennis of Cincinnati, a former Detroit lumberman, visited in Detroit last week and renewed old acquaintances. He is now connected with the St. James Lumber Company.

"Business is looking up and everyone is cheerful; improvement is shown in all branches since you called last time," was the cheering word handed the RECORD correspondent at E. W. Leech's big hardwood lumber yard.

The E. W. Leech team in the Lumber Bowling League is still clinging to the last place, but members of the team hope to begin climbing out of the cellar pretty quick.

C. R. Duggan of Tindle & Jackson spent several days out of the city last week on a business trip.

The steamer Parks is at the docks of the Thomas Forman Company on the Rouge river with a cargo of hardwood lumber from Alpena. The Forman mill is very busy and Mr. Forman says that business still continues to boom.

For the month of October building operations in Detroit totaled \$1,415,515, a good increase over the corresponding month in previous years. Permits were taken out for 363 new structures to cost \$1,206,100, as compared to 314 new structures in October, 1908. Permits for 87 additions were taken out, an increase of 25 over October, 1908. The grand total for the month represented an increase of \$301,685, or a gain of more than twenty-seven per cent over the same month in 1908.

The automobile trade is contributing largely to building operations in Detroit and vicinity as

well as helping the hardwood market because of the increasing demand for hardwoods used in the construction of automobiles. It is reported that the big Maxwell-Briscoe Company is to build a large plant in Detroit. The General Motors Company, the automobile trust, is busy in this vicinity, grabbing up factories right and left and making extensive improvements and building additions to the plants absorbed. The Carter Car Company and the Pontiac Buggy Company are the latest to fall into the hands of the trust. At Flint the big plant of the General Motors Company is nearing completion. The flooring of the plant will alone cost \$74,000. It is of concrete, in which two-inch hemlock planks are imbedded and one-inch maple is used as a finish.

The safe in the office of Hunton, Weeks & Co. was damaged by a burglar who was captured and turned out to be Jack Johnson, known all over the country as a counterfeiter. Johnson did not succeed in getting anything from the safe and was rounded up by the watchman and policemen before he could make his escape.

### GRAND RAPIDS

"Mahogany has advanced twenty-five to thirty-five per cent since early summer," says I. Preston Rice, president of the Rice Veneer & Lumber Company, "and the upward movement has not stopped. A shortened log crop in Africa, together with the increased demand, seems to account for the advancing market."

The Valley City Desk Company is building a lumber storage shed at its factory on Butterworth avenue, at a cost of \$3,000.

Three skilled workmen, former employees of the Royal Furniture Company, have organized the Sheraton Furniture Company and will engage in the manufacture of high-grade furniture at Grandville, occupying the plant of the Hammond Novelty Works.

Roy G. Harrison, former manager of the Grand Rapids Parlor Frame Company, has resigned and gone to Portland, Ore., where he will engage in the lumber business. The vacancy at the Parlor Frame plant has not been filled as yet.

Uptegrove & Beckwith, dealers in veneers, are erecting a warehouse on Court street, near Shawmut avenue.

The Leonard building on Ottawa street formerly occupied as a refrigerator and game board factory has been converted into a furniture exhibition building and all the space has been taken for the January exposition. The five uptown exhibition buildings will be filled with furniture samples and the show will be the largest ever made in this market.

The Grand Rapids Club held its annual meeting and dinner at the club house, Plainfield, November 3. "Billy" Williams, a well-known dealer in furniture and building supplies, was elected president and C. A. Phelps and John H. Bonnell of the Hackley-Phelps-Bonnell Company were chosen on the board of directors.

James Lynn of Chicago, buyer for the American Seating Company, was in the market recently.

Z. Clark Thwing, manager of the Grand Rapids Veneer Works, is in the South supervising the installation of dry kilns in a number of the large mills. He will return in about a week.

Walter N. Kelley, Traverse City, and A. F. Anderson, Cadillac, were among the visitors here during the past week.

The United States court has appointed B. B. Luten of the Grand Rapids Supply Company as receiver for the Cecil Ray Stave Company of Cecil Bay; liabilities, \$5,000; assets not known.

The Kalamazoo Interior Finish Company, Kalamazoo, is bankrupt and the court has appointed George P. Sweet of this city as receiver, with bond fixed at \$75,000. Louis Larsen, secretary-treasurer and manager of the company,

left Kalamazoo suddenly October 20 and no word was heard from him until this week, when Henry G. Dykhouse of this city, vice-president of the company, had a telegram from him sent from Denver, but offering no explanation except the statement that he must have been "off his trolley" and offering to come back and assist in straightening up things. Mr. Sweet, who has been in charge of the concern for several days, has examined the books and reports to creditors a shortage of about \$100,000 in the accounts,

the assets being approximately \$190,000 and the liabilities \$290,000. The company is doing a large business and it is expected the plant will be kept running. Several of the stockholders live in this city.

Ralph Hanchett of the Hanchett Swage Works, Big Rapids, who had charge of the company's exhibit at the Seattle exposition, is home for the winter, but will probably go West again in the spring. He likes the West and is something of a hustler himself.

## Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

### CHICAGO

Every hardwood yard in Chicago is extremely busy. The yard men report that the present situation is very much like the early part of 1907. Nearly every yard is obliged to hire extra teams to keep up with the local deliveries.

There is a growing scarcity in firsts and seconds plain white and red oak, and poplar is particularly strong in the higher grades, and wide widths are scarce. It now seems almost sure that the car shortage is going to be severely felt during the next sixty days, as rail deliveries are already slow.

Out-of-town salesmen doing business in this market, report a strong demand with comparatively easy selling on desirable stock.

The furniture and interior woodworking factories are all busy and it is anticipated that there will be remarkably heavy orders placed for furniture during the big January furniture exposition.

Everything indicates a still stronger and increasing demand for every variety of hardwoods during the next few months.

### NEW YORK

The hardwood market at New York is firm, with considerable increased activity in oak and maple hardwood flooring, an increased demand for both thin and 3/8-inch parquet flooring. It is stated that in 2 1/2-inch maple flooring, the market is oversold several million feet, with all grades and sizes in good call. In consequence prices are exceptionally firm with an upward tendency. This activity is due to the decided increase in the use and demand for hardwood flooring in all classes of buildings and is a phase of the situation which is well worthy the attention of the hardwood flooring manufacturer from a business standpoint.

In good-grade hardwood lumber the market seems to be taking its full share under existing conditions. Stocks are not overplentiful and prices are firm. Low-grade hardwood is more plentiful, but the market is getting in better shape all the time and the outlook for an active and firm spring with a fair amount of winter business is looked for. As a whole, the price situation is firm, although in low-grade stock there is still opportunity for better prices.

### BUFFALO

There is no real difficulty with the lumber trade. If anybody gets in a hurry he is reminded that business is not up to its old pace yet, no matter what the newspapers may say, and lumber is not the first to recover from dull times. The fact that quartered oak is very scarce and poplar and elm are not much less so shows that there is none too much lumber and that the real difficulty in sight is that the supply will run right down just as soon as the demand is better or the producers stop to wait for it.

Buffalo is putting in a good stock of all sorts

of lumber for winter and is also in touch with all the rest of the lumber in the country, so that this will remain the chief lumber depot and especially of hardwoods in the East. All hardwoods are very strong and promise to remain so. The increase of Pacific coast woods in this market shows that it is stocks and not sales that are in need of pushing up.

### PHILADELPHIA

There is an improvement in the hardwood trading of late, but the volume of business is undeniably short of expectation. There was a perceptible lagging in buying during the fortnight which, however, has not materially affected prices. The good ends of poplar, chestnut and oak remain active. The condition of stocks at the mill and storage yard prevents any weakening in values, and as it is already a difficult matter to obtain adequate cars at the southern hardwood mills for shipping the accumulated orders, the result is an increase in prices. The demand for hardwoods in the eastern furniture factories, and for the carriage and automobile body makers, is better, and the scarcity of the woods most desired by these industries will undoubtedly considerably stiffen prices. In the low grades of hardwoods there has been no noticeable change, but the demand is gradually growing stronger and prices are holding steady.

### BOSTON

The undertone of the market for hardwood lumber is firmer. Demand, while showing a steady improvement, has not yet reached a point where dealers refer to it as active. The offerings of dry lumber of desirable grades from the manufacturers are small and the latter are much firmer holders. Chair manufacturers are doing a larger business and are in the market for supplies. Furniture manufacturers have been larger buyers and a good call is reported from the interior finish men. Yard trade has not been very active, but this is better than it has been and retailers' stocks are smaller.

The demand for quartered oak is good, with offerings small. One-inch, one's and two's, is firm at good prices. Plain oak is firm, with all grades in more inquiry. Walnut is in small offering. The demand for birch has fallen off. Cherry and elm are in moderate call. North Carolina pine is rather unsettled, due to the fact that some manufacturers are in need of orders and are willing to accept lower prices in order to secure them.

### PITTSBURG

Hardwood prices tend upward, and there has been nothing during the past two weeks to interrupt the increasing flow of business or to check the tendency toward higher prices and lower stocks. Mills are kept busy cutting lumber enough to supply orders that demand immediate shipment. In all the best grades of hard-

wood dry stocks at the mills are low. Pittsburg wholesalers, who have recently made a thorough inspection of the manufacturing plants in Pennsylvania, Ohio and West Virginia, claim that at no time in three years has there been so little first-class hardwood on sticks and in shape to ship as now.

Individually, most hardwoods are selling well. White oak probably leads the list in this respect. For car oak and dimension stock the demand is the best that it has been for three years and prices are excellent. Hardwood interior finish is in active demand and prices are quoted for short deliveries only. Maple flooring is selling better than during the summer. Hickory, ash and cherry are very scarce and Pittsburg wholesalers have had hard work lately to find enough to supply their orders. The use of beech in automobile bodies and also extensively in river and harbor work is proving the market for that wood much the best that it has been for years. Everything in poplar except culls is moving well and prices are coming up right along. The call for posts, poles and ties, and especially for mining stock in the medium and low grades of hardwood, is much better this month, so that many firms are working off large quantities of this sort of lumber at good prices.

### BALTIMORE

Encouraging reports are heard about the hardwood trade, and indications are that the improvement will continue until conditions are as satisfactory as that of 1907. The demand for stocks in the domestic market has been quite good and intending buyers seem to be in a receptive mood. Many of the big purchasers manifest a disposition to place orders. The yardmen still show hesitancy to stock up to any extent and the stocks of many dealers are not up to the requirements of a very active business. The prices bid have gone up until they nearly meet the figures of the shippers, and there is every prospect that the gap will be entirely bridged before long, as the home demand remains sufficiently active to absorb the output of mills and makes it more profitable to keep supplies here than to ship them abroad. A material change has taken place in poplar, which wood is sought after and commands a ready market. Oak, ash, chestnut and all the other woods in general use are affected by the improvement, and the tendency continues to be upward.

Among the new developments in the trade is the increasing use of red gum, which is being employed as a substitute for Circassian walnut with much success. The wood is said to take a fine polish and shows a beautiful grain. It was bought as an experiment by a furniture manufacturer here, and he has since made other purchases, the results attained being entirely satisfactory.

### CHARLOTTE

Marked activity has been noted in the hardwood lumber trade during the past two weeks. From manufacturing and logging centers of the Carolinas reports of heavy operations and excellent business come in. The railroads are heavy buyers and car manufacturers also are in the market for supplies. Furniture manufacturers of all classes report record-breaking business. Orders are pouring in and full time with full force of hands at all the state factories is the result. So far there has been little complaint of car shortage. Hardwood dealers of this city say their business is better than it has been for two years past and they look for continued heavy business during the winter and spring months. In all of the towns and cities there is an unusually large amount of building going on, resulting in an increased demand for all varieties of hardwoods and builders' supplies.

Prices have advanced, especially on certain of the finer grades of quartered oak, poplar, etc.

Numerous lumber railroads are in course of construction in this state, and when these are completed they will make available large stores of valuable virgin hardwoods of all kinds. Taken on the whole, the hardwood situation is all that can be expected and future outlook is good.

### NORFOLK

The hardwood mills report the outlook for business good and state that the last two or three weeks it has picked up considerably, especially oak and poplar. High-grade hardwoods are in greater demand than the cheaper grades. At present walnut is in better demand and has brought better prices than any wood in the foreign market. The main feature of the market is the firmness of prices on all hardwoods.

### CLEVELAND

Considerable improvement is noted in the hardwood business in this section during the past month. There has been an improved demand for all lines and the size as well as the volume of the orders is increasing. Collections are good, the banks are fairly free with their money for building loans and the structures are getting to a point where they are requiring large amounts of hardwood for interior finish.

The automobile trade is booming and there is a keen demand for wide poplar for body work. The vehicle trade generally is showing more vitality than it has for two years, while the furniture makers are beginning to place orders on the same scale they followed before the panic.

### INDIANAPOLIS

Hardwood lumber conditions have not been more satisfactory in two years than they are at the present time in this territory. All grades of oak are in steady demand, with prices slightly advancing. Poplar and hickory are improving, the latter due largely to the renewed activities in vehicle plants. Collections are said to be exceptionally good, retail dealers turning their stocks into money quickly. Industrial conditions are improving in all lines, which is having much influence on the hardwood trade. All of the veneer and hardwood plants are running steadily. All report the outlook for winter and spring trade is exceptionally good.

### CINCINNATI

There is more spirit displayed in the hardwood market at this time than has been noticeable at any time within the past two years. Every hardwood concern in Cincinnati is doing business, while some of the leading concerns are very busy. Many are now predicting a runaway market by the opening of the new year. There is a strong tone to the market for oak and prices are steadily advancing. There is an advance of from \$3 to \$5 predicted by the first of January. One local concern declares that orders for January and later delivery at current rates will be turned down.

New building operations have fallen off to some extent, but this is only natural at this season of the year. There still remains a large volume of buildings in process of erection to be completed and prospects are good for building operations next year. An improvement is noted in collections.

### TOLEDO

Hardwood prices show no signs of weakening. While the call from builders is expected to drop off somewhat, it will be more than counter-

balanced by the increased demand from the factory end of the business. Prices have advanced recently on maple flooring, which is scarce and hard to get. The better grades of poplar are in good demand, with limited supplies in sight. Oak is still taking the lead, both plain and quarter-sawn finding an anxious market. There is no question but what factories are increasing their operations very ma-

An experienced sawmill man with some money to take an interest in hardwood mill on a good basis, and operate same. Address "BOX 45," care HARDWOOD RECORD.

# A GIFT

## TO HARDWOOD RECORD SUBSCRIBERS

Lightest, smallest, most accurate gauge ever produced. Made of best quality steel, heavily nickeled.

Can be conveniently carried either in the hand or pocket of the Inspector. As it weighs less than a half ounce it makes an attractive watch fob.

### PRICE 50 CENTS

One of these gauges given with every New Subscriber to HARDWOOD RECORD, when accompanied by remittance of \$2.00. Old subscribers can secure one by remitting \$2.00, thus extending their subscription one year.

terially, and each succeeding month is bringing a stronger demand from this field. Local stocks are in normal condition at present, and will go into the winter with few surplus stocks or shortages, if any. While dealers have bought conservatively, they have not ordered sparingly, and broken ends are well filled in. The box business is a trifle more brisk, resulting in a better market for all kinds of box materials. Basswood, used largely in this connection, is scarce, with high prices. On the whole, the business conditions and prospects are satisfactory and an air of optimism pervades the local market.

### EVANSVILLE

Local manufacturers and dealers express satisfaction with the volume of business done the

### OAK FLOORING

An artistic volume by Henry H. Gibson, editor Hardwood Record; 40 pages, in colors, on heavy India tint paper; tells all that's worth knowing about Oak Flooring, its hygienic qualities and low cost; as well as the proper finishing and care of oak floors.

Profusely illustrated, an ornament to any office or library table; contains no advertisements, and constitutes an authoritative text-book on this important subject. Of special interest to architects, builders, house-owners and women. Price 50 cents. A limited number have been purchased by leading oak flooring manufacturers who authorize distribution FREE (until supply is exhausted). Copy will be sent on receipt of 10 cents in 2c stamps to cover cost of packing and mailing. Address quick:

Book Dept., HARDWOOD RECORD, 355 Dearborn St., Chicago.

past month and say prospects are very bright for a banner year in 1910. Some of the dealers are making arrangements for increased supply and all the local mills are running full time and several on an eleven-hour schedule. There has been trouble in some quarters in getting cars to take care of the increase in shipping, as the movement of grain and other products from this section has been heavy. Some of the local railroads refuse to allow their cars to be loaded for points beyond their rails, which is a hardship on the lumbermen.

Quartered oak is still in quick demand, and an improvement has been noticed in all hardwoods in the past fortnight. Walnut is not very active in this market. Poplar is improving, especially in one's and two's. Plain oak has not advanced much in price, but demand is somewhat improved.

### MEMPHIS

While there is complaint now and then that there is not as good a business as was expected at this time and that there is not a steady or even run of orders, the majority of the trade reports a better volume of business under way and conditions gradually getting more wholesome. Yarding interests appear to be in the market on a pretty liberal scale, but there is still a tendency among consumers to buy only for more pressing requirements. However, the fact remains that there have been such large shipments of lumber during the past few weeks that the supply of high-grade stock in most lines has been reduced, with the result that holders are inclined to ask stiffer prices. There is a good demand for all grades of plain and quartered oak with the exception of No. 2 common and prices are very firm. There is also some further improvement in demand for ash, and cypress is also going at a very satisfactory rate at the moment. The higher grades of gum and cottonwood are selling fairly well and notable improvement has taken place in the lower grades as a result of the betterment in box circles. There is plenty of low-grade stock, however, and prices are not showing any very pronounced improvement so far. The export situation is showing some signs of improving, there being a noticeable increase in the number of inquiries for oak and for some other hardwoods. Thin stock is selling pretty well abroad and there is a large amount of inch stock also moving to Europe at the present time.

A new development in the market is the increase in the number of inquiries for lumber for shipment after January 1. Manufacturers and wholesalers, however, are unwilling to enter into extensive engagements of this character. The prevailing view is that lumber will advance further and members of the trade here do not care to sell lumber ahead and have to make deliveries at lower prices than could be obtained on the same lumber after January 1. It is also pointed out that it is impossible to tell what the winter may bring forth in the way of logging conditions, and that those who enter into forward deliveries may have considerable difficulty in securing the necessary stock when the time comes for delivery of the lumber.

### NASHVILLE

Steady improvement is noted in the condition of the local hardwood market, about the only discouraging feature being the car shortage, which is declared to be getting worse all the while. A number of the railroads have recently placed large orders for lumber, which is taken not only as an evidence of good times but shows the effort on the part of the roads to try to remedy the car shortage situation as much as possible by building cars.

Hardwood prices are holding up right along, there being no slackness or letting down any-

where along the line. Plain and quartered oak, both red and white, are reported scarce, as is also wide poplar. These varieties, as usual, are bringing top prices. All the lower grades of lumber are reported to be moving. Ash, chestnut and gum are in fair demand. Hickory shows improvement. The cypress market is strong, as this kind of wood is very popular now for shingles, as well as other uses. Renewed activity is found among the boxmakers. There is plenty of birch and maple on hand, but these two varieties are not slow at that.

### CHATTANOOGA

Market conditions show some signs of improvement. High-grade stock is going without any trouble, while the lower grades are lagging a little, but inquiries for this stock have increased. Logs are plentiful and of a good quality, in fact far above the average. Millmen are saying that they will have no trouble in getting stock enough to run regular and some of them are running overtime. The demand for first and second plain white oak, good chestnut and wide poplar is far above the average. It is generally conceded that a car shortage in the near future is imminent.

### BRISTOL

The lumbermen here are now harassed by the probability of a car famine at an early date, if the increase in the shipment of lumber, growing out of improved conditions in the lumber trade, continue. The market is said to be in good condition by the Bristol lumbermen, while the mails are flooded with inquiries. Altogether the tone to business is entirely satisfactory and the almost unanimous prediction of the hardwood trade here is that 1910 will be a most prosperous year for the lumberman.

### LOUISVILLE

The hardwood market is considerably improved, the volume of business pretty nearly touching the high-water mark of 1907. In respect to the movement of lumber there is no complaint, and prices have stiffened perceptibly in several lines. High-grade poplar is getting scarce, and prices have already advanced on it. Plain oak is also moving well and is strengthening in price. Quartered oak is in demand as usual, and the lower grades are picking up somewhat. Nearly every item on the list is under call right now, as practically every branch of trade is buying in the old-time volume. Instead of having to go out on the road and dig up orders, the hardwood manufacturers and dealers are sitting in their offices now figuring on how to take care of the business. A car shortage, more evident at the mill points than here, is causing some uneasiness, but as yet it has not proved difficult to cope with. The mahogany market is in good condition and it is selling well, and veneers are also showing strength. The general situation is better than it has been in two years.

### ASHLAND

Prices remain firm, some grades being a little higher than two weeks ago. During the last ten days a large number of buyers visited this section and found a scarcity of dry stock, especially poplar panel stock and other high grades. The demand for No. 1 and No. 2 common oak is greatly increased in dry stock the last few weeks, there being considerable more activity in the furniture and flooring factories. More and larger orders are received for car material and construction oak. Railroads are placing contracts for switch ties for 1910 and every line of the lumber business is much better and greatly improved. Especially is poplar in great demand

### Trustee's Sale of MODERN VENEERED DOOR AND WOODWORKING PLANT of PENNSBORO LUMBER CO., Bankrupt

On August 14, 1909, at 1 o'clock P. M., will be offered for sale at public auction, on the premises of the Pennsboro Lumber Co., at Pennsboro, Ritchie County, West Virginia, all the real estate of the concern, including the plant thereon, as well as the personal property belonging thereto.

The sale will include the land on which the plant is located; the factory buildings, with machinery, fixtures, and all appurtenances; the lumber on the premises, the office furniture, supplies and fixtures, as well as divers other personal property, all in first-class condition. The property will be sold as a whole, or in small lots, to the highest bidder.

For further particulars address,

**THOS. J. DAVIS, Trustee**  
Pennsboro Lumber Co., Bankrupt  
**PENNSBORO WEST VIRGINIA**

and our manufacturers who make a specialty of this stock are receiving more inquiries and could book more orders than the stock they have on hand, at greatly advanced price. The lower grades of poplar are moving more readily at prices better. The manufacturers of this locality are much encouraged over the prospects and are optimistic over the outlook for 1910.

### ST. LOUIS

The hardwood conditions are not as good as they were a couple of weeks ago. While the difference is not great, yet it is noticeable. Shipments have held up fairly well considering the scarcity of cars. The delay in getting shipments from small mills with poor shipping facilities is more noticeable than the shipments from the larger producing points. Every dealer is complaining in regard to the slow movement of cars. The fine weather in the South, coupled with the high price of cotton, has caused a rush in cotton shipments and that has caused the trouble to sawmills desiring cars for hauling their products. The demand is mostly for the better grades of woods. There is also a special call for No. 1 common plain oak and quartered red oak, although cypress and wide poplar stock in selects and better are also in demand. White oak has fallen off in demand somewhat. The cause for this is probably because of the influence of prohibition, the latter having affected the cypress trade until recently. There is also an active demand for first and second grade red gum. The lower grade stock has also improved.

### NEW ORLEANS

Little change has manifested itself in the situation here during the last fortnight. Though the hardwood mills of this section continue operations, they are cutting mostly for an interior demand. European buyers are inactive and exports are light. The dealers do not look for any marked change in the situation for some time.

### MILWAUKEE

While the Milwaukee hardwood business is still very satisfactory, it is not as active as it had been for the past two months. The bulk of the orders for the building season have been placed and it is expected that conditions will now remain normal. The sash and door plants are now picking up stocks to meet only present requirements and are not preparing heavily for future business. The furniture plants are placing satisfactory orders in the better class of hardwoods. The box factories are meeting with a better business and consequently they are ordering fairly well. The lower grade stocks are in better demand than they have been for some time. The railroads are not buying extensively, except for repair purposes. Hardwood men are confident that while business will not be phenomenal from now on, yet the winter trade will be decidedly better than it was a year ago. General industry and business in Milwaukee is on a much sounder footing than it was a year ago and this is naturally reflecting favorably upon the lumber business.

The lower prices in yellow pine and hemlock have to a certain extent tended to lower hardwood figures. In general, however, the market has been holding its own. Oak is still in the lead. Basswood, poplar, ash and elm are in good demand. Maple has fallen off in demand.

### MINNEAPOLIS

Continued strength in the upper grades of all hardwoods handled in this market and advancing values in the lower grades of most woods about sizes in the market at this point. Birch shows the latest comparative strength

in the upper grades. The supply of birch has come the nearest to being adequate and as a result it went to the lowest comparative price when everything went off two years ago, and its recovery has been the slowest for the same reason. It is now gaining, however, and wholesalers predict it will reach \$40 for firsts and seconds before spring. The lower grades are not gaining as rapidly. Uppers in basswood are bringing good prices and there is a fairly good demand, but the lower grades are not as high comparatively, though they are strengthening. White and red oak continue staple and strong in price. They are not plentiful, and wholesalers are not urging customers to buy at present prices. Ash is good property, especially in the two higher grades. Odd work in the sash and door factories continues to call for finished grades.

### SAGINAW VALLEY

Every manufacturer and dealer is optimistic. Trade has improved steadily; there is a demand for every foot of lumber fit to ship, with the possible exception of beech, and a large quantity of the latter is going into the cooperage and basket business and there is evidence of an increased demand and better prices. Maple is higher and very active, with a prospective shortage in stock. Birch has also steadily advanced and the market for that commodity is strong. Basswood and ash are in short supply and are strong. All manufacturers report a short stock of unsold dry lumber, which is something unusual at this season in the year, and it presages a strong market during the winter. Thus far the railroads have been able to take reasonably good care of shippers, but there are apprehensions of a car shortage during the winter.

### CADILLAC

The condition of the lumber market in Cadillac today is practically the best that has been reported for two years. All of the mills are running full time with the exception of Williams Brothers Company, which has shut down for repairs and will start up again about December 1.

Hardwoods are moving fairly well and many inquiries are received. The hemlock market has not been as good in a long time. Flooring is not moving as freely as a month ago, but with the comparative low stocks of this commodity the conditions are good.

### DETROIT

The present feature of the hardwood market in Detroit and vicinity is a weakness in the price of basswood. One dealer is quoting prices showing a drop of \$3. Activity is shown in cypress lumber and the demand for oak and poplar still continues, with satisfactory prices prevailing. Great activity is still shown in the flooring trade, continuing the strong demand for maple. General market conditions are excellent.

### GRAND RAPIDS

The price of quartered oak has advanced somewhat. Plain oak is also firmer, with dealers trying to get more, though they have not generally been successful. There is a little falling off in the demand for Michigan hardwoods as the first of the year, or inventory time, approaches, and fewer large contracts are being closed. High-grade maple, firsts and seconds birch and No. 1 basswood are holding up stiff, while lower grades are easier. Some offers of No. 3 crating stock basswood at low prices are reported.

For about half million feet 4/4 soft Yellow Poplar, 20 to 32" or wider, to average not less than 26 to 27". Must be strictly firsts and seconds and panel with nothing picked out. Delivery required from time to time during the next six months. Will pay spot cash.

Also might be willing to purchase several million feet of log run out of big logs. What have you to offer?

AMERICAN LBR. & MFG. CO., Pittsburg, Pa.

## BUSINESS OPPORTUNITIES

### FOR SALE.

Large tract of hardwood timber, principally cottonwood, considerable oak, ash and gum, with 35,000 circular mill. Plenty of good houses, office building, tram road and cars, mules, loading dock and switch. Everything complete and in first-class condition for manufacturing. Mill logged by river and teams. Now running. In Oklahoma. Address "BOX 5," care HARDWOOD RECORD.

### FOR SALE.

Circular sawmill complete, new outfit; also teams and wagons; a going proposition. Will require \$2,000 cash. Will contract output and take balance on time.

J. T. MORGAN LUMBER CO., Paducah, Ky.

### CLOSE TO THE STUMP.

A woodworking plant at the junction of the "Soo" and Great Northern railways is offered for sale, or rent on easy terms, owing to the desire of the owner to retire.

The plant covers an entire block; main building 40x160 feet outside of engine room; finishing and packing rooms 36x80 feet and 40x80 feet; new 80-horsepower boiler and engine; dry kilns and office.

Plenty of hardwood timber supply at a low price.

A live furniture or woodworking man can secure a bargain and a splendid money-making business.

For full particulars address L. J. BROWN, Alexandria, Minn.

### WANTED.

A responsible party with a band sawmill to log and manufacture the timber on two sections of land lying 1 1/2 miles from Y. & M. V. R. R. in Washington Co., Miss. Oak and Gum proposition. We have option on timber and will turn timber over to mill man at cost price and buy all the lumber on grades. Address "BOX 43," care HARDWOOD RECORD.

## LOGGING EQUIPMENT FOR SALE

### FOR SALE

One No. 6 McGiffert Log Loader and Skidder in first-class repair; immediate southern delivery. Bargain price.

Address "BOX 9," care HARDWOOD RECORD.

## DIMENSION STOCK WANTED

### WANTED—DIMENSION STOCK.

We are in the market for several carloads of oak and hickory dimension stock.

ESTABROOK-SKEELE LUMBER CO., Fisher Bldg., Chicago, Ill.

## RAILWAY EQUIPMENT FOR SALE

### LOCOMOTIVES FOR SALE.

Narrow or standard gauge from 7 tons to 70 tons; over 165 locomotives of various types at our shops.

SOUTHERN IRON & EQUIPMENT CO., Atlanta, Ga.

## MISCELLANEOUS

### GRAPHOPHONE EQUIPMENT FOR SALE

Three Columbia graphophones practically unused, of modern type, in perfect order, including shaver with electric motor attachment. These machines for commercial dictation will effect an economy of about forty per cent in time.

The entire equipment will be sold at a bargain. Address "H. H. G.," care HARDWOOD RECORD.

# PERSONAL LETTERS

*Mr. Business Man  
Good Times  
Personal U.S.A.*

## The Writerpress

Makes it possible to send out from 8,000 to 10,000 **Personal Letters** daily. Not printed forms, but actual typewritten letters bearing the name of the recipient and having all the earmarks of a letter pounded out on the typewriter.

Multiply your best selling arguments by the number of names on your mailing list and the result is largely increased business.

By a new method possible only with the **WRITERPRESS**, names and addresses can be filled in on the **Writerpress** at the same time the body of the letter is made, doing away with the typewriter in making form typewritten letters.

## The Direct Inking Carriage

converts the **Writerpress** into a complete printing plant, enabling the business man to print his own office forms, quotations, price lists, filing cards, cost prices, advertising copy, etc.

Send for descriptive booklet and sample of work.

## The Writerpress Co.

410 **Writerpress Bldg.**, Buffalo, N.Y.

## Corrugated Joint Fasteners

Can be quickly and cheaply driven with

### "ADVANCE" CORRUGATED JOINT FASTENER MACHINE

Made in Different  
Types to Meet  
All Conditions

Specially suitable for manufacturers of sash, doors, blinds, screens, coffins, furniture, plumbers' wood-work, porch columns, boxes, refrigerators, etc.

Write for bulletins and prices.

Manufactured only by

**Saranac Machine Co., St. Joseph, Michigan**

## BURN YOUR REFUSE UNDER YOUR BOILERS.

utilizing the heat to run your mill.

This enables you to dispose of it without expense, and permits you to

### SELL YOUR WOOD,

for which there is a large and rapidly-growing demand, at good prices.

### THE GORDON HOLLOW BLAST GRATE

gives as good results with wet, green or frozen sawdust as a draft grate gives with dry wood.—Equally efficient with wet or green slabs.—Generates from 25 to 50% more steam than an ordinary grate.—Gives you perfect control over your fire.—Makes you independent of the weather.—Saves labor in firing.—Lasts a lifetime.—Adapted for either ordinary furnaces or Dutch ovens, and for any number of boilers.

It often

PAYS FOR ITSELF IN ONE WEEK'S TIME.

**GORDON HOLLOW BLAST GRATE CO., GREENVILLE, MICHIGAN.**  
(Please mention this publication.)

# American 12in. and 30in. Scrapers

Are you after results? That is what counts in the end, and the best results yield the most profit. That is what you want.

American 30in. Scraper.

12in. Scraper—Rear View.

The Best Results, the most profit. Write us and we will tell you how and why. Do It Now.

Portland, Ore.: First and Pine Streets

New Orleans: Canal-La. Bank Building  
Seattle: 401 White Building  
Spokane: Paulsen Building  
San Francisco: 58 Fremont Street

## WHO BUYS HARDWOODS?

### Do You Want the List?

The Hardwood Record supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of consumers of those materials throughout the United States and Canada.

Specifically, the items of the bulletins recite:

Name of state and town  
Name of concern  
Name of buyer  
Line manufactured

Kinds, grades and thicknesses of Lumber  
Kinds and sizes of dimension stock  
Kinds and thicknesses of veneers  
Kinds, thicknesses and sizes of panels.

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber **not** used are removed, and the cards are filed in alphabetical order between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete roster of the hardwood requirements of all users. and is an invaluable adjunct to the sales department of every manufacturer and jobber.

This service is free to all advertisers, save the patent index cards which show at a glance the kinds of lumber used by each concern, and which are sold at \$3.50 a thousand, the state guide cards costing 75 cts. a set.

Write us about this service.

## HARDWOOD RECORD

355 Dearborn Street

CHICAGO

## HANCHETT VENEER KNIFE GRINDER

Furnished in different sizes for knives of any length.

Cut shows Grinder for 100-inch veneer knives, with independent motor drive for emery wheel. Weight, 5,000 lbs.

**List Price, \$700.00**

Furnished either with or without the motor drive for emery wheel, or all motor driven, as preferred.

Knives are held stationary and perfectly rigid, adjustable to any angle. Automatic feed for emery wheel carriage, to feed the emery wheel up to the knives at any speed. Smooth running, durable. Gives perfect finish to the knives.

**Hanchett Swage Works, Big Rapids, Mich.**

SEND FOR CATALOGUE No. 20—JUST OUT

# A Modern Self-Feed Rip Saw

(No. 336-A SELF-FEED RIP SAW)

The cut annexed is a rear side view of our No. 336-A Self-Feed Rip Saw which will drive a 24 inch Saw—The feeds are both front and rear, and the table, which is counterbalanced, adjusts up and down to regulate the depth of cut. The machine is strongly driven and may be belted from almost any direction.

A suitable countershaft may be furnished.

A smaller machine built on the same general plan.

Also more than 150 other Wood Working Machines.

Address for Circulars

## RESULTS

in steam skidding depend largely on keeping the machine busy **at skidding** and in getting the logs up to track at the **nearest** spot.

Frequent moves from one point to another are accomplished quickly by the

### CLYDE SELF-PROPELLING STEAM SKIDDER

and require no more time than walking down the track.

The steam guying-drums enable a set to be made while the tongs are being taken out to the first log.

These important features are exclusive in the **Clyde Skidder** and are what determine the **average results** for the month, the year or any other period.

A half million may be skidded with our machine in a single day, with large logs, in thick timber, close to track but the **correct test** of the long haul as well as the short haul.

any machine is the **average** in all kinds of timber, scattered growth and from the **final results** that the **CLYDE SKIDDER** outclasses them all. Let's send our testimonial booklet giving such results from scores of customers.

floor space 3½ x 6 ft.

### JOINTING AND SETTING UP VENEER BY HAND IS A USELESS WASTE OF MONEY

Our patented machines will set it up at the rate of 1,500 to 2,000 lineal feet of jointing per hour, and do it far better than can possibly be done by hand.

**Our Continuous Feed Veneer Jointer**, which edges and joints in one operation, has three or four times this capacity.

If interested in doing this work at a minimum of cost, write for full particulars.

**THE VENEER MACHINERY COMPANY, 602 Austin Ave. Chicago, Ills.**

Floor Space, 3½ x 15 feet

## New Hoosier Improved Short Log Sawing Machine

Made especially for sawing veneer cores and small logs, up to 20 inches diameter and from 2 to 12 feet long.

The machine is built with a heavy cast iron husk frame that carries the feed works and mandrel which runs in self-oiling boxes. It is equipped with a variable friction feed, with cable attachment to carriage. Feed is strong and rapid.

The dogs are of an entirely new style, and dog the log, or piece to be sawed, in the end instead of top and bottom, and can be instantly changed to grip any length log that the carriage will accommodate.

The machine consists of but three pieces, the husk frame, track frame and carriage. It can be quickly and easily moved, and can be operated with a 10 H.P. engine. The machine will saw from 3,000 to 6,000 feet per day and weighs 3,500 lbs.

The largest saw that can be used is a 48-in. diameter.

For further information, address:

**THE SINKER-DAVIS COMPANY, Indianapolis, Indiana**

## Broom Handle Machinery

Let us tell you about our STEEL TUMBLERS FOR DRYING AND POLISHING BROOM HANDLES. This system is rapidly supplanting all others. More economical; less time required for drying; no polishing afterwards; greater per cent of straight handles turned out.

BUYERS OF  
ALL KINDS OF

HARDWOOD LUMBER

# Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock THAT IS IN SHAPE TO GLUE.

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawed Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. THE GLUE WE USE IS GUARANTEED HIDE STOCK.

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed THE BEST.

Factory and Veneer Mill: ALGOMA, WIS. Veneer and Saw Mill: BIRCHWOOD, WIS. Home Office: ALGOMA, WIS.

## A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

*Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.*

## RED BOOK

Published Semi-annually  
in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

## MICHIGAN HARDWOODS

Manufactured by

### Mitchell Brothers Co.

Cadillac, Michigan

Our assortment of dry stock is now more complete than it will be later in the season.

A car shortage this fall is predicted by railroad authorities and some symptoms of it are already noticeable.

Better anticipate your requirements while stock and cars are available and send us your orders now for

## CADILLAC QUALITY

## SUPERIOR ELM

Our Soft Gray Elm is better than ordinary Soft Elm. It has less shake, is not as hard and is much less liable to warp.

It makes excellent interior finish and is especially desirable for furniture, refrigerators, pews, chairs, tables, etc., and forms a good base for veneers.

# ATKINS SILVER STEEL SAWS

"FINEST ON EARTH"

The most profitable Saw in the world. There is scarcely a commissary in the United States but what sells them. They are in nearly all large lumber camps exclusively. The most satisfactory Cross-cut Saws, because they are made of finest material and constructed on most scientific principles. They run easier, cut faster and hold their edge longer than any other Saw. We are the originators of all the popular styles of teeth on the market.

## DO YOU BUY THEM?

If not, now is the time to begin. Ask your Jobber or Dealer for an Atkins Silver Steel Saw and be sure the name, "E. C. Atkins & Co." is on the blade. It is not a genuine Atkins Saw unless our name is plainly etched upon the center of the blade. If you have any difficulty in getting an Atkins Silver Steel Saw, please write to the nearest address given below.

### Coming Association Meetings

#### NORTHWESTERN HARDWOOD LUMBERMEN'S ASSOCIATION.

The annual meeting of the Northwestern Hardwood Lumbermen's Association will be held at St. Paul, Minn., December 7.

J. F. HAYDEN,  
Secretary.

A. H. BARNARD,  
President.

#### NATIONAL VENEER & PANEL MANUFACTURERS' ASSOCIATION.

The annual meeting of this organization will be held at the Auditorium Hotel, Chicago, December 14 and 15.

E. H. DEFEBKAUGH,  
Secretary.

BURDIS ANDERSON,  
President.

#### INDIANA HARDWOOD LUMBERMEN'S ASSOCIATION.

The next annual meeting of this association will be held at Indianapolis, on Thursday, January, 13, 1910.

C. H. KRAMER,  
Secretary.

JOHN M. PRITCHARD,  
President.

#### HARDWOOD MANUFACTURERS' ASSOCIATION OF THE UNITED STATES.

The eighth annual meeting of this association will be held at the Sinton Hotel, Cincinnati, on Tuesday, Wednesday and Thursday, February, 1, 2 and 3, 1910.

LEWIS DOSTER,  
Secretary.

R. M. CARRIER,  
President.

### General Market Conditions

There are no particular changes in hardwood conditions from the report made in the last issue of the RECORD. In the middle West the market is very strong and business is above normal. On the Pacific coast trade is fair, but substitution of foreign woods is cutting into the old-time lumber shipments from the Mississippi Valley and from Michigan and Wisconsin.

There is a manifest improvement in hardwood conditions in eastern trade centers, but still business there is not nearly so strong as it is further west. It is a well established fact that recovery from a period of trade depression is much slower in the chief Atlantic coast cities than in the middle West. At the present time there is every prospect that business in the East will fairly approximate that further west not later than the first of the year.

Trade is by no means bad in the consuming sections of New York, Pennsylvania, Maryland and New England, and it is improving daily, but buying and consumption there are not as strong as they logically should be.

The short items of stock the country over are in oak, poplar, birch and maple, which are having advancing values. All other hardwoods are in fair request at satisfactory prices.

### Annual Hardwood Manufacturers' Association

The date of the eighth annual meeting of the Hardwood Manufacturers' Association of the United States has been definitely fixed for Tuesday, Wednesday and Thursday, February 1, 2 and 3 next, at the Sinton Hotel, Cincinnati, Ohio. It had previously been planned to hold the meeting on January 18, 19 and 20, but on thoroughly canvassing the situation, it was concluded that the February dates would be much better, as the time first selected conflicted with several important meetings in which various members of the association would be interested.

It is planned to make this forthcoming meeting the greatest one ever held in hardwood annals. There will be brought together at this time the leading hardwood manufacturers of the United States, leaders in hardwood lumber merchandising, and a large concourse of wholesale consumers from the furniture, automobile body, coffin and casket, wagon, interior finish, flooring and kindred trades. It is thought likely that the banquet feature usually concomitant with association meetings will be dispensed with. There is so much business to come before the association that it was found that two days would not be ample time to handle it, therefore a three days' session is authorized.

Details of the entertainment features of the meeting have not yet been definitely decided upon. However, on the second evening, February 2, an elaborate series of stereopticon pictures will be shown, illustrating different types of timber growth, and full and various details of logging and lumber operations through Allegheny and Appalachian mountains; pictures of mountaineer types, moonshiners, feudists, etc., which will be supplemented with an elaborate set of moving pictures showing every phase of the woods and river operations of the Yellow Poplar Lumber Company of Coal Grove, O. These moving pictures will include the turning loose of the Yellow Poplar Lumber Company's new 360-foot concrete splash dam on Russell Fork, the main stem of the Big Sandy River in Dickinson

County, Va., and the splashing out of more than 40,000,000 feet of big poplar sticks through the "Brakes" of the Big Sandy. This entertainment will be followed by a luncheon and smoker, and will be held in the big banquet hall of the Sinton Hotel. This entertainment should prove of vast interest not only to every manufacturer of hardwood lumber but also to every dealer and user of this material. From present indications the attendance at this meeting will be a record breaker.

### Attitude of Wholesale Consumers on Hardwood Inspection Rules

HARDWOOD RECORD is in receipt of a communication from M. Wulpi, commissioner of the Central Bureau of Table Manufacturers, Chicago, enclosing the report of the committee of his organization appointed to handle the subject of hardwood lumber inspection.

The report recites that, owing to many changes made from time to time in the rules for inspecting hardwoods, it makes the purchasing and inspection of lumber one of the perplexing questions which the consuming manufacturer has to face. The two sets of inspection rules, one by the National Hardwood Lumber Association and the other by the Hardwood Manufacturers' Association of the United States, gives added perplexity to inspection matters.

It is the opinion of the committee that these associations are not guiding their policies of inspection on as broad-gauged a plan as would be best to the mutual interest of manufacturers and wholesale consumers.

The report alleges that the rules are made up for the manufacturer of logs into lumber, and are planned to advance only the interest of hardwood manufacturers and that the consuming manufacturers are not considered.

The report further alleges that orders for lumber are usually given out with the understanding that the National rules apply on shipments from the North and that Hardwood Manufacturers' rules apply on shipments from the South. Owing to the fact that the rules of the associations are so severe on low grade lumber, the larger part of the consuming manufacturers, in making contracts, stipulate the grading, thus removing the inspection of the purchase from the application of either set of rules. This committee further states that the consumer receives no benefit from the two association rules, and that it believes that there should be a uniform set of inspection rules made which should govern hardwood lumber in all markets. It insists that the two associations should jointly adopt one set of inspection rules, which should be just to both the producer and the buyer, and urges a federal law regulating one set of hardwood inspection rules.

Furthermore, the report states that on the higher grades of lumber the rules seem to work fairly well; that the most marked defect in the grading of lumber is No. 2 common; that much of this grade should go into No. 3 common or culls. It states that the present systems are good for settling disputes, but that manufacturers of lumber have much the advantage over the consumers in No. 2 common and better, and the committee recommend the entire elimination of this log run grade, as it does not mean any definite quality.

Summing up, the committee believes in one set of rules applicable everywhere, and that the rules should be made permanent.

A report like the above, coming from a leading group of

hardwood consumers, is worthy the consideration of leaders in hardwood association and grading matters. The view taken by this organization is of necessity *ex parte*, and it does not take into consideration many basic facts. The first point to be considered in inspection rules is that grades be not made by manufacturers for their own advantage, but for the accommodation of buyers. The hardwood manufacturer would prefer to sell his lumber mill run, if by that means he could secure a reasonable profit on his straight output. When he makes grades, he attempts to so assort the various qualities of lumber that they will suit the specific requirements of remanufacture for sundry uses. All the manufacturer insists upon in the making of grades is that they shall reasonably accommodate the quality of his output of logs, and what the remanufacturer can logically demand are grades that will reasonably lend themselves to his specific requirements. There is no way of legislating values into grades. Whatever quality the grade represents the price value will follow. Remanufacturers have no right to arbitrarily say that too much "No. 3 or culls" is placed in the grade of "No. 2 common." The name does not mean anything. If they want a higher grade of No. 2 common, they can get it, but they will be obliged to pay a higher price.

The RECORD believes that the wholesale consumer does receive vast benefit from the present comparative uniformity of hardwood grading established by the two leading associations. Again, it fully agrees with the table manufacturers that one set of inspection rules should be collated and employed as a union set of rules for the guidance of both associations.

The Hardwood Manufacturers' Association invites the co-operation of every organization of remanufacturers of hardwood in the making of hardwood inspection rules, and it is up to these buyers to join hands with hardwood manufacturers in the framing of rules that shall be jointly satisfactory and just to all elements of the trade. Without a doubt a movement of this sort would be concurred in by the National Hardwood Lumber Association, but in the event that it was not, the whole-

sale consuming element would have recourse by buying its lumber entirely under rules in which they have had a hand in the making.

### A SALESMAN'S CREED

I believe in the goods I am selling, in the firm I am working for, and in my ability to get "results." I believe that honest goods can be sold to honest men by honest methods. I believe in working, not waiting, in laughing, not weeping, in boosting, not knocking, and in the pleasure of selling goods. I believe that a man gets what he goes after, that one order today is worth two orders tomorrow, and that no man is down-and-out until he has lost faith in himself. I believe in today and the work I am doing, in tomorrow and the work I hope to do and in the sure reward which the future holds. I believe in courtesy, in kindness, in generosity, in good cheer, in friendship and honest competition. I believe there *is* an order somewhere for every man ready to take one. I believe I'm ready—right now.

—Edwin Osgood Grover.

### The Nation's Lumber Output for 1908

In this issue is published an elaborate statistical report showing the lumber output of the United States by states during the year 1908, based on reports of the government. Special details are printed covering especially the hardwood output. Washington, Louisiana, Mississippi, Arkansas and Wisconsin, in the order named, constitute the five big states in miscellaneous lumber production. Texas, Michigan, Oregon, Minnesota and Pennsylvania come after the first five states, and the others follow in decreased quantities down to Utah, the lowest on the list, with Nevada and North Dakota, having little timbered area, not rated at all.

While the valuation of the production of lumber, lath and shingles produced in 1908 reached a total of \$541,545,640, this amount represents a decrease of twenty-three per cent under the previous year's output. The average value of lumber at the points of manufacture was \$15.37 a thousand feet.

Oak lumber manufacture now centers in West Virginia, Kentucky and Tennessee.

## A Code of Ethics

Although published in the last issue of *HARDWOOD RECORD* it is doubtful if sufficient emphasis was placed upon Section 5 of Article 1 of the constitution of the Cincinnati Lumbermen's Club, which was unanimously adopted at its meeting on November 2. This clause is as follows:

The president shall, on receiving a request from any responsible firm, corporation or individual, appoint a special commission with power to act (composed of five members of the club), three to be chosen by the president and one each by each of the principals to the transaction, for the purpose of investigating the complaints of buyers or sellers, foreign or domestic, in this market, against any member of this club, or nonmember, of unfair or unmercantile conduct, with the exception of matters of inspection of hardwood lumber, which shall be submitted to and finally decided by a regularly licensed inspector of some recognized inspection bureau.

It shall be the duty of this commission to investigate such charge or charges, and it shall be empowered to call on club members or the principals to a dispute for information and evidence, and shall render a finding to the executive board of the club; said finding to be transmitted in writing to said principals, and a copy to be retained by the club.

It shall be expressly understood that in submitting a case for arbitration to said special commission that both the principals agree to accept the decision of the special commission as final and binding.

Any member refusing to abide by the decision of the special commission, or who declines to submit his case to said special commission, shall be subject to expulsion from the club by a unanimous vote of the executive board.

Any principal to a dispute, not a member of the club, who refuses to abide by the decision of the special commission, shall forfeit all right to again call on the Lumbermen's club for arbitration.

This section virtually establishes a basis of fair dealing and insures a square deal between every member of the Cincinnati Lumbermen's Club (which includes practically the totality of the Cincinnati hardwood manufacturing and jobbing trade) and the people from whom they buy and to whom they sell. It is a logical step toward the legitimate evolution of the hardwood trade, and the *RECORD* wishes to particularly commend Cincinnati lumbermen for taking the initiative in this important move. It is certain that Section five of the constitution of the Cincinnati Lumbermen's Club will go down in lumber history as one of the most important movements ever forwarded by a lumber organization.

## Imports and Exports of Forest Products

The monthly summary of commerce and finance covering imports and exports for September, 1909, shows that wood and manufactures thereof to a total of \$5,537,169 was imported during September this year, as against a total of \$3,940,122 for the same month in the previous year.

The exports of domestic merchandise for the month of September, 1909, reached a total of \$5,876,450, while the figures for the same month of 1908 were \$5,044,676 on exports of this class. Of exports of foreign merchandise the total for September, 1909, was \$130,635, as against \$140,078 for September, 1908.

It is gratifying to note that there was a substantial increase in this year's figures over those of last year, except in the last item, which, however, is really quite an unimportant phase of the business, compared with the other two.

## The Lumber Situation on the Coast

The fir manufacturers of the Pacific Coast feel assured that the good business that has marked the past two months will be continued throughout the fall in the local and rail shipping fields, while cargo shippers are encouraged with a decided increase in coastwise and foreign demand with corresponding advance in price. The prosperity of the coast is practically a corollary of the prosperity in the hardwood field, and it is pleas-

ing to note that the market situation on the Pacific is fully meeting expectations.

In hardwoods business is picking up right along on the coast, although competition is said to be keener than ever. There is not very much building going on in San Francisco, but there is a healthy growth in all manufacturing and commercial fields, and the general prosperity is naturally reflected in the hardwood business, and lumbermen are sanguine of the outlook for a continued and increasing business.

## Forestry in Germany

The German Empire has nearly 35,000,000 acres of forests, of which 31.9 per cent belongs to the state. German forestry on scientific lines has resulted in raising the average yield of wood per acre from twenty cubic feet in 1830 to sixty-five cubic feet in 1904. During the same period it has trebled the proportion of the saw timber secured from the average cut. In fifty-four years it increased the money returns from an average acre of forest sevenfold, yet today the forests are in better condition than ever before.

The experience of Germany in conserving and perpetuating its forests should be an object lesson to this country, which has dire need of immediate and effective reforestry measures.

## More Good Morals

In days gone by the embodiment of integrity in a member of a community or an organization was the nice old gentleman wearing gold-rimmed glasses, a slick stovepipe hat, spotless linen and nicely blacked shoes, and having a reputation for punctuality both in his business and social life.

This paragon of integrity was a clean man, physically and morally.

What applies to an individual can well apply to an industry, and undeniably at the present time there is a trend towards better business morals in all lines of trade. There is a trend towards cleanliness.

You can not always say what you think, but you can always think what you say.

In times gone by in the hardwood industry there were markets that were generally held in disrepute. Shippers would say, "That town is made up of a set of burglars." A community got this reputation through transactions that were pulled off by the unregenerate that threw a stench in the air that reached the sky, and the strange thing about these transactions was that they were never productive of permanent benefit to the men who indulged in them. In all the history of the lumber trade there was never a man who achieved a fortune by robbing his customer or his country correspondent. This fact adds to the glory of the old golden rule of doing business and has the added compensation of pleasant recollections that surround the good name of every man who has had a life-long reputation of doing business strictly on the level.

Several Pittsburg lumbermen have made an analysis of the policies that have accrued in that market during the last two years and have found that, almost without exception, the element that has gone to the wall has been addicted to the old and threadbare practice of raising tallies on their shipments.

It has therefore come about, without any united effort on the part of Pittsburg dealers, that several "up-and-up" lumbermen of that city are now asking their shippers to endorse on original bills of lading the number of feet contained in the car. This endorsement reads, "This car contains — feet." It is found that the railroads are willing to accept bills of lading thus endorsed and to place the question of any shortage between the original shipper and the consignee.

It is a mighty good feature of trade morals and forms a suggestion that it might be well for other intermediaries in the lumber trade to adopt.

## A Tribute to a Friend

James Elliott Defebaugh was my friend for nearly a quarter of a century.

For years we have been "Jim" and "Henry" to each other, and as I write, the thought that I shall never hear his voice again strikes upon my heart with inexpressible grief.

Memories of our business and personal association come crowding thick and fast, but it is when we feel most deeply that words come haltingly.

In 1886, Mr. Defebaugh, then proprietor of *The Timberman*, went to Toledo, where I was engaged in the lumber business, and solicited my cooperation as a writer on lumber topics for the publication he had recently started. Our relations immediately broadened into intimate friendship and a close business alliance, and when *The Timberman* was consolidated with the *Northwestern Lumberman*, I continued on the staff of the "new" paper, which is now known as the *American Lumberman*. Although in 1905 I severed my connection with the *American Lumberman*, my friendly personal relations with Mr. Defebaugh have known no diminution until now that Death's inexorable mandate has cut them off.

James Elliott Defebaugh was a self-made man in the best acceptance of the term. He was born at Williamsburg, Pa., in 1854, of Dutch ancestry. He was educated at the common schools, but when twelve years old his ambition for work impelled him to obtain a position in a printing office. In three years he was working "at the case" in the office of the *Pittsburg Gazette*. In 1876 he was assistant cashier of the *Philadelphia Times*. During the Centennial celebration of that year he became acquainted with the Rev. J. B. McClure, who, the following year, induced him to move to Chicago, where he took great interest in the Young Men's Christian Association, and also connected himself with a number of eastern trade papers as their Chicago representative. While thus engaged, he substituted for the secretary of the Lumbermen's Exchange of Chicago, and in this way came in touch with the lumber business. This interest resulted in the establishment of *The Timberman*, a modest, sixteen-page, weekly publication. On January 1, 1899, *The Timberman* was consolidated with the *Northwestern Lumberman*, W. B. Judson, proprietor of the latter paper, assuming the business management, and Mr. Defebaugh caring for the editorial end. In 1906 Mr. Judson sold his interest to Mr. Defebaugh and retired from active business.

As a trade journal publisher, James E. Defebaugh has been an almost unparalleled success. Perhaps the reason for this may be found in the estimate given of him the other day by a business acquaintance and friend: "His was the most intensely commercial mind I ever have known, and when you combine this kind of a brain with the highest ideals of honor and business integrity, success is certain."

A man's character is largely fashioned by his philosophy of life.

With James Elliott Defebaugh, life was serious from the beginning, and from the time he was twelve years old to the day of his death he met toil gladly and constantly. He discharged his duties always with honesty, fidelity and ability. He was a clean man in language, in thought, in personal habits, and in action. He was careful of his influence, and any young man would profit well by following his example.

Mr. Defebaugh was in many ways a lonely man, but to those who knew him best, he was most affable, and particularly interested in their business success. He was a man of indomitable will and in no way did he illustrate this better than in the last year of his life. Although he was satisfied that he was suffering from an incurable disease, he spent all of his time last spring at Washington, battling for what he considered the best interests of the great lumber trade, whose cause he had espoused—to the tariff issue he gave his time and his wonderful energy, without thought of what it might mean to him physically. Even after he was stretched upon his last bed of pain, he fought death with this same courage. At last, when he knew that defeat was inevitable, he did not even then allow those dearest to him to suspect that he had given up hope; as he said recently to an acquaintance, "I know I am going to die, but I haven't told my wife nor my brother. You see, I can bear it better than they." This was indicative of the strength of his character. He bore his burdens single-handed and unassisted; he relied on himself. Mentally he was the embodiment of self-reliance and strength. He never would acknowledge defeat.

Looking about me for such another stern, unyielding, and still gentle soul, I experience a sense of bewilderment. The air resounds with paltry declarations of righteousness and friendship, but the world is poorer today for the loss of a man of inflexible integrity, and I for the loss of a friend, in the death of James E. Defebaugh.

JAMES E. DEFEBAGH,  
1854-1909

"Just a word ere you go, old friend,  
Just a word ere the oarsmen bend  
And your boat speeds out on the unknown sea,  
Whose further shore is eternity.

"The night is closing, our eyes are wet,  
But see! There's time for a signal yet—  
Quick! Ere thy bark has left the sand,  
Give us a wave of your cheery hand,  
And hark to our answer, swinging back,  
Far o'er the waters, cold and black,  
Straight to the foot of the great white throne,  
Where the Master waits to claim His own.

"Christ! Be good to him to the end,  
For he was a friend—a friend—a friend."

—HENRY H. GIBSON.

## Pert, Pertinent and Impertinent

### The Little Star

Twinkle, twinkle, little star, how I wonder what you are! Are there people living there, countless leagues from anywhere? Have they sorrow or distress in your shining wilderness? Or is bitter human woe only found on earth below? Twinkle, twinkle, little star! I will bet a good cigar that if men are living there they are pawing at the air, saying taxes are too high, and they miss their share of pie; they are chasing round in swarms clamoring for new

reforms that will place them in a row where the blooming plum trees grow. On your distant golden shores there are doubtless hosts of bores, who explain, from sun to sun, how the country should be run; who are sounding warning notes while they skirmish round for votes. There are other bores with packs of fool figures on their backs, proving that the time is near when there'll be a bankrupt sphere. Twinkle, twinkle, little star! Keep on twinkling where you are! Twinkle till the voters say that you're throwing light away!

WALT MASON.

### Down and Out

To be "resigned to fate," is true.

We'd feel less hesitation.

Were fate not almost certain to

Accept the resignation.

If you would stand well with a woman give her your seat in a crowded car.

Every time a man gets elected mayor of a village he thinks he's in line for a four years' residence in the White House.

What becomes of the 2 cents a woman saves when she buys a dollar article for 98 cents?

## The Hardwood Boy's Thanksgiving

The Boy: "Gee! I haven't eaten this much before in several years."

Subsequent events frequently demonstrate that the bride was the best man at the wedding.

A girl may be angry at a man for trying to kiss her, but just the same she admires his good taste.

Occasionally a man bumps into something that is too good to be true—and the shock wakes him up.

The trouble with the average young man is that he doesn't think seriously of marriage until after he faces the parson.

A strong-minded woman misses a lot of good things because she doesn't understand the art of crying effectively for what she wants.

He's a poor dentist who is unable to get to the root of the matter.

A man can't be as wise all of the time as a woman is some of the time.

When a man falls in love he quits laughing at other victims of the disease.

If a mountain refuses to come to some men they put up a bluff of their own.

The only noticeable thing about some men is that they are unworthy of notice.

Some women just can't help referring to a dollar boat excursion as a yachting party.

There are too many men in this world who are not content with wasting their own time.

### Mutilated Maxims

Loaf and grow fat.  
Taste not want not.  
Let sleeping debts lie.  
Beggars can't be boozers.  
Money makes the mayor go.  
"Still" whisky runs cheap.  
Lend me little lend me long.  
Fine feathers make fine beds.

A horse untied waits for no man.  
Every crowd has a silver lining.  
None but the bald repine for hair.  
Absence makes the heart to wander.  
Charity covers a multitude of skins.  
Discussion is the better part of valor.  
We never know who we can do till we try.  
Whoever's worth doing is worth doing well.  
Never put off till tomorrow the man you can do today.

—EXCHANGE.

### Wherein They Differ

Her—"When a man starts to talk he never stops to think."

His—"And when a woman starts she never thinks to stop."

The average man is a willing worker—when he meets another man who is willing to be worked.

About the only thing that would shock some people is the electric chair.

## Builders of Lumber History

NUMBER LXXXVI

Henry C. Yeiser

(See Portrait Supplement.)

Cincinnati stands high among the hardwood markets of the country. This enviable position is due in great part to the large number of strong, progressive and resourceful men connected with the hardwood industry of the city.

A recent addition to the trade of Cincinnati was Henry C. Yeiser, organizer and president of the New River Lumber Company and president of the Globe-Wernicke Company, another of Cincinnati's notable business concerns. The latter institution ranks among the largest of the office furniture houses in the world, the hardwoods used being both varied and of great quantity. It was because of this fact that Mr. Yeiser promoted the New River Lumber Company in order to facilitate and economize in the hardwood supplies for the furniture concern. The lumber auxiliary furnishes to the Globe-Wernicke Company forty per cent of the hardwood used and the rest of its product is sold on the open market.

The New River Lumber Company has office headquarters in the Union Trust building. It has mills at New River and Norma, Tenn. Its hardwood timber holdings comprise approximately 60,000 acres lying in Scott, Campbell and Anderson counties, Tennessee. The timber includes poplar, oak, chestnut, maple, hickory and a little pine, all of exceptionally fine quality.

The Norma mill is in charge of F. G. Norcross, and the New River mill of H. E. Fuller. W. H. Hopkins, treasurer of the company, has charge of the Cincinnati office, the general supervision of the affairs

of the company being in the hands of the president, Mr. Yeiser.

There are several advantageous features connected with the mills. The logs are skidded to the line of the Tennessee railway which runs through the center of the properties. There is a branch line of twenty-three miles connecting with the main line of the Queen & Crescent railway, affording excellent shipping facilities. The Norma mill, which is quite new, has the most modern equipment and convenient arrangement, having three complete band mills, one of which is kept almost continually on quarter-sawing. The plant has electrical power and an unfailing water supply. In the logging two steam loaders and geared engines are employed. The company carries 12,000,000 feet of lumber on its yards, which are most conveniently arranged for handling and shipping.

The company has erected one hundred houses at Norma for the use of its employes and contemplates other improvements in order that its plant may have every working facility.

Mr. Yeiser's plan is a new departure for concerns covering the office equipment field. In fact, it is the only instance where a lumber plant is owned outright. But the consumption of hardwood by the Globe-Wernicke Company is so great that a plant of its own was imperative.

Mr. Yeiser is just the type of man to meet and overcome difficult situations, and he is not the sort to hesitate to take the initiative. From the time (only a few years ago) that he took charge of the Globe-Wernicke Company until now, there have

been many additions to the three factories, each a correlative unit in the whole. He thus placed the business right at the top. His New River Lumber Company is simply a continuation of the same policy, an exemplification of a scheme inaugurated at the beginning. He directs both institutions, the lumber company being given a position that will insure its permanency in the trade.

Mr. Yeiser is a man of strong personality, devoted to his business. He is easily approached, a good listener, and expresses his views in a clear, concise and convincing manner. He is a master of detail, the most minute factor of his vast manufacturing enterprises being as familiar to him as to the workman in whose charge the various departments may be. A firm believer in system, every phase of his business is thoroughly systematized and operated from the main office. Mr. Yeiser advocates the adoption of every effective labor-saving device, which will facilitate the work of his employes in any way.

This man, a comparatively new comer, is now a valued and prominent member of Cincinnati's hardwood trade. He is past fifty-six years of age and evidently those years have been well spent. Mr. Yeiser is personally a very modest man and does not seek the limelight. However, he does take pride in the fact that the two companies which he controls and which have a combined capital of over \$6,000,000, give employment to 2,000 persons and are of a class seldom exceeded in American industrial life.

Mr. Yeiser is closely identified with Cincinnati's commercial interests, and is a member of the leading business organizations. One of his hobbies is gunning and the stories of the number of targets he has hit prove him a mighty good shot.

## Semi-Annual Southern Cypress Manufacturers' Association.

One of the best attended meetings in the history of the Southern Cypress Manufacturers' Association was held at New Orleans on November 17. The association adopted a resolution standardizing odd lengths; appointed a committee to take up with traffic officials the matter of speedier handling of overcharge and other claims; adopted the report of its committee pertaining to cutover lands to the effect that it would be preferable to retain cutover lands for agricultural purposes rather than to attempt reforestation. The meeting adopted grading rules covering ear siding, roofing and lining, and dispatched considerable routine business.

Twenty-eight mills were represented at this semi-annual meeting, and the Chalmette Cypress Company of Arabi P. O., and the Wardville Lumber Company of Wardville, La., were elected to membership.

Secretary George E. Watson's report, which was accepted and put on the records, is as follows:

It is usual for the secretary of an association such as this to report at each meeting what has been accomplished since his last report. I intend departing from this custom for the reason that our members already have been informed, by bulletin and circular letter, of the workings of our organization. If they have read what we have sent them they know what we have done.

The important things to consider now are those which are impending. In other words, those problems which the manufacturer of lumber must face in the near future should be discussed; there should be a full realization of their importance and plans should be made to properly meet them when they develop. We are prone to look into the future only with regard to supply, demand and prices, but we should go further, for we are now confronted with conditions of a character such as we have never been called upon to meet. We are placed in an anomalous position which we should combat and we, as lumbermen, are oftener misquoted, misjudged and

misunderstood than any other set of business men on top of the earth.

I hold that this is mostly our fault. Secure in the knowledge of our own honesty of purpose, we have smiled at the things said of us and have made no effort to correct erroneous statements or to set the public right where it has been wrong. We should have learned a lesson from the lumber trust investigation and from the tariff fight, but I am afraid we have not. It is as true today as it was two years ago that if we are called a trust we smile at the other fellow's ignorance and say nothing to enlighten him.

In his own opinion the average citizen understands the lumber business as well as do those who have spent their lives at it, and the mere fact that you have bought trees and the land upon which they grow does not prevent him from forcing his ideas upon the public as to how and when these trees shall be cut, and the public implicitly believe him. Is not it our fault if we sit still and let the public receive its education from those who know nothing of the subject? Should we not add ourselves to the faculty and do some of the teaching?

HENRY C. YEISER  
CINCINNATI, OHIO

THE GREATEST PROBLEM

This leads up to the greatest problem of the day for lumber manufacturers, which is the keeping of timber conservation out of politics. I am afraid it is almost too late to accomplish this, for it is already the subject of much political speculation in the various capitals. As with the lumber trust bugaboo, we have moved too late. We are too apt to smile at mere theories and to do nothing until they have developed into such deep-rooted conditions that it is almost impossible to overcome them. Thus it was with the trust theory, which has cost the lumbermen millions of dollars and which was directly responsible for the tariff fight and the partial elimination of the tariff on lumber.

Gentlemen, it is an absolute certainty that this state (and others, for that matter) is preparing to pass laws looking to the conservation of timber. In the guise of protecting all natural resources, timber alone will be legislated against, for the reason that other varieties of conservation might not be popular with the voting public. It is not my intention to argue for or against conservation. Properly handled it would mean, as Captain White suggested in New Orleans a few weeks ago, sufficiently high prices for uppers to cause a heavier consumption of lower grades and thus permit the profitable sawing of top and other inferior logs. He also suggested in St. Louis last week that this impending legislation should make it a misdemeanor, punishable by fine, for a lumber manufacturer to sell lumber for less than it would cost to grow the trees and saw them into lumber.

The idea alone that there are bound to be conservation laws introduced in the various state legislatures in the very near future is not the particular cause for worry. It is the fact that these laws will be written, introduced and perhaps passed by politicians seeking to popularize themselves and who know not the least rudiments of the lumber business, that should cause us to sit up and take notice. The public will be with the politicians in this movement, for the public, while it concedes that the farmer owns his land and the crop upon it, has been educated into the belief that it has more rights than have you in the timber upon which you are paying taxes. Therefore it is of supreme importance that these impending laws be watched, that they be absolutely defeated, unless they are alike in all lumber producing states, and that the lumbermen take a greater interest in such political moves, for they are strong if they act together. I am informed that three bills looking toward timber conservation are already prepared and will be brought up at the next session of the Louisiana legislature.

CONSERVATION OF CYPRESS

It is difficult to conceive just where cypress enters into this conservation movement. It does not grow on hills, where the soil is subject to erosion, nor is it responsible for the water supply at the head waters of streams. It does grow in the richest soil to be found on this little earth of ours, and some of the most productive farms to be found anywhere were once cypress swamps. The cypress people believe that true conservation should be practiced at the other end of the line and that that wood should be used which will not decay and soon require replacing, which means, of course, the greater use of cypress. Joking aside, we are between two millstones. There is the movement to prevent the depletion of the forests and there is the movement to drain all swamp lands. A certain tract of cypress which is known to some of you was drained a number of years ago, with the result that a large number of trees are dead or dying. The September storm of this year blew down 20,000,000 feet of this weakened timber and yet you, according to popular demand, must submit to laws which will prevent the cutting of your timber and laws which will drain your swamps.

It is no secret how politicians handle such things, nor is it strange that we should be fearful of the results of legislation designed by them. They want us to conserve, and yet what did they do to timber taxes this year? To ease the burden of the poor Louisiana farmer who was afflicted with boll weevil troubles, ten millions of dollars were lifted from the farmers' taxes and practically all of it was saddled upon the timber owner. This is the kind of medicine you have to take.

Another of the important problems of the day is the present militant attitude of the lumber retailer. During the last two years the manufacturer has been in the depths and has been making little, if any, profit out of his business. On the other hand, the retailer has prospered, has learned to assert his authority over the manufacturer needing orders and has become more aggressive in insisting that all business be transacted according to methods dictated by him. He tells the manufacturer there are certain customers whose business is thoroughly worth while whom he shall not sell, but that he shall cleave only unto the retailer. He is also preparing to dictate to the manufacturer the business methods he shall follow in dealing with these customers. He is willing to let the manufacturer have. He is making every preparation to insert, after his midwinter convention, terms of sale of his own making in the orders he will thereafter give. If for economic reasons the manufacturer sees fit to make changes in the lengths of a certain few items, he uses it for campaign purposes, stuffs the ballot box and makes it appear that all items are to be so changed. His arguments lead one to think that only 12 and 16 foot lengths are purchased by the retailer, as only they can be used without waste.

I do not intend to be harsh in this criticism of the retailer, but it is a condition you have met and unless there is a change the manufacturer will have other problems to reckon with.

These subjects are too deep to be handled in such a short report as this, but they are of such importance that they should receive your earnest consideration.

Treasurer Dodge's report showed a good balance in the treasury and he expressed the belief that the revenues were ample to meet current expenses.

Acting Chairman Westmoreland of the Tupelo Committee, submitted several changes in the grading of that wood which were adopted. Mr. Westmoreland also presented the following report as chairman of the Terms of Sale Committee, which was also adopted:

As the Chicago meeting of the American Lumber Trades Congress abolished the terms of sale which were in effect in all lumber organizations participating in that congress, it was necessary for this association to immediately put in effect terms of sale of its own and I, therefore, as chairman of the Committee on Terms of Sale, called a meeting to convene in New Orleans June 25. There were also present at this meeting the members of the Committee on Grades, the Committee on Form of Price List and the delegation attending the Chicago convention of the American Lumber Trades Congress. As all committees of this association have been given power to act, subject to the later ratification of the association itself, our committee adopted terms of sale which were ordered printed on slips to be attached to invoices, acceptances, etc., as follows:

NOTICE

For protection, against loss in transit, we request that you make a record of the box car door seal numbers and initials. If shipment has been transferred from original car and there is damaged stock, or a shortage, demand that the railway agent verify your statement. Should he

refuse, advise us immediately. No claim will be considered if not mailed with expense bill within five days after arrival of car. Should there be a shortage, the loss occurred in transit and we must have your affidavit.

TERMS OF SALE

The consignee shall pay freight, balance net cash, sixty days from date of invoice. Discount (a premium offered for prompt remittance) will be allowed on the amount remitted only, as follows: Two per cent within fifteen days or one per cent within thirty days from date of invoice.

These terms of sale were ordered placed in the Price Current by the Committee on Form of Price List and in the grading rules by the Committee on Grades and Specifications.

The meeting held was a joint session for the reason that the matters to be taken up overlapped from one committee to another. The joint session ordered that rubber stamps be prepared and sent to all members, these stamps to be used on acceptances, invoices, quotations and in any correspondence bearing upon the sale of lumber. The wording of this stamp is as follows:

"Our lumber is sold on the grading rules and terms of sale of the Southern Cypress Manufacturers' Association and subject to the 'Code of Ethics' of the American Lumber Trades Congress, and all quotations are made and orders accepted thereon. Claims on account of grade or measurement will be adjusted on report of inspector of above association, party in error to pay cost of inspection. A variation of more than 5 per cent in measurement or grade of the item complained of shall constitute an error."

A New Hardwood Mill in Alabama

A thoroughly modern plant for the manufacture of hardwood lumber has recently been completed by the Poplar Lumber Company at Tar Springs, Danville postoffice, Alabama. The mill, which will turn out a general line of southern hardwoods, is equipped with modern machinery throughout, as is also the stove mill. The company has a body of timber comprising high-grade poplar, forked leaf oak, hickory, beech, etc., which will be manufactured into lumber, and the concern will also cut dimension stock and oak staves and heading.

The president of the new company, Mr. Potter, and the secretary-treasurer, Mr. Hitt, are both men of wide experience in lumber manufacture, and success is sure to crown their efforts.

Death of Prominent Indiana Lumberman

As the result of a very sad accident Elliott G. Shulze, secretary and general manager of the Hoffman Brothers Lumber Company of Fort Wayne, Ind., was recently killed. While riding a wheel in his home city Mr. Shulze collided with another cyclist going in the opposite direction, and was hurled to the ground, sustaining serious injuries from which he died two hours after the accident. The direct cause of his death was hemorrhage of the brain. The other cyclist was only slightly bruised. Mr. Shulze was prominent socially and in church circles as well as a general favorite with business associates. He was 44 years of age and left a wife and four children.

Mr. Shulze entered the employ of the Hoffman Brothers Lumber Company when a very young man, and by steady application and hard work won promotion after promotion until he rose to the position of secretary and general manager of the concern. He had been connected with the company for thirty years. The operations of the company were closed down immediately upon receipt of the news of Mr. Shulze's death and remained closed until after the funeral services.

# The Country's Production of Lumber in 1908

The statistics of the lumber cut in 1908 are based upon the operations of 31,231 active sawmills situated in the various lumber-producing regions of the United States. The bulk of these reports were made by the manufacturers directly to the Bureau of the Census and the Forest Service. As in previous years, however, the data for New York were furnished entirely by the forest, fish, and game commission of that state. Assistance in securing reports from delinquent members was rendered by the secretaries of several associations of lumber manufacturers. In addition, many delinquent reports were secured through state foresters, through members of the Forest Service who were especially detailed to collect such information for the Eastern states, and from forest officers in the Western states. The result is that these statistics probably represent the most complete census of lumber production ever made in the United States. Although it is probable that a number of small mills in out-of-the-way localities were not reached, it is believed that the total reported production closely approximates the actual output.

In addition to bringing out the fact that the canvass in 1908 was more complete than that for the preceding year, the figures disclose in a most striking manner the adverse conditions obtaining in the lumber industry during that year. The percentage

of mills reported as idle throughout the year was more than twice as large as the corresponding percentage for 1907. This fact and also the fact that a large number of mills reported as active in 1908 were idle during a part of the year account for the falling off in the reported lumber production.

As a result of the business depression, the quantity of lumber produced in 1908 was less than that for any year since 1900, and the average value per thousand feet of the cut at the mill was less than in any year since 1904.

The average value per thousand feet at the mill for all the lumber produced was \$11.13 in 1900, \$12.76 in 1904, \$16.54 in 1906, \$16.56 in 1907, and \$15.37 in 1908. The decrease in average value per thousand feet in 1908 was general, only a few kinds of lumber showing even small increases over 1907.

While there was an increase of 2,381, or 8.3 per cent, in the number of mills engaged in the production of lumber, there was a decrease of 7,031,785,000 feet, or 17.5 per cent, in the total quantity of the output. In the case of most of the states, reports were secured from a greater number of active mills for 1908 than for 1907, while, on the other hand, the cut in 1908 was generally less than in 1907.

Yellow pine had been far in the lead as a lumber producer for more than a decade

previous to 1908, and in that year its cut amounted to 33.8 per cent of the total cut from all species. Douglas fir ranked second both in 1908 and 1907. White pine ranked third in both years. Though still maintaining their relative rank, oak and hemlock fell off 947,249,000 feet and 842,173,000 feet, respectively, or about 25 per cent each.

The softwoods supplied 76.9 per cent and the hardwoods 23.1 per cent of the total production in 1908. The softwood cut was less in 1908 than in 1907 by 17.6 per cent, while that of the hardwoods was less by 17 per cent.

## Oak

Many different species of oak are cut for lumber, and it is impracticable to give the statistics separately for each. Among the kinds most used are white, red, chestnut, chinquapin, bur, and Spanish oaks.

The production of oak lumber has fallen off heavily in the last ten years. In 1908 it was less by 947,249,000 feet, or 25.5 per cent, than the cut of 1907. The oaks are very widely distributed, and no one state leads decisively in the production of oak lumber. Kentucky and West Virginia reported practically the same quantity in 1908. Tennessee ranked third and Arkansas fourth, with Pennsylvania and Ohio following in the order named. No other state produced as much as 200,000,000 feet.

Among the principal oak lumber pro-

ducing states the decreases from 1907 to 1908 were as follows: Kentucky, 138,863,000 feet, or 30.4 per cent; West Virginia, 148,899,000 feet, or 31.9 per cent; Tennessee, 57,836,000 feet, or 16.2 per cent; Arkansas, 86,431,000 feet, or 28.3 per cent; Pennsylvania, 109,229,000 feet, or 34.6 per cent; and Ohio, 70,305,000 feet, or 25.9 per cent.

The cut in 1908 was but little more than three-fifths as much as in 1900, and it is probable that the total cut of oak lumber will never again be as great as it was in that year.

The supply of oak in the northern states has been largely cut out, and now the southern states are being heavily drawn upon. In 1900 Indiana ranked first in oak production, with 649,794,000 feet, or nearly four times as much as in 1908, and in the same year Ohio was second, with 596,618,000 feet, or nearly three times as much as in 1908.

### Maple

While the total production of maple lumber was less in 1908 than in 1907 by only 64,090,000 feet, or 6.8 per cent, a decrease of 23.5 per cent in the average cut per mill is shown.

Michigan was the principal state producing maple lumber in 1908, in which year it supplied more than 46 per cent of the total. New York had a slightly larger cut of maple in 1908 than in 1907, and ranked second in the latter year, having displaced Pennsylvania and Wisconsin, the

states that ranked second and third, respectively, in the previous year. Only relatively small quantities of maple lumber were produced in the other 30 states from which it was reported.

### Cypress

Apparently cypress suffered less from the unfavorable market conditions obtaining during 1908 than almost any other leading kind of lumber. It is a very useful wood, and while the demand for it is increasing, the supply of stumpage is not large.

Louisiana again in 1908 was preeminently the cypress-producing state, furnishing almost two-thirds of the total cut of lumber of this kind. In this state the production of 1908 was less than that of 1907 by only 20,995,000 feet, or 4.1 per cent. While the quantities of cypress lumber cut in the other states were relatively small, their combined output was larger in 1908 than in 1907.

### Yellow Poplar

The trade name "yellow poplar" is used to designate the tree which is known to botanists as "tulip-tree" or "tulip poplar" (*Liriodendron tulipifera*). It has no reference to the true poplars of the genus *Populus*, of which the cottonwoods and aspens are prominent representatives.

A production of yellow poplar lumber was reported in 20 states in 1908, and the average cut per mill was about 98,800 feet. The total cut was 24.2 per cent less than in 1907. In 1908, for the first time, West

Virginia led in the production of yellow poplar lumber, the cut in that state being slightly more than one-fifth of the total cut of this lumber. This was practically the same proportion as that for 1907. Although in 1907 the cut in Kentucky was greater than that in West Virginia, it decreased 86,840,000 feet by 1908, with the result that the state dropped from first place in the former year to third place in the latter year. Tennessee advanced from third place in the former year to second place in the latter year, though with a decrease in output of approximately 17,000,000 feet. Virginia supplied one-tenth of the total cut, and taken together the 4 states of West Virginia, Tennessee, Kentucky, and Virginia furnished two-thirds of the total quantity of yellow poplar lumber produced in 1908. Yellow poplar is one of our most valuable woods, and it usually commands a relatively high price. The average values per thousand feet of yellow poplar lumber for the principal states reporting it in 1908 ranged from \$18.65 in North Carolina to \$30.40 in Ohio. The maximum production from this species was passed several years ago, and its average value per thousand feet has advanced rapidly during the past few years, the rate of increase between 1900 and 1908 being 80.3 per cent.

### Red Gum

Red gum is one of the woods which has become prominent in recent years. Notwithstanding the fact that the cut in 1908

REPORTING AND QUANTITY AND VALUE OF EACH WOOD BY STATES.

was 14.5 per cent less than that in 1907, it was yet more than double the output of 1900.

The average production of red gum lumber per mill in 1908 was 107,900 feet. Red gum is widely distributed throughout the Central and Southern states, but Arkansas has been the largest producer of red gum lumber since statistics concerning the production of this species have been collected. The cut in that state in 1908 formed 32.5 per cent of the total output, although this was a decrease of 47,603,000 feet, or 19.9 per cent, from the cut of 1907. The cut in Mississippi was practically the same in the two years, while that of Missouri fell off nearly 12,000,000 feet. The decrease in Tennessee was approximately 9,500,000 feet, and that in Kentucky about 8,000,000 feet. These five states supplied more than four-fifths of the total amount of red gum lumber cut in 1908. In 1908 the average values of red gum lumber in the principal producing states ranged from \$11.52 per thousand feet in North Carolina to \$15.36 in Indiana.

#### Chestnut

Chestnut is a wood which has only in recent years become prominent as a source of lumber. It is widely distributed throughout the East and South.

The total cut in 1908 was more than two and one-half times the cut in 1900, although it was less by 113,898,000 feet, or 17.4 per cent, than the production of 1907. For several years Pennsylvania has ranked first as a producer of chestnut lumber, its proportion of the total cut in 1908 being 18.9 per cent. The output, however, was a decrease of more than 25,000,000 feet from the cut in 1907. West Virginia ranked second in 1908, as in 1907, though with a decrease of 28,900,000 feet, or 24.5 per cent, in the later year. The output of chestnut lumber in Connecticut in 1908 was 2,711,000 feet more than in 1907, giving this state third place instead of Tennessee, which held it in the previous year. The decrease in the output in Tennessee was nearly 15,000,000 feet in 1908 as compared with 1907. Taken together, these four states furnished nearly three-fifths of the total production in 1908.

In 1908 the average value per thousand feet of chestnut lumber in the principal states producing it ranged from \$14.39 in Maryland to \$25.88 in New Jersey.

#### Beech

Only within recent years have relatively complete data upon the cut of beech lumber been available. The reported production in 1908 was less than that in the preceding year, the decrease being approximately 20,000,000 feet, or 4.6 per cent.

Michigan is the leading state in the production of beech lumber, and the cut in 1908, though less by 3,460,000 feet than the cut in 1907, was more than one-fifth of the total output. Indiana ranked second, with more than 17 per cent of the total cut, and

Pennsylvania third, with nearly 15 per cent. New York cut nearly 5,000,000 feet more beech lumber in 1908 than in 1907. Taken together, these four states supplied practically two-thirds of the total production.

#### Birch

The total cut of birch lumber in 1908 was practically the same as that in 1907, and nearly three times the output in 1900.

Wisconsin has led for a number of years in the production of birch lumber, though the increasing percentages supplied by other states have reduced this lead somewhat in recent years. This state supplied 45.5 per cent of the total cut in 1900, and 38 per cent of the total in 1908. Other important states in the production of birch lumber are Maine, Michigan, and New York. These three states, together with Wisconsin, furnished more than three-quarters of the total production in 1908. In that year the average values of birch lumber in the principal states producing it ranged from \$13.80 per thousand feet in Minnesota to \$22 in New York.

#### Basswood

Basswood, like birch, while of comparatively wide occurrence, is manufactured into lumber on a relatively large scale in only a few states.

Wisconsin has a strong lead in the production of basswood lumber, furnishing 34.5 per cent of the total cut in 1908. The cut in this state was, however, 37,574,000 feet less in that year than in the preceding year, and in Michigan it was approximately 11,000,000 feet less, while in New York the output was slightly greater in 1908 than in 1907. These three states cut more than five-eighths of the total quantity produced in the later year.

In 1908 the average values of basswood lumber in the principal states ranged from \$15.99 per thousand feet in North Carolina to \$24.18 in Indiana. The production of basswood has been fluctuating within rather narrow limits for the past eight years.

#### Elm

Although the reported cut of 1908 is greater than that of 1907, the maximum production of elm lumber was passed several years ago.

The reported production was approximately 13,000,000 feet more in 1908 than in 1907, the increase being 5.1 per cent. As in the previous year, Wisconsin was the leading state in the manufacture of elm lumber, the output in that state being approximately 6,000,000 feet more in 1908 than in 1907. The cut in Michigan was nearly 15,000,000 feet greater in 1908 than in 1907, and this state was second in rank in the later year; on the other hand, the output in Indiana fell off over 12,000,000 feet and the state dropped from second place to fifth place in 1908. Ohio and New York cut approximately equal quantities in the two years. Seven-tenths of the total

quantity of elm lumber produced in 1908 was supplied by these five states. In the principal states producing elm lumber the average values per thousand feet in 1908 ranged from \$10.65 in Oklahoma to \$24 in New York.

#### Cottonwood

The cottonwoods are among the most widely distributed species of wood, and yet the bulk of the lumber manufactured from them comes from the central and southern states. There are also included under this heading relatively small quantities of lumber cut from the aspens or other species of the genus *Populus* which grow in the northern and New England states, where they are known locally as "poplar" or "popple," and also small quantities from the balsam poplar or balm of Gilead in Minnesota.

Mills in 39 states manufactured cottonwood lumber in 1908, but the output in that year was less by 60,686,000 feet, or 20.7 per cent, than in 1907. Mississippi and Arkansas each supplied more than one-fifth of the output in 1908, and Louisiana about one-eighth. Over one-half of the total production was reported by these three states.

#### Ash

Ash is widely distributed throughout the eastern half of the United States, and no state or group of states distinctly leads in its production.

The output of the 37 states reporting for 1908 was a decrease of nearly 27,000,000 feet, or 10.6 per cent, from the cut in 1907. Michigan and Arkansas each furnished 9.4 per cent of the total, and Ohio and Indiana almost as much; slightly more than 8 per cent was cut in Wisconsin, and nearly 7 per cent each in Tennessee and New York. Other states of considerable importance as sources of ash lumber were Mississippi, Missouri, Kentucky, Louisiana, Pennsylvania, West Virginia, and South Carolina.

While there has been no decided change in the total cut of ash for the past eight years, the quantity supplied by some states has changed greatly. The total cut in 1900 was 269,120,000 feet, or 43,753,000 feet more than the cut in 1908. Of this production in 1900, however, Michigan supplied 85,753,000 feet, or more than four times as much as was cut in that state in 1908.

#### Hickory

In 1908, mills in 34 states reported a cut of hickory lumber that was approximately 6,000,000 feet less than in 1907, a negligible decrease, considering general conditions.

About one-half of the total quantity of hickory lumber reported was manufactured in Arkansas, Tennessee, Indiana, and Kentucky.

#### Tupelo

This term is chiefly used to designate the wood of the tree known to botanists as *Nyssa sylvatica*, and often locally called "bay poplar." This wood is associated with cypress and is cut principally by the manufacturers of cypress lumber. Included

under tupelo is also some lumber cut from other species of the genus *Nyssa* and known locally as pepperidge, black gum, white gum, etc.

Over 45 per cent of the total quantity of tupelo lumber produced was manufactured in Louisiana, about one-sixth in North Carolina, and the bulk of the remainder in Alabama, Missouri, Mississippi, and Virginia.

### Walnut

Walnut is widely distributed throughout the eastern half of the United States, and the 1908 production of lumber from this wood, including a small cut of butternut, was reported from 29 states.

More than one-half of the total cut of 1908 was reported from the three states of Indiana, Ohio, and Missouri, considerable quantities also being produced in Illinois, Kentucky, and Tennessee. While walnut timber is not abundant enough to make pos-

### Cherry

Cherry is a rare wood, and but few logs of it come to any one mill in the course of ordinary hardwood lumber manufacturing. Nearly one-quarter of the total cut was produced in West Virginia. Pennsylvania ranked second, while other states of some importance in the manufacture of cherry lumber were Indiana, New York, Ohio, and Michigan.

The reported production of cherry lumber in 1907 was 9,087,000 feet, valued at \$308,824, or \$33.99 per thousand feet.

### Minor Species

Data as to the quantity and value of the lumber manufactured are shown for 15 other species, the cut of any one of which was not sufficient to warrant a separate showing. Among these species are included two imported woods, mahogany and Spanish cedar, the former of which makes up more

### Leading States and Species

In the accompanying tabular statement are shown the states which in 1908 led in the production of lumber from the 30 species of timber, statistics of the cut from each of which are presented in the tables immediately preceding:

State.	Kind or kinds of wood in the cut of which the state ranked first.
Arkansas	Red gum and hickory.
California	Western pine, redwood, white fir and sugar pine.
Indiana	Walnut and sycamore.
Kentucky	Oak.
Louisiana	Yellow pine, cypress and tupelo.
Maine	Spruce and balsam fir.
Michigan	Maple, beech and ash.
Minnesota	White pine and tamarack.
Mississippi	Cottonwood.
Montana	Larch.
Pennsylvania	Chestnut.
Washington	Douglas fir and cedar.
West Virginia	Yellow poplar and cherry.
Wisconsin	Hemlock, birch, basswood & elm.

In 1908, 14 states reported a production of more than one billion feet of lumber each, and in the following tabular statement these are shown in the order of output, together with the principal species reported from each, and the percentage that this species constituted of the state's total cut:

State.	Principal kind of wood.	Per cent specified kind of wood forms of total cut of state.
Washington	Douglas fir	79.1
Louisiana	Yellow pine	77.8
Mississippi	Yellow pine	78.7
Arkansas	Yellow pine	65.5
Wisconsin	Hemlock	36.5
Texas	Yellow pine	98.1
Michigan	Hemlock	33.5
Oregon	Douglas fir	79.2
Minnesota	White pine	83.4
Pennsylvania	Hemlock	46.7
Virginia	Yellow pine	60.3
Alabama	Yellow pine	92.1
North Carolina	Yellow pine	71.6
West Virginia	Oak	29.0

### French Method of Making Alcohol From Sawdust

Replying to a Chicago inquiry asking for information concerning the manufacture of alcohol from sawdust in France, the quantity of such material available, and the prospect of a sale in that country of a newly invented American process for that purpose, Consul-General Frank H. Mason, of Paris, reports as follows:

"Very little timber or lumber is sawed in or near the forests of France, so that the supply of material for such a process would be limited and expensive. Apparently the only establishment for the manufacture of alcohol from sawdust is at St. Marcel, in the Department of Ardeche, in the south of France, not far from the Mediterranean. It is a new, up-to-date concern and employs a highly improved process of an inventor of Aix la Chapelle, which consists in exposing sawdust to sulphurous acid gas, whereby a chemical action is induced which enables the alcohol to be generated and extracted without being mixed or contaminated by the sulphur, as had always happened when sawdust was macerated in a solution of sulphuric acid under the older processes. Consequently, it is claimed that wood alcohol made by the new process can be drunk or used for any other purpose to which pure alcohol is usually applied.

"One metric ton (2,204 pounds) of sawdust yields by this process 100 litres, or 27.47 gallons, of alcohol, 20 kilos (44 pounds) of acetic acid, and the residue or spent sawdust is pressed into briquettes and used as fuel. Consequently it is claimed that the process is very profitable. The process is patented, of course, in France and the United States."

MINOR SPECIES OF HARDWOOD QUANTITY AND VALUE, AND PRINCIPAL STATES IN WHICH CUT: 1908.

Kind.	M feet.	Value.	Principal states in which cut
Mahogany	15,367	\$1,651,417	Kentucky, Louisiana, and Alabama.
Buckeye	9,342	124,537	Tennessee, Kentucky, West Virginia, and North Carolina
Locust	1,327	33,719	Indiana and Virginia.
Persimmon	1,077	33,540	Arkansas, Louisiana, and Alabama.
Cucumber	999	21,180	West Virginia and Pennsylvania.
Applewood	325	11,375	Michigan, New Jersey, and Pennsylvania.
Spanish cedar	312	27,850	Alabama, Ohio, and Tennessee.
Willow	302	3,216	Mississippi and Pennsylvania.
Dogwood	261	8,310	Tennessee and North Carolina.
Hackberry	219	3,161	Missouri, Kentucky, Indiana, Tennessee, and Alabama.
Alder	180	2,705	Washington and Oregon.
Myrtle	72	3,420	Oregon.
Sassafras	25	475	Tennessee and Mississippi.
Magnolia	10	150	Georgia.
Coffeetree	1	20	Indiana.
Total	29,819	\$1,923,075	

sible the manufacture of large quantities of walnut lumber, the production has remained comparatively steady from year to year, mainly as a result of the fact that lumber from this species continues to command a higher price than that manufactured from any other native wood. Much of the highest grade walnut timber is exported to Europe in the log, so that reports of walnut lumber production in the United States do not give the total output of this valuable wood.

### Sycamore

Sycamore is another useful wood which, while widely distributed throughout the eastern half of the United States, does not occur in sufficient quantity in any one locality to make a large cut of it practicable.

In 1908 Indiana was the leading state in the manufacture of sycamore lumber, with approximately one-fourth of the total cut. Other states of importance in sycamore lumber production are Missouri, Kentucky, Ohio, Arkansas, Illinois, Tennessee, West Virginia, and Oklahoma.

The cut of sycamore lumber in 1907 was 46,044,000 feet, with an average value of \$14.58 per thousand feet.

than one-half of the total quantity of these minor species. The figures given for mahogany and Spanish cedar by no means indicate the average annual importation of these woods, since large quantities of them are consumed as material in establishments which are not covered by this section of the report—veneer mills, turning and carving establishments, and those manufacturing interior finish.

Of the native woods among the minor species, by far the most important was buckeye. The major part of the lumber produced from this species was in Tennessee, Kentucky, West Virginia, and North Carolina. While more than 1,000,000 feet each of locust and persimmon lumber were reported, the actual consumption of these woods is doubtless far in excess of this figure, since in addition to being manufactured into lumber these woods are cut into special forms suited to the particular uses for which they are adapted. Undoubtedly more cucumber lumber is manufactured than is shown by the reports, since it is not unusual for lumber which is cut from this species to be included with yellow poplar.

## Grading and Buying of Hardwood Lumber

The following is an excerpt of the important features of an address delivered by Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States at the banquet of the Chicago Furniture Manufacturers' Association, held at the Chicago Athletic Club, on Tuesday evening, November 2.

Mr. Chairman and Gentlemen: I am very proud to be invited to attend this meeting of yours here in Chicago, which we as hardwood manufacturers regard as the largest consuming hardwood market in the world. The Hardwood Manufacturers' Association of the United States, whose secretary I am, takes much pleasure in interesting itself in such an important allied interest of the hardwood trade as your association represents. I believe it will benefit you to learn about our system of handling lumber from the stump to the wholesale consumer.

The various branches of the lumber trade each year are being brought closer and closer together, chiefly through the American idea of association work. The Hardwood Manufacturers' Association is intensely interested in the wholesale consumer of hardwoods and it takes every opportunity to study the actual requirements of lumber buyers, and is always willing to adapt itself to any new condition that makes for the betterment of the industry.

At the various meetings of manufacturers of furniture and allied lines, which I have had the pleasure of attending, I have presented the lumber manufacturers' view of hardwood manufacturing and inspection matters, and as much interest has been shown by your association on these questions, I will take pleasure in reviewing the policy and methods of the Hardwood Manufacturers' Association, and shall be glad to reply to questions on the subject that may be of interest to you.

The life of the hardwood timber supply of the country is conjectural. In various publications you read about the waning of hardwood forests, the drain upon them, the period necessary for the regrowth of trees, etc., but no accurate statistics have ever been compiled showing the exact situation. We simply know that there is a considerable stand of maple, birch, beech, black ash, gray elm, basswood and some rock elm in the states of Michigan and Wisconsin, and a small growth still remaining in northeastern New York, northern Vermont and northern New Hampshire. We know that Ohio, Indiana and southern Illinois still produce a considerable quantity of oak and some of the minor hardwoods, and that the quantity of output in these states is decreasing year by year. We know there is an extended area of the Allegheny mountains and the lower Appalachians, running through southern Pennsylvania and continuing through Maryland, the Virginias, Kentucky, Tennessee, North and South Carolina and northern Georgia and Alabama there is still a heavy stand of oak, hickory, chestnut and some considerable quantity of poplar. We know that in the lower Mississippi valley district extending through western Tennessee, southeastern Missouri, Arkansas, Mississippi, Louisiana and Texas, there is another large hardwood field which is fast being developed and which contains a source of supply for quite a number of years of oak, ash, gum and hickory and in minor quantities several other varieties of timber. However, statistics showing the true condition and the future life of American hardwood forests have never yet been obtained, but it is hoped that the work being undertaken by the government in its forthcoming census will give the hardwood manufacturing and remanufacturing industry some definite figures that will constitute a basis for at least a reasonable estimate.

Evolution in hardwood consumption is so prevalent that a record of past lumber consumption

would be of little value to make figures on for future consumption. American remanufacturers of hardwood lumber are resourceful. They indulge not only in substitutes constantly, using a cheaper and less esteemed kind of lumber for others they have used in the past, but they are employing to a greater and greater extent, year by year, veneered panels and thin lumber. A piece of furniture that used to require fifty feet of lumber is now often made with one-half that quantity of solid wood and the remainder is made up of veneered stock. In building construction, iron, steel and concrete in many cases is taking the place of wood. Notwithstanding these substitutes and economies, the actual use of lumber per capita in this country is increasing year by year.

The sawmill man is also attempting to practice methods of economy and conservation. Formerly the lumberman did nothing but cut down his high class merchantable trees, and let the remainder of his forest go to fire and decay. Nowadays, with the higher prices of stumpage, he is usually cutting his forests comparatively clean, felling every tree that will pay for its cost of manufacturing into lumber. Each year he is using thinner band saw blades, and less lumber is being produced with circular saws than ever before in the history of the trade. Today the manufacturer is closely studying the hardwood consuming situation and is trying to provide for the exact requirements of the remanufacturer. He is trying to adapt his production to the wants of his customers. He tries to produce and maintain a well balanced stock of lumber with a minimum of waste. He attempts to so conserve his output that he shall not overstock the market either in quantity or in a particular kind, thickness or grade of lumber. This is a lesson learned during the last panic, for when the demand fell off millions of feet of lumber was in the hands at the mills which in many cases became stick-rotten and worm-eaten before it could be moved. This entailed an immense loss to lumber manufacturers.

Hence, if the present stand of hardwood timber in this country can be accurately determined, and if the actual consumption of the past can be accurately estimated, it would give but a very indifferent basis on which to determine the future life of the forests. Evolution in production and consumption is so pregnant that at best it would be but guess work. Constantly increasing stumpage values and decreasing lumber values will all tend toward conservative and economical methods on the part of lumber manufacturers, and while in the past much less than one-half of the forest growth has been reduced to a merchantable lumber product, undeniably the future will show that a much greater percentage is made into some form of lumber or dimension material that will possess a value for remanufacturing purposes. It is therefore safe to say that there are a good many years of supply ahead of the furniture and kindred trades employing hardwood lumber.

It would seem that a logical movement for an association like yours and other remanufacturers of hardwood lumber would be to work closely with the hardwood manufacturer and assist him in the attempt to perpetuate the forests of the country to the greatest extent possible. If substitutes can be used by you either in kinds of lumber or in grades, it certainly is to your interest to do all you can to this end that you may secure your lumber supplies at the lowest logical price and at the same time perpetuate not only your industry but that of the lumber manufacturer. It would be wise for you to keep lumber manufacturers advised on your specific requirements and tell them what you could use in grades or in lesser sizes, thicknesses and widths than you do today. If it is logical for you to use dimension stock cut to standard

sizes it very likely will prove a matter of economy to you, because it means a saving of an immense sum in freight alone. When dimension sizes can be uniformly classified as to relative proportions of use, it undeniably will be a very important step toward forest economies and in assisting in keeping the value of your material down to the lowest possible figure.

I find that a good many lumber buyers do not make a careful enough analysis of grade and prices in their purchases. I have found remanufacturers of hardwood lumber who employed firsts and seconds when they could have used No. 1 common with economy, their waste being taken into consideration. I have found No. 1 common used where No. 2 common could have been employed at a saving. Grading systems outline the percentage of clear lumber and the lowest range of quality that each grade shall contain, and the price is supposed to be regulated by this percentage of usable material. For example: When you purchase firsts and seconds at \$50 a thousand and it shows a waste of 20 per cent, against a lower grade at \$32 to \$35 a thousand, which shows a 30 per cent waste, it does not take much figuring to demonstrate that the lower priced lumber is the better purchase.

This grading matter is a broad question owing to the variety of uses and consequent varying sizes of material employed in the numerous lines of remanufacturing, but it is worth discussing and analyzing and it is worthy the consideration of both remanufacturers and manufacturers of hardwoods, for through a thorough understanding and cooperation they both can be benefited. The manufacturer can learn to be more economical in his methods of production and the remanufacturer can learn economy in his consumption.

Right now a thorough canvass of the quantity of stock of hardwood lumber on hand in manufacturers' hands shows that conditions are not in a very satisfactory shape from the producers' viewpoint. There is a tremendous shortage of high grade hardwoods, and the dry-killing of green lumber is being resorted to by a great many manufacturers in order to take care of the insistent demand for seasoned high grade stock. Lower grades that for two years past have moved slowly are now being purchased with avidity.

The cessation of manufacture on the part of many producers during the last financial depression caused numerous small institutions to go out of business, and caused many of the larger ones to shut down for some time, as they found they could not make any profit under existing conditions. The present shortage is inducing the reopening of quite a number of mills that have been closed down for more than a year, but probably never again in the history of the hardwood industry will there be any such number of small sawmill plants as has been in the past. The fact is that all the most desirable timber area remaining in the country is in the hands of the large producers, who have paid such a high price for this stumpage that it must needs be handled out with a great deal of economy in order to show them a profit. It is undeniable that we have passed the zenith of hardwood production, and from this time forward there will be a gradual diminution in the total annual yield. It is doubtful if ever again in the history of hardwood lumber production a material overstock will exist.

Manufacturers, therefore, should keep in close touch with the wholesale consumer of hardwoods in order to be able to best satisfy your wants in both quantity of lumber and quality of grades that will answer your purposes.

Referring specifically to the Hardwood Manufacturers' Association of the United States, it is made up of about three hundred and fifty leading hardwood producers of the United States,

the greater portion doing business south of the Ohio river, although the organization has a good many members north of that stream. Members of this association in good commercial times operate as high as seven hundred mills with a maximum output of about a billion feet a year. The larger portion of this lumber comes from all the southern hardwood area. The work of the Hardwood Manufacturers' Association is divided into bureaus and departments, and the bureau in which the most money is expended is the one of grades. The association publishes a grading rule book which is written in special consideration of the wants of consumers as the association understands them, and the grades are expressed in such clear and concise English that they can be interpreted by a lumber inspector of even ordinary intelligence. It is the endeavor of the organization to place these rules in the hands of not only all inspectors, but of every lumber buyer in the land.

I have been asked to explain our methods of handling disputed shipments, which is a very important subject. We have local inspectors at the chief consuming centers of the country for prompt service, where inspection may be questioned. These inspectors on request reinspect shipments, separating grades if so desired, and instructed to explain carefully to the buyer his reason for the interpretation of the grade on every piece of lumber. This inspection is invariably carried on open and above board. These inspectors are men who have had long training and are selected for their intelligence, courtesy and specific knowledge of hardwood growth, manufacture and seasoning. The association is very proud of its corps of inspectors and it is a very rare circumstance that there is ever any fault found with the work done by them either by seller or buyer. After the work of reinspection is accomplished a copy of the certificate is given to the purchaser, a duplicate is mailed to the shipper and the third copy forwarded to the main office of the association for record. In the event that the inspection proves unsatisfactory to either buyer or seller, the association insures to both a fair deal by making a second review of any shipment, and a thorough reinspection of it for the purpose of checking up the original inspection. This reinspection has the most careful attention of one of the association's chief and most trusted inspectors.

The work of these inspectors is not confined entirely to the consuming markets, but they instruct the shippers' graders how to fairly and intelligently interpret the inspection rules of the organization. They also advise, as to matters of sawing, edging, trimming, stacking, etc. The association attempts to secure not only uniformity, but a high standard of uniformity in lumber production and grading. This is the bugaboo of the lumber business, and year by year we find that we are decreasing the number of complaints through this system. It makes better customers for the manufacturer; it makes for the easier selling of lumber; it makes for economy, and it minimizes, to a great extent a sudden increase of price. The system steadies the market at all times. Uniformity brought about by these methods is beneficial to both manufacturers and wholesale consumers. It certainly is an aid to the remanufacturer to have lumber and grades made as he wants them. The consumer is benefited in the close harmony which is gradually growing between the hardwood manufacturer and himself, and it is especially valuable to the remanufacturer located three hundred to one thousand miles away from his source of supply.

The Hardwood Manufacturers' Association works under no iron-clad price agreement. Every member is at liberty to make any price on his product that he chooses, and there is nothing in the work of the association that is not open to the entire wholesale consuming industry of the country.

The next annual meeting of this organization will take place at the Sinton hotel, Cincinnati, O., on February 1, 2 and 3, 1910, and on behalf of the organization I wish to invite every member of your association to be present at that convention.

The handling of hardwood manufacturing problems is no simple matter for the members of our association, and I believe it is to your interest to thoroughly cooperate, or, better still, affiliate with the Hardwood Manufacturers' Association. I will assure you that this organization will meet you half way on any proposition that tends to your material advantage, and especially on all matters that mean uniformity of manufacture and inspection. We want you to come to our meetings and we want you to work with us.

## The Sins of Hardwood Sellers and Buyers

The following address, entitled "The Sins of Hardwood Sellers and Buyers," was delivered before the National Furniture Manufacturers' Association at a meeting held at the Auditorium Annex, November 10, 1909, by Henry H. Gibson, editor Hardwood Record. As it contains considerable matter of interest to both hardwood lumbermen and furniture manufacturers it is reproduced herewith for the benefit of RECORD readers:

"I understand that I am indebted to the suggestion of P. D. Francis of the Furniture Journal of this city for the pleasure of appearing before you today. It may happen that Mr. Francis' 'inspiration' reflects more credit on his friendship than on his discretion."

I am always interested in association work, and especially in any association work that deals with hardwoods or hardwood utilization. Association work is a good thing because it assists in the general good of the entire manufacturing contingent involved and indirectly benefits the individuals engaged in that calling. Primarily, association work is based on mutual confidence and respect, on a belief of every man in his fellows.

Speaking of lumber association work, I am reminded of an interview that I had some years ago with the late John Branning, a prominent lumber operator of Edenton, N. C. It was at a time when his lumber product was selling at very low prices, and there was an absolute cut-throat game being played by manufacturers, so that the entire market was demoralized.

I said to him: "Mr. Branning, why don't you operators down here get together and figure out with each other matters of cost and see if you can't secure a price for your product that will give you a little profit in lumber manufacture?"

Mr. Branning was a very distinguished southern gentleman (of Pennsylvania birth), and said to me: "We're a very peculiar people here in the South, sub. The fact of the matter is that we can't believe each other, and, do you know, sub, that I have d—d hard work in believing myself?"

When this condition obtains it is pretty difficult to do efficient association work. I think that the sins of lumber sellers and buyers are based very largely on a deficient knowledge on the part of buyers of hardwood growth and manufacture, and on the part of sellers very largely on their paucity of knowledge of hardwood utilization.

It must be realized that the virgin hardwood forests of the United States are at an end; that every hardwood region in this country today is in the hands of operators. The last stand of virgin forest is the southern Appalachian, and even in this region are small farmers and squatters that have existed there for the last century. A tree is like an Indian—it will not stand civilization and the depredation and damage that

We want you to help us with rules and regulations that will benefit yourselves as well as ourselves. We want you to assist us in suppressing the unjust practices of any member of the hardwood trade. You are all eligible to membership in our association and we would like to have you attend our meetings, and after studying our methods, use your best judgment about joining us. If you will thoroughly study your own lumber requirements and make purchases in accordance with the present or any future agreed rules the association has in force, the Hardwood Manufacturers' Association will guarantee you just treatment and insure to you a pleasant interchange of business relations between members of your association and those of our own organization.

these people have caused to our forest area is fully as serious as all the timber that has ever been cut in the same region. They graze their cattle in the forest; they start leaf fires which often develop into fire "scalds," very seriously damaging the timber area and letting in borers that would ruin the wood. The result is that a large portion of our timber, especially in oak and chestnut, is wormy, and in some cases the worm defect appears in fully 90 per cent of the total output.

A competent buyer of furniture lumber must needs know where the best sources of supply obtain, where the best types of timber grow. He must know his sources of supply and know that the lumber is correctly manufactured and carefully seasoned. On the other hand, hardwood operators are very illy informed on the subject of hardwood utilization. They know it is cut-up material, but that is about all they do know. They are not thoroughly posted on the exact uses for which the lumber is required; they need education in order to make it possible for them to make grades exactly suitable for furniture purposes.

Right here I would like to take a moment on the subject of hardwood grading. The hardwood manufacturer seeks to get a profit from his mill-run product. That is all he asks. When he makes a score of grades, he makes these grades to accommodate the specific requirements of the wholesale consumer. He makes these grades for the accommodation of the buyer, and not for himself. He would much prefer to sell his lumber from the tail end of his mill as a mill-run product. It would simplify matters very much for him if this were possible.

Mr. Gibson then, on the subject of the specific text of his talk, "The Sins of Hardwood Sellers and Buyers," recited cases in which furniture men were supposedly buying firsts and seconds and were receiving but a comparatively small portion of that grade in their shipments, but were apparently satisfied with the grade because they were not intelligent buyers. He cited the example of an eastern jobber who purchased from a manufacturer a car of lumber containing but a small proportion of firsts and seconds, and the remainder of the stock was No. 1 common, which he involved to a furniture manufacturer as firsts and seconds. The returns from the car showed that the furniture buyer accepted the shipment, with the exception of fourteen hundred feet, as straight firsts and seconds. He told of an eastern buyer for a large woodworking house that insisted upon buying quarter-sawn white oak at 85 less than the current price, and was willing to accept a grade with a mixture of No. 1 common in it, so that he could satisfy his board of directors on the price he was paying for the lumber. These examples were given to illustrate the sins and weaknesses of lumber buyers. On the other hand, he cited the report of

an east Tennessee lumber manufacturer who deals largely with eastern jobbers who said that ninety-five orders out of a hundred received by him specified a percentage of No. 1 common thoroughly mixed with firsts and seconds. By inference, it was shown that this lumber was resold as firsts and seconds. He told of a Chicago jobbing house which sold a car of 44 firsts and seconds white oak at \$45 a thousand, which was below the regular market price for the same lumber, and that the profit in the sale was explained by the fact that they had mixed 7,000 feet of No. 1 common in the car, which had cost them but \$29 a thousand. He stated that these citations were not exceptional cases, but were everyday transactions countenanced and condoned by both sellers and buyers; that they are discussed as openly as a man would invite a friend to step in "next door" and have a highball.

Continuing, Mr. Gibson said: There are two leading hardwood lumber associations in the country whose grades are so nearly alike that there can scarcely be found \$5 difference under either set of rules in a carload of any specified quality. One of these associations is the Hardwood Manufacturers' Association of the United

States, made up of manufacturers, and the other is the National Hardwood Lumber Association, made up jointly of manufacturers and jobbers. Both associations have as a basis of ethics the uniform grading of hardwood lumber, and both, to the best of their efforts, are attempting to insure to both seller and buyer a square deal in lumber transactions.

The first named association does not generally issue certified certificates of inspection, but maintains a corps of competent inspectors to educate the inspectors of various plants how to make grades in strict accordance with its rules. In the event that this grading is disputed, it sends one of its corps of official inspectors to the consuming market where the lumber is sold, and reinspects it, thus standing squarely between the shipper and the buyer on the matter of the correct interpretation of grades according to its rules.

The National association, when required, issues certified inspection certificates on its shipments, and in the event the shipment is found out of line it reinspects the lumber at the expense of the shipper, if he is wrong, and at the expense of the receiver of the lumber if his complaint is not justified by the reinspection.

I would suggest that there is a trend of public sentiment among lumber associations and local lumber organizations which makes for the improvement of trade morals. These people generally deprecate special grades which leave the door open for misunderstanding and unsatisfactory dealing, and I personally know that before your association at the present time is an invitation from one of these associations, which very likely the second association would be glad to join in, inviting you to appoint a committee to confer with its inspection departments, with a view of making grades to satisfy the particular uses to which you wish to place lumber.

Correct ethics of lumber inspection involve the making of a series of grades that shall reasonably accommodate the present and fast lowering quality of log output, and at the same time make a series of grades that shall as nearly as possible satisfy your exact requirements. I would suggest that you thoroughly learn the present rules of lumber inspection, and have your inspectors learn them, and in the event that you buy intelligently under these rules, you will have no difficulty in establishing your claim for a just and equitable deal.

## Blower Systems for Handle Plants

By H. B. Alexander

One of the most important features in a handle plant, or for that matter in any woodworking factory, is a good shavings exhaust, or as more properly termed, a blower system. Although most progressive manufacturers realize how essential such a system is to their work, it is not unusual to find plants that get along somehow without them and also factories which have installed these systems but which are very poorly arranged and give but meager satisfaction.

A plant without a blower system indicates a lack of progress on the part of its proprietor, and more than this would undoubtedly be refused insurance by modern companies. Factory owners sometimes assert that it is much cheaper to hire a boy to wheel out the shavings and sawdust as some of the waste material from their machines is too heavy for a blower to handle. However, this is not as cheap as it may seem on first thought. In the first place a boy costs at least fifty cents a day, and he is not much of a prize at that. Then a good wheelbarrow or a big basket must be purchased, and the plant must be so arranged that the boy can get through with them to the firing room, and this may frequently interfere with some of the machines in the factory. Furthermore, it is practically impossible for one boy to keep all the plant cleaned up all the time, and this is bound to cause trouble, as it is a very difficult thing to get the best results from any machine when it is half buried in shavings—result, another loss here.

As to the cost of the blower system, of course this depends largely upon the size of the shop and the knowledge and experience of the man who installs the system, but at most it should not exceed \$100 for an ordinary handle plant. It is not a very

difficult matter to figure out how long it will take the blower to pay for itself, considering only the small wages of the cheap boy, to say nothing about the loss of time to the machine and the trouble and worry avoided. Probably the best feature of the blower system is that the machines are kept in good condition and fairly clean all the time, and their operation is not interfered with by being clogged up with shavings and refuse. By having a rule that each operator should spend about five minutes each evening in cleaning up around his machine the shop will be kept in good condition all the time at practically no expense.

The success of a blower system depends principally upon how it is installed and the manner in which the pipes lead up to it. There has always been more or less discussion as to the better position for the main pipes, overhead or under the floor, but this point is best decided by each individual factory, according to the different arrangement of the various appliances. For most handle factories undoubtedly the best plan is to have the pipes under the floor. Most of the handle machines are so built that this seems to be the best place to take care of the shavings from them. With a rip-saw, for instance, nothing is easier than to put a hopper directly under the saw to collect the dust and to lead a small pipe from that directly through the floor into the main pipe. With lathes the majority of handle men seem to favor the under-the-floor system, which proves to be the handiest and best.

When the overhead system is used there must be a short removable pipe to collect the shavings from the lathe heads and send them into the main pipes. This pipe must have some sort of support, and if this is to be satisfactory and one that will hold the

pipe up, it very often proves to be quite difficult and requires not a little time to remove it.

With the pipes laid under the floor there must also be a short connecting pipe, but here the arrangement is different. The pipe leading from the main pipe to the lathe will come only to the top of the floor, and the connecting link will fit in that without any fastening of any kind. It is simply set in the hole and the top of it placed at the mouth of the hoods on the lathe, and it is then ready to operate, and whenever it is necessary to move it to get at the heads it is only a moment's work to pick it up and put it to one side.

Another important point in blower installation is the location of the blower and the pipes. A very convenient place for the blower is at the end of shop nearest the point of outlet, and of course beyond the last machine. A fan will pull farther than it will blow, and for this reason should be as near the fire room as possible. It should be placed up about on a level with the line shaft in order that it may have a downward blow. The pipe coming in from the shop should be the same size until after it has taken in the first branch, and from there on it should be reduced so that the combined size of the branches will not exceed that of the main pipe; if they do they invariably give trouble. No two pipes should be placed so that the openings are directly opposite each other, and every branch should enter the main pipe at a long angle; there should be no sharp turns anywhere, and there should be no rough places inside the pipe. The trouble arising from neglect of this feature is quite apparent, as a bit of shaving might lodge against a projection in the pipe and very quickly other pieces would cling to it, and

soon the pipe would be clogged up. With proper care in installing the blower system, being careful that it is large enough, it should give no trouble, and more than this should insure the operator a nice clean factory, which means greater facility of operation, and in the long run greater profits.

Did you ever try to babbitt an exhaust fan shaft? The boxes on our fan went out on us the other night, and the next morning we found that we had to re-babbitt both of them. This was no easy task as none of us had ever before done work on this kind of a fan, which has an oil reservoir and rings, and each half of the box is made in two parts so that each bearing consists of four sections. One of the men insisted that it would be necessary to take the fan down on the floor or take out the shaft in order to get at it and get it level. However, we secured a shaft that was the right size and took the supports of the boxes off the fan frame and used them to carry the shaft off to line up with. After melting out all the old babbitt, we put the lower box on the supports and filled the ring groove with waste, and on top of that we put mud. We made a liner of leather just the thickness that the babbitt should be, and put one on each side of the ring groove and rested the shaft on these. Then we proceeded as usual in closing up the end of the shaft and pored the babbitt. For the caps we made liners for the sides to suit the thickness of babbitt needed, and then used mud in the ring groove to divide the metal, filling it up full and pressing down the cap on the shaft and cutting away all the mud not needed. This made the boxes in separate halves, and it made a very smooth job. This task took the greater part of a day, as none of us had ever done this sort of work before, and of course we had to figure out every process and we made some few mistakes which we would not make again if we ever had to undertake a similar job.

## Important Philippine Woods

Lumbermen in the United States possess very little definite information about Philippine woods. Most of them realize that the Philippine Islands are rich in forest growth, but the nature of the timber, the various species, their uses, etc., are not a matter of general knowledge. The information contained in this article was furnished *HARDWOOD RECORD* by the Bureau of Forestry of the Department of the Interior at Manila and is therefore reliable as well as most interesting.

The idea seems to be prevalent in this country that Philippine forests are impenetrable jungles, but this is not so. In many places there is frequent need of a bolo to make one's way through the masses

of running babbitt bearings in cold weather, or in fact almost any time, it pays to warm up the boxes or caps before pouring in the hot metal, being sure however to heat them enough to dry out the moisture that gathers if they are only just slightly warmed.

Factory men should look carefully to the shape of the teeth of their saws, and see that they are kept well rounded. A saw out of rounds runs as badly as a dull saw, and neither should be tolerated. Such saws cause a waste of lumber and a more serious one in the time of the operator.

The main bearing on the line shaft should be kept in good condition, well oiled, and tight on its supports, and the distance between them should be carefully regulated, as it is far better that there should be one or two more than necessary rather than not enough, which would render the line shaft insecure. Nothing looks worse in a factory than the line shaft out of line and looking as if it were trying to make a snake out of itself; it not only looks bad, but it is unsafe and wears out the shaft in a short time.

There are so many belt fasteners on the market today that it is a difficult matter to decide which is best. A great many of these fasteners, however, are of little or no value, and in fact injure the belts so seriously that they are really worthless. A large number of mill men still advocate the old-time leather lacing belt, which really possesses many advantages over some of the so-called quick lacing styles. There are of course a great many good laces on the market, in wire, hoops, plates, studs, etc. This feature will be discussed in a coming article in this department, the writer giving his experience along this line which may be of help to someone that is having trouble with belt fastenings.

ing the light, leaving the ground comparatively free. There are often heavy growths of small trees that seem to thrive in the dense shade, but these are not so close together as to prevent passage between them. The large trees are usually covered with vines, birds' nest ferns are seen here and there, and orchids grow on the branches or trunks of the trees. Sometimes palm trees are common, but in other forests they are entirely absent. Without the palm tree Philippine forests are more like those of temperate regions than they are different from them. They are composed of tall trees, from 150 to 200 feet in height, with straight regular trunks, often for 100 or more feet without a single limb.

Sometimes there are many kinds of trees in a forest, but in many instances the majority are of five to ten members of the same family. This family, known as the Dipterocarps, is to the Philippines what the oak and pine families are to temperate zones. They are found in all parts of the Islands and constitute the greatest bulk of the timber, and without them the Philippines would have to depend on other countries for cheap construction wood.

The timbers of the Dipterocarp family may be divided into three general groups, viz: the Yacal, Apitong, and Lauan groups.

The Yacal group yields such woods as yacal, mangachapuy, and narig, all heavy, durable timbers used for construction purposes where contact with the ground is necessary.

The Apitong group contains apitong, lagachac, panao, guijo, and others, all of which are good heavy construction timbers when contact with the ground is not necessary. These woods compare favorably in mechanical properties with the hard pines.

The Lauan group embraces a large number of timbers under various names suitable for lighter construction purposes and of much the same structural characteristics as white pine. It is estimated by the Bureau of Forestry that 75 per cent or even more of the forest growth of the Islands belongs to these three groups of timbers.

### First Group Trees

Philippine forests contain a vast wealth of woods useful not only for durable construction work, but also for the most beautiful furniture to be found in any of the world's furniture factories.

In the early days these woods were so plentiful that the Spaniards and wealthy Filipinos did not think of using in building their houses and furniture anything but these superior or so-called first group woods. Now, as a result of this indiscriminate cutting, these trees have become scarce generally and have even disappeared in easily accessible forests where they were once found in abundance.

The most frequent and important of these trees are molave, ipil, and yacal for construction, and acle, narra, tindalo and

ebano for furniture. Mancono and lanate, which belong also to this group, are not so widely used. Lanate is a fine grained white wood, excellent for carving, and mancono, the heaviest and hardest of all Philippine woods, has only recently come into use. It is of such a character that it may eventually become a substitute for that well-known and most valuable timber, lignum-vitae, which is rapidly approaching extinction.

Some of the first group woods, such as molave and narra, are found in almost every province of the Islands, although never in heavy enough stands to make their exploitation on a large scale worth while.

Yacal, acle, ipil and tindalo are not so widely spread and while the first is sometimes found in greater abundance the others are widely scattered. The provinces which produce the most ipil are Palawan, Cagayan, and Isabela; the best stands of narra are encountered in Cagayan and Mindoro, and yacal is most abundant in Tayablis. The last named province produces also a good deal of molave, but in this respect is second to Mindanao, where so far the heaviest stands of this valuable wood have been found.

The real ebony occurs only in small quantities and the black heart wood of the camagon tree which is found in all parts of the islands is frequently substituted for it. These two woods are mostly used for small furniture and walking canes and in the sub-province of Abra, Hocos Sur, there exists a flourishing industry of carving camagon canes, of very intricate design and requiring great skill and infinite patience in their execution. The popular fruit sold on the Manila market under the name of Mabolo comes from the camagon tree.

Considering the relative scarcity of the first group woods they never will form a great factor in the exports of Philippine timber, but under a wise forest management and a definite policy of replanting the non-agricultural waste lands with such trees, the time will come when they will again be plentiful. Then every Filipino will be able to build his house with these strong and beautiful woods instead of bamboo or soft wood which will not withstand a severe storm or resist the attacks of the white ant and other insects.

#### Narra or Padouk

Perhaps no wood is better known in the Philippines than narra, because of the beautiful one piece table tops made from this wood. These are taken from the large roots, or buttresses, that occur at the base of the trunk. Table tops up to eight feet in diameter are made of these buttresses.

Narra occurs in three varieties, viz: White, yellow and red. It grades from rather soft to fairly hard wood. Sometimes all three colors are found in one tree. Bright red narra is exceedingly rare. Yellow narra, with red streaks, is often

stained red, and for all practical purposes is nearly as good as the natural colored wood. Under the name of "padouk," narra has long been known in the London market. The Adaman Islands have furnished the principal supply of padouk. Unfortunately, narra is not found in large quantities anywhere in the Philippines. It, however, occurs scattered on flats and along streams in practically all the provinces, and in such places will average less than one tree to the acre. Exceptional stands for very limited areas will run as high as three or four trees to the acre.

While narra is pre-eminently a furniture wood, in remote districts it is used for bancas, and in some instances for mining props. In Singapore, narra is planted as a shade tree. Its symmetrical, globular crown, and bright yellow blossoms give a beautiful effect. It is readily propagated from cuttings, and grows rapidly. It is one of the principal trees used to shade hemp in southern Luzon.

Narra is sometimes sold as Philippine mahogany, but the limited quantities present in the Philippines do not favor its wide acceptance in the lumber markets of the world.

#### Ipil

The three most common durable woods in the Philippines are molave, yacal and ipil.

Ipil, when freshly cut, is yellowish in color, but with age turns dark reddish brown. Most pieces of ipil show some of the pores filled with a sulphur-yellow deposit, by which it can be readily distinguished.

Ipil, while not as extensively used as narra and tindalo, as a fine furniture, interior finish, and cabinet wood, yet, because it takes a good polish, is second only to those well known woods for such purposes.

Because of its great durability when in contact with the ground, ipil is being extensively used as railroad ties. It is also one of the main woods used for house posts. As such, it forms the portion of the posts in contact with the ground. To this, for the upper part of the post are often spliced less durable timbers, like *Salak* or *Apitong*.

While ipil has a wide distribution throughout the Philippines, it is nowhere abundant over large tracts of land. Scattered trees are found along the coast, especially near the mouths of rivers, and they sometimes occur on low coastal hills. Ipil grows in Borneo, under the name of *meraban* or Borneo ipil. While found scattered in practically all provinces of the Philippines, Palawan now furnishes the largest supply.

#### Apitong

One of the commonest woods in the Philippines is the reddish wood, known commercially by the Tagalog name of *apitong*. There are several species of trees which produce this wood, known by many

names in different parts of the Islands. Although the trees can be recognized in the forest by the bark, leaf, flower and fruit, their woods are so much alike that they cannot be distinguished with certainty, and lumbermen class them all as *apitong*.

Apitong is rather hard and moderately heavy, weighing about 45 pounds per cubic foot. The heart wood is generally of a dull reddish color, and has a distinct resinous odor; the sap wood is grayish and has less odor. The heart wood is strong, and, when not in contact with the ground or exposed to the rain, fairly durable. It is not often attacked severely by insects, but the termite (the so-called white ant) sometimes damages it, although slowly.

The grain of apitong is somewhat crossed, but fairly straight, and generally rather coarse. It is usually not difficult to saw or plane, but on account of its coarse grain and resinous nature, it cannot be polished. It can, however, be stained and varnished, as is frequently done in cheaper grades of furniture.

Logs of apitong are generally straight, clear and sound. The wood shrinks a good deal in drying, and is liable to warp, but does not check or split much.

Apitong is put to a wide variety of uses. It has been used for bancas (dug-out canoes), shipbuilding, posts, beams, flooring piles, cheap furniture, railway ties, paving blocks, and many minor uses. It is especially valuable for interior construction timbers.

#### Rattan or Bejuco

Few people realize the importance of the minor forest products of the Philippines. This industry is the collecting and selling of firewood, gums, resins, rattans. Of these products, rattan or bejuco as it is commonly called in the Philippines, is by no means the least important.

In the year 1905-06, forest charges were paid on over forty-five million pieces, and in the following year the output reached over fifty million pieces.

The best bejucoes are obtained from the mountains, and are usually collected by mountain people. Those that come from the lowlands are usually inferior in strength and fineness of fibre.

Rattan has a wide range of uses. The largest and strongest pieces of the choicest kinds are made into furniture and ornaments of various kinds. When split into strips, bejucoes are woven into chair and bed bottoms, and, for use around bottles. In some places they are used for flooring, as a substitute for bamboo. By far the largest local use to which bejuco is put is for tying purposes. Bejucoes are cheap, strong and abundant, and therefore preferable to hemp for packages, when exposed to the weather. They are universally used in the Philippines as a substitute for nails. The parts of many houses are entirely

bound together by means of bejucos. Especially large pieces are stretched across streams, as cables for ferries.

Bejucos are well known to manufacturers all over the world, and are in great demand. At present, they are abundant in the more remote provinces of the Philippines, but if they are wasted or the reproduction is not considered, they will be as scarce as they are at present in many thickly populated provinces. Therefore, the Bureau of Forestry is using care in granting licenses to cut bejucos, and is trying to bring the industry under more conservative management.

Where an American or a European would use oak, pine, chestnut, iron, steel or brass, the Filipino uses bamboo.

Bamboo is a Malay word, which has been adopted, with slight variations in different countries, by all the world. It applies to hundreds of different kinds of grass, as well as to trees one hundred and seventy-five feet high. Yet all the varieties called bamboo are the same in structure and can be used for similar purposes. Java produces the species growing to the greatest height and the stems of these gigantic growths often have a diameter of eighteen inches. One variety grows in the States, which is known as "Japanese cane." In Japan and the Philippines there are many different varieties.

The house of the average Filipino is built of bamboo, from the corner post to the roof. In many cases, split bamboo, overlapped, takes the place of nipa palm roofing, forming an excellent watershed. Within doors one finds chairs, tables, beds, hammocks, stools, ladders and cupboards made of the stems of this giant grass; milk jugs, water pots, water pipes, flower pots, bottles of every size, boxes, cups and fruit jars are fashioned from joints of bamboo.

Bamboo is not only lived in and eaten from, but is likewise eaten and worn. The flower of the plant makes an edible dish. The fibres of the stalk can be shredded and woven into cloth, rugs and carpets. The cloth made of bamboo makes cool, comfortable and durable clothing. Excellent paper is also made of this fibre. However, at present, no paper is made in the Philippines, as no company has as yet given the matter its serious attention. In shipbuilding, bamboo is invaluable for masts. Spear-shafts, bridges and any number of smaller things are constructed from bamboo.

Recent developments have created an entirely new demand for bamboo. It is peculiarly adaptable for airships. No other common wood is so light and at the same time so strong. Steel tubing, spruce, bamboo and aluminum tubing have all been used to hold the engines and other mechanisms necessary for aerial navigation. Steel and aluminum tubings are objectionable on account of their weight in comparison with wood, and recent laboratory tests have proved that bamboo is stronger than spruce.

## Hardwood Record Mail Bag

[In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.]

### Pennsylvania State College Appreciates Record

STATE COLLEGE, PA., Nov. 10.—Editor HARDWOOD RECORD: I wish to express to the HARDWOOD RECORD the appreciation of the department of forestry for their generous gift of the magazine for the coming year.

It is one of the best magazines which we have on our reading table and is without doubt read more than any other by our students.—J. A. FERGUSON.

### Congratulates the Record

CINCINNATI, O., Nov. 16. Editor HARDWOOD RECORD: I wish to congratulate the RECORD on the splendid issue of November 10. —GALLOWAY-PLEASE COMPANY, E. D. Galloway, President.

### Appreciates Record

CADILLAC, MICH., Nov. 16. Editor HARDWOOD RECORD: I want to take this occasion to thank you for the interest the HARDWOOD RECORD has shown in our association meetings and especially for the article on pages 24, 25 and 26 of your issue of November 10, covering our fall meeting in Detroit on October 26.—J. C. KNOX, Secretary.

### In Commendation

PHILADELPHIA, Nov. 15.—Editor HARDWOOD RECORD: We beg to commend you on your several articles under date of October 25, page 16, and also the article "The End of Substitution," and the low-grade problem, pages 20 and 21, under date November 10. These are articles which interest us very much, and we believe that they are well founded as far as timber resources are concerned. We also believe as you do, that many millions of feet of lumber could be preserved yearly by utilizing the low-grade lumber and low-grade logs which are left in the forest.—THE FURNITURE & CHAIR STOCK COMPANY.

## News Miscellany

### Obituary

James E. Defebaugh, editor and proprietor of the American Lumberman, died at 4:17 o'clock Sunday morning, November 21, at the Columbus Hospital, this city, after suffering for many months with malignant cancer of the bladder. His end was peaceful, and at the bedside at the time of his death were his wife and only son, Carl; his brother, E. H. Defebaugh, and Bolling Arthur Johnson, who has been associated in business with him for many years.

A tribute to Mr. Defebaugh's memory and a brief biographical sketch will be found in another section of this issue of the RECORD.

as it has adhered to in the past. A directing board of those who have been intimately associated with the publication for years will guide the destinies of the publication. At the head of this directorship will be E. H. Defebaugh, brother of the deceased, associated in the publication of the HARDWOOD RECORD, the Barrel and Box, and Rock Products.

### IXL Flooring

The accompanying cut shows the large and attractive building of the San Diego high school, all the flooring in which was supplied by the

SAN DIEGO HIGH SCHOOL, SAN DIEGO, CAL., FLOORED WITH IXL ROCK MAPLE.

Private funeral services were held at the deceased's late residence, 919 East Fiftieth street, at 10:30 a. m., Tuesday, November 23, which were followed by a largely attended public service at the Forty-first Street Presbyterian Church, at 12 o'clock. The interment was made at Mt. Hope cemetery.

In many respects Mr. Defebaugh was the foremost figure in the American lumber industry, and his loss will be most severely felt by the entire lumber trade of the country. The great trade publication so ably conducted by him will be continued with exactly the same policy

Wisconsin Land & Lumber Company of Hermansville, Mich. The floors are of this company's famous Rock Maple, well known for its durability and accuracy of manufacture. The company has a large plant equipped with the finest modern machinery used in the manufacture of flooring and makes besides its well known Rock Maple, birch, selected red birch, birdseye maple and cherry flooring. The company also produces large quantities of white cedar shingles and lath, cedar posts, poles and ties, maple clippings and slab wood, as well as hardwood and pine lumber.

### An Old Wooden Water Pipe System

At Newark, N. J., there is an old system of wooden water pipes, which it is claimed was laid over a hundred years ago. Excavators in working in this district from time to time unearth pipes which are taken as proof by antiquarians that the city had a water supply other than wells long before the time when the public system was installed. Pipes have been dug up which were found to have been plugged up at the end and still contained water. They were made from tulip-tree trunks, the wood of which is soft, having a straight, regular grain. A small hole about  $1\frac{1}{2}$ " in diameter had been bored through the middle of the trunks. Sometimes it is found that on some connections had been made to smaller wooden pipes which had rotted away. Some of the connections were plugged up with hardwood corks. Almost without exception the pipes are found to be in excellent condition, resisting well the action of moisture. The pipes vary in length from 18 to 35 feet, and are found from 15 to 20 feet underground, which indicates the extent to which land has been filled in since they were laid in the eighteenth century.

Under favorable conditions and when well made, wooden water pipes are very durable and water keeps in them practically free from contamination. Wooden pipes are still used in some sections of the country and give good satisfaction.

### Heavy Loss Through Timber Decay

Millions of feet of timber and finished lumber rot every year in railroad ties, bridges, trestles, piles, farm buildings, fences, poles, and mine props. The lumber consuming public of the United States pays perhaps thirty to forty million dollars a year to make good the losses from wood decay.

These great drains are a source of more and more concern each year. Chemists and engineers who have to do with the uses of wood are working unceasingly on the problem. The United States Forest Service has men who devote their whole time to it.

Wood decay is caused by fungus, whose roots, like minute hairs, force their way into the wood tissues and destroy the solid parts. Timber treated with preservatives has double and sometimes treble the life of ordinary timber.

The United States government considers investigations of preservative treatment of such importance that one office of the Forest Service, that of wood preservation, with new headquarters at Madison, Wis., is given over entirely to the work of experiments in cooperation with railroad companies and other corporations and individuals in prolonging the life of railroad ties, mine props, bridge timbers, fence posts and transmission poles.

The lengthening of the life of timber means the saving of thousands of dollars annually through doing away with the heavy expense of labor and cost of material for renewals.

### A New Zealand Wood

A wood which has not yet been used in Europe has made its appearance at London. Its scientific name is *Olea cunninghamii* and its native name is black maire. It has a dark brown heart streaked with black and is very thorny. The wood is straight grained, heavy, dense and compact, sound throughout and practically all heart. It is said to be susceptible of a high polish and to be very durable. It has been used with excellent results for railway work, cabinet work, turnery, and is widely used in New Zealand for flooring, being especially desirable for this purpose on account of its wearing qualities. It is also much used for general outdoor work, for building material and bridge construction. It is said that there are large quantities of the timber, but it is scattered and as it is so very hard it is expensive and difficult to get it out of the forests.

### Clever Shot and Good Lumberman

Barry Norman, the popular head of E. B. Norman & Co. of Louisville, Ky., used to be a football player of renown. He was captain of the high school team here—though that has long since been ancient history—and then starred at Sewanee. More recently he has found that Father Time and Mr. Avoirdupois have been getting ahead of him, and he now gets his sport in automobiling and hunting. Like his father, A. E. Norman, he is rated one of the best shots in the business, and is a leading member of the

BARRY NORMAN SHOOTING CLAY PIGEONS AT LOUISVILLE GUN CLUB.

Louisville Gun Club. The picture shows him in action at the club's grounds on the Prospect road, taking part in a clay pigeon shoot. He and his father usually spend several weeks during the fall in Shelby county hunting quail. They seldom return without full game-bags.

### Dodge Co. Building New Warehouse

Following the completion of the main machine shop addition at the plant of the Dodge Manufacturing Company, Mishawaka, Ind., ground has been broken for an additional warehouse for finished products.

For a long time the present warehouse has been inadequate to take care of the volume of business and this condition, together with a firm resolve to better the service, is responsible for the new building. The plans call for a structure of reinforced concrete, 256 feet long by 112 feet wide, four stories high and a basement, and will cost in the neighborhood of \$160,000.

The first floor, on a level with the floor of a freight car, will be used for shipping and inspection purposes, with offices for the general traffic manager and his force.

A loading platform will extend the entire length of the warehouse, with ample trackage for loading and moving cars with promptness and speed. The Lake Shore & Michigan Southern already has extensive yards at the Mishawaka factory, but connection with the warehouse will be made direct. Suitably placed doors will give access to and from the shipping floor.

The basement and the second, third and fourth stories will be confined to the storage of prod-

ucts. Each will have elevator facilities and the whole equipped with the most modern appliances of the day in warehouse construction.

In the new warehouse arrangement it will be possible to fill orders for standard goods, such as pulleys, hangers, pillow blocks, collars, couplings, clutches and other transmission machinery in special or carload lots as fast as the railroad company can furnish cars and pull them away.

### Berthold & Jennings Incorporate

The Berthold & Jennings Lumber Company of St. Louis, Mo., has been incorporated with \$100,000 capital stock. This business has been conducted at St. Louis as a partnership for the past thirty-seven years, being one of the oldest in St. Louis. In September last John B. Sarpy Berthold, senior member of the firm, died, and the incorporation of the concern followed. The officers elected for the new company are C. M. Jennings, president and treasurer, and G. P. Sheban, secretary. The company's headquarters are in the Lumbermen's building, St. Louis. It manufactures and handles oak, gum, cypress and other hardwood lumber as well as wagon and implement stock and railroad material. The company is one of the foremost in St. Louis and has contributed no little toward building up the enviable reputation which that city holds as a hardwood market.

### Philadelphia Concern Makes Big Purchase

Several of the biggest timber deals of the year have just been announced from Asheville, N. C. They were closed by J. C. Arbogast, William Whitmer & Sons, Inc., of Philadelphia, Pa., have just acquired 70,000 acres of fine timber lands in Polk county, Tennessee, and Fannin county, Georgia. The purchase price was about \$900,000. When improvements contemplated on the property are made the Philadelphia concern will have expended on the property over \$1,000,000, including purchase price.

Two years ago William Whitmer & Sons purchased a 35,000-acre boundary of fine timber lands in Swain county, North Carolina. This tract has been transferred to the Parsons Pulp & Lumber Company, a West Virginia corporation, the consideration named being \$651,500. Concerning this transfer, Mr. Arbogast of Asheville said that it did not mean that the property really changed owners, since the Parsons Pulp & Lumber Company is owned by William Whitmer & Sons. Mr. Arbogast said that development of the Swain county (N. C.) property would probably not be made for several years at least.

Included in the 70,000-acre tract taken over in Tennessee and Georgia are all the sawmills, the railroads and the 25,000 acres of land owned by the Conasauga Lumber Company, now operating in Polk county, Tennessee. The rest of the land was acquired from small holdings, and the entire property will be merged into a large corporation, capital stock increased, and lumbering operations conducted on a much larger scale. It is said that the change of ownership will not stop the operation of mills at present on the Tennessee property.

### Status of Wagon Oak Exporters' Controversy

The Wagon Oak Plank Exporters' Association, organized some months ago, is pursuing persistently the aims originally set and is going right ahead with the work undertaken. Conditions abroad, which brought the organization into existence, are still operative to a large extent, and the association is determined to work to remedy these if it can possibly be done. Under the influence of a declining market large accumu-

lations of stocks contracts ceased to have any binding force with foreign buyers, who endeavored to recoup themselves for the drop in the current quotations by putting up the grade requirements, and rejecting pieces not up to the mark, in their opinion, and would make arbitrary reductions on the pieces rejected. When asked why they took the planks at all, they would say that these planks were good enough for their purposes, and yet they insisted that such planks were not good enough to be paid for at contract figures. The reductions became so great that the exporters sustained serious losses. The organization of the Wagon Oak Plank Exporters' Association followed. This organization proposed to make a sample shipment, the planks to be inspected by a number of the leading exporters and to represent the American ideas of quality. This shipment was to be inspected on its arrival at Liverpool by a similar committee from the Timber Trade Association, representing the British view. With the two inspections available as a basis of negotiations, the matter was then to be submitted to a joint commission for final agreement upon inspection rules recognized on both sides of the Atlantic and constituting an absolute and unquestioned standard. Until the foreign buyers have given assent to this proposition, however, exporters are resolved to make no more shipments on contract, preferring to take their chances on the open market. They feel that they will be incurring smaller risks, especially at this time, when some improvement has taken place in the situation, by offering their shipments on the open market than by relying upon contracts. They feel that with any system of inspection that is fixed and stable they can get along, but what they object to is to be exposed to the mercies of buyers who do not consider themselves bound by any rules. The shippers are disposed to let the receiver make the rules, and are confident that the price will then adjust itself as long as the rules are lived up to.

#### Meeting Memphis Lumbermen's Club

The regular semi-monthly meeting of the Lumbermen's Club of Memphis was held at the Hotel Gayoso, November 20. President Crenshaw was in the chair and the usual luncheon was served. On account of the near approach of Thanksgiving day, small souvenirs in the shape of turkey images decorated the table. There were about forty-five members present, including the following:

Rudolph Sondheimer.	George W. Fooshe.
N. Butler Haines.	A. N. Thompson.
C. D. Hendrickson.	D. T. Heuer.
B. R. Thurman.	George O. Friedel.
F. E. Stonebraker.	A. L. Foster.
J. W. Dickson.	S. B. Anderson.
A. W. Gould.	C. C. Lattauer.
F. B. Robertson.	John W. McClure.
E. E. Goodlander.	G. E. Bailey.
F. J. Blackwell.	George C. Ehemann.
James R. Blair.	A. C. West.
W. R. Barksdale.	J. M. Pritchard.
R. M. Bennett.	C. L. Wheeler.
S. C. Major.	F. W. Dugan.
J. W. Wright.	H. W. Kramer.
R. J. Wiggs.	C. B. Dudley.
D. D. Nellis.	

The committee appointed at the last meeting to investigate the proposed increase in charges on code messages on the part of the telegraph companies, effective December 1, reported through its chairman, A. L. Foster, that the members of the club would not be affected, and on motion the secretary was instructed to communicate this fact to the Illinois Manufacturers' Association, at whose request the matter was taken up.

President Crenshaw was instructed to appoint nominating committees within a week to place

two tickets in the field for officers for the ensuing year. He will make these appointments by next Saturday, and before the December 4 meeting of the club these committees will select their candidates and make them known to the club at that time. It has been decided that no election contest shall be longer than two weeks, and the actual election will take place at the second meeting in December. It is certain that, despite the shortening of the time between nomination and election, the race will be most exciting and spirited, as it is considered quite a high honor to serve the club in any official capacity. No suggestions have been made as to the identity of the nominating committee, and no idea can be given of the personnel of the candidates themselves.

A letter was read from E. F. Perry, secretary to the Car Stake Executive Committee, with headquarters at New York, asking the members of the club or the organization itself to contribute to the defrayal of certain expenses incurred in the car stake controversy and litigation. The club did not feel so disposed and instructed Secretary Thompson to advise Mr. Perry to that effect.

Two new members were elected, one active and the other associate. Sam Burgess, of Maley, Wertz & Burgess, Memphis, is the former, and W. J. Norton, of the Norton Lumber Company, Richie, Miss., is the latter.

A. L. Foster called attention of the club to the very hearty support and assistance given by the Memphis Freight Bureau in the matter of furnishing tariffs and other information needed by the club in prosecuting its cases before the Interstate Commerce Commission. He said that its help was material and that, in order that the club might be able to command this aid in case of need in the future, he thought as many members of the club as possible should identify themselves with the Memphis Freight Bureau by becoming members of that organization. Mr. Foster characterized it as one of the most active and important in rate matters of any organization in the South.

Gardner I. Jones of Boston addressed the club informally, and John P. Hanna of the Wiborg & Hanna Company, Cincinnati, also was called upon for a few remarks.

#### Monthly Meeting Chicago Wholesalers

The regular monthly meeting of the Chicago Wholesale Lumber Dealers' Association was held in the East Room of the La Salle hotel Tuesday, November 9. The business session was preceded by the usual enjoyable luncheon, which was served at one o'clock. President Griffith then called upon Secretary Thornton, who read the roll call and minutes of the last meeting, which latter were adopted.

The next order of business was the reports of standing committees. George J. Pope, chairman of the Trade Relations Committee, stated that there was nothing special in connection with the work of this committee except as it related to that of the Inspection Committee, to which the members had been able to give some assistance.

Next followed the report of the Inspection Committee, which was given by Chairman George T. Mickle. Mr. Mickle referred to the hiring of H. N. Hanbury as association inspector, whose work was begun November 1. Mr. Hanbury has made a number of inspections, all of them entirely satisfactory to both the mill men and the consumer. Mr. Mickle said that he had talked with a number of mill men regarding this feature of the association's work, and that all had been strongly in favor of the plan, as were also most of the buyers. Mr. Mickle stated that thus far the work assigned to Mr. Hanbury had not been of as great volume as had been expected, and he said that it seemed to him that the mere fact of the Inspection Bureau having been estab-

lished had served to prevent complaints, and that it might be a good plan to maintain the office as a preventive measure even though the inspector were not called for at all.

The work of the Inspection Bureau and the attitude toward it which manufacturers and consumers of lumber show, as well as the expense connected with its maintenance, were discussed by Messrs. Brown, Mickle and Pope. These men were of the opinion that the work could be done through the local bureau cheaper than in any other manner, and this appeared to be the view of most of the members of the association. Mr. Hanbury has so far made his headquarters in the office of Mr. Mickle, and the question of securing a separate office for him was taken up, and upon motion it was decided to leave the matter with the Inspection Committee, with power to act.

John A. Nourse, chairman of the Membership Committee, reported that a number of applications had been made by operators outside the city who seemed to be anxious to join the association to reap the benefits of the Inspection Bureau. Mr. Nourse called the attention of the members to the fact that under the present by-laws of the organization it would be impossible to admit these concerns, and raised the question of amending the by-laws to provide for associate membership. He then stated that the Wisconsin Lumber Company had applied for admission to the association, and this concern was favorably acted upon.

J. C. Ulrich reported that it was rumored that the Pacific Coast Lumber Manufacturers' Association is contemplating putting in an Inspection Bureau for middle western territory and suggests the possibility of an alliance with the Chicago Wholesale Lumber Dealers' Association for the use of its bureau instead. Mr. Ulrich suggested that it might be a good plan to communicate with Washington and Oregon manufacturers' organizations to the end that they use the bureau.

F. R. McMullen spoke briefly on the campaign which the Chicago Hardwood Lumber Exchange proposes to make in advertising Chicago as a lumber market, and suggested the appointment of a committee to confer with a committee from that organization. Mr. Mickle spoke about dies for stationery and the use of stickers as proposed by the hardwood exchange. On the suggestion of President Griffith the matter was given into the hands of George J. Pope, chairman of the Trade Relations Committee.

The meeting then adjourned.

#### Why Posts Should Be Turned End Up

It is said that among the ancients there were a number of features of construction work that were as well if not better understood than they are today. It has been shown that all main upright timbers, for instance, were almost invariably put in upside down and many placed in this position are of much larger diameter at the top than at the bottom. For instance, it is often found that posts, having a diameter of twelve inches at the top, at the lower end are not over eight inches, somewhat like the diminished stile of a door inverted.

The reason for this may be explained in a very natural way. The sap in the tree rises through the porous grain of the wood and descends on the outside circumference of the trunk under the bark, forming an annual ring and at times becoming part of the wood of the tree. Fixed in the natural position it is claimed it would be the means of carrying moisture throughout the length of the post, but when placed in a reversed position, the dampness does not rise into the wood and the timber is only affected by moisture on the exterior, which would seem to be a logical explanation of the fact that so many construction timbers placed years ago were well preserved through long years of time.

## Progress Made in Adoption of the Code of Ethics

A circular issued by A. B. Wastell, secretary of the American Lumber Trades' Congress, Portland, Ore., covers the progress made thus far in the adoption by the various lumber associations of the country of the code of ethics as revised at the Chicago meeting of the Congress on June 8 last. Consideration has subsequently been given to the code by many associations, and adoption has been reported by a number of the prominent organizations of the country.

Secretary Wastell urges that the code be brought up by the secretaries of the various lumber organizations at their next annual meeting, and that attention be drawn to the merits of the regulations embodied in the code, with the understanding that any suggestions for revision will be duly considered by the congress at the next session, but that in the meantime the code as it stands represents the best compendium of lumber trade custom and regulations extant. Naturally there have been many criticisms of the code, as well as commendatory remarks, in association circulars and trade paper articles. Herewith are given a number of the revisions, with comment, which have been suggested to Secretary Wastell, who would be glad to receive further comments on them:

"Provisions for a time limit for the registering of complaints after arrival of car."

It is usual for seller to cover this limit in terms of sale, but as terms of sale were not definitely covered, it would be well to incorporate a corresponding clause in Article 14.

"Relative responsibility of shipper or consignee for damage to product during transportation, and what constitutes point of delivery and when title to lumber passes."

This matter was quite fully discussed at Chicago and it proved impossible to get any unanimity of opinion, on account of the wide field of operation, and it was considered inadvisable to incorporate anything in the code on this score. Inclusion of special clauses in terms of sale to cover these questions is entirely possible between buyer and seller, and, according to Article 6 of the code, terms of sale should be considered as part of the contract and be lived up to.

In Article 15 the clause should be added, "The buyer must credit shipper with the amount above grade determined by inspection." Exception has been taken to the fact that while shipper must credit buyer with the amount of degrade, no corresponding premium is paid shipper for the amount of above grade found in the consignment.

The same question was raised at Chicago and quite a controversy resulted and created more of a contention than any other feature, but it was finally determined that although in some instances the buyer might be able to utilize to advantage stock running above grade, in the majority of cases the above-grade stock would be sold as of grade ordered, without distinction, and shipper was clearly at fault in sending better than ordered, and buyer should not suffer for this reason.

"To the duty of president of the congress add the duty of an arbitrator to consider complaints as to flagrant violations of the code of ethics, which he in turn would bring to the attention of those about whom complaint has been made, for the moral effect that such action would have, with the complete understanding that specific details would not be gone into on individual cases that should be handled, as prescribed by the code, by a regular board of arbitration, but in a general way, particularly between associations to consider and advise in relation to violation of the provisions of the code."

Mr. Wastell includes in this circular a statement of the receipts and expenditures of the American Lumber Trades' Congress since the last meeting. This shows a splendid participation by the larger associations of the country, and also shows that the several Pacific coast organizations have given very gratifying help to the organization, although they were not accorded accredited representation. They evidently appreciated

the purpose of the organization and wanted to help, which may be a good suggestion to other associations. Voluntary contributions will be greatly appreciated, and if enough are received no further assessment during the current year will be necessary.

It is hoped that various association secretaries whose organizations will meet shortly will not fail to bring up this important matter for consideration and to communicate with Mr. Wastell's office direct as to the action taken.

## November Meeting St. Louis Lumbermen's Club

The November meeting of the Lumbermen's Club at St. Louis, held at the Mercantile Club on the evening of November 9, was one of the banner meetings of the year.

After a most delightful dinner, President Julius Seidel called for reports, and Frank Goepel, chairman of the Committee on Public Affairs, reported that in the proposal to incorporate the club, which his committee had in hand, it had been decided to lay the matter on the table for the present. The committee, he said, could see no advantage in incorporating, the only contracts being made by the Entertainment Committee, and the club holding no property. Besides this, there would be considerable cost attached to incorporating. The report of the committee was adopted.

J. L. Benas, chairman of the Traffic Committee, reported that a number of important matters had been handled by this committee, one of which was a request to investigate the advance in the rate of one cent from St. Louis to Minnesota transfer points. The committee on investigation reported that the advance was justified, as it equalized the locals from the South to those points with the through rate.

Another very important matter considered was switching charges in St. Louis. After considerable correspondence and many visits to the railroad offices, the committee, Mr. Benas reported, had been able to obtain a complete tariff to date from a road that handles the bulk of the lumber coming into St. Louis—the Missouri Pacific and Iron Mountain railroad.

The committee stated that it had not been able to get any satisfaction as to any changes that might benefit the industries of St. Louis, but were informed that the railroads operating in St. Louis and East St. Louis territory are arranging a new and uniform tariff which will be complete and show the switching charges on cars entering St. Louis and East St. Louis territory. The committee recommended that action in regard to St. Louis switching charges be deferred until the new uniform switching tariff of all the roads and also the absorption tariff of individual roads have been issued. The committee also reported that the matter of space for unloading lumber from boats and barges on the wharf between Clinton and North Market streets has been satisfactorily arranged at the Harbor and Wharf Commission.

The Membership Committee presented the names of the following men for membership and they were unanimously elected: B. L. Van Cleave of the Van Cleave Lumber Company, Lee Caruthers of the Kirby Lumber Company, and T. C. Skeen of the Consolidated Sawmills Company.

As the election of officers will take place at the December meeting, the president named the following for a nominating committee: J. A. Freeman, E. C. Robinson, and J. L. Sheve. As the constitution also specifies that three members from the floor be named, thus putting two tickets in the field, the following gentlemen were chosen from the floor: W. A. Bonsack, H. W. Ballman, and C. M. Jennings.

A letter from W. B. Morgan was then read in

regard to having a delegation from the St. Louis Lumbermen's Club in attendance at the meeting of the Western Classification Committee, to be held in San Antonio, Texas, in January next. At this meeting an effort will be made to obtain an equitable adjustment of rates on goods shipped in wooden boxes as compared with that contained in strawboard and fiber boxes; the rate at present is the same, and it is contended that this is unjust and that goods shipped in inferior packages are not entitled to the same freight rates as when shipped in the more durable wooden box. Most of the lumber and box manufacturers' associations in the country will have delegates at this meeting, and it is hoped that much good will be accomplished in this direction, which is a matter of considerable importance to lumbermen, as a victory of this sort will help the low-grade problem considerably.

Following the business meeting a toast was sung by the members to J. B. White of Kansas City, Mo., a prominent southern operator, who was the speaker of the evening. This toast was written by P. F. Cook of the St. Louis Lumberman, and made a great hit. Mr. White very feelingly thanked both Mr. Cook and the members for this demonstration, after which he addressed the club in a most entertaining manner on the subject, "Forest Conservation and the Merchandising of Lumber." Mr. White's speech was one of the ablest ever given on this subject, and 10,000 copies of it were ordered printed for distribution.

The meeting then adjourned.

## Charcoal in Japan

United States consul located at Kobe, Japan, gives some interesting facts regarding the production of charcoal in Japan. The white is made from hardwoods mostly *Quercus myrsinæ-folia*, and the black from soft woods other than pine. Trees from twenty to thirty years old are used and are cut into lengths of three feet by two feet in circumference.

There are two styles of kilns used, stone for making white charcoal and earthen for making black. Kilns burn from 800 to 4,000 pounds of green wood, which process takes about thirty hours, and requires the services of three men. The charcoal obtained amounts to from eighteen to twenty-three per cent. A new kiln has been patented which will burn from 24,000 to 80,000 pounds of wood, but no details in regard to it were furnished by the consul.

The charcoal consumed in Japan in 1907 was valued at \$7,934,700. The retail price of hard charcoal is 60 cents per bale of 32 pounds and of black charcoal 30 cents.

## A Prominent Chicago Hardwood Flooring House

The hardwood industry has its perceptive minds quite as much as any other industry. The prevalent notion that the men who know and see and act are principally among those who have to do with matters of great commercial and governmental importance is erroneous. Institutions that are rarely heard by the public and that figure little in shaping policies are to the field in which they work directing a destiny. The hardwood industry is no exception.

An allied member of this industry, though not so large as some, but which is wielding a timely influence, is the North Branch Flooring Company, located at 2415 Barry avenue, Chicago. This institution is the outgrowth of the old North Branch Lumber Company established eighteen years ago on the same site.

Men long in the trade remember the North Branch Lumber Company. At the time of its founding the thought uppermost in the minds of its promoters was to do a general lumber busi-

REAR VIEW OF PLANT, NORTH BRANCH FLOORING COMPANY.

ness, paying only slight attention to the hardwood feature. As such it continued for eighteen years, but being keenly observant of trade conditions and of the growth of Chicago, it was soon apparent to the officials of the company that the manufacture of hardwood flooring was fast coming to be a great factor in the industry.

Accordingly the business was reorganized in 1906. The officers elected, who are still serving, were: W. C. Hull, president; F. M. Longenecker, vice-president, and H. F. Brand, secretary. The first two gentlemen are vice-president and sales manager respectively of the Oval Wood Dish Company of Traverse City, Mich., and men of wide activity. Mr. Hull is the moving spirit of the Michigan company, reputed to be one of the largest of its kind in the world. It manufactures wood dishes and clothes pins that find their way to the markets of the world.

The determination of these men to devote their energies entirely to the manufacture of hardwood flooring proved their wisdom. Three years is a short term in which to establish any business, but a concern that handles 600,000 feet of maple and 150,000 feet of oak every twenty-four days is surely making splendid progress. The company has not always found progress smooth sailing, for in 1907, a year after the reorganization, fire completely destroyed its plant. But "from ashes cities rise" found application here.

The present plant is modern in every sense.

In the manufacturing department there are nine machines four flooring and five end-matching machines. These machines are of the latest pattern, the product of the American Wood Working Machinery Company's Aurora plant. There are five dry-kilns having a capacity of 40,000 feet each. The yards are arranged with great convenience along the north branch of the Chicago river, and property immediately across the street has just been added owing to increased business.

The company has seventy-five employees in all departments. The highest grade of skilled labor is the rule of the company and it is widely stated that the North Branch Flooring Company has one of the best organizations of any similar concern in the United States. The officials themselves say that they aim always to get the best labor and to treat their men as men. Because of this there have been mighty few resignations.

The North Branch Flooring Company makes a specialty of maple flooring in the ratio of three to one. The lumber is obtained from the Oval Wood Dish Company direct, an arrangement that insures the best quality that money can buy and selected stock as well. The oak is purchased in the open market, but here also the same fixed purpose of "buy nothing but the best" obtains.

In the manufacture of maple flooring this concern stands among the highest. One feature which it emphasizes is the manner in which the flooring is prepared. Instead of a square groove

into which the tongue fits the under edge of the top lips of the groove is rounded so that the tongue will not interfere with the nails. The rounded edge insures an even surface of the finished floor. By a series of tests the company has demonstrated that a perfectly smooth floor always results. Similarly the same attention is paid in the preparation of each piece of flooring, insuring uniform accuracy. The flooring machines, it might be stated in this connection, were made from special patterns prepared by Mr. Brand and the superintendent of the plant, after an experience of many years.

The company supplies the yard trade and contractors direct. The business is confined entirely to Chicago, though the officials state that it is the only exclusive hardwood flooring concern in the state. Standard widths are made, of course, yet the equipment is suited to all special sizes desired.

The personal equation in this company must not be overlooked. The man who directs its forces is the genial and strong H. F. Brand, for thirty-five years identified with the local lumber business. One may go far to find a man with a kindlier spirit. Around three score years of age, he shows no trace of the devastation of time and never a day's work does he miss. He is without ceremony and show, and is one of those who sees, knows and acts, and while not laying claim to the prophetic, he is shaping in his small way the destiny of the trade.

MANUFACTURING DEPARTMENT, NORTH BRANCH FLOORING COMPANY.

### Water in Wood

In the living tree and in green wood there is a large amount of water. Part of this is closely held in the material of the cell walls, and cannot be removed without affecting the physical condition of the wood; the rest, which fills the pores of the wood, is free water. In drying, the free water within the cells passes through the cell walls until the cells are empty, while the cell walls remain saturated. When all the free water has been removed the cell walls begin to yield up their moisture. Heat raises the absorptive power of the fibers, and so aids the passage of water from the interior of the cells.

Air-dried wood under ordinary atmospheric temperatures retains from 10 per cent to 20 per cent of moisture, whereas kiln-dried wood may have no more than 5 per cent as it comes from the kiln. The exact figures for a given species depend in the first case upon the weather conditions, and in the second case upon the temperature of the kiln and the time during which the wood is exposed to it. The studies upon which this report is based covered the following goods: White oak, red oak, maple, birch, basswood, chestnut, ash, red gum, mahogany, cherry and walnut.

### The Cincinnati Photographs

The admirable pictures of Cincinnati lumbermen which appeared in the last issue of the *HARDWOOD RECORD* were made by the foremost Cincinnati photographers, Young & Carll, Seventh and Vine streets. This house did a prompt and satisfactory piece of work for the *RECORD*, and thanks are due for this efficient service.

### A Lumber Rhyme

The *RECORD* is indebted to J. A. Spalding, well-known lumberman of the Witherspoon building, Philadelphia, Pa., for the appended verses. Mr. Spalding explains that it is a copy of an acceptance of an invitation to attend a wooden wedding anniversary which one of his friends received a few days ago. The acceptance was written on parchment and mounted on a heavy block of oak.

We accept your invitation with a great amount of glee;  
The interest that we feel in you is lively, don't you see;  
We helped you in your wooing, on the land and on the sea,  
And we couldn't, no, we wouldn't, miss your anniversary.

Some *wooden-headed* people, call them *blockheads* if you like,  
Might pass the invitation by, to some other function hike;  
We're not that kind of *timber*, we're built of solid *Oak*,  
As modest as the violet (you'll consider this a joke).

One could not hope to *Sycamore* companionable place,  
Where everything is lovely and one cannot fall from grace;  
One meets old friends who *Pine* to work off many an old *Chestnut*,  
But host and hostess never let things fall into a rut.

We'll *Spruce* up in our very best, we have not *Fir* to go,  
And *Maple* up at your front door in good time for the show;  
The *Buttonwood* announce us, it touches off the bell,

Now put your open *Palm* in ours, and ask if all are well.

Now, if there's any singing, Massey's *Basswood* please us all,  
And if he doesn't do it well, there's a *Birch* rod in the hall;  
Or if he pleads he has a cold in that good throat of his,  
We'll give him slippery *Elm* drops, then settle down to biz.

The prospect pleases us indeed, and you will see us two  
On Wednesday night, November tenth, without making more ado.

M. P. B. and G. H. B.

P. S.:

Don't *lumber* up your attic with this old block of wood,  
But burn it up to give you heat, as decent *lumber* should.

### Proposed Hoo-Hoo Legislation

At the Hot Springs Annual of Hoo-Hoos held in September last a joint meeting of the Supreme Nine and the House of Ancients of Hoo-Hoo was authorized, and this meeting was held on November 17, 18 and 19 at the La Salle Hotel in this city. Bolling Arthur Johnson, Seer of the House of Ancients, and W. A. Hadley, Supreme Snark of the Universe, jointly presided at the meeting. There were nearly sixty prominent members of the organization present. Most of the action taken by the organization, before becoming effective, will have to be passed on at the next annual meeting of the order. Numerous suggestions were recommended, but a summary of the work accomplished is as follows:

A contribution of \$250 was made to the Cherry mine disaster relief fund.

The House of Ancients and Supreme Nine are authorized to employ a high-class traveling representative, to be known as Supreme Representative. The duties of this new officer are to devote his entire energies to the good of the order, and especially to be present and be arbitrator and co-operate with vicegerent snarks at all concatenations.

Gifford Pinchot, chief forester of the United States, was elected an honorary life member of the order, exempt from initiation fees or dues, and he and his policies were endorsed in a strong resolution.

The Scrivenoter was instructed to report at annual meetings concerning the work of securing positions for members out of employment.

A committee was appointed to co-operate in forest conservation and report at the next annual meeting.

Hoo-Hoo territory of the United States, British North America and Mexico was divided into nine jurisdictions, each jurisdiction to be represented on the Supreme Nine. Each of these jurisdictions has the right to place in nomination candidates for the Supreme Nine at each annual meeting.

It was recommended that Hoo-Hoo banquets or "On-the-Roof" may be held to better advantage in the afternoon or evening between six and eight o'clock than late at night.

Numerous changes were made in the constitution and by-laws relative to the eligibility of members and election of candidates. The change will admit a large number of railroad employees that never before have been eligible.

A plan was authorized to provide for a death benefit fund and the plan to be drafted by a committee and submitted for approval to the House of Ancients and Supreme Nine, and then put into effect.

It was proposed to rescind the action at Hot Springs concerning changing the Hoo-Hoo button

and authorized the continued use of the old or large button.

The number of handbooks to be issued for 1910 to be restricted to 3,000.

Plan of manner of holding concatenation changed to definite period in each section of the country.

Scrivenoter was instructed to inaugurate a special campaign to get back desirable members who have resigned from the order; also to induce delinquents to pay their dues.

Vicegerents are to be instructed by Scrivenoter to hold concatenations in strict accordance with ritualistic ruling.

In the future no member will be eligible to office in the order whose dues are not paid in advance covering his period of office.

Vicegerents are to be suspended if they don't return ritual in specified time after expiration of term of office.

### Baldwin Locomotive Works Building Enormous Erecting Shop

At the Eddystone plant of the Baldwin Locomotive Works, foundations are being dug for one of the largest erecting shops in the United States. The shed will be about 900 feet long and 80 feet wide and will comprise three buildings, for the erecting and assembling of the mammoth Mallet freight or double type engines. Contracts have been awarded for the iron and steel structure work and the machinery. The latter will consist of large electric traveling cranes and other appliances for rapid handling of the heavy parts of the locomotives. The building is to occupy the unused land of the company which lies north of the Pennsylvania railroad and which skirts the tracks. It will be constructed in three overlapping sections, the first to be 243 feet long, the other two 291 feet each in length, with a common width of 80 feet.

Shipping facilities will soon be arranged for this plant unattained by any other industrial establishment in the world. Two great trunk lines, the Pennsylvania and the Reading, skirt the works, and connection is being made with a third, the Baltimore & Ohio. In addition, great wharves are to be built on the Delaware river front and a harbor provided in Crum creek.

Eight departments are now in operation at Eddystone because of the lack of room at the Philadelphia works, the blacksmithing, drop-forging, hydraulic-forging, bolt-forging, rolling mill, pattern shops, iron foundries and repair shops. These are grouped between the Reading railway, which passes through the southern part of the works' property, and the Pennsylvania, on the north. Shipments are made by both of these lines, but in order to have a third outlet a bridge is being built to span Crum creek and connect with the Baltimore & Ohio.

### Defiance Bending Machine

Illustrated herewith is the 12-inch patent automatic felloe, hound and bow bending machine manufactured by the Defiance Machine Works, Defiance, O. This machine the manufacturers have designed with the idea of meeting the requirements for the successful and economical bending of felloes for automobile, carriage and wagon wheels, wagon hounds, carriage bows, reaches and other similar classes of bending. It is capable of bending the lightest felloes used for carriage wheels as well as the heavy work required for farm wagons, truck and artillery wheels.

It bends hardwood as large as 5 inches thick, 12 inches in width, with adjustments to accommodate changes from 13½-inch to 72-inch circles; also wagon hounds to any circle required, and carriage bows from 36 inches to 44 inches wide. The form for this work is adjustable to bend any width between the sizes specified. The frame of the machine is a massive

casting, and is substantial and strong in all parts. It is 9 feet 9 inches high and occupies 14 feet of floor space.

The machine embodies an entirely new feature in the application of power, the object being a drastic longitudinal stress upon the timber to be bent. This is secured by means of an elastic cable railway held taut by four powerful springs, which are capable of exerting an aggregate energy of 6,000 pounds. Upon this railroad roll the trucks by which are carried the inner or lower ends of the levers or bending arms. Long experience in the art of bending timber proves this action to be necessary to secure a shape in satisfactory agreement with the form upon which the timber is bent.

A swinging crane with hoist attached is furnished with each machine, which enables the operator to easily place the forms in or out of the machine, and when out of use it is swung out of the way. The machine will bend about 2,500 felloes 1½ inches or 1,200 wagon hounds in ten hours; the other classes of work in proportion.

Anyone interested in this machine or in any sort of equipment for making hubs, spokes,

DEFIANCE PATENTED 12 FOOT AUTOMATIC WOOD BENDING MACHINE.

wheels, wagons, carriages, rims, shafts, poles, neckyokes, singletrees, barrel hoops, handles of every kind, bobbins, spools, insulated pins and oval wood dishes may receive details in regard to same and illustrated circulars by writing to the Defiance Machine Works, manufacturers of a wide and excellent line of this class of machinery.

### Two New Dodge Branches

Service is one of the chief characteristics of the Dodge Manufacturing Company, power transmission engineers and manufacturers of the Dodge line of transmission machinery at Mishawaka, Ind. This is largely based on the maintenance of large stores and warehouses in many of the principal cities of the country, in connection with expert engineering departments, which makes possible immediate deliveries and the solution of knotty transmission problems without delay.

From time to time the Dodge people have enlarged and extended this service until it now takes in nine points—Boston, New York, Brooklyn, Pittsburgh, Philadelphia, Cincinnati, Chicago, St. Louis and London, Eng. Recently the list has been augmented by the addition of Minneapolis, Minn., and Atlanta, Ga., to the list. These two branches will serve as local stores and distributing stations for the Northwest and the South.

The Minneapolis store is located at 202-204 Third street, South, and the warehouse at 312 to 320 First street, North. The agency arrangement with the Minneapolis Steel & Machinery Company has been discontinued. Burke Richards, former resident salesman at Cleveland, O., has

been promoted to manager of the Minneapolis branch.

The Atlanta branch and warehouse is located at 54 Marietta street. S. L. Dickey, resident salesman at that place, has been appointed manager. No change has been made with any of the agency connections in the South.

### A Veneer Punch

Users of birdseye maple and walnut veneer will be gratified to learn of a veneer punch which is a very efficient "black spot chaser." The old and frequent trouble with black eyes in maple and holes in walnut is entirely done away with by the use of this tool. It is the only one of the kind on the market, and is made of Sander-

son tool steel and tempered in whale oil. Its edge is as sharp as a razor. It is fitted with a turned hardwood handle and bronzed to resemble silver, making a neat and convenient little article. The punch comes in sizes from an eighth inch to three inches in diameter, and the price is \$3.98 for one, \$11.75 for a set of three and \$14.75 for a set of four. The tool is sold by Birdseye Walker, Chicago, exclusively.

### Government Transfers Work of Forest Products Investigation

Preparations have been completed for the transfer of all the government's forest products work to Madison, Wis., where the United States Forest Service products laboratory will be located, and to Chicago, where the headquarters of the office of wood utilization will be established.

The new forest products laboratory being erected at Madison by the University of Wisconsin, which will co-operate with the government in its forest products work and which is to cost approximately \$50,000, is now in course of construction. The laboratory will be a fireproof building of brick trimmed with white stone and is located near the Chicago, Milwaukee & St. Paul railroad, with exclusive tracks and other railroad facilities. The building is expected to be ready for occupancy January 1. In the meanwhile temporary offices will be located at 1610 Adams street, Madison.

On October 1 the Yale timber testing laboratory was discontinued and the Forest Service equipment there was shipped to Madison. The laboratory at Washington was discontinued at the same time. The timber testing laboratory at Purdue, Ind., will be operated until the middle of December, when it will be discontinued and its equipment sent to Madison.

The offices having general supervision over all the work of the branch of products will remain temporarily at Washington.

W. L. Hall, assistant forester, continues in charge of branch of products and McGarvey Cline will be director of the Madison laboratory. The work of the laboratory will be assigned to five offices, as follows:

Wood preservation, which will study all problems related to the impregnation of wood with preservatives and other substances.

Wood chemistry, which will handle all work bearing on the chemical utilization of forest products. Wood distillation, paper pulp and other fiber products, chemical analyses of creosotes, turpentine, etc., are the principal lines handled by this office.

Timber tests, which will have charge of all tests to determine the strength and other mechanical properties of different woods.

Technology, which will study the microscopic structure of wood, methods of seasoning and drying it, and other problems of a purely technical character.

Maintenance, which will have charge of the filing and computing. It will also be responsible for the purchase of supplies and general care of the entire laboratory.

The class of work in the laboratory may be separated into three kinds, as follows:

1. The investigation of problems in experimental research.

2. Experimental work in co-operation with commercial plants to verify laboratory experiments on a commercial scale.

3. Co-operation with outside parties for the purpose of assisting them in applying principles and processes of recognized commercial value with which the service is thoroughly familiar.

The supervisory staff of the laboratory is as follows:

McGarvey Cline, director.  
H. S. Bristol, in charge of wood chemistry.  
H. D. Tiemann, in charge of technology.  
H. F. Weiss, in charge of wood preservation.  
Rolf Thelen, in charge of timber tests.  
W. H. Kempfer, in charge of maintenance.

The technical force will in part be made up of the following men:

H. E. Surface, engineer in wood chemistry.  
Edwin Sutermeister, wood pulp investigations.  
Jason L. Merrill, chemist.  
E. Bateman, chemist.  
L. F. Hawley, wood distillation investigations.  
Frederick Dunlap, kiln drying investigations.  
C. D. Mell, microscopist.  
W. D. Brush, microscopist.  
C. J. Humphrey, pathologist, detailed from the Bureau of Plant Industry.  
F. W. Bond, mechanical engineer.  
E. W. Ford, mechanical engineer.  
C. T. Barnum, mechanical engineer.  
C. F. Winslow, civil engineer.

The work of the office of wood utilization at Chicago will consist of studies of the wood-using industries of various states, the study of woods in manufacture and of the methods of disposing of mill waste, the collection of statistics on the price of lumber at the mill and at the principal distributing markets of the country, and the study of specifications and grading rules. The office will also secure statistics of forest products of importance to the experimental work of the service and the study of the movements of lumber and of the conditions of the principal lumber markets.

The personnel of the office of wood utilization for the present is as follows:

H. S. Sackett, in charge.  
Hu Maxwell.  
Franklin H. Smith.  
Roger E. Simmons.  
Charles F. Hatch.

### Miscellaneous Notes

The Moro Land & Lumber Company has recently been incorporated at Marked Tree, Ark., with a capital stock of \$25,000. John J. Hirschman is president; W. L. Black, vice-president; T. J. Turner, secretary and treasurer, and Paul H. Westbrook, manager. The company now has one mill in operation and will put in another larger one soon.

Fire recently broke out in the yard of the Fullerton Lumber Company at Anita, Iowa. The whole stock of lumber was destroyed, causing a loss of about \$15,000.

The Spencer Lumber Company of Vandervoort, Ark., recently started business with a capital of \$25,000. The incorporators are S. A. Richardson, president, E. J. Spencer and R. Goff.

New machinery was received by the Fortuna broom factory of Beville, Tex., which when installed will increase the capacity of the plant from fifteen to forty dozen brooms a day. A stock company is being formed which will be capitalized at \$8,000.

Word has been received that Hill City, a new town twenty-five miles from Grand Rapids, came near being wiped out by fire on November 11. The town has made rapid strides in the past year, due to its large hardwood forests. The flames were discovered in a lumber yard, and for a while threatened the destruction of the whole town, as it has no fire protection. However,

after a hard fight on the part of the citizens the fire was extinguished with only \$2,000 loss. Hill City is in the midst of the hardwood lumbering camp. During the past year the Mississippi River, Hill City & Western Railway Company has built a road into the place, thus greatly increasing the value of the timber land there.

A company has been organized at Wichita, Kan., for the purpose of planting 1,000 acres in catalpa trees. The plantation is located about twenty-nine miles southwest of Enid, Okla., and the trees will be planted next spring. It is proposed to plant about 1,500 trees to the acre, making 1,500,000 in all.

The tie-treating plant of the Mexican Central railroad has reached an output of 3,500 ties a day, making it one of the largest concerns of its kind in the country.

Work on the plant being erected by the Pioneer Hardwood Lumber Company of Durant, Okla., is progressing rapidly. It is expected that the sawmill will be completed this week. About \$4,000 worth of timber to be used by the plant has been received and is now awaiting the commencement of operations. The plant will employ about fifty men.

The Wallace Robinson Lumber Company, Duluth, Minn., has been capitalized at \$100,000 by W. J. Wallace, W. C. Robinson and F. L. Swan, all of Duluth.

The Jackson Lumber Company has been organized to do a general lumber business at Evansville, Ind. The capital stock is \$35,000 and the directors are C. W. Talge, Louis Koss and W. C. Calhoun.

The Ballard-Trimbale Lumber Company, a Minnesota corporation with a capital of \$70,000, has filed a statement to do business in Wisconsin.

## Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

### CHICAGO

The RECORD is advised that the firm of Brants, Franck & Co. of Antwerp, Belgium, was dissolved on October 1, and that the business will be continued under the style of Amédée C. Franck & Co., 76 Rue Loos, Antwerp.

E. W. Tickle of the big mahogany and American lumber house of Tickle, Bell & Co. of Liverpool, sailed from Liverpool on Thursday last by steamship Canada for a business journey through the United States. Mr. Tickle will visit Chicago during his tour.

The Northfield Lumber Company is the name of a new hardwood institution just organized at Chicago Heights, Ill. The institution is made up of H. C. Schneider, C. C. Robinson and George G. Drumper. The house will engage in the wholesale production of dimension stock and interior hardwood finish.

R. H. Vansant, the well-known poplar magnate of Ashland, Ky., and head of the house of Vansant, Kitchen & Co., spent nearly all the week before last in Chicago on business matters.

Giles Wright, president Wright-Saulsberry Lumber Company of Ashland, Ky., was a caller at RECORD office on November 11. Mr. Wright is very enthusiastic over the current and prospective hardwood lumber business.

Among recent Chicago visitors have been Alexander Lendrum of the Penrod Walnut & Veneer Company, Kansas City, Mo.; E. D. Galloway, president of the Galloway-Peace Company, Cincinnati; M. M. Wall of the Buffalo Hardwood Lumber Company, Buffalo, N. Y., and W. W. Knight of the Long-Knight Lumber Company, Indianapolis, Ind.

At a meeting of the board of directors of the Business Men's League of Greenville, Miss., held on November 16, J. L. Strickland was agreed on to be president of the organization. Mr.

It has an interest of \$25,000 here and has appointed D. M. Travis of Ellsworth as its Wisconsin representative.

The new Katy crosstong tie plant is now in operation and when running on full time, twenty hours a day, will employ 150 men and treat 5,000 ties daily. There are now on hand 100,000 ties, and others are ready for shipment to this point. The plant is constructed of fireproof material throughout, at a cost of over \$100,000.

Experiments have begun at the experimental station on the Shasta national forest reserve for the purpose of introducing eastern hardwoods into California. Seeds of the following species have been received for trial: White and red oak, shag-bark hickory, black walnut, chestnut, black locust, and linden. Secretary Wilson of the Department of Agriculture favors the experiments on a large scale and urges that the forestry of the state plant heavily the territories all over California which are so fitted to receive and produce timber.

What is declared to be the largest and most expensive leather belt ever made for power drive was shipped a few days ago from New York to the Great Southern Lumber Company of Bogaloussa, Fla. The belt is 240 feet long, 6 feet wide, 3 ply in thickness, and is said to cost \$5,800. The hides of 540 Texas steers went into this belt.

The Henderson Chair Factory at Henderson, Ky., was recently damaged by fire. The loss was about \$45,000.

The Hertzler Lumber & Manufacturing Company has been organized at Carlisle, Pa., to operate a mill owned by Harry Hertzler on West North street. The members of the company are Harry Hertzler, W. Harry Crider and Peter Gassaman, the latter of Williamsport.

Strickland is one of the best-known lumbermen of the Greenville hardwood section, and is of the firm of Starnes & Strickland. His choice as president of the Greenville Business Men's League is a distinct compliment to this energetic lumberman.

It will be recalled that some time ago A. H. R. Timpink, who operated under the title of the Kentucky Car Lumber Company at Madisonville, Ky., was arrested by postoffice inspectors in Chicago on the charge of the misuse of the United States mails. The RECORD has been advised by Inspector R. M. C. Hosford of the postoffice department that Timpink has entered a plea of guilty and was fined \$300. Mr. Timpink is getting off very easy as a result of his swindling enterprises.

J. M. Attley, president of the Sagola Lumber Company, is visiting the company's mill at Sagola, Mich.

T. Ford, manager for Ward Lumber Company in Chicago, is visiting the company's mill at Whiting, Mo.

W. B. Heinemann of the B. Heinemann Lumber Company of Antigo, Wis., visited Chicago last week. He reported a splendid business.

Inspector Hanbury of the Chicago Wholesale Lumber Dealers' Association is now located in offices on the sixth floor of the Baltimore building, 21 Quincy street.

The Chicago Hardwood Lumber Exchange will hold its next regular meeting November 27 at the La Salle hotel. The chief business will be the consideration of publicity matters, plans for which have been in the hands of the publicity committee for several weeks. The report of this committee will be exhaustive, it is stated, and the committee hopes for some tangible results. Luncheon will be served at 12:30.

The new concrete, fireproof sawmill of the Northwestern Cooperage & Lumber Company, Gladstone, Mich., is completed and now running.

Much credit is due General Manager Ian Bushong for the excellent and modern condition of this plant, which is one of the best of its type in the country. A veneer plant and flooring factory will soon be added to the equipment.

D. J. Arpin of the Arpin Lumber Company, Grand Rapids, Wis., accompanied by Mrs. Arpin, visited Chicago last week. Mr. Arpin stated that his company would in all probability log from 12,000,000 to 15,000,000 feet this year. He is sanguine on the business outlook for 1910.

N. J. G. VanKeulen of the VanKeulen-Wilkinson Lumber Company of Grand Rapids, Mich., was in Chicago on business November 9.

T. S. Estabrook, a well-known and popular member of the Estabrook-Skeele Lumber Company, who was operated on for appendicitis a few weeks ago, is now recovered sufficiently to be at his desk again.

The Flanner-Steger Land & Lumber Company of Chicago, with mill at Blackwell, Wis., is making additions to its plant in the form of two boilers, two dry kilns and two new machines in the hardwood flooring department. This will increase the capacity of the plant from 16,000 feet to 40,000 feet.

C. R. Lamb of the Lamb-Fish Lumber Company of Memphis, visited a day in Chicago last week on his way from Minneapolis to French Lick Springs.

George F. Kerns of the Kerns-Utley Lumber Company spent several days last week at the company's plant at Mounds, Ill.

W. K. Schieweck, a well-known timber estimator of Memphis, visited Chicago last week.

Samuel A. Thompson of Darnell-Tanzer Lumber Company of Memphis, A. B. Baker of the Cincinnati Poplar Company, R. L. Muse of the R. L. Muse Lumber Company of Jonesboro, Ark., were among hardwood salesmen who visited Chicago last week.

Edwin D. Johnson, the hardwood man of the Old Colony building, returned to his desk last week after being confined in a local hospital for ten days. Mr. Johnson underwent a minor operation which resulted most successfully and his wide circle of friends and acquaintances are glad to see him back at his desk again.

F. M. Mulvany of the Mulvany-Pratt Lumber & Tie Company of this city severed his connection with that concern November 6. The following officers have since been elected: G. C. Pratt, president; W. H. Russe, vice-president, and George D. Burgess, secretary and treasurer. Mr. Mulvany's interest has been taken over by Messrs. Russe and Burgess.

Announcement has been received of the incorporation of the Floyd-Olmstead Company, with headquarters at 307 Bulletin building, Philadelphia. This concern will conduct a general wholesale lumber business, making specialties of white pine, hardwoods, spruce and long and short leaf pine. The company will have on hand at all times a complete stock of these woods, and is in position to offer very prompt and efficient service to customers. A. S. Olmstead is president, and J. W. Floyd treasurer of the concern.

The National Hardwood Lumber Association, whose headquarters are in the Rector building, this city, has added six new inspectors to its force since October 5, and four more will be added as soon as satisfactory men can be obtained. Secretary Frank F. Fish reports that the inspection department of the association is very busy, which speaks well for the service which the organization is giving the hardwood trade. The following men have been assigned to permanent stations: Edward E. Nichols, to be located at Memphis, Tenn., as assistant to George Teets; C. A. Shreve, to New Orleans as assistant to C. E. McSmith; Harry J. Schwartz has been given southern territory and will visit mill plants in Mississippi and Arkansas; John J. Shephard is located in Chicago and will travel to nearby points.

The RECORD had the pleasure of a call on November 22 from George R. Jones, principal of the mahogany and American timber house of Jones Son & Miller, West India docks, London, Eng. Mr. Jones is making an extended trip in the United States, marketing African mahogany logs. He expects to be back in Chicago again in about three weeks. This is not Mr. Jones' first visit to this country, and his house has an established trade among the principal buyers of mahogany. His concern specializes in fine figured African mahogany, satinwood, Circassian walnut and other high-class woods.

William Wilms of the Paepeke-Leicht Lumber Company has been spending some time at the Greenville, Miss., operations of the company, overseeing the construction of large additions to the plant there. More than \$100,000 will be expended on this plant, making the company's operations at Greenville one of the largest veneering factories in the South. The number of men employed at Greenville will be almost doubled.

## NEW YORK

The Emporium Lumber Company, large Pennsylvania hardwood manufacturers, with headquarters at Keating Summit, Pa., and general sales office at Buffalo, N. Y., and local sales office at 1 Madison avenue, have just purchased another big tract of Adirondack hardwood timber, embracing 65,000 acres in the Cranberry Lake section. This latter purchase, together with the extensive timber holdings already owned by the company in Pennsylvania, the Adirondacks and Vermont, still more strongly entrenches them as one of the biggest holders of eastern timber.

Following the fire which totally destroyed the lumber yards and buildings of the C. H. O'Neill Lumber Company at Eighteenth and Nineteenth streets and Jersey avenue, Jersey City, N. J., it was announced that the business of the company had been merged with the big Jersey City retail house of Vanderbeek & Sons, under which plan the latter will restock the former yard and operate the same as a branch, with G. F. Farrell, former head of the C. H. O'Neill Lumber Company, as manager.

J. B. Mitchell, local representative of the John L. Roper Lumber Company of Norfolk, Va., headquarters 18 Broadway, left last week with a party of customers on a hunting trip to the Virginias. The party included W. S. VanCleaf, the large retailer of Port Richmond, L. I.; his son, Cortlandt VanCleaf, and J. B. Quest of the New Rochelle Coal & Lumber Company, New Rochelle, N. Y.

The John R. Capenter Company, large retail house of Jamaica, L. I., has just acquired additional property at Lynn Brook, L. I., which it is developing for its trade further on down the island, thereby saving the extra charges of supplying the wants of its customers from the Jamaica yard.

Sam E. Barr, sales manager for the Lilly Lumber Company, Hinton, W. Va., has just returned from a business trip to the West Virginia and Tennessee mills.

Secretary E. F. Perry, of the National Wholesale Lumber Dealers' Association, has been spending several days in the Pittsburgh district in the interest of association affairs.

The well-known furniture and cabinet firm of E. Schloss & Co., Manhattan, has been incorporated under the same style with a capital of \$75,000.

Thomas Rae, president of Crane & Clark, Inc., large retailers of West Thirtieth street, New York, died suddenly at New Canaan, Conn., aged sixty-four years. He was not actively associated with the management and conduct of Crane & Clark, but was widely known in the building trades of New York through other lines of business.

George M. Stevens, Jr., of Stevens-Eaton Company, 1 Madison avenue, New York, is enjoying ten days' shooting in the Adirondack regions. During his absence G. A. Mitchell, president of the company, is looking after his work.

C. O. Shepherd, wholesale hardwoods, 1 Madison avenue, and who, in fact, is one of the best posted hardwood men of the district, sums up the hardwood situation with the statement: "Good lumber is very scarce; low grades are plentiful, and if the mills cut the same amount of low-grade next year there will be very little material change in the price situation." He further stated that the salient feature of the hardwood situation is in the scarcity of supplies in 1's and 2's lumber. He is of the opinion that there will never again be what may be termed surplus of good-grade hardwood lumber and that if, on the other hand, there was any specially good or excessive demand for good lumber today there would practically be a panic, so to speak, among buyers east of Buffalo and Pittsburg.

C. E. Lloyd, Jr., wholesale hardwood, Land Title building, Philadelphia, spent several days in town during the fortnight in the interest of business. He reports the general market as showing a steady improvement and is confident that there will be a strong demand for all kinds of hardwoods through the winter, with very large and promising prospects for the spring.

S. Segar, head of the George D. Emery Company, returned recently from a visit to Liverpool and other English ports. In addition to the business of George D. Emery Company, Mr. Segar also has large lumber interests on the continent, with main office in London, under the style of S. Segar, Limited.

Pieces of lumber about 2½ by 4 inches and 2½ by 3½ inches, planed on three sides and planed and grooved on the fourth, were decided by General Appraiser McClelland to be dutiable as lumber planed and finished, at the rate of \$4 per thousand feet board measure. By so deciding the general appraiser overruled the assessment of collector of customs at the rate of thirty-five per cent ad valorem as "manufactures of wood." The evidence of the owner of the merchandise, F. W. Myers of Plattsburgh, N. Y., showed that this lumber was rough-planed on three sides and planed and grooved on the fourth; that all of the processes to which it had been subjected were known as rough planing and grooving by machinery, and that in the condition as imported the lumber was used in the construction of buildings.

## BUFFALO

President F. A. Beyer of the Pascola Lumber Company has gone to the mills at Pascola, Mo., with the intention of starting them up before he comes back. Such a press of other business has been upon him of late that lumber has been neglected.

Scatcherd & Son complain of the high price of logs in the Southwest, though they are paying it, for their mills in Memphis are running strong, as they will need to if the demand for oak is met in any way when it returns in full again.

The fall trade of O. E. Yeager has been of the best, September running ahead of all other months except one and October being only a little behind it, so that he has been obliged to lay in a lot of new stock to meet the outgo.

A good October trade is reported by I. N. Stewart & Bro., with chestnut selling at better prices, though it is the time of year for cherry to be quiet. H. A. Stewart has returned from his West Virginia shipping and taken a trip east.

F. W. Vetter is selling a good lot of maple and finds it a good wood to handle on account of the demand for the low grades in the flooring trade. It comes in from various directions and is no longer the cheap lumber that it used to be.

The Buffalo Hardwood Lumber Company reports a fair trade and predicts that it will be good after the first of the year. Between the Buffalo and the Memphis yards the company has an excellent stock of lumber on hand.

G. Elias & Bro. are very busy getting in the last of their lake receipts and reported the other day that they had 3,000,000 feet on the dock, ready to be put into the yard for winter, thus insuring a large stock and big assortment.

The winter stock of A. Miller will be good, as he always knows where to get what he wants, bringing in stock from Michigan, Canada and the South, so that he is sure of the variety that he will need for the winter.

Hugh McLean did not take his usual fall vacation, so he managed to find himself in the vicinity of the late Yale-Princeton football game. Business is always active with him and the office reports fine sales of oak, poplar and chestnut.

T. Sullivan & Co. are looking after their last fall shipments by lake, finding it hard to get vessels for that trade of late. A good stock of Pacific coast lumber is one of the easy-selling parts of the yard stock.

New purchases of timber south add to the operations of the Standard Hardwood Lumber Company, which is doing well in yard sales and will look for a fine revival of trade early in the new year.

## PHILADELPHIA

Horace G. Hazard of H. G. Hazard & Co. reports as much business as his company can handle. Fortunately it is not inconvenienced to any extent by the growing car shortage, as most of the goods are shipped by water.

Justin Peters, manager of the Pennsylvania Lumbermen's Mutual Fire Insurance Company, says he has no reason to complain of business, as the average amount of insurance is being written up right along.

J. Gibson McIlvain, Jr., of J. Gibson McIlvain & Co. has just returned from a searching tour through the southern and some of the western lumber camps in connection with a visit to firms' mill. He reports trade in good shape and says that so far the company's shipments have not suffered from car shortage.

George A. Howes, chairman of the Office and Entertainment Committee of the Lumbermen's Exchange of Philadelphia, has just brought his family home from their seductive summer cottage in Belmar, N. J.

The W. M. Ritter Lumber Company is busy, but already hampered by the car shortage. H. W. Collins, eastern sales manager, has returned from the usual monthly meeting of the sales managers at the Columbus, O., office with a hearty testimony as to improved trade.

The Floyd-Olmstead Company is a recent corporation, under New Jersey laws, capitalized at \$50,000. The officers are A. S. Olmstead, formerly with the Atlantic Coast Lumber Company, president, and J. W. Floyd, formerly with W. H. Fritz & Co., vice-president, and C. E. Lloyd, Jr., treasurer, a duo of well-known hustlers in the trade. The company will handle hardwoods, white pine, spruce and long and short leaf pine. It is established in large airy offices at 307 Bulletin building.

From the offices of Fenwick Lumber Company come reports of a steady activity. J. C. Tennant, secretary and sales manager, is on a tour through the New York state consuming district.

The Baldwin Locomotive Works on November 1, received orders for sixty-eight locomotives to be built, fifty passenger engines for the Chicago, Burlington & Quincy railroad, thirteen for the Lehigh Valley and five for the Charlotte Harbor & Northern railroad, aggregating more than \$1,000,000.

The Chadwick Engineering Works, Pottstown, Pa., makers of automobiles, have found it neces-

sary to increase their capital stock from \$500,000 to \$1,000,000.

William P. Shearer of Samuel H. Shearer & Son, has recently returned from a selling trip through eastern Pennsylvania. He reports a vigorous improvement in trading; the volume much ahead of last year and prices steady.

President Herbert P. Robinson of the Lumbermen's Exchange of Philadelphia has appointed Samuel B. Vrooman, Robert C. Lippincott, Franklin Smedley, Frederick S. Underhill and Frank C. Gillingham delegates to represent the exchange at the sixth convention of the Rivers and Harbors Congress, which will be held at the New Willard hotel, Washington, D. C., on December 8, 9 and 10.

An elm tree was recently cut down in the Paradise settlement, Winslow township, Jefferson county, Pa., the height of which was 140 feet, spread of limbs 72 feet, distance to first limb 36 feet. It was five feet through and seven feet from ground. Reckoned by annual rings, it was between 320 and 325 years old.

The sawmill of George Craig & Sons, Inc., of Philadelphia at Winterburn, W. Va., was destroyed by fire on November 9. The loss is estimated at \$30,000; well insured.

The Atlantic Automobile & Supply Company obtained charter under New Jersey laws November 15; capital, \$125,000.

The Washington Casket Company, Washington, D. C., was incorporated under New Jersey laws November 15, with a capital stock of \$8,000.

The Berkebile Lumber Company, Somerset, Pa., obtained a charter under Delaware laws, November 9. The capital stock is \$100,000.

The Whiting Timber Company, to buy and sell all kinds of timber, was incorporated November 10. The capital is \$1,000,000 and the incorporators are W. C. Taylor, A. L. Bair, William B. MacDonald.

## PITTSBURG

W. R. Cornelius, one of the hustling young hardwood wholesalers of Pittsburgh, made a flying trip through West Virginia last week in search of stocks. Mr. Cornelius was highly favored lately, having acted as best man at the weddings of two of his bachelor friends.

An indication of general business in the Pittsburgh district is found in the refusal of the Jones & Laughlin Steel Company to take any more orders at its plants for the present. The company has orders booked to keep it running at full capacity for some time. Other steel plants in the Pittsburgh district are in the same condition. Many of them are preparing to relieve this situation by making extensive improvements or building large additions this winter.

J. C. Parsons of the Meyers-Parsons Lumber Company, was down in West Virginia this week taking up some good stocks. This concern reports the best business last week of any week in its history, which shows that it is a "comer" for a young firm.

The American Lumber & Manufacturing Company is keeping its hardwood interests under strong headway and has its face toward higher prices. President Johnston has believed for the past eighteen months that hardwood was selling at less than any wholesaler was justified in letting it go and he is going to be correspondingly firm in his quotations from this time forward.

The Pennsylvania Railroad Company, although it has planted a very large number of young oak trees for cross tie purposes, has not enough to supply its current needs and so is making its first use of its new pitch pine ties. These have been treated at the Mount Union, Pa., creosoting plant and the Pennsylvania officials will watch the result of this experiment with great interest.

President J. B. Flint of the Flint, Irving & Stoner Company is taking an enforced vacation of a few days on account of sickness. His company is doing a rushing business at its new

hardwood operation near Dunlevie, W. Va., and looks for some big records to be made during the next few months.

President Baker of the Empire Lumber Company returned from an eastern trip a few days ago much impressed with the cheerful tone of the market in that section and the increase in demand for all kinds of lumber. He sees no reason to doubt that prosperity in the East has come to stay a long while.

The Berkebile Lumber Company, capital \$100,000, has been formed at Somerset, Pa., forty miles east of Pittsburgh, by Adam G. and Ralph L. Berkebile and Isaac H. Jones, all of Somerset. The company will engage in a general retail and wholesale business in that town.

Forest fires have been very prevalent in Pennsylvania and West Virginia the past two weeks and some serious losses have resulted. Nearly a dozen counties in central and eastern Pennsylvania have had considerable areas burned. In some of them were located the forest reserves of the state, which suffered more than in any previous fires.

The Linehan Lumber Company is feeling better on account of the improvement in general hardwood conditions, although it sees no boom on hand as yet. Its trade in flooring is improving, however, which shows that building is beginning to revive in all sections.

President Freck of the Pennsylvania Lumber Company dropped off in Pittsburgh for a day or two recently to talk over business with his local manager, J. W. Hulse. The company's plant at Sheffield, Pa., is one of the largest in the state. Likewise, Mr. Freck is one of the most nervy manufacturers in eastern Pennsylvania and, looking ahead a few months, recently boosted his quotations and is standing hard by the wheel in the face of pretty hard competition just now over price-cutting competitors.

The S. W. Means Lumber Company has received final settlement on all its insurance claims and is preparing to reestablish its big yard in the East End, where its plant was recently burned. The United Planing Mill Company, whose plant was also burned, will not continue in business for the present.

Hanie Clark & Son of Waterford, Pa., have bought eighty-five acres of the finest oak timber in that part of Pennsylvania and are starting work on a big sawmill. The plant will be convenient for shipping to the Pittsburgh and also to lake points.

Officers of the Kendall Lumber Company say it is much oversold on some lines of hardwood. Its big business with the B. & O. and the mining companies has been largely responsible for this exceptionally good demand. In spite of hard efforts to keep its mills up in stocks, the company is not able to make any gain. J. L. Kendall, president of this company, has recently returned from a trip through the West.

The Emporium Lumber Company, Emporium, Pa., has bought about 120,000 acres of hardwood timber in New York and Vermont, much of it being in the Adirondacks. The two tracts purchased will cut at least 1,000,000 feet of birch alone. The company will not begin operations right away, but will finally establish a very large plant to cut off the timber.

The Warren Handle Works, Warren, O., has secured the contract from the United States Steel Foundry Company to furnish its entire supply of handles for two years. This is one of the best orders ever booked by a Western Reserve firm and will take a large amount of hardwood to fill it.

E. F. Perry, secretary of the National Wholesale Lumber Dealers' Association and also of the Lumber Underwriters' Insurance Company of New York, made a short stay in Pittsburgh recently. Another visitor to the city last week was Morris W. Wiley of the Wiley-Homer Lumber Company of Baltimore.

The Railroad & Car Material Company is making first-class headway in its hardwood depart-

ment. Railroad orders are much more encouraging and the demand for oak is sufficient to keep the company busy a good share of the time.

The car shortage, chiefly in West Virginia, is looking quite serious. On the B. & O. and the Western Maryland it is reported that at many points shipments have to wait a week or more for cars; even then some wholesalers announce that they have to use cattle cars for shipping good lumber. If this condition becomes more aggravated, as it is likely to do, its effect upon the hardwood market cannot fail to stiffen prices.

The work of getting Pittsburgh's big bond issue in shape to spend is already started. Ordinances will be introduced in city council shortly to get in definite form the bond issue, and it is likely that the bonds will be placed and actual work on the improvements started early in January. Mayor William A. Magee has been in frequent consultation with the State Railway Commission at Harrisburg in reference to immense improvements to the trolley system of this city. His efforts are likely to avail much and trolley construction work is pretty sure to be announced by 1910 on a mammoth scale. It is evident to all observers that Pittsburgh is booked for a splendid era of municipal and corporation improvements, and Pittsburgh wholesalers are already beginning to count their sales of lumber which will be needed for these improvements.

The annual convention of the Pennsylvania lumber retailers will be held at the Monongahela house in Pittsburgh, January 27 and 28. Last week the Pittsburgh Retail Lumber Dealers' Association appointed A. G. Breitwieser of the A. G. Breitwieser Company, George M. Glass of the Keystone Lumber Company and A. C. Righter, secretary of the local association, a committee to get up the program for the convention and make all preliminary arrangements. The annual convention is a much more important gathering than the midsummer meeting of the Pennsylvania retailers, which is more a social gathering, and at the coming convention several matters of much importance to the state retail lumber interests are to be discussed.

## BOSTON

George B. Jobson, secretary and sales manager of the A. C. Davis Lumber Company, Columbus, Ohio, was a recent visitor in the Boston market, as was also F. C. Zupke, second vice-president of the Darnell-Taenzler Lumber Company, manufacturers of and dealers in hardwood lumber, Memphis, Tenn.

Furber, Stockford & Co., wholesale dealers, have removed their offices to the Fisk building, 89 State street, Boston.

Frank H. Taylor, one of the best known lumbermen in Maine, died November 9 at his home in Bangor. He had been associated with the James Walker Company for forty-two years.

The Mapleton Lumber Company has been organized at Presque Isle, Me., with a capital stock of \$30,000 to deal in timber lands.

The Berkshire Lumber Company, Pittsfield, Mass., is planning to make improvements at its yard. A new shed will be erected.

William E. Litchfield has returned from a trip to Washington and New York.

Eliot P. Livermore, who has conducted a lumber business in Bridgeport, Conn., under the name of the Livermore Lumber Company, has disposed of all of his lumber to the Frank Miller Lumber Company and has retired from the lumber business.

An attempt was recently made to set fire to the large plant occupied by the Simonds Manufacturing Company, saw manufacturers. Fortunately the fire was discovered by the watchman before it had made any headway.

The Palmer & Palmer Company, Boston, is classed as one of the pioneers in the manufacture of veneers in this country. The business was established in 1832 by Harrison Parker be-

where he had reached the age of twenty-one years. In 1906 the company was incorporated with Harrison Parker, president; Irving S. Palmer, treasurer; Frank D. Sawyer, vice-president, and William I. Palmer, assistant treasurer and secretary. The company is a large manufacturer of mahogany veneers, but also handles large lots of other costly and rare woods.

James C. Hall of the Hall Lumber Company recently visited the New York market.

A party of business men, members of the Boston Chamber of Commerce, will leave on December 1 for a visit to Chicago. Several lumbermen will be in the party.

Herbert K. Blanchard of William Haskins & Son, Boston, returned early in the month from a six months' trip to South America.

Frederick R. Smith of the Clark & Smith Company died at his home in Reading, Mass., November 18. Mr. Smith was one of the oldest retail dealers in this section.

## BALTIMORE

Preparations have been practically completed for the next annual meeting of the Baltimore Lumber Exchange, which will be held on December 6 at the Merchants' Club on German street, to be followed by the yearly banquet. The nominating committee, consisting of George W. Eisenhauer of the Eisenhauer-MacLea Company, John H. Geis and Joseph D. Virdin of the Canton Lumber Company, has put into the field a ticket with John L. Alcock at the head, and there is not believed to be any doubt about its success.

E. M. Terry, secretary of the National Lumber Exporters' Association, returned home on November 6 from an extended tour in the interest of his organization. Every place he visited he endeavored to get in touch with the membership, and was successful in seeing about fifty per cent. He also secured some new accessions to the membership.

Complaints are being heard again about a car shortage. This lack of rolling stock on railroads is especially pronounced on the Chesapeake & Ohio railroad. In response to a letter written to one of the officials two weeks ago, a Baltimore shipper received word that on three divisions the shortage amounted to not less than seventy-five cars. The railroads, however, say they are doing the best they can.

Samuel W. Sowers of Hagerstown, Md., has secured an option on 17,000 acres of hardwood timber along a trunk line railroad in West Virginia. A company is being organized to erect sawmills, build railroads and lumbermen's houses, and develop the tract. The company will have a capital stock of \$450,000.

Holger A. Koppel, a hardwood exporter, returned from a trip of about ten days or two weeks in West Virginia, where he looked up mill connections and arranged for stocks. He is of the opinion that the foreign outlook has improved very much of late, and that a brisk movement of lumber and logs to the other side of the Atlantic will set in perhaps in the early part of next year. Already the inquiry is far more active, and only the approach of the holidays tends to hold down the volume of business.

James Cant of Cant & Kemp of Glasgow, who was here two weeks ago on the way to the West and South, to make an extended trip in the lumber manufacturing sections, gave it as his opinion that the business in England has been held back by the presentation of the budget, which has aroused much discussion and given rise to a feeling of unsettlement. He said until the budget was disposed of the natural strength of the British market for stocks could not be expected to assert itself.

John L. Alcock of John L. Alcock & Co. was on a brief trip to West Virginia two weeks ago. He went to look after some of his mill connec-

tions and to take up matters which required his personal attention.

The N. W. James Lumber Company, Aliceanna street, has laid in an extensive stock of hardwood flooring, which is at present in strong demand among builders. Oak flooring is especially in favor, and the company carries a full line.

Among the visiting lumbermen in Baltimore within the past two weeks have been H. O. Bonham of Chilhowie, Va.; George G. Barr of Beecher & Barr, Pottsville, Pa.; G. W. Beebe, Southern Lumber Company, Clayton, Ga.; Genio Cardwell of the Cardwell & Kreger Lumber Company, North Wilkesboro, N. C., and L. E. Hunter of the Carr-Hunter Company of Graham, Va.

## CHARLOTTE

The Cole Manufacturing Company, located near Charlotte, extensive manufacturers of farming implements, is building a plant which will include six large buildings, to cost \$50,000.

A large new concern for Hudson, N. C., is the Hudson Chair Company, just chartered, with \$50,000 capital stock, by J. L. Sigmon, T. J. Lutz and others. Chairs and furniture of all kinds will be manufactured.

Indicative of the improvement affecting the hardwood trade in the Carolinas is the fact that most of the furniture factories are now working full time. Last year during the dullness in the furniture business many of the factories were forced to closed down, and most of them curtailed production heavily.

The Parker-Whitaker Lumber Company is a new concern for Nashville, N. C., having \$25,000 capital. J. R. Parker and others are the incorporators. They will deal in timber, etc.

The Seaboard Lumber Company of Carthage, N. C., has just been chartered with \$50,000 capital stock. The incorporators are M. G. Dalrymple and Alton McIver of Carthage and J. J. Angle of Greensboro and J. T. Penn of Asheboro, N. C.

L. A. Briles, receiver for the Standard Furniture Company of High Point, N. C., will sell the property and real estate of this concern at public auction in High Point within the next few days.

The Gilmore-Rankin Lumber Company of Fayetteville, N. C., has recently been chartered with \$50,000 capital stock. C. E. Rankin, J. E. Gilmore and others are the incorporators.

Charter has just been granted the Duck Lake Lumber Company of Rocky Mount, N. C., with \$75,000 capital. S. T. Anderson, W. L. Groom and others of Rocky Mount are the incorporators.

The White Furniture Company of Mebane, N. C., which has had many large orders from the War Department for goods to be shipped to Panama, has just booked another large government order. It calls for 360 library desks, 290 sideboards and 240 extension tables for use in officers' quarters in various army posts of the product of this concern ranks with that of any similar manufactory in the country.

A petition in bankruptcy was filed a few days ago by W. H. Lassiter of Asheville, N. C., manufacturer of carriages and wagons. Liabilities are stated at \$42,781.66 and assets at \$37,366.91. Mr. Lassiter owned a large number of firms. This is one of the largest failures occurring in Asheville for some time.

Mention of the sale of the Kinston Lumber Company's large sawmill and railroad at Kinston, N. C., to the John L. Roper Lumber Company was made in the last issue of the HARDWOOD RECORD. The purchase price at auction was \$35,000. It is understood that the large sawmill at Kinston will be operated and the railroad property developed by the new purchasers. Messrs. Ellington and Guy, who had held \$28,000 in first mortgage bonds and interest against the

company, own extensive timber lands in the Kinston section, including much fine hardwood timber, and if they sell out to the new purchaser it is certain the mill will continue operations for some time.

Some of the finest hardwood timber in western North Carolina has been destroyed by forest fires during the past two or three weeks. The last heavy rain in the mountains occurred October 10, and the leaves are dry and fires spread rapidly. On the Murphy branch of the Southern, out from Asheville, N. C., much valuable timber was burned, although it is impossible at this time to estimate the loss. A report from Asheville, N. C., states that forest fires have been raging for several days in the vicinity of Canton, N. C., and on the Vanderbilt estate fires are now burning. It is said these fires were started by hunters to run the deer out.

An important meeting of the North Carolina Case Workers' Association, representing prominent furniture manufacturers of North and South Carolina and Virginia, was held Nov. 17 at Greensboro, N. C. It was decided to advance the price of all grades of furniture on an average of ten per cent. This advance is due to the fact that the cost of material entering into the manufacture of furniture has increased to a considerable extent. The new tariff has resulted in largely increasing the price of glass, for example, an important item in the manufacture of furniture. Action of the Carolina manufacturers is said to be in line with recommendations of the American Furniture Manufacturers' Association, which recently met in Chicago, and urged a ten per cent increase in furniture prices. The increase will go into effect the first of the year.

At a largely attended meeting of the North Carolina Chair Association, held at Thomasville, N. C., a few days ago, similar action to that of the Case Workers' Association was taken.

The Muckenfuss Manufacturing Company's plant, at Spartanburg, S. C., was destroyed by fire a few days ago; loss is estimated at \$20,000 with about \$15,000 fire insurance. The factory manufactured brooms and whisk brushes. Something like 18,000 brooms were burned with the plant. Whether the plant will be rebuilt is not known as yet.

The Dixie Floor Finishing Company is the name of a new concern for Spartanburg, S. C., headed by P. T. LeMaster and H. L. Bomar. The company is to handle the floor scrapers and polishers invented and patented by Mr. LeMaster. They also propose to manufacture a high grade of floor stains, and will use in their manufacture weeds that grow around Spartanburg.

A condition bordering on a state of terror exists in the lumber camps of the Waccamaw Lumber Company, whose headquarters are at Bolton, N. C., in Brunswick county, following the wrecking of a logging train a few days ago, resulting in the death of a Russian laborer and fatal injuring two others. Officials of the company say they believe the train was wrecked by "squatters" on their lands, and this opinion is shared by their several hundred laborers, more than one hundred of whom have quit work rather than be made the target of further attacks by "squatters." Mr. Clark, general manager of the lumber company, says the "squatters" on the lands, many of whom claim possession of the lands by right of adverse possession, have brought the company thousands of dollars loss recently by spiking logs that were cut. More than \$5,000 worth of saws have been destroyed. Spikes have been driven in trees and skidders blown up with dynamite. A night watchman was fired upon recently by men in ambush and a skidder was wrecked by dynamite. The lumber company has employed detectives who are in the woods and several arrests have been made.

The Green Swamp Cypress claims were bought by the Waccamaw company two years ago and an old man named Brady and his kith and kin were insulted thereby. The lands include many thou-

sand acres, lying in Brunswick and Cumberland counties, on which are to be found some of the finest hardwoods and other timbers in the South. The lands were procured by a process of the Federal court and many of these people are resisting removal from property they have occupied for years, believing it to be theirs.

### NORFOLK

Maynard A. Cheny, president of the South Georgia Lumber Company, Savannah, Ga., a new company just organized, was in the city recently. He states that the outlook for hardwood, especially cypress, is very good.

Harvey M. Dickson of the Dickson Lumber Company has given a good bit of his time to the Deep Waterways Convention for several days, but will now return to the hardwood business with renewed interest. His office reports business satisfactory.

Mr. Weaver of the Edgerton Lumber Company, Victoria, Va., was a recent visitor in Norfolk.

R. L. Lamberth has sold the veneer factory he had at Thomasville, N. C., to R. T. Lamberth and associates from Virginia and Pennsylvania. They will at once begin to remodel the entire plant, and it is planned to have one of the largest veneer plants in North Carolina.

The Deep Waterways Convention, which met here on the 18th, 19th and 20th, brought many hardwood dealers to our city.

Antonie Govers of Antwerp was in the city buying hardwood, and he states the hardwood market is picking up a great deal.

Robert McLean, president of the Norva Land & Lumber Company, with large mill at Wallace, Va., was in the city recently attending the Atlantic Deep Waterways Convention. He states that the lumber outlook is very good and says his company is practically filled up with orders for some time ahead for the foreign market.

Jott Mitchel of the John L. Roper Lumber Company was in the city for several days in the interest of business.

### CLEVELAND

The Martin-Barriss Company, dealers in hardwoods, recently delivered one load of lumber in Cleveland, the total value of which exceeded \$1,300. It was a load of fine mahogany panels to be used in the construction of interurban cars by the Kuhlman Car Company. The panels were of crotch mahogany, of various sizes.

Elmer E. Teare of Potter, Teare & Co. was elected president of the Cleveland Builders' Exchange during the past month. Mr. Teare is the first lumberman ever to be awarded the honor. He is a member of one of the most important lumber firms in the city and has served for several terms upon the executive board of the organization. Mr. Teare was given an informal reception at the Lumbermen's Club on the day succeeding his selection. J. J. Wemple, manager of the Ohio Sash & Door Company, was recently elected president of the wholesale merchants' board of the Chamber of Commerce.

H. C. Christy, president of the Advance Lumber Company, has joined with Otto Muehlhauser of the Muehlhauser Piano Company in the leasing for ninety-nine years of the Pythian temple property on Huron road, a short distance east of East Ninth street. The building will be entirely remodeled and a large theater built on vacant property in the rear, an entrance to it to be made through the present building. The expenditures will exceed \$150,000.

Mr. Christy reports the mills of the Advance Company in the South to be running to capacity, turning out hardwoods of every description for the trade. Business is very brisk at present, with good prospects for the winter.

H. B. Weller has been appointed by the Jenks

Lumber Company to represent it in northern Ohio, outside of Cleveland. Mr. Weller has been with the Detroit Lumber Company for some time. His father was a lumberman before him who used to ship cargoes from the upper lakes district clear through to Quebec for export to the old country.

A partnership has been formed by W. J. Brinker and Martin Sating, to operate a wholesale lumber business. Offices have been opened in the Williamson building. Both men formerly have been connected with various Cleveland firms.

F. E. Smith, representing the Palmer Semans Lumber Company of Uniontown, Pa., in calling upon the local trade during the past week announced that the company will hereafter act as selling agents for the hardwood output of the three mills of the Tri-State Lumber Company and the United Lumber Company of Uniontown, Pa. The company will also do a general brokerage business.

On November 1 Clarence N. Howells left the employ of the Jenks Lumber Company of Cleveland to represent the Southern Lumber Company in this section of Ohio.

E. P. Ransom has been appointed by the Domestic Lumber Company of Columbus to represent it in this territory. Mr. Ransom has operated through this part of Ohio for a long time and is well known to the trade.

The offices of the Edwin B. Smith Company, dealers in ties and structural timber, have been moved to 1005 Rockefeller building. Business with the firm is reported as being unusually active, as the railroads have begun ordering on a large scale.

On November 5 the mill of Brott & Pike at Willoughby, a suburb of Cleveland, narrowly missed being wrecked by a Nickel Plate train which was derailed at a switch. A large flour mill was razed and a number of piles of lumber scattered over a wide area. The lumber company is endeavoring to collect damages from the railroad.

The Cleveland Hardwood Floor Company has secured the contract for installing over 6,000 square feet of parquet floor in the new ten-story Pope building on Euclid avenue. Some fine hardwood fixtures are to follow.

### COLUMBUS

J. E. Cummins of the Columbus Sawmill Company reports steadily improving market conditions in most varieties of hardwoods. Mr. Cummins does considerable export business to Hamburg, Germany, in walnut.

C. T. Nelson, head of the C. T. Nelson Column Company, says there is a better demand for the product of his concern. He believes that building operations will be more active next season, although the demand was good the latter half of 1908. James H. Heyl of the company recently left on an extended business trip in the South.

H. W. Putnam, president of the General Lumber Company, reports an increasing demand from manufacturing establishments and from railroads for all grades of hardwoods. He says that railroads are telegraphing for hurried shipments of lumber and that prices are getting firmer. The company is preparing its mill at Ashland, Ky., for operation as soon as the winter freshets carry the logs down the Big Sandy river. The concern has been busy during the summer, cutting logs on its timber tract in the interior. A new engine and boiler will be installed at the mill. The engine will be of 150 horsepower.

The shops of the Jeffrey Manufacturing Company of Columbus are being operated on full time and orders for lumber handling apparatus are coming in rapidly. The plant has been increased by several large additions recently.

H. H. Fassett's planing mill at Findlay, which was burned to the ground August 15, is being rebuilt and will soon be ready for operation.

The Columbus Grove Lumber Company of Co-

lumbus Grove, O., has been succeeded by the Light Lumber Company. The concern does a retail business.

The W. M. Ritter Lumber Company, which occupies the entire tenth floor of the Harrison building, Columbus, is having a difficult time to keep its lady employees for any length of time. The reason is the attacks of Cupid have resulted in at least six marriages in as many months. The last to resign her position to enter the state of matrimony is Miss Alma E. Dean, who was married recently to Philip Luginbill of Columbus Grove.

At Mansfield, O., the Robert Hixon Lumber Company is selling out to M. D. Fancher, who will operate the business at the same locality.

By a certificate filed with the secretary of state recently the Ottawa Coopersage & Lumber Company of Ottawa, O., has increased its capital stock from \$100,000 to \$150,000.

Statistics compiled from Ohio, West Virginia and western Pennsylvania for the week ending November 10 shows that contracts awarded amounted to \$1,016,300, as compared with \$1,569,000 for the corresponding week in 1908 and \$491,000 in 1907. Since January 1 contracts awarded amount to \$83,573,000.

R. L. Gilham, secretary of sales of the W. M. Ritter Lumber Company, reports active business during the month of November and he believes the month will hold up to that of October, which was one of the best in the history of the company. He says there is a steady demand for all grades and there is no accumulation of stocks. The company recently called all its traveling representatives into the home office for the purpose of conferring and receiving reports from the various territories. It has recently added to its staff E. J. Flautt, who will look after the territory in and around Baltimore, Md.

The H. R. Allen Lumber Company will add a traveling salesman to its force December 1, in the person of Ralph W. Peck, formerly with the Great Southern Lumber Company.

W. L. Whitacre reports a steady stream of orders and numerous inquiries. He is of the opinion that lumber conditions will show more improvement after the first of the year.

George B. Jobson, secretary of the A. C. Davis Lumber Company, recently returned from a two weeks' selling trip in the East. He reported a weak market in many respects. A. C. Davis, president, reports a run of good orders locally.

John R. Gobeys of John R. Gobeys & Co. recently returned from the South. He was in New Orleans for several days checking up the two-cent overcharge, which means quite an item to him. He reports active conditions in the lumber trade in the South, with surprisingly small stocks when the prices are taken into consideration.

C. G. McLaughlin, general manager of the McLaughlin-Hoffman Lumber Company, reports a better demand from railroads. He says that wide sizes of poplar will bring almost any price. W. M. Boyer of the company is on an extended selling trip through eastern Ohio.

Hugh Ford, formerly manager of the factory of the Pioneer Pole & Shaft Company of Akron, O., has taken charge of the timber department of the same company at Memphis.

The engagement of Daniel Flee, a well-known lumber salesman of Columbus and Cincinnati, to Mrs. Maude Mason of Columbus has been announced. The marriage will take place in December.

A resolution asking the next session of the Ohio general assembly to appropriate \$50,000 to investigate the feasibility and cost of building a ship canal between the Ohio river and the Great Lakes was adopted by the Ohio State Board of Commerce at its recent annual meeting in Columbus, O. The outcome of the matter will be watched with great interest by lumbermen in Ohio and southern states, for it would mean quite a reduction in transportation charges of hardwoods.

## CINCINNATI

W. F. Duling of the Graham Lumber Company is touring the Middle West, and his reports show good business.

J. Watt Graham left recently for a short stay in the hardwood regions of the South, looking over his mill interests.

Owing to the large amount of work connected with getting out the big Cincinnati special of the HARDWOOD RECORD, a few errors in names have crept in, and these will not be blamed upon the old scapegoat, the "intelligent compositor," but will be placed upon the shoulders of the "scribbler," whose pothooks are not at all times decipherable even by himself; but mistakes will occur in the best regulated families, and we ask forgiveness for our misguided son, who in the future will pose as the chauffeur of a typewriter when putting proper names over the speed line.

In the description of the Freiberg Lumber Company the name should be Harry A. Freiberg.

In writing of our "grand old man" of the hardwood trade, inadvertently C. C. Boyd was placed under the picture of S. G. Boyd. With Mr. Boyd's forgiveness for this error, we hope in the near future to present to the readers of the HARDWOOD RECORD an interesting life sketch of this pioneer of the veneer-cutting industry of the West. C. C. Boyd was the original head of the firm years ago, but has passed to his reward.

The line under the cut of the New River Lumber Company's mill should read Norma, Tenn., instead of Norma, Ky.

Chester F. Korn, president of the Farrin-Korn Lumber Company, was elected a member of the board of directors of the Business Men's Club. A. J. Conroy, widely known furniture man and member of the Queen City Furniture Club, was made president. As the Business Men's Club is the strongest of its class in the city, the honor is much sought after.

A. A. Andridge, former president of the United States Timber Company, bankrupt, is now a bustling hardwood dealer with office in the Mercantile Library building.

The Asher Lumber Company, one of the new hardwood companies in this field, is piling up a heavy stock of hardwoods in its yards at McLean and Bank streets, on the Cincinnati Southern railroad yards.

Owing to continued illness, James King, for many years with Gage & Russell, express specialists, but more recently a member of the firm of King & Trimble, has withdrawn from that connection.

W. A. Bennett, of Bennett & Witte, returned Saturday from a two weeks' stay in New York and the East.

The next meeting of the Cincinnati Lumbermen's Club will be held at the Gibson house on Monday, December 6. There will be a special program of interest, as Chairman Joseph Boiser is busy arranging for some good five-minute talks. President Cliff S. Walker will have a report from the Inspection Committee, and a general discussion will follow. The usual six o'clock dinner will open the session.

Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, left on November 18 for an extended trip which will embrace Columbia, O., the mountains of Virginia, and thence to New York City headquarters, returning by way of Philadelphia about December 1. Mr. Heaton, the chief executive at headquarters, is very busy receiving and issuing the reports, and with his corps of assistants keeps things on the hum. Mr. Heaton was so busy that he did not even have time to smile when the RECORD man dropped in to see if the headquarters were still there.

The annual convention of the Hardwood Manufacturers' Association of the United States,

which will be held at the Sinton hotel in this city on February 1, 2 and 3, 1910, will be the greatest and most interesting gathering of lumber interests ever held in this country. Invitations will be sent out to the hardwood consumers of the country and most interesting speakers have been secured to lecture on the most elaborate collection of stereopticon views of "lumberland" and modes of getting out timber that has ever been presented to the public. No pains will be spared to give a generous welcome to all who attend, as the sessions of the association are all open to the public and those who attend will be able to enjoy the educational features spread before them by practical lumbermen. This will be a rare educational treat to the consumers, who will have the art of grading hardwoods elaborately explained. It is expected that the attendance will run into the thousands.

During the past fortnight callers at the association's headquarters were: Joseph Boyd, New Orleans Lumber Trade Journal, New Orleans, La.; A. C. Bolander of A. C. Bolander & Co., Danville, Ky.; C. H. Loveland, Winchester, Ky.; C. D. Fridman, New Richmond, O. Dr. Herman Von Schrenck of the Rock Island railroad, whose headquarters are in St. Louis, dropped in to pay his respects to Secretary Doster while in the city attending an important railroad conference. J. A. Keyes, president of the Kentucky Lumber Company, Terre Haute, Ind., was also a caller at headquarters while on a visit to the Cincinnati office of his company.

The Swann-Day Lumber Company of Winchester and Lexington, Ky., has taken quarters in the First National Bank building and will open its suite of offices on December 1. Mr. C. "Mack" Clark will be the Cincinnati manager.

W. R. Barksdale of Memphis, Tenn., stopped in this city recently to look over his friends.

Richard Bartlett of the J. J. Newman Lumber Company, St. Louis, Mo., is here stirring up the trade.

Cliff S. Walker, president of the Bayou Land & Lumber Company, left last week with a number of Cincinnati capitalists on an inspection tour through timber lands in Louisiana. Mr. Walker stated that he was trying to interest capital in Louisiana timber lands and did not expect to return for a couple of weeks.

Harry B. Millikan, manager of the Advance Veneer & Lumber Company of Indianapolis, Ind., he of the three hundred pounds of high-grade avoirdupois, was in town November 18. He was very cheerful over the business outlook.

Another noted veneer man was in town on the same date, and there was a joyous meeting between the two jolly purveyors of thin lumber. H. F. Wonderly of Grand Rapids, Mich., representative of Uptegrove & Beckwith, stated that he was very happy to meet his heavy friend.

W. H. Devoss of the H. V. Cyril Lumber Company, Pittsburg, Pa., was here several days disposing of hardwoods and incidentally offering a fine lot of birch to the trade.

"Tom" Stone of the T. B. Stone Lumber Company is recreating in New York City and the East. While on his way he stopped over at his old boyhood home in McKeesport, Pa., where there are still a few Stones left.

The Queen City Furniture Club will hold its annual election at the Business Men's Club on Wednesday, December 1. The town is covered with the red posters of the "Regulars" and the blue posters of the "Independents." The election will be a hot old time. The club will give its annual banquet at the Sinton hotel in the week between Christmas and New Year's, followed by a dance. This will be the first occasion on which the ladies have attended the annual banquet.

The annual election of the Cincinnati Furniture Exchange will be held in conjunction with the annual banquet on Tuesday, December 7.

A. Johnson of the Pennington Lumber Company, Pennington Gap, Va., is here circulating among the trade.

"For goodness sake, don't say I told you," but Will S. Sterrett, president of the Sterrett Lumber Company and secretary of the Cincinnati Lumbermen's Club, is married. This being his second venture in the matrimonial field, he went quietly away and almost forgot to even tell himself.

W. A. Bennett is in New York City and the East on a business trip. His office manager, E. J. Thoman, is the busy man during his absence. A smile and "I'm very busy today" is all the RECORD man could get from him.

On November 10, O. B. Bannister of Terre Haute, Ind., president of the Wheel Club, entertained that body with an elaborate dinner at the Sinton hotel.

## EVANSVILLE

C. G. Powell, manager of the Fullerton-Powell Hardwood Lumber Company, paid a visit to the local office of the concern this week.

F. M. Cutsinger of Young & Cutsinger returned this week from a southern trip, having visited Jackson and Memphis, Tenn., and other points.

This market was visited this week by representatives of two foreign houses, John Cant of Cant & Kemp, 52 St. Enoch square, Glasgow, and Mr. Wright of the well-known house of C. Leary & Co., London.

Bedna Young of Young & Cutsinger was in Jasper, Ind., this week, closing up the affairs of the firm of Maley, Young & Cutsinger at that point.

The C. P. White Manufacturing Company, a concern to engage in the lumber business, with headquarters at Evansville, filed articles of incorporation with the county recorder recently. The firm is capitalized at \$50,000 with shares at \$100 each. Clark P., William T., Walter L. and Roy C. White, all of Boonville, Ind., are the incorporators and will serve as directors. The life of the company is to be fifty years. It recently erected a new band mill in this city.

W. H. Cornell of the Nichols & Cox Lumber Company, Grand Rapids, was in the city this week on business for his firm.

The Jackson Lumber Company of this city is erecting a sawmill at Jackson, Tenn., and has the buildings for the plant well under way. It is composed of Charles W. Talge of the Evansville Veneer Works of this city, Louis Koss and W. C. Calhoun, and they have just incorporated at Indianapolis for \$35,000. The new mill will have a capacity of fully 15,000 feet per day and it is expected that the new plant will be in operation by the first of the new year.

A car shortage has been felt here quite keenly for the past three weeks which has hampered local manufacturers and dealers considerably. A few of the local railroads have been unable to secure cars for their merchandise business and consequently other interests have suffered considerably.

## MEMPHIS

Heavy rains have occurred throughout this section during the past week, and while these have interfered to some extent with logging operations, they have been a help rather than a hindrance as a whole. A number of plants were forced to close down because of the low stage of the water in the streams on which they were located. Some of these have been able to resume after the heavy rain.

There is a tendency to increase the production of hardwood lumber in this territory, as evidenced by the resumption of some of the mills during the past three or four weeks. Much dissatisfaction is expressed over the prices of lumber in certain quarters, particularly on some

doms, but there is a large volume of business under way. This is the feature that has induced manufacturers to resume after having been closed down for an almost indefinite period. The production is not yet of normal proportions for this territory, but indications are that it will very nearly reach the average by the end of the year, especially if production is increased as rapidly during the next seven or eight weeks as during the past similar period.

Bank clearings in Memphis during the past week were as large as ever shown for this period and those of the preceding week were also of record proportions. Clearings at Little Rock and Birmingham recently have also been of very large proportions. There is every evidence that the business situation south is very wholesome. There has been some slowing down in the steel and iron industry and yellow pine is not moving as rapidly as the manufacturers would like to see it. These are about the only discords in an otherwise very harmonious situation.

The railroads are still having some difficulty in furnishing all cars needed by lumber shippers in Arkansas. It is notable, however, that there has been some tendency toward an improvement in this respect during the past fortnight. It is now stated that the Iron Mountain, Cotton Belt and Rock Island System are able to furnish about seventy-five per cent of the cars needed, whereas a fortnight ago they could not furnish more than twenty-five to thirty-five per cent. The lumbermen themselves admit that there has been considerable improvement, but they are still short of cars and, during the recent period of inability to secure cars, it was necessary for them to cancel some of the orders they had booked. The climax of the cotton movement has already been passed and it is expected that this fact will operate very largely in favor of lumber shippers.

The Three States Lumber Company is operating only one of its hardwood mills. This is located at Winchester, Ark., and is devoted exclusively to cutting cypress. The company has made no preparation whatever for resumption at its big mill at Burdette or at the other plants in Memphis territory.

The Clements-Stevens Lumber Company has filed an amendment to its charter, whereby its capital stock is increased from \$10,000 to \$17,500. This company was organized here only a short time ago.

The Darnell-Taenzer Lumber Company has resumed operations at its second mill in South Memphis, which has been idle for some time. The company is making no preparation to resume at its mill at Round Pond, Ark., which has been idle for several years.

The East End Hardwood Lumber Company has been granted a charter under the laws of Tennessee. It will have a capital stock of \$10,000 and headquarters at Memphis.

Contract for the reconstruction of the buildings of the Gulf Cooperation Company at Texarkana, Ark., recently destroyed by fire, has been let and it is expected that the work will be completed in about thirty days. The machinery to replace that destroyed by fire has already been ordered and will be installed as soon as the buildings are ready therefor.

Engineers are busy locating the route for the extension of the Arkansas, Louisiana & Gulf railroad, which is to be run by way of Pine Bluff, Ark., northward from Hamburg to Hazen. All arrangements have been made for financing the extension of this road. General Manager J. N. Parker is authority for the statement that the work will begin not later than January 1. The extension is 135 miles and will be one of the most important pieces of railroad construction undertaken in Arkansas since the completion of the Missouri & North Arkansas. When completed the road will run from Monroe, La., to Hazen, and connection will be made at the latter point with the Rock Island. Pine Bluff has

raised a bonus of \$100,000 to secure the passing of the extension through that city. The road will run through a magnificent timber section and will furnish facilities for its development.

The Rock Island System has opened its new terminals at Hurlbut, Ark., just across the river from Memphis. These terminals have been constructed at a cost of between \$175,000 and \$200,000 and will greatly facilitate the Rock Island System in handling its east-bound traffic. The Frisco System has made arrangements with the Rock Island whereby its east-bound traffic will also be handled through the same yards. The new terminals were opened last Monday morning.

The Illinois Central railroad has reopened its industrial office in Memphis, which was discontinued during the financial depression. G. P. Harper is in charge. It is the specific purpose of the industrial office to secure new industries for the Illinois Central System in the South, and Mr. Harper states that he will cooperate with the Business Men's Club and with other organizations in Memphis which are seeking to secure new industries for this city.

Five cars of steel rails have been delivered to the Wisconsin-Arkansas Lumber Company at Waldo, Ark. This is the first shipment of rails that will be used in building six miles of track which this company will construct to facilitate the handling of its timber. The headquarters of the company are located at Malvern, Ark. It is operating in the timber region around Waldo.

Lumber interests in Arkansas are much pleased with the fact that the St. Louis, Iron Mountain & Southwestern will take over a number of short roads in that state. They are all of the opinion that a great deal better service will be maintained on these lines under the management of the Iron Mountain than has prevailed under the local regime. A meeting of the stockholders of the St. Louis, Iron Mountain & Southern will be held in St. Louis to vote on this proposition, but it is regarded as a certainty that the short lines will be consolidated with the parent road.

S. B. Anderson of the Anderson-Tully Company, W. R. Barksdale of the Barksdale-Kellogg Lumber Company and W. H. Russe of Russe & Burgess, Inc., are the lumbermen who will serve on the committee appointed by the Business Men's Club of Memphis to advertise the city in every way possible. The committee consists of forty members and it is expected they will have about \$50,000 to spend. The Business Men's Club some months ago took over the work which had been carried on by the old Memphis Industrial League, which was organized specifically for the purpose of attracting industries to this city. This work has been in the hands of James S. Warren, industrial commissioner, and he will be materially aided by the committee of forty. It is the intention of the committee to advertise Memphis in the most systematic and thorough manner ever known.

The T. B. Laycock Manufacturing Company of Indianapolis, Ind.; Belknap Hardware Manufacturing Company of Louisville, Ky.; the Standard Furniture Company of Nashville, and the Olympia Chair Company of Martinsville, Ind., have arranged to establish a distributing depot at Memphis which will be in charge of E. L. McClure. The officials of the various companies spent some time in Memphis recently perfecting plans to this end. A large warehouse has already been secured. The several firms manufacture hardware and lumber products and will be able to do business together without competing with each other, as they manufacture different forms of the same product. A number of other cities made efforts to secure the distributing depot, but Memphis was chosen on account of its central location and also on account of its splendid transportation facilities.

W. D. Kilpatrick, a Michigan capitalist, has leased several acres of ground from the Chicago Mill & Lumber Company at Marked Tree, Ark.,

and will at once establish a large hoop and stave plant at the latter point. The machinery has already been ordered and it is stated that the enterprise will be in operation by the first of the year.

George D. Burgess of Russe & Burgess, Inc., has returned from a business trip to Louisiana.

W. B. Morgan, secretary of the Anderson-Tully Company, is at home again after a business trip to New Orleans and St. Louis.

J. W. Dickson, president of the Valley Log Loading Company, the name under which the old Memphis Log Loading Company and the Valley Log Loading Company have been consolidated, is authority for the statement that this company handled into Memphis during October about 750 cars of logs and that this month it will bring fully 700 cars, mostly oak and ash. All of this timber is being brought to Memphis over the lines of the Yazoo & Mississippi Valley road. The cars average about 4,000 feet each, which gives some idea of the amount of timber handled by this company. There is a great deal of timber being brought in that this company does not touch, with the result that the receipts may be characterized as quite full.

C. L. Wheeler of J. W. Wheeler & Co., Madison, Ark., states that the big mill of the company at that point is still idle and that the recent rainfall was not heavy enough to enable it to resume operations. This firm has about 3,000,000 feet of high-grade logs awaiting a satisfactory water stage for transportation to its mill.

The Lee Wilson Lumber Company states that all of its mills in this territory are in operation and that business shows improvement over a short time ago.

The J. W. Thompson Lumber Company reports a very satisfactory run of orders and is doing a good business. All of the mills with which this company is identified in any way are operating on full time.

The Bellgrade Lumber Company is running its big mill at Belzoni, Miss., on full time and says that it is meeting with a very good demand for its output.

J. P. Hanna of the Wiborg & Hanna Company of Cincinnati, O., spent some time in Memphis this week.

Another recent visitor to the Memphis market is Gardner I. Jones of the Jones Hardwood Company of Boston.

## NASHVILLE

John B. Ransom and John W. Love, two of Nashville's prominent lumbermen, together with a number of other leading business men of the city, are having all sorts of trouble in wrestling with the problem of a new Y. M. C. A. building for Nashville. It was proposed to erect the building on a lot on the corner of Seventh avenue, North and Union streets, but the city came along and condemned thirty-five feet off the rear of the lot for a boulevard and thus rendered it too small, in the judgment of the committee, for the purposes of such a Y. M. C. A. building as Nashville should have. The committee met a few days since and decided therefore to sell the site and go into the market for another one, which will probably be announced soon.

John S. Denton, another of Nashville's well-known lumbermen, has recently been appointed chairman of the finance committee of the city council.

An interesting visitor to the city a few days since was K. S. Darrow of the Gardner Wood Company in the Flatiron building, New York. This company has mills in Louisiana and makes a specialty of the unique "Gardner wood process," which consists in inoculating the standing timber any desired color by a secret treatment. He states that this company is now coloring wood some forty-seven tints.

Forest fires have wrought much damage to various sections of Tennessee and Kentucky. The present fall season has been an unusually dry one. In various communities the farmers have had to go out and fight fire all night to keep the flames from their houses. One of those who is interesting himself in the prevention of forest fires in Tennessee is State Game, Fish and Forestry Warden Col. J. H. Acklen. Col. Acklen states that investigations by his department confirm the statement that fully seventy-five per cent of the forest fires in Tennessee occur along the railroad rights of way. He estimates that his wardens have saved the state over \$200,000 annually in forest fires handled by them. Col. Acklen states that the railroads all over the state have obeyed his orders in regard to clearing away the trash and undergrowth near their rights of way and he believes this step will prove most beneficial and a great saving.

An interesting and profitable meeting of the Cumberland River Improvement Association was held last week at the Nashville Board of Trade and it was attended by a number of well-known lumbermen of the Cumberland river valley and other noted men. The keynote of the meeting was that the people of the valley should keep on agitating and urging the necessity of liberal government appropriations for river improvement. The work on the Cumberland was reported to be progressing satisfactorily, but it was the consensus of opinion that the appropriations must be continued if possible. The Cumberland river furnishes a large part of the annual lumber supply of the Nashville market, millions of feet of fine timber being floated down to Nashville each winter and spring in rafts. The rafts are tied up for miles and miles above the city to season and then are brought down to be sawed as needed. Many of the lumber concerns have yards right on the river.

John B. Ransom & Co. report brisk business and an increased demand for high-grade stock. This firm's business of October was the biggest of the year as yet and a good start has been made on November business and another record for the year may be broken yet.

The Baker-Jacobs Company reports unusual activity at its plant at Sparta, Tenn. It had a good business in October.

Love, Boyd & Co. did a rushing business in October and report that so far November is coming up all right.

W. R. Patterson, J. W. Overall and W. W. Vaught have purchased the famous old cedar bucket factory of the Previtt Spurr Manufacturing Company at Murfreesboro. The latter company owned the factory for twenty years and it is said to be the only red cedar bucket factory in the world. The consideration was \$35,000.

The Davidson, Hicks & Greene Company is enjoying a good run of orders. The members of the firm pay frequent visits to the big interests in Fentress county.

The Standard Furniture Company reports that the business of the past month done by it was a big improvement over that done in the same month a year ago.

The W. J. Cude Land & Lumber Company has nothing to complain of in a business way except that the crop movement is affecting its business in Mississippi, where it has large timber holdings and interests.

Building continues on a boom in Nashville. As a result of the meetings of the Masons of Tennessee in Nashville last week, announcement was made that two handsome club buildings or lodges are to be erected in Nashville at once. One is to cost about \$200,000 and the other \$150,000. Many of Nashville's most prominent lumbermen belong to the Masonic orders.

H. B. Bond, formerly a merchant of Lebanon, Tenn., has come to Nashville to associate himself in the lumber business with A. E. Baird,

the latter being his uncle. Mr. Bond was prominent in the politics of Wilson county and was formerly chairman of the county Democratic executive committee.

## LOUISVILLE

The meeting of the Louisville Hardwood Club last week was enlivened by the presence of S. B. Lynd, cashier of the Citizens' National Bank and one of the best known financiers in the city. Mr. Lynd addressed the hardwood men on the subject of banking as related to lumber, and brought out several interesting points of value to lumbermen. It is the intention of the Hardwood Club to have other experts in various lines make addresses to them on subjects related with their business.

The annual meeting of the Hardwood Club has been set for November 23. The election of officers is the principal item of interest, but annual reports which will be made by all the officers are expected to epitomize the work done by the club during its first twelve months. Following the election, committees will be appointed by the new administration to take up the work of arranging for the national convention to be held here in May or June of next year.

R. F. Smith of the Ohio River Saw Mill Company said that business is good, and that lumber is selling freely. The company has all it can do to keep up with the demand. Prices are steady and stronger. Mr. Smith has just returned from a hunting trip to Seymour, Ind., but had indifferent luck because of bad weather.

T. M. Brown of W. P. Brown & Sons said that business is fine and prices rising. F. H. Wade, a hardwood broker of Indianapolis, called on the Browns recently, as did Owen Moffett of the Moffett-Boyman Lumber Company of Madison, Ind. Mr. Moffett said that his company is preparing to move to Memphis and open a hardwood yard there. He didn't know whether or not they would have a mill.

The revision of the tax laws is interesting the hardwood trade, along with the other branches of business in the state, and it is expected that the new legislature will propose a constitutional amendment along that line. C. K. Mengel, a member of the tax commission, was in Frankfort the other day attending a meeting. He and W. F. Schuerman, a furniture manufacturer of Carrollton, are on the manufactures subcommittee, and J. C. Mayo of Paintsville and J. B. Atkinson of Earlington are the subcommittee on lumber. Both own a large amount of timber.

Charles H. Stotz, who was for several weeks with the Robinson Hardwood Company, has announced that a new company has been formed to take over the Robinson interests. It is the A. Z. Haas Lumber Company, and it will handle hardwoods mainly, with offices in the Keller Building. The officers of the company are: A. Z. Haas of Fayetteville, Tenn., president; Charles H. Stotz of Louisville, general manager, and E. S. Haas of Vincennes, Ind., secretary and treasurer. E. S. Haas and Mr. Stotz will be in active charge, as President Haas, who recently retired from the William-Haas Lumber Company of Fayetteville, desires to remain inactive. Both of the Haases have had experience in the lumber business. The new company has been incorporated with a capital stock of \$25,000. C. W. Robinson, a yellow pine manufacturer of New Orleans, who was interested in the Robinson Hardwood Company, has sent Warren Birnbaum to Louisville to represent his interests here. His company is the Robinson Lumber, Veneer & Box Company.

Business is good in all lines, according to E. L. Davis of the Edward L. Davis Lumber Company, and there is no complaint at all to be made. Claude Sears, who has been having a successful trip, has returned.

Louis C. Mathey of Spot, Tenn., was in Louisville lately. He represents the Kaufman Stave & Lumber Company, which owns 26,000 acres of timberland in Tennessee. He said that while the company has done nothing in the stave line for several years, things are now improving so much that it may soon begin to manufacture again.

George P. DeWitt of Horace G. Hazard & Co. of Philadelphia was here recently. Some of the hardwood men asked that it be stated that Mr. DeWitt behaved perfectly while he was here.

H. M. McCracken of the Kentucky Veneer Works has been ill for some time, but his condition is not believed to be serious. Treasurer Geiger of that company said that the veneer trade is much better, and that prices are going up. The furniture factories are buying again, while the piano and automobile manufacturers, which have been taking veneers all through the so-called hard times, are still in the market.

Barry Norman of E. B. Norman & Co. says that business is good, with the demand pretty well distributed. Lower grades are moving in larger volume. The box factory is running at night in order to take care of the demand. Whisky cases are its main output. The Normans, who are the Nimrods of the Hardwood Club, have not yet got into action.

"Business in flooring is rather dull at present," said W. A. McLean of the Wood-Mosaic Flooring & Lumber Company. "But the demand for quartered oak is pretty good." Mr. McLean, by the way, is sporting a fine new Stearns just now, and proved its quality by taking the HARDWOOD RECORD correspondent for a ride.

H. P. Roberts, who looks after the lumber business of the Mengel Box Company, said that the demand for oak is so much better that the price has advanced. "It looks as if prosperity were here again," Mr. Roberts said.

C. C. Mengel & Bro. Company has two boats chartered for the purpose of importing mahogany logs. One is the Rose Lea, which is on its way from Belize with a 900,000-foot cargo, and which is due the latter part of this month. Then there is the Chiswick, which is loading at Axim on the west coast of Africa. It is expected to bring over about 1,000,000 feet of logs and to dock them at Pensacola in December. The company recently received a shipment of 40,000 pounds of chicle from Central America. It has a ready sale to the chewing gum manufacturers. J. C. Wickliffe, secretary of the company, has been in the Bahama Islands and is thought to be en route home. Owing to the storms in the West Indies and the impossibility of communicating with him, the members of the company are awaiting news of his condition with some eagerness.

The Southern Veneer Company has nearly finished work on its addition, and reports business to be excellent. The furniture and piano manufacturers are buying freely, it was stated.

Walter R. Day, who was convicted for alleged frauds committed in connection with the lumber business of his uncle, Floyd Day, in eastern Kentucky, has been pardoned. He was treasurer of the state under the brief Taylor regime ten years ago.

Fire destroyed the plant of the H. H. Collins Lumber Company at Maysville November 8. Besides lumber, a large quantity of millwork was burned. The loss was \$5,000, and the fire is said to have been of incendiary origin.

Forest fires, which have caused considerable loss in the western part of the state, Butler county, Hopkins county and Christian county, were the main localities where fires of any extent were reported. In most instances they were started by hunters or nutting parties, and the inhabitants of the nearby towns turned out to fight the flames. Rain in most cases intervened and saved further loss after a large amount of timber, fencing, outbuildings, etc., had been destroyed.

As an evidence of the conservation policy of the railroads, the Louisville & Nashville is planting catalpa on all available spots along its line. Near Lagrange, a suburb of Louisville, it has succeeded, in a few years, in raising quite a sizable lot of catalpa, and they will be large enough in a short time to be used for ties. This policy has been adopted by most of the railroads of the country.

Judge Charles Moore of the New York Traffic Club will make an address before the Louisville Traffic and Transportation Club at its annual meeting. Many of the hardwood club members belong to the traffic organization.

Owing to the fact that the "belt line" of the Kentucky and Indiana Bridge & Railroad Company touches most of the lumber plants of the city, the hardwood men were interested by the filing of amended articles of incorporation, allowing it to increase its scope. It is understood that the company will extend its trackage and improve its equipment generally.

Though it looks as if the good roads amendment to the state constitution, one of the measures which the lumber interests of the state especially favored, was lost at the November election, its leaders say that there is still a chance for it, and that if it did go down to defeat, the agitation will be started in its favor all over again.

River improvement is a thing which the lumbermen everywhere are urging, and the improvement of the Ohio and its tributaries is considered to be of first importance by Kentuckians engaged in the lumber business. The annual report of the chief of engineers at Washington shows that a good deal is being done in this direction. At Louisville the dam has nearly been completed, and when it is finished there will be a nine-foot stage between here and Madison, Ind. The Kentucky river, which is a great channel for logs, has had \$3,000,000 expended on it, and lock No. 13 is now being completed, and the Big Sandy river has been improved by the construction of three locks and their accompanying dams. Interest in this sort of work is suggested by the enthusiasm with which the state has taken hold of the plans for the National Rivers and Harbors Congress at Washington next month. The two commercial organizations of Louisville have called a mass meeting at the Gayety theater for December 2, when it is expected to make plans for sending a delegation of 500 to the convention to fight for the Ohio river improvement. Delegates have been appointed not only from Louisville, but from every city of consequence along the Ohio on the Kentucky side. In addition the governor has appointed delegates to represent the state at large, C. C. Mengel of Louisville is one of them.

## BRISTOL

Several new mills are being erected in this section. F. K. Bradshaw, formerly of the United States Spruce Company of Marion, Va., who was in Bristol this week, is building a band mill near Erwin, Tenn., where he owns a 20,000-acre boundary of fine timber. The mill is situated near the line of the Carolina, Clinchfield & Ohio railroad. The Honaker Lumber Company is building three mills at Honaker, Va., all band mills, while J. A. Wilkinson of Bristol will put in a new mill in West Virginia, where he has recently added to his timber possessions.

Dougherty & Hill of Morristown, Tenn., have just purchased a \$15,000 tract of timber from James Maye. It is situated in Meigs county, Tennessee, and may be developed by the purchasers.

C. Morton of the Morton-Lewis & Willay Lumber Company of this city is here from Grand Rapids, Mich. His company is rapidly disposing of the rolling stock of the Holston Valley rail road, running out of Bristol, since it closed

down the Bristol band mill. It has sold a large number of the logging cars to the Rockcastle Lumber Company of this city, which were shipped to West Virginia. It has six locomotives which will be sold.

The Rockcastle Lumber Company of Bristol has just placed an order for the second Climax locomotive, made by the Climax Manufacturing Company of Corry, Pa., for the Meek, Ky., mill, which was started last week.

The Tug River Lumber Company is running its big Cherry mill regularly and is cutting about 800,000 feet a month. The mill broke all records last week when it cut 45,500 feet. The Wise county timber will be cut out in about twelve months, as there is only about 12,000,000 feet left standing.

J. W. Diefenderfer of the J. W. Diefenderfer Lumber Company of Philadelphia and the Laurel Lumber Company, operating near Bristol, was a visitor on the local market last week. The company's mill at Laurel has been idle for some time.

C. N. Hawkins of Bluefield, W. Va., district representative of E. Stringer Boggess of Clarksburg, W. Va., was in Bristol this week and reports business moving along well, with excellent prospects for spring trade.

Walter Johns, buyer for the Wm. H. Perry Lumber Company of Cincinnati, spent several days in Bristol last week and left some orders for hardwood stocks to be shipped at once.

J. H. Mathews of the Mathews Lumber Company of Macon, Ga., and the Stetson Lumber Company of Arlington, Ga., was a prominent visitor in Bristol last week. He reports business moving along well in the lumber industry in Georgia.

The Gilmore-Rankin Company has been organized at Fayetteville, N. C., to do a general lumber business.

"Business is not as good as we had thought it would be by this time," said George W. Peter of the Peter-McCain Lumber Company. "However the outlook for next year is especially good."

B. B. Burns of the Tug River Lumber Company, Irving Whaley of Whaley-Warren Lumber Company and F. W. Hughes of Price & Heald were among the Bristol lumbermen who spent several days last week hunting.

Among the buyers on the Bristol market last week was W. W. Dempsey of Johnstown, Pa.

## ASHLAND

James Kitchen, manager of the Standard Planing Mill & Building Company, reports a good business. The company now has on hand more contracts than it will be able to take care of for some time. It is furnishing a large amount of the lumber for various residences and business buildings under course of construction in this city and a number of contracts in surrounding vicinity.

The W. H. Dawkins Lumber Company continues to operate its band mill at Ironton, Ohio, full time, and has enough logs to keep it running until about the first of the year. More orders are received for panel and high-grade poplar than can be furnished. Prices have greatly advanced. Mr. Dawkins is figuring on buying more timber in 1910 than this year in order to enable the company to supply more stock and take care of its customers in better shape.

O. E. Faught, sales manager of the K. & P. Lumber Company, Cincinnati, Ohio, was a business caller in our city this week, calling on our several lumbermen. Mr. Faught states the lumber business is greatly improved in Cincinnati and that his company finds it more difficult to fill orders now than it has been for some time; especially is this true of high-grade and panel stock poplar, and as well high grades in plain and quartered oak.

W. L. Watson of the J. W. Mahan Lumber Company, Mahan, W. Va., has returned to the company's plant at Mahan after a few days' stay in the city. Mr. Watson states everything is running very satisfactorily and orders received will enable the company to ship stock as fast as it is ready.

R. E. Elmer and Mr. Fisher of the Fearon Lumber & Venter Company, Ironton, Ohio, were business callers in our city, en route to the mountains on a business trip. The company closed its mills this week for an indefinite length of time and will make extensive repairs, putting in new boilers, ovens, etc. It advises business satisfactory and bright prospects for 1910.

W. A. Cool of W. A. Cool & Son, Cleveland, Ohio, spent a few days in our city this week. Mr. Cool gives encouraging reports on lumber markets in Cleveland and states that his company is receiving a large amount of business. Prices have materially advanced.

The Whistler & Searcy Company, Ironton, Ohio, closed its mills this week, having sawed out the present supply of logs. Mr. McConn of the company advises good business and says orders are being received at advanced prices.

L. C. Smith of the Cranor-Smith Lumber Company, Prestonburg, Ky., was a business visitor in our city, returning from a trip to Lincoln county, Kentucky. This company owns and operates a number of mills in the Big Sandy district.

Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, was a business visitor in Ashland this week in the interests of the association. From here he went to Bluefield, W. Va., and various other large lumber manufacturing centers before returning to his office in Cincinnati, Ohio.

The Breece Manufacturing Company, New Boston, Ohio, whose plant was destroyed by fire, has placed contracts for rebuilding at once. The work will be rushed through as fast as possible, so as to enable the company to begin operations at a very early date. At the time of the fire it was enlarging the plant and increasing its capacity in order to take care of the increased amount of business received. The Three States Manufacturing Company, Kenora, W. Va., is allied with this company and manufactures the best of oak veneers, both plain and quartered.

## ST. LOUIS

The recent strike at several of the East St. Louis planing mills has practically ended. The mills are running open shops, the cause of the strike. Union or non-union connections are ignored by the managers and many of the old hands have returned to work and have accepted the inevitable.

J. S. Garetson of the Garetson-Greaseon Lumber Company has been appointed to the Missouri Forestry Commission by Gov. Hadley in place of W. W. Dings, who resigned when he removed to Chicago. As Mr. Dings was one of the officers of the Garetson-Greaseon Lumber Company, the selection of Mr. Garetson keeps the appointment in the company.

E. L. Page, manager of the hardwood department of the Alf. Bennett Lumber Company, says that a satisfactory trade is being done and no trouble is experienced in making shipments, as the car shortage is not affecting the lines on which the firm's mills are situated to any extent. Alf. Bennett, the president of the company, is down in Texas and Arkansas, visiting the Dayton, Spring and Todd mills, and will be absent until about December 1. Mrs. Bennett and their little daughter are with him. The manager of one of the mills has arranged for a little shooting trip for Mr. and Mrs. Bennett while they are in Texas, for Mr. Bennett is quite a sportsman and Mrs. Bennett is an expert with a gun. The trip will be to the Taft ranch in

Texas, where President Taft spent several days while he was on his trip. A gasoline launch has been arranged for, dogs have been secured and all the paraphernalia for duck, quail and snipe shooting.

The American Hardwood Lumber Company has been having quite a good rush of business. It is sending out a large amount of upper grade gum at good prices.

George E. Hibbard, vice-president of the Steele & Hibbard Lumber Company, says there is only a moderate degree of activity in the hardwood market. The call for plain and quartered red oak is good and the upper grades of cypress are also in fair demand. All the orders are for quick shipment. The prospects for next season are most promising.

The sawmill of the Henry Quellmalz Lumber & Mill Company, at Brookings, Ark., has recently started up after a thorough overhauling. Many improvements have recently been added.

The office of the International Hardwood Lumber Company has recently been moved to 1421 Wright building. The new location is well adapted for handling its increasing business. C. S. Stanley of the company is down at the mills on business, and W. E. Keown, president, is still in the West, where he went some time ago for his health.

The Fullerton-Moses Tie Company, the incorporation of which was mentioned recently in this paper, has elected its officers. The company might be called a subsidiary company of the Chicago Lumber & Coal Company, as S. H. Fullerton is president, J. C. Cremer is secretary and Frank Goepel is treasurer. The headquarters of the company are at Ava, Mo., where L. B. Moses, the vice-president and general manager, is located. Mr. Moses is well known in the lumber trade in Kansas City. The company will buy and sell white oak ties.

Charles A. Tilden, under the name of the Charles A. Tilden-Lumber Company, has bought out the business of A. C. Baird and will be located in Mr. Baird's old office at 1310 Wright building. Mr. Tilden will handle yellow pine, hardwood and Pacific coast lumber.

## MILWAUKEE

George Mason of the Mason-Donaldson Lumber Company of Rhinelander, Wis., recently called upon the Milwaukee trade.

W. E. Cooper, president of the Cooper & Maxson Lumber Company of Milwaukee, general wholesalers, has returned from a trip of inspection at his different retail yards about the state. G. M. Maxson, secretary of the company, has returned from northern Wisconsin.

L. A. Parker of the American Hardwood Lumber Company of St. Louis has called upon the Milwaukee trade.

The Cumberland Fruit Package Company has been incorporated at Cumberland with a capital stock of \$25,000. The company will begin the erection of a new factory building at once which will be 60x60 feet in dimensions and equipped with the latest woodworking machinery. The plant will use birch, basswood, ash, elm, maple, poplar and pine in the manufacture of the Ewald folding berry boxes. It is expected that the plant will be in operation within three months' time.

The Volmar-Below Lumber Company of Marshfield has purchased the Maxwell sawmill at Mellen and will operate the plant this winter. The mill has a capacity of about 50,000 feet daily.

The Vetter Manufacturing Company of Stevens Point has completed arrangements for the installation of electric power in its woodworking plant. Considerable new machinery will also be installed.

The C. A. Goodyear Lumber Company of Tomah has completed the installation of a new electrical power plant of 1,200 horsepower. New machinery

has been added and the plant now has a daily capacity of 100,000 feet.

The Manasha Manufacturing Company is erecting a new plant at Goodrich for the manufacture of wooden plugs.

The Lane-Coos Land Company has been incorporated at Appleton with a capital stock of \$80,000 by E. G. Jones, Fred F. Wettengel and J. V. Canavan. The corporation owns 6,000 acres of timber land in Oregon.

The Kiel Furniture Company of Kiel, Wis., which recently purchased the furniture plant of the B. A. Kipp Company of Milwaukee, has taken out a permit for the erection of a new \$30,000 plant adjoining the Kipp plant at Milwaukee.

The Menasha Woodenware Company of Menasha has closed a contract with the Robbins Lumber Company of Rhinelander to cut 50,000,000 feet of timber from the Menasha company's holdings. The deal means that both plants of the Robbins company at Rhinelander will be kept in operation this week.

The entire timber holdings of the Joseph Dessert Lumber Company west of the Wisconsin river, consisting of 3,345 acres, have been purchased by the Mosinee Land, Log and Timber Company. The tract contains considerable hardwood.

The insurance on the plant of the John R. Davis Lumber Company, which was destroyed by fire recently with a loss of \$150,000, has been adjusted. It is announced that the plant will be rebuilt.

The Edgar Veneer & Box Company of Edgar has been dissolved by common consent of the stockholders and that portion of stock paid in on the capitalization of \$15,000 has been paid back to the owners. The company has been in existence but a few months and dissension among the members resulted in this step.

Kenfield & Lamoureux have begun the erection of another addition to their box factory at Washburn. The addition will be 100x30 feet in size and will be equipped with the latest machinery. The plant is now rushed with orders.

The Alexander Stewart Lumber Company, the Barker & Stewart Lumber Company and the Mortenson Lumber Company have all closed their plants after a successful run.

The Flambeau River Lumber Company has been incorporated at Ladysmith with a capital stock of \$100,000 by E. K. Hughey of Bellevue, Iowa, and James F. Mitchell and Willard E. Thompson of Ladysmith. The company owns 10,000 acres of timber land in the Flambeau river district.

Assemblyman William M. Bray, well-known young lumber manufacturer of Oshkosh, has presented dock property to his home city valued at \$15,000. The gift was made in memory of Mr. Bray's late father, V. M. Bray, the pioneer lumberman, who recently died, and Leander Choate, also a pioneer lumberman and late partner of the elder Mr. Bray.

Lumbermen all over Wisconsin are interested in the announcement that the old "Gottin Gap" in the Chippewa river at Chippewa Falls has been closed. It was in operation for thirty years.

Business men of Mosinee are endeavoring to induce the Mosinee Land, Log & Lumber Company, which has purchased the timber holdings of the Joseph Dessert Lumber Company, to move its sawmill from Four Mile creek to Mosinee.

The lumber yards of C. A. Nye of Cornucopia were destroyed by fire recently with a loss of \$14,000, with insurance of \$10,000. The sawmill of Mr. Nye was saved.

The special committee of the Wisconsin Legislature on forestry, water powers and drainage held a session at the Hotel Pfister, Milwaukee, for the consideration of important problems, including the conservation of the timber supply. State Forester D. M. Griffith addressed the committee and advocated the system of burning slash.

## MINNEAPOLIS

Information has been received here this week that about the first of the year the rates on lumber and lumber products from Minneapolis, St. Paul and Duluth and northern Wisconsin and Michigan points to Eastern Trunk Line territory will be reduced. The new rates will be the same as those in effect two years ago. The hardwood lumber manufacturers of Wisconsin have been working for this reduction for some time and have been ably assisted by the traffic department of one of the lines, whose officials have believed right along that the rate in effect two years ago was high enough. After the present rates were put into effect shipments of lumber eastward fell off fully sixty per cent. The opposition to the restoration of the rates in effect two years ago came principally from those lines that get a longer haul on lumber shipped to the Southwest.

Minneapolis building permits for ten months amounted to \$11,180,855, and were thirty-two per cent larger than for the same period of last year.

The Minneapolis mills have finished cutting lumber for the season. The output of the mills this year is about 80,000,000 feet greater than last year, when the cut was 189,000,000 feet.

L. C. Nolan of the Nolan Brothers Lumber Company, Memphis, Tenn., has been in the North on business during the past two weeks.

The Northwestern Hardwood Lumbermen's Association will hold its annual meeting at St. Paul on December 7.

## SAGINAW VALLEY

Men are being called for to quite an extent in the lumber woods, and some firms are experiencing difficulty in getting good men. Wages range from \$24 to \$28 in the lower peninsula, and \$30 to \$35 north of the straits. Indications point to the cutting of a large quantity of timber during the winter. The improvement in the lumber trade and the general revival of business and industry are the stimuli to activity in the woods. All of the larger firms will put in all the stock they can handle and get to the mills. Ross & Wentworth are lumbering north of Grayling, and they buy enough additional stock to keep the Campbell-Brown lumber mill at Bay City busy. This firm has had a successful year.

The Bliss & Van Auken mill and flooring mill are running the year through and have had a good business. The Wylie & Buell Lumber Company is furnishing the stock for the plant, which comes down over the Mackinac division of the Michigan Central. The W. D. Young & Co. plant at Bay City is running both sawmill and flooring mill day and night and shipping large quantities of maple flooring abroad. The Mer-shon-Bacon Company has done a large business this year in the manufacture of hardwood lumber into box stuff. The Bay City Box & Lumber Company has also handled more or less hardwood in the production of box stuff.

The Richardson Lumber Company's mill will run through the winter, as usual. The plant has a hot water pond for winter operations. It receives about twenty-five cars of logs from the North daily.

The construction of the Hanson Ward Company maple flooring mill at Bay City is being pushed as rapidly as possible. It will be equipped with up-to-date machinery. Another large flooring plant is in process of incubation at Bay City.

The Nicholson & Hanson Lumber Company's plant at Lewiston will finish its cut in a few months and will then be removed.

The Salling-Hanson mills at Grayling have enough stock to operate for twenty years or more. The Johannesburg Manufacturing Company's plant at Johannesburg, some twenty miles

As an evidence of the conservation policy of the railroads, the Louisville & Nashville is planting catalpa on all available spots along its line. Near Lagrange, a suburb of Louisville, it has succeeded, in a few years, in raising quite a sizable lot of catalpa, and they will be large enough in a short time to be used for ties. This policy has been adopted by most of the railroads of the country.

Judge Charles Moore of the New York Traffic Club will make an address before the Louisville Traffic and Transportation Club at its annual meeting. Many of the hardwood club members belong to the traffic organization.

Owing to the fact that the "belt line" of the Kentucky and Indiana Bridge & Railroad Company touches most of the lumber plants of the city, the hardwood men were interested by the filing of amended articles of incorporation, allowing it to increase its scope. It is understood that the company will extend its trackage and improve its equipment generally.

Though it looks as if the good roads amendment to the state constitution, one of the measures which the lumber interests of the state especially favored, was lost at the November election, its leaders say that there is still a chance for it, and that if it did go down to defeat, the agitation will be started in its favor all over again.

River improvement is a thing which the lumbermen everywhere are urging, and the improvement of the Ohio and its tributaries is considered to be of first importance by Kentuckians engaged in the lumber business. The annual report of the chief of engineers at Washington shows that a good deal is being done in this direction. At Louisville the dam has nearly been completed, and when it is finished there will be a nine-foot stage between here and Madison, Ind. The Kentucky river, which is a great channel for logs, has had \$3,000,000 expended on it, and lock No. 13 is now being completed, and the Big Sandy river has been improved by the construction of three locks and their accompanying dams. Interest in this sort of work is suggested by the enthusiasm with which the state has taken hold of the plans for the National Rivers and Harbors Congress at Washington next month. The two commercial organizations of Louisville have called a mass meeting at the Gayety theater for December 2, when it is expected to make plans for sending a delegation of 500 to the convention to fight for the Ohio river improvement. Delegates have been appointed not only from Louisville, but from every city of consequence along the Ohio on the Kentucky side. In addition the governor has appointed delegates to represent the state at large. C. C. Mengel of Louisville is one of them.

### BRISTOL

Several new mills are being erected in this section. F. K. Bradshaw, formerly of the United States Spruce Company of Marion, Va., who was in Bristol this week, is building a band mill near Erwin, Tenn., where he owns a 20,000-acre boundary of fine timber. The mill is situated near the line of the Carolina, Clinchfield & Ohio railroad. The Bonaker Lumber Company is building three mills at Hoboken, Va., all band mills, while J. A. Wilkinson of Bristol will put in a new mill in West Virginia, where he has recently added to his timber possessions. Dougherty & Hill of Morristown, Tenn., have just purchased a \$15,000 tract of timber from James May. It is situated in Meigs county, Tennessee, and may be developed by the purchasers.

C. Morton of the Morton-Lewis & Wilby Lumber Company of this city is here from Grand Rapids, Mich. His company is rapidly disposing of the rolling stock of the Holston Valley railroad, running out of Bristol, since it closed

down the Bristol band mill. It has sold a large number of the logging cars to the Rockcastle Lumber Company of this city, which were shipped to West Virginia. It has six locomotives which will be sold.

The Rockcastle Lumber Company of Bristol has just placed an order for the second Climax locomotive, made by the Climax Manufacturing Company of Corry, Pa., for the Meek, Ky., mill, which was started last week.

The Tug River Lumber Company is running its big Cherry mill regularly and is cutting about 800,000 feet a month. The mill broke all records last week when it cut 45,500 feet. The Wise county timber will be cut out in about twelve months, as there is only about 12,000,000 feet left standing.

J. W. Diferderfer of the J. W. Diferderfer Lumber Company of Philadelphia and the Laurel Lumber Company, operating near Bristol, was a visitor on the local market last week. The company's mill at Laurel has been idle for some time.

C. N. Hawkins of Bluefield, W. Va., district representative of E. Stringer Boggess of Clarksburg, W. Va., was in Bristol this week and reports business moving along well, with excellent prospects for spring trade.

Walter Johns, buyer for the Wm. H. Perry Lumber Company of Cincinnati, spent several days in Bristol last week and left some orders for hardwood stocks to be shipped at once.

J. H. Mathews of the Mathews Lumber Company of Macon, Ga., and the Stetson Lumber Company of Arlington, Ga., was a prominent visitor in Bristol last week. He reports business moving along well in the lumber industry in Georgia.

The Gilmore-Rankin Company has been organized at Fayetteville, N. C., to do a general lumber business.

"Business is not as good as we had thought it would be by this time," said George W. Peter of the Peter-McCain Lumber Company. "However the outlook for next year is especially good."

B. B. Burns of the Tug River Lumber Company, Irving Whaley of Whaley-Warren Lumber Company and F. W. Hughes of Price & Heald were among the Bristol lumbermen who spent several days last week hunting.

Among the buyers on the Bristol market last week was W. W. Dempsey of Johnstown, Pa.

### ASHLAND

James Kitchen, manager of the Standard Planing Mill & Building Company, reports a good business. The company now has on hand more contracts than it will be able to take care of for some time. It is furnishing a large amount of the lumber for various residences and business buildings under course of construction in this city and a number of contracts in surrounding vicinity.

The W. H. Dawkins Lumber Company continues to operate its band mill at Ironton, Ohio, full time, and has enough logs to keep it running until about the first of the year. More orders are received for panel and high-grade poplar than can be furnished. Prices have greatly advanced. Mr. Dawkins is figuring on buying more timber in 1910 than this year in order to enable the company to supply more stock and take care of its customers in better shape.

O. E. Faught, sales manager of the K. & P. Lumber Company, Cincinnati, Ohio, was a business caller in our city this week, calling on our several lumbermen. Mr. Faught states the lumber business is greatly improved in Cincinnati and that his company finds it more difficult to fill orders now than it has been for some time, especially in this line of high grade and panel stock poplar, and as well high grades in plain and quartered oak.

W. L. Watson of the J. W. Mahan Lumber Company, Mahan, W. Va., has returned to the company's plant at Mahan after a few days' stay in the city. Mr. Watson states everything is running very satisfactorily and orders received will enable the company to ship stock as fast as it is ready.

R. E. Elmer and Mr. Fisher of the Fearon Lumber & Veneer Company, Ironton, Ohio, were business callers in our city, en route to the mountains on a business trip. The company closed its mills this week for an indefinite length of time and will make extensive repairs, putting in new boilers, ovens, etc. It advises business satisfactory and bright prospects for 1910.

W. A. Cool of W. A. Cool & Son, Cleveland, Ohio, spent a few days in our city this week. Mr. Cool gives encouraging reports on lumber markets in Cleveland and states that his company is receiving a large amount of business. Prices have materially advanced.

The Whisler & Searcy Company, Ironton, Ohio, closed its mills this week, having sawed out the present supply of logs. Mr. McConn of the company advises good business and says orders are being received at advanced prices.

L. C. Smith of the Cranor-Smith Lumber Company, Prestonburg, Ky., was a business visitor in our city, returning from a trip to Lincoln county, Kentucky. This company owns and operates a number of mills in the Big Sandy district.

Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, was a business visitor in Ashland this week in the interests of the association. From here he went to Bluefield, W. Va., and various other large lumber manufacturing centers before returning to his office in Cincinnati, Ohio.

The Breece Manufacturing Company, New Boston, Ohio, whose plant was destroyed by fire, has placed contracts for rebuilding at once. The work will be rushed through as fast as possible, so as to enable the company to begin operations at a very early date. At the time of the fire it was enlarging the plant and increasing its capacity in order to take care of the increased amount of business received. The Three States Manufacturing Company, Kenova, W. Va., is allied with this company and manufactures the best of oak veneers, both plain and quartered.

### ST. LOUIS

The recent strike at several of the East St. Louis planing mills has practically ended. The mills are running open shops, the cause of the strike. Union or non-union connections are ignored by the managers and many of the old hands have returned to work and have accepted the inevitable.

J. S. Garetson of the Garetson-Grease Lumber Company has been appointed to the Missouri Forestry Commission by Gov. Hadley in place of W. W. Dings, who resigned when he removed to Chicago. As Mr. Dings was one of the officers of the Garetson-Grease Lumber Company, the selection of Mr. Garetson keeps the appointment in the company.

E. L. Page, manager of the hardwood department of the Alf. Bennett Lumber Company, says that a satisfactory trade is being done and no trouble is experienced in making shipments, as the car shortage is not affecting the lines on which the firm's mills are situated to any extent. Alf. Bennett, the president of the company, is down in Texas and Arkansas, visiting the Dayton, Spring and Todd mills, and will be absent until about December 1. Mrs. Bennett and their little daughter are with him. The manager of one of the mills has arranged for a little shooting trip for Mr. and Mrs. Bennett while they are in Texas, for Mr. Bennett is quite a sportsman and Mrs. Bennett is an expert with a gun. The trip will be to the Taft ranch in

## MINNEAPOLIS

Information has been received here this week that about the first of the year the rates on lumber and lumber products from Minneapolis, St. Paul and Duluth and northern Wisconsin and Michigan points to Eastern Trunk Line territory will be reduced. The new rates will be the same as those in effect two years ago. The hardwood lumber manufacturers of Wisconsin have been working for this reduction for some time and have been ably assisted by the traffic department of one of the lines, whose officials have believed right along that the rate in effect two years ago was high enough. After the present rates were put into effect shipments of lumber eastward fell off fully sixty per cent. The opposition to the restoration of the rates in effect two years ago came principally from those lines that get a longer haul on lumber shipped to the Southwest.

Minneapolis building permits for ten months amounted to \$11,180,855, and were thirty-two per cent larger than for the same period of last year.

The Minneapolis mills have finished cutting lumber for the season. The output of the mills this year is about 80,000,000 feet greater than last year, when the cut was 189,000,000 feet.

L. C. Nolan of the Nolan Brothers Lumber Company, Memphis, Tenn., has been in the North on business during the past two weeks.

The Northwestern Hardwood Lumbermen's Association will hold its annual meeting at St. Paul on December 7.

## SAGINAW VALLEY

Men are being called for to quite an extent in the lumber woods, and some firms are experiencing difficulty in getting good men. Wages range from \$24 to \$28 in the lower peninsula, and \$30 to \$35 north of the straits. Indications point to the cutting of a large quantity of timber during the winter. The improvement in the lumber trade and the general revival of business and industry are the stimuli to activity in the woods. All of the larger firms will put in all the stock they can handle and get to the mills. Ross & Wentworth are lumbering north of Grayling, and they buy enough additional stock to keep the Campbell-Brown lumber mill at Bay City busy. This firm has had a successful year.

The Bliss & Van Auken mill and flooring mill are running the year through and have had a good business. The Wylie & Buell Lumber Company is furnishing the stock for the plant, which comes down over the Mackinaw division of the Michigan Central. The W. D. Young & Co. plant at Bay City is running both sawmill and flooring mill day and night and shipping large quantities of maple flooring abroad. The Mer-shon-Bacon Company has done a large business this year in the manufacture of hardwood lumber into box stuff. The Bay City Box & Lumber Company has also handled more or less hardwood in the production of box stuff.

The Richardson Lumber Company's mill will run through the winter, as usual. The plant has a hot-water pond for winter operations. It receives about twenty-five cars of logs from the North daily.

The construction of the Hanson Ward Company maple flooring mill at Bay City is being pushed as rapidly as possible. It will be equipped with up-to-date machinery. Another large flooring plant is in process of incubation at Bay City.

The Michelson & Hanson Lumber Company's plant at Loviston will finish its cut in a few months and will then be removed.

The Salling-Hanson mills at Grayling have enough stock to operate for twenty years or more. The Johannesburg Manufacturing Company's plant at Johannesburg, some twenty miles

Texas, where President Taft spent several days while he was on his trip. A gasoline launch has been arranged for, dogs have been secured and all the paraphernalia for duck, quail and snipe shooting.

The American Hardwood Lumber Company has been having quite a good rush of business. It is sending out a large amount of upper grade gum at good prices.

George E. Hibbard, vice-president of the Steele & Hibbard Lumber Company, says there is only a moderate degree of activity in the hardwood market. The call for plain and quartered red oak is good and the upper grades of cypress are also in fair demand. All the orders are for quick shipment. The prospects for next season are most promising.

The sawmill of the Henry Quellmalz Lumber & Mill Company, at Brookings, Ark., has recently started up after a thorough overhauling. Many improvements have recently been added.

The office of the International Hardwood Lumber Company has recently been moved to 1421 Wright building. The new location is well adapted for handling its increasing business. C. S. Stanley of the company is down at the mills on business, and W. E. Keown, president, is still in the West, where he went some time ago for his health.

The Fullerton-Moses Tie Company, the incorporation of which was mentioned recently in this paper, has elected its officers. The company might be called a subsidiary company of the Chicago Lumber & Coal Company, as S. H. Fullerton is president, J. C. Cremer is secretary and Frank Goepel is treasurer. The headquarters of the company are at Ava, Mo., where L. B. Moses, the vice-president and general manager, is located. Mr. Moses is well known in the lumber trade in Kansas City. The company will buy and sell white oak ties.

Charles A. Tilden, under the name of the Charles A. Tilden-Lumber Company, has bought out the business of A. C. Baird and will be located in Mr. Baird's old office at 1310 Wright building. Mr. Tilden will handle yellow pine, hardwood and Pacific coast lumber.

## MILWAUKEE

George Mason of the Mason-Donaldson Lumber Company of Rhinelander, Wis., recently called upon the Milwaukee trade.

W. E. Cooper, president of the Cooper & Maxson Lumber Company of Milwaukee, general wholesalers, has returned from a trip of inspection at his different retail yards about the state. G. M. Maxson, secretary of the company, has returned from northern Wisconsin.

L. A. Parker of the American Hardwood Lumber Company of St. Louis, Mo., called upon the Milwaukee trade.

The Cumberland Fruit Package Company has been incorporated at Cumberland with a capital stock of \$25,000. The company will begin the erection of a new factory building at once which will be 60x60 feet in dimensions and equipped with the latest woodworking machinery. The plant will use birch, basswood, ash, elm, maple, poplar and pine in the manufacture of the Ewald folding berry boxes. It is expected that the plant will be in operation within three months' time.

The Volmar-Below Lumber Company of Marshfield has purchased the Maxwell sawmill at Mellen and will operate the plant this winter. The mill has a capacity of about 50,000 feet daily.

The Vetter Manufacturing Company of Stevens Point has completed arrangements for the installation of electric power in its woodworking plant. Considerable new machinery will also be installed.

The C. A. Goodyear Lumber Company of Tomah has completed the installation of a new electrical power plant of 1,200 horsepower. New machinery

has been added and the plant now has a daily capacity of 100,000 feet.

The Manasha Manufacturing Company is erecting a new plant at Goodrich for the manufacture of wooden plugs.

The Lane-Coos Land Company has been incorporated at Appleton with a capital stock of \$80,000 by E. G. Jones, Fred F. Wettengel and J. V. Canavan. The corporation owns 6,000 acres of timber land in Oregon.

The Kiel Furniture Company of Kiel, Wis., which recently purchased the furniture plant of the B. A. Kipp Company of Milwaukee, has taken out a permit for the erection of a new \$30,000 plant adjoining the Kipp plant at Milwaukee.

The Menasha Woodenware Company of Menasha has closed a contract with the Robbins Lumber Company of Rhinelander to cut 50,000,000 feet of timber from the Menasha company's holdings. The deal means that both plants of the Robbins company at Rhinelander will be kept in operation this week.

The entire timber holdings of the Joseph Dessert Lumber Company west of the Wisconsin river, consisting of 3,345 acres, have been purchased by the Mosinee Land, Log and Timber Company. The tract contains considerable hardwood.

The insurance on the plant of the John R. Davis Lumber Company, which was destroyed by fire recently with a loss of \$150,000, has been adjusted. It is announced that the plant will be rebuilt.

The Edgar Veneer & Box Company of Edgar has been dissolved by common consent of the stockholders and that portion of stock paid in on the capitalization of \$15,000 has been paid back to the owners. The company has been in existence but a few months and dissension among the members resulted in this step.

Kenfield & Lamoureux have begun the erection of another addition to their box factory at Washburn. The addition will be 100x30 feet in size and will be equipped with the latest machinery. The plant is now rushed with orders.

The Alexander Stewart Lumber Company, the Barker & Stewart Lumber Company and the Mortenson Lumber Company have all closed their plants after a successful run.

The Flambeau River Lumber Company has been incorporated at Ladysmith with a capital stock of \$100,000 by E. K. Hughey of Bellevue, Iowa, and James F. Mitchell and Willard E. Thompson of Ladysmith. The company owns 10,000 acres of timber land in the Flambeau river district.

Assemblyman William M. Bray, well-known young lumber manufacturer of Oshkosh, has presented dock property to his home city valued at \$15,000. The gift was made in memory of Mr. Bray's late father, J. M. Bray, the pioneer lumberman, who recently died, and Leander Choate, also a pioneer lumberman and late partner of the elder Mr. Bray.

Lumbermen all over Wisconsin are interested in the announcement that the old "Sorting Gap" in the Chippewa river at Chippewa Falls has been closed. It was in operation for thirty years.

Business men of Mosinee are endeavoring to induce the Mosinee Land, Log & Lumber Company, which has purchased the timber holdings of the Joseph Dessert Lumber Company, to move its sawmill from Four Mile creek to Mosinee.

The lumber yards of C. A. Nye of Cornucopia were destroyed by fire recently with a loss of \$14,000, with insurance of \$10,000. The sawmill of Mr. Nye was saved.

The special committee of the Wisconsin legislature on forestry, water powers and drainage held a session at the Hotel Pfister, Milwaukee, for the consideration of important problems, including the conservation of the timber supply. State Forester E. M. Griffith addressed the committee and advocated the system of burning slash.

from Grayling, has been cutting about 14,000,000 feet annually and has considerable stock in sight.

R. Hanson & Sons' hardwood mill just north of Grayling has been operated steadily during the year, cutting about 50,000 feet a day. The Kerry & Hanson Flooring Company's mill at Grayling is running full time and with a full crew. Trade is reported excellent.

The Endury Martin Lumber Company at Cheboygan is putting its plant in condition for the winter run on hardwood. The company is operating eleven camps this winter.

The new band sawmill of the E. H. Stafford Manufacturing Company at Sand Bay on Bois Blanc Island just off Cheboygan is expected to be ready for sawing in a short time. It will cut about 50,000 feet a day, and the company has purchased 8,000 acres of fine hardwood timber. The company will utilize a considerable portion of the output of the mill in its manufacturing plant at Ionia, Mich.

### CADILLAC

The lumber trade in this vicinity has been unusually good this fall and the manufacturers are having some difficulty in securing proper railroad equipment for handling their stocks. Prices are firm.

The Lista Chemical Company, an eastern concern, has made arrangements to locate in Cadillac. It will use the refuse of wood distillation which has previously been burned by the chemical manufacturers. This waste or tar will be used in the manufacture of a substitute of asphalt. Same has been tried with success in the East. The new company expects to be in operation in thirty days.

The Falmouth Lumber Company, operating at Falmouth, Mich., near Cadillac, has been incorporated recently with a capital stock of \$9,000. Those interested are H. B. Helpolsheimer, John Snitzler, H. M. Liesveld and George Liesveld of Grand Rapids, Mich., and Albert Bunning of Falmouth.

H. H. Cummer of the Cummer Manufacturing Company left Cadillac a few days ago on his semi-annual trip to the Cummer Manufacturing Company's plant in Paris, Tex. He expects to be absent about two weeks.

M. E. Thomas, sales manager of Cobbs & Mitchell, Inc., and the Mitchell Brothers Company of this city has returned from a three weeks' trip in the East. He reports a good trade.

The Michigan Hardwood Manufacturers' Association have undertaken a new line of work in making the office of Secretary J. C. Knox at Cadillac a sort of a clearing house for lumber manufactured in Michigan. This office is in touch with the various stocks of lumber manufactured in Michigan and will be able to advise the consumer where to locate certain kinds and grades of lumber. It is thought that this work will be of considerable advantage to both consumer and manufacturer.

### DETROIT

The J. C. Wilson Carriage Company has bought the machinery of the Humphrey Widman Book Case Company and will occupy the factory at Fifteenth street and Warren avenue, for the manufacture of automobile bodies. J. C. Widman, proprietor of the bookcase company, has transferred the manufacturing of bookcases to the factory of J. C. Widman & Co. The business will be handled separately as to the selling and manufacturing ends from the business of J. C. Widman & Co. The Wilson company will take possession of its new plant and begin turning out automobile bodies in a few days, while the manufacture of bookcases will be resumed in the new location shortly. Both companies will use large quantities of hardwoods.

H. Schneider of the Dudley Lumber Company of Grand Rapids was a Detroit visitor last week. Mr. Schneider reports good business in his section and says that the hardwood trade has been booming.

Giles Wright of the Wright-Saulsbery Lumber Company of Ashland, Ky., was in Detroit last week on a business trip. Mr. Wright was recently elected a senator in his district in Kentucky.

J. M. Clifford of J. M. Clifford & Co. said: "We have been very busy and all grades of hardwood are moving along nicely. Basswood is the only hardwood lumber that is causing any uneasiness. General conditions, however, are excellent."

William E. Metzger of Detroit, one of the largest automobile dealers in the country, says: "The auto wheels are made of second-growth hickory, most of which is brought into the state for manufacture from southern points. A man who owns a large tract of timber in the South told me a few days ago that an average of forty acres a day of hickory is being cut now. It happens that sometimes they do not get a half dozen suitable trees in an acre, as the wood has to be just right for the purpose. The demand is so great that heavier wood is apt to find its way into the wheels of commercial vehicles, to make the hickory last longer."

Clifford F. Blanchard, a Detroit lumberman, has filed a petition in the local federal court asking that he be adjudicated a bankrupt. His liabilities are \$1,788.73, while his assets total \$650.

The steamer Parks unloaded a fine cargo of hardwood lumber from Alpena at the docks of the Thomas Forman Company on the Rouge river last week. The Parks has been one of the busiest lumber carriers on the lakes this season because of the big demand for hardwood lumber at the Forman mills, which have had a banner season. Mr. Forman reports that business is still booming.

H. W. Harding of the H. W. Harding Lumber Company reports a good, healthy trade at the two big yards of the company, with a steadily increasing demand for hardwoods.

The affairs of the Kalamazoo Interior Finish Company, which were found to be badly muddled after the disappearance of Louis Larson, manager and secretary of the company, may be straightened out and the company will probably be able to pay in full the claims against it. Mr. Larson has returned and is assisting in straightening out matters. He said that the company will later reorganize and continue in business.

Over 2,000,000 feet of fine hardwood lumber was destroyed by fire in the yards of the Hudson

Lumber Company at Garnet last week. The yards contained over 5,000,000 feet of lumber, all of which was destroyed, the total loss being about \$70,000.

### GRAND RAPIDS

Local furniture manufacturers are issuing notices to the trade of an advance of ten per cent on the new goods. Similar action has been taken at Rockford. The North Carolina Case Workers' Association met at Greensboro, November 17, and voted a similar advance, to be effective January 1.

Preparations are now active for the January furniture exposition. The new samples of outside manufacturers will begin to arrive soon, and all available space in the exhibition buildings has been taken, which insures the biggest show that this market has ever seen.

Parties in Trieste, Austria, have written the Grand Rapids board of trade asking if the local manufacturers can supply hotel furniture in solid birch at certain prices. It seems that birch is used quite extensively in the making of furniture abroad.

Oak is having a very strong run just now in the furniture trade here owing to the popularity of the Flemish and the Early English styles. Circassian walnut is not as popular as it has been, some big concerns like Berkey & Gay's having cut very little of it this season.

A life insurance company with \$100,000 capital and \$50,000 surplus, all paid in, has been organized here, with headquarters in the Michigan Trust building. Its board of directors includes several well known lumbermen.

George J. Dykhous, son of Henry Dykhous of the Acme Lumber Company, was married November 17 to Miss Martha Schoegge of this city.

Charles W. Garfield, the newly elected president of the Michigan Forestry Association, accompanied by his wife, left for the South, November 16, where they will spend several weeks.

Owners of the float factory at Newberry, in the upper peninsula, are figuring on enlarging the plant by installing machines for the manufacture of handles. This will keep the mill in operation the year round.

The amount of wood that goes into automobile bodies these days is cutting quite a figure in the lumber trade. From January 1 to November 15 this year thirty-four automobile manufacturing companies have been incorporated in Michigan, and in addition fifty-four companies were formed to make automobile parts.

The Stearns Salt & Lumber Company has broken ground for a new salt block at the Fourth ward plant, Ludington.

## Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

### CHICAGO

There has been no particular change during the last fortnight in Chicago hardwood market conditions. All the yards are busy. Both local wholesale operators and visitors from outside points allege that their Chicago business is strong. Some items of stock are very scarce, especially in the good end of all varieties of oak and in wide good poplar. The prices in these items are daily stiffening. There is manifest shortage in the good end of maple and birch with advancing prices. Nearly all other items are in fair request at satisfactory prices. There is every prospect of a strong fall and winter demand in this market.

### NEW YORK

The hardwood market does not show much of activity in the way of large individual orders,

but what is lacking in that particular seems to be more than made up by the aggregate number of small orders for quick and mixed car shipments. The manufacturing trade is picking up and is showing more of a reviving spirit than for some time past. The scarcity of special hardwood stocks and good-grade lumber is having a sympathetic effect upon prices, which are exceedingly firm, with an upward tendency in most cases. Chestnut and some grades of oak are scarce, especially for export shipments. There seems to be a fair supply of maple and birch. Maple is improving materially in demand and available supplies are being quite rapidly absorbed. Poplar is holding firm, especially in the better grades, and taking the list all the way through, while low-grade stock is not holding up either in price or demand with the better grades, the market is absorbing more low-grade stock right along, which cannot help but have a beneficial effect upon prices and trade generally when the season advances.

**BUFFALO**

Hardwood lumber moves a little slow, but is as good property as it ever was. There is still a little more than the usual amount of distrust of the future on the part of the manufacturer and it is perhaps well, for nothing hurts business much faster than over-production. The amount of hardwood lumber available is small enough to keep it at its best as to price and demand if it is handled right. Buffalo is selling conservatively, at moderate prices, and has her full share of the lumber.

There is some uneasiness expressed over the price of logs, especially of oak in the South. Buffalo dealers who have mills down there are of the opinion that they are going up faster than lumber is, for that is pretty nearly stationary at present. Nobody doubts, though, that it will go higher early next year. Some dealers here say that oak, poplar and chestnut are the best sellers, while others report that maple, elm and ash, especially black ash, are strong and some dealers find the same to be true with birch. The activity of the furniture mills is taking care of the common and lower grades.

**PHILADELPHIA**

The past fortnight has seen a decided activity in hardwood trading, especially in the higher grades of poplar, chestnut, plain and quartered oak and basswood; ash is also gaining strength. The lower grades, although slower in movement, show an advance. The furniture and automobile factories are more active throughout the East. Car building, railroad and trolley, goes on uninterrupted. The outlook in all the consuming districts promises well for 1910. Complaints, unfortunately multiply as to car shortage and orders accordingly are taken subject to delay in shipment. The stocks of the good end of hardwoods are below normal, consequently prices hold firm and it is predicted a steady advance may be looked for.

**PITTSBURG**

Hardwood men are busy. Evidence of this is seen everywhere. Shipments of hardwood are larger than two months ago and stocks are relatively smaller, due to the fact that the demand is steadily eating into supply. Although mills are running at almost full capacity in most places, they are not able to make any gain on stocks. On the other hand, they are barely able to keep up with current orders. The demand for the best hardwood from the eastern furniture factories and the carriage and automobile manufacturers is insistent. The railroad and contracting trade is also calling for a large amount of hardwood, chiefly timbers, for use soon after January 1. To get deliveries of this stock will be no small trouble to many wholesalers. Unless they have mills of their own, they are finding it hard to contract for any large quantity of lumber to be delivered so soon.

Hardwood flooring seems to be improving in demand. Maple stick is wanted at good prices and much of it is going to the eastern market. The call for birch and fine oak is very encouraging. Hickory, ash and poplar continue to be very firm in market and quotations rule above list where stocks are choice and customers are pushed for lumber to supply their needs in the immediate future. There is a larger call for pitch than usual, much of it going to the automobile factories for car sills, etc. Elm is selling well and country mills are turning out much stock. Hardwood prices in general are certain to move up during the next two months if present quotations in this market count for anything at all.

**BOSTON**

There has been a steady improvement in the market for hardwood lumber during the past few weeks. Large buyers who have not been in the market for several months have been operating and salesmen all state they are received in a better way than they have been. Manufacturers of interior house finish have had an active fall business and are still busy, with a good outlook for a large spring trade. More building is looked for in this section next spring than for several years. This, with all of the other work to be started within a few months, will result in an active call for finish. Furniture manufacturers are also very busy. The yard trade has been good and retailers are obliged to replenish their stocks.

Demand for quartered oak is good and stocks are not large. Sales have been made at \$90 for one-inch stock, but buyers as a whole have not been willing to pay this figure. Plain oak is in better demand and prices rule firmer. Ash and maple have been in very good call of late. Chestnut is firm with demand moderate. A fair call is reported for whitewood. Veneers are in larger demand and better prices are obtainable.

**BALTIMORE**

The hardwood trade of this section is moving along without any remarkable developments, but the tone of the market is becoming steadily stronger and such advances as have been made from time to time are maintained. The hardwoods all along the line have been able to hold their own, the demand being sufficiently active to absorb the output of the mills as fast as it could be shipped. Dry weather has continued to favor operations by the manufacturers and the production has made gains, but practically all of these have gone to meet the larger immediate requirements. Except in comparatively few instances no heavy restocking has taken place. For a time the yards were affected by the strain imposed upon them by the depression and deemed it inexpedient to let out, and now, when the situation has changed decidedly for the better, high money rates are compelling curtailment. Collections are reported to be far from satisfactory because of the demand for money, and even though the dealers wanted to expand they find themselves facing limitations imposed by the rising tide of prosperity. After the crop movement and the special needs of the holidays conditions are expected to be more conducive to the placing of liberal orders than at present. The current necessities of the consumer are of fair proportions and there is every indication that the trade will continue to show gains.

Furniture manufacturers are buying quite freely and the wholesalers here report almost without exception that they are going ahead and that a much better feeling prevails. All the woods in general use are favorably influenced, poplar especially being strong and showing no decline. The domestic demand has been of such volume as to curtail the shipments abroad, and prices have improved there. The foreign trade continues to show a marked improvement and exporters are preparing for a far more active movement than has prevailed perhaps in years.

**CHARLOTTE**

The past two weeks has witnessed considerable improvement in the hardwood markets. In some sections the increase in price of oak and other woods amounts to from \$3 to \$4 a thousand. It is said that orders for delivery next year have been turned down at present quotations, lumbermen refusing to place future business at current prices because they confidently believe there will be still further advance in

prices. Makers of furniture in the Carolinas are enjoying the best business they have had for over two years. All the factories are working full time and full forces.

Implement manufacturers, boxmakers and other makers of hardwood products report good business. Here in Charlotte hardwood dealers are finding all the business they can handle, and in every case they report prospects for spring and winter business the best for several years.

Railroads have been in the markets and car makers have placed numerous orders. There is an unusual amount of building under way, and demand from the North and West has been strong during the past fortnight. Large volumes of goods have been shipped out of the state both by rail and water. There has been little complaint of lack of cars to handle business so far, although a few manufacturers have encountered some difficulty in this respect.

**NORFOLK**

The hardwood market of Norfolk is improving, especially in higher grades for the manufacture of furniture, both for home markets and foreign. Hardwood manufacturers are feeling more enthused over the outlook than they have for several months. All of the local firms are busy, and looking forward to a decided increase the first of the year.

**CLEVELAND**

The call for mahogany for interior finish has increased considerably this fall, according to local hardwood dealers. The reasonable price at which mahogany can be secured and the constantly increasing price of oak is causing many persons to use the former in fine residence work. Many of the hardwood dealers are preparing to carry larger and choicer stocks of mahogany than ever before. The call for hardwoods is becoming more active as business revives. The vehicle trade, the car works and furniture factories are also investing more freely. Oak still seems to have the preference, both quartered and plain moving well.

There seems to be a tendency for advanced prices all along the line. Such low prices, comparatively, have been existing for the past year or two that the dealers say they feel justified in holding out for better figures.

Considerable hardwood is being brought down from the upper lakes district by the vessels, as navigation closes early next month. Heavy stocks are being carried by most of the yards in anticipation of a big business this winter and next spring. Manufacturing concerns, which have been running on a short order scale, are again beginning to buy more liberally.

**COLUMBUS**

Increasing strength in all grades characterizes the market in central Ohio. The demand is uniform for all grades, which prevents an accumulation of stocks, as had been the case several months ago. The demand comes from manufacturing establishments, the yard trade and from car works, and one of the best features is the desire to have immediate delivery instead of stringing it along for some time. In many places the telegraph is brought into requisition to hurry up shipments.

Prices are firm. In several instances there have been advances which will probably be followed by others before the first of the year. The car shortage which has been affecting shipments is becoming more pronounced. Quartered oak is as scarce as ever and prices are slightly higher. Stocks are small and the seller can get almost any figure. There is also a good demand for plain oak, especially for firsts and seconds.

## TOO LATE TO CLASSIFY

For other Wanted and For Sale  
Matter See Page 63

### WANTED—ORDERS

For dimension walnut and oak cut to patterns. We also want 500 cars each of walnut, white oak and hickory logs—quick.

### FOR SALE

20 cars of walnut squares of all sizes.  
5 cars of white oak plank and timbers.  
LANGTON LUMBER COMPANY, Pekin, Ill.

### WE OFFER FOR QUICK SHIPMENT

1 car 5/4" 1st & 2nds Cypress.  
5 cars 5/4" No. 1 Common Cottonwood.  
3 cars 5/8" No. 2 Common & Better Gum.  
1 car 6/4" No. 2 Common Gum.  
Dry stock, band sawn. Write us.  
HEATH-WITBECK CO.,  
22nd and Fisk Sts., Chicago.

### 1,000 ACRES HARDWOOD TIMBER

Western North Carolina, near railroad. Original growth oak, chestnut, hickory, poplar, pine. \$8 an acre. W. M. PRATT, Marion, N. C.

### FOR SALE

One 60" Fan Sturtevant Dry Kiln. One 8" Molder; both in good running order. Will sell same very reasonable.

ROELL LUMBER CO., Pearson, Miss.

## OAK FLOORING

An artistic volume by Henry H. Gibson, editor Hardwood Record; 40 pages, in colors, on heavy India tint paper; tells all that's worth knowing about Oak Flooring, its hygienic qualities and low cost; as well as the proper finishing and care of oak floors. Profusely illustrated, an ornament to any office or library table; contains no advertisements, and constitutes an authoritative text-book on this important subject. Of special interest to architects, builders, house-owners and women. Price 50 cents. A limited number have been purchased by leading oak flooring manufacturers who authorize distribution FREE (until supply is exhausted). (Copy will be sent on receipt of 10 cents in 2c stamps to cover cost of packing and mailing. Address quick: Book Dept., HARDWOOD RECORD, 355 Dearborn St., Chicago.

The lower grades are in good demand and mills are hurrying orders. Ash is stronger and the movement is better. Hickory is steady and prices are firm. Poplar is one of the strongest points in the market. Almost any price can be secured for the wide sizes. An advance of \$1 per thousand in the upper grades of chestnut is reported.

### CINCINNATI

There is a cheerful atmosphere in the hardwood market at this point, owing to the continuance of good business conditions and a most encouraging outlook for the future. The demand for good figured quarter-sawn oak is strong, with a feeling that there is not an overabundance in sight; prices are very strong and dealers show no disposition to make contracts for future delivery at current rates. Chestnut is in good demand for ones' and two's of twelve feet and over, with a ready sale for all other lengths; sound wormy is receiving considerable attention from buyers. Poplar is a strong feature in the market, and while the lower grades are abundant in supply, there is an evident scarcity of good clear poplar in the market. A decided activity is noted in the veneer market, with a good demand for Circassian walnut, mahogany and quartered oak veneers.

### EVANSVILLE

Conditions in the local hardwood lumber market have not changed noticeably during the past two weeks. There is, however, a manifestation of increasing confidence shown by buyers in future business. Quite a number of factories are making contracts for 1910 delivery in anticipation of an advance in the price of lumber, and it is generally expected by the local factories that 1910 will be a banner year. Quartered oak remains the strongest factor in this market, and the demand for poplar continues to improve. The demand for plain oak is improving noticeably, but the price is not as good as it should be. However when present stocks of this wood are used up, the price will advance.

### MEMPHIS

The demand for hardwood lumber is fairly active and there is a good volume of business under way in most items. There is a steady increase in the amount of business being put through, and, while orders are not as brisk as some of the trade expected, there has been so much improvement that there is a feeling of hopefulness among the trade regarding the outlook. The biggest part of the demand is from yarding interests. Consuming interests appear to be disposed to buy only for more pressing requirements. The time is approaching for taking stock, and this is expected to militate against business to some extent, but the situation has a number of encouraging features. There is some increase in the number of inquiries from Europe, and altogether there is rather more business passing with that country.

The feature of the situation is the strength of plain and quartered oak, which is in excellent demand at good prices. This is true of both firsts and seconds and No. 1 common. Some members of the trade say that quartered oak is now higher than it was prior to the financial depression. There is some improvement in the demand for lower grades of cottonwood and gum, but prices have not materially improved. The supply of high-grade cottonwood and gum is lighter, but cottonwood is showing greater strength than gum. Cottonwood box boards are scarce and prices on these are improving, though some holders here are not quite able to secure

the prices put on their stock some time ago. The improvement in the box business is looked upon as a stimulating factor in connection with the lower grades of cottonwood and gum. Ash is moving fairly well and there is also a moderate movement in cypress, though perhaps there is not as much activity in these items as a fortnight ago. There is almost no poplar for sale in this market, but those who have any are meeting with no difficulty whatever in disposing of it.

### NASHVILLE

The local market has improved somewhat during the past week. The car shortage situation appears to be in a better shape than for some time and less apprehension is felt on that score. In fact, a general improvement is noted in all lines, nothing particularly noteworthy or sudden, but just a general and satisfactory improvement in conditions. The railroads, realizing that their stock is entirely inadequate to demands, have jumped into the hardwood market and are placing large orders for car material. These orders in themselves are helping the lumber business just that much as an initial proposition, not to mention the ultimate good that will result when the cars for which the stuff is being ordered shall have been built. The wood working factories and the box people are reported quite busy, including the planing mills and the furniture factories. Quartered oak, both red and white, continues to be a leader in the local market. The lower grades are moving well also. High-grade poplar is also selling well. Cypress is steady. The box factories are using liberal quantities of cottonwood and the various cabinet woods are in good demand. There is a better tone to chestnut, but ash is a bit slow.

### BRISTOL

Trade conditions here are not as good as they were a fortnight ago. The lull in business is unabated and orders are not coming as rapidly as lumbermen had expected. However, trade is in fair shape and the lumbermen generally will be satisfied to drift along until the new year, when they expect business to boom. Inquiries are less numerous and November will not make the showing of October, though shipments are holding up well. Prices are steady, but there has been little advance of late.

### LOUISVILLE

The demand for hardwoods continues to improve. Every branch of trade is ordering in old-time volume, and this activity has stiffened prices considerably. Quartered and plain oak and poplar are all on the up grade as far as quotations are concerned. The lower grades of nearly all items are beginning to move under the stimulus of the increased demand, and the chances are that the winter will see a marked decrease in the accumulation of low-grade stuff caused by the depressed prices that prevailed during the times following the panic. Mahogany is being imported and manufactured in the accustomed large volume, and while the demand for it is not such as is causing any great enthusiasm, it is sufficient to show that the trade is there and that continued conditions such as exist now will produce a heavier demand later on. Veneers are selling much more freely, and prices are higher. The general situation as far as hardwoods are concerned is satisfactory.

### ASHLAND

Everything at present points to great increase in price and demand for all kinds and grades of lumber. Manufacturers are all very busy manu-

facturing and loading out stock, although some mills closed on account of having sawed out their present supply of timber. They are all busy loading lumber on orders and are very much encouraged over the prospects for a large amount of business in 1910. Poplar in panel stock and firsts and seconds far exceeds the present supply, with prices almost at their option. Lower grade poplar has materially increased in demand and price the last thirty days.

Building materials of all kinds are in great demand and building is on the boom, both dwelling houses and business buildings. All planing mills and retail yards have all the business they can possibly handle, and more contracts on hand at the present time than they have had for the past two years. The bevel siding and flooring manufacturers are rushed with orders and have been obliged to turn down large amounts of business the past two weeks, being unable to make shipment. Every indication points to more business next year than there is at the present time.

### ST. LOUIS

There is a fairly good demand for hardwood stock and the shipments are about the average. The better grades are most in demand. Owing to the nearness of the holiday season and the approach of stock-taking time, the general buying is having a tendency to fall off. Some manufacturing lines, however, are holding up quite well and in fact are buying more freely now than they did a few weeks ago. The manufacturers of agricultural implements are taking considerable thick ash stock. The oak situation shows no change. There is a good call for gum in firsts and seconds, and this has resulted in stiffening the price. Sap gum is also in fair request. Firsts and seconds cottonwood is in fair demand. Other items are not moving above the average. Door and millwork people are busy.

### MILWAUKEE

In spite of the fact that demand is a little easier in the Milwaukee hardwood market, prices are being well maintained, especially in the upper grades. Only slight declines have been experienced in low-grade stuff.

The sash and door plants are placing good orders for interior finishing stock and seem to be meeting a fairly good business. The building season is fast drawing to a close and the bulk of the orders that are being placed in the lumber line are for finishing material. The furniture people seem to be meeting with a good business and manufacturers are placing some very good orders. The box factories are in the market for plenty of material and this has resulted in considerable improvement in the lower grade stuff. The flooring trade has been fairly active of late. Oak, birch and basswood lead in demand in the local market, with poplar, maple and ash a close second.

### MINNEAPOLIS

Wholesalers of hardwood lumber in this market feel that better times are ahead of them. Trade during this season has not been bad, but values have not advanced as rapidly as they ought to, considering the increased volume of business the country is doing. However, there is a strong feeling in the hardwood market, and owners of good birch are expecting better values soon after the first of the year. The upper grades are stronger already, but low-grade stock—No. 2 and No. 3 common—has not advanced materially. Oak, both white and red, continues to sell well, and the demand is keeping up even though winter weather has commenced. The sash and door factories are still busy on odd

work, and as they had little raw stock on hand they keep placing new orders from day to day, though not for large amounts. Rock elm is not called for much and prices are unsatisfactory. Basswood in the upper grades is selling well, but boxboards are not moving at all freely. There is too much box lumber of other kinds on hand, and too little demand for it to make low-grade basswood very desirable at present.

### SAGINAW VALLEY

The volume of business is good and prices are firm. Some woods, notably basswood, birch and maple, have hardened and are bringing better prices with indications of still further advance. Thick maple is not only higher, but in face of the large quantity manufactured, there is likely to be a shortage of dry stock. In fact, dry ash, birch and basswood are scarce, some firms being entirely cleaned out. Dealers and manufacturers will go into the winter with much lighter stock of dry lumber than a year ago.

Some difficulty is reported in getting cars. The movement of lumber products by rail is very heavy at present.

### DETROIT

General condition in the hardwood market in Detroit and vicinity remain unchanged. Prices are fair and a good demand in all grades of hardwoods is reported. Continued activity is shown in oak, maple, cypress and poplar, while basswood has toned up considerably and the demand for this wood is again about normal. Activity in the flooring trade continues to be the feature of the market. Box and veneer manufacturers report a good healthy trade. Better business with the box manufacturers has increased the demand for hardwood culls and has toned up the prices for the lower grades of hardwoods.

### LIVERPOOL

The volume of business passing is very disappointing and the future is not looked forward to with any degree of confidence. Prices for some commodities are on the up grade, but generally speaking there has not been any material change. Ash is very firm and in urgent demand, especially 3-inch and up thicknesses. Shippers are advised to send all grades and sizes of this wood at the earliest possible date. Hickory logs are also wanted, good prices being easily obtainable. There is none of this wood here, and orders for the first shipment arriving will be quite exorbitant. Shippers are advised to send all available supplies without delay. The man who could have 5,000 prime logs here in December and January would make a fortune, and this quantity and more will be wanted for later delivery. We know of several buyers who have taken orders which they cannot deliver, and naturally they are very anxious to get hold of the wood at almost any price. Ash logs are almost as firm, although shippers at present are not advised to ship heavily to this market. Mahogany continues fairly firm, but a weak undertone is detected. The mahogany position has been to a large extent "bolstered up," and the present ruling figures are purely deceptive of these values, and American buyers are warned not to be misled by the apparent firmness of this department. An early fall is looked for at the next sales, and if this occurs buyers should seize the opportunity to buy heavily, as in the present mood of those interested anything may happen, without any regard to the true position of the market. Other markets continue much as before. Oak, birch and poplar lumber are all much as before, though perhaps there is a firmer tone to be noted.

## BUSINESS OPPORTUNITIES

### BAND MILL FOR SALE

I have for sale, owing to death of owner, a complete and first-class band mill, including band resaw, structures and entire equipment, practically new and in perfect running order. Located in live Ohio town with nearby timber supply to last for many years. Good opportunity for live lumberman. Address "BOX 53," care Hardwood Record.

### CLOSE TO THE STUMP.

A woodworking plant at the junction of the "Soo" and Great Northern railways is offered for sale, or rent on easy terms, owing to the desire of the owner to retire.

The plant covers an entire block; main building 40x160 feet outside of engine room; finishing and packing rooms 36x80 feet and 40x80 feet; new 80-horsepower boiler and engine; dry kilns and office.

Plenty of hardwood timber supply at a low price.

A live furniture or woodworking man can secure a bargain and a splendid money-making business.

For full particulars address

L. J. BROWN, Alexandria, Minn.

### WANTED.

A responsible party with a band sawmill to log and manufacture the timber on two sections of land lying 1 1/2 miles from Y. & M. V. R. R. in Washington Co., Miss. Oak and Gum proposition. We have option on timber and will turn timber over to mill man at cost price and buy all the lumber on grades. Address "BOX 43," care Hardwood Record.

## DIMENSION STOCK WANTED

### WANTED

8 to 10 cars strictly white oak squares for delivery beginning as soon as possible, and running through the next 12 months. Must be well manufactured and free from knots, checks and other defects. Address "D-1," care Hardwood Record.

### WANTED—DIMENSION STOCK.

We are in the market for several carloads of oak and hickory dimension stock.  
ESTABROOK-SKEELE LUMBER CO.,  
Fisher Bldg., Chicago, Ill.

## LOGGING EQUIPMENT FOR SALE

One No. 6 McGiffert Log Loader and Skidder in first-class repair; immediate southern delivery. Bargain price.  
Address "BOX 9," care Hardwood Record.

## RAILWAY EQUIPMENT FOR SALE

### LOCOMOTIVES FOR SALE.

Narrow or standard gauge from 7 tons to 70 tons; over 185 locomotives of various types at our shops.  
SOUTHERN IRON & EQUIPMENT CO.,  
Atlanta, Ga.

# American Hardwoods and Where They Are Sold

## Some Interesting Statistics Showing Where the Hardwoods of the U. S. Are Sold

During the past four years the HARDWOOD RECORD, by means of sending out nearly one thousand letters and report blanks daily, has collected information from the chief hardwood buyers throughout the United States, covering their normal annual requirements by quantity, kind, grade and thickness. This information has been put into the form of condensed paragraphs, which recite the state, town, name of concern, use to which the lumber is put, the name of the purchasing agent, with the other information added. Up to this date forty of these bulletins have been issued. This information, when pasted up on tabbed cards, as shown on page 64 of this issue, and filed alphabetically by towns, between state guide cards, forms a roster of the leading wholesale hardwood consumers of the United States, and makes a ready reference, showing from what source trade in every line of lumber, including foreign woods, dimension stock, veneers and panels may be intelligently sought. This information is free to every display advertiser in the HARDWOOD RECORD, and is being utilized by the majority of them to their manifest advantage.

As before noted, these bulletins, including all back numbers, are supplied free to advertisers, and where people desire to paste up their own system, the only additional cost involved is that of the tabbed cards, which cost \$3.50 per thousand, and a set of state guide cards, costing 75 cents. However, in a good many instances, advertisers have preferred that this service be pasted up for them in complete form, with the extra tabs removed from the index cards, and filed alphabetically by towns between state guide cards, enclosed in a four-drawer oak cabinet. The service thus prepared is sold to advertisers at practically cost—the sum of \$35. This includes 100 extra cards to continue the service as subsequent bulletins are issued. Once a year a correction sheet is sent out to all concerns listed in this service, and if there are any corrections to be made they are supplied and issued in a correction bulletin form. Thus the service is kept up-to-date. There is no question about the accuracy of the information involved, as in every instance it comes direct from the purchasing agent of the various concerns.

Up to this time more than 15,000 requirements are shown on this service, which, in part, list up about as follows:

Buyers of Ash	625
Buyers of Basswood	600
Buyers of Beech	215
Buyers of Birch	550
Buyers of Butternut	65
Buyers of Cherry	200

Buyers of Chestnut	475
Buyers of Cottonwood	250
Buyers of Cypress	425
Buyers of Elm	350
Buyers of Gum	375
Buyers of Hickory	300
Buyers of Mahogany	350
Buyers of Maple	675
Buyers of Oak	1,350
Buyers of Walnut	165
Buyers of Poplar	675
Buyers of Sycamore	110
Buyers of Dogwood	15
Buyers of Persimmon	12
Buyers of Locust	10
Buyers of Holly	15
Buyers of Dimension Stock	650
Buyers of Veneers and Panels	550

With this information at hand the manufacturer or jobber in hardwoods is able to address an intelligent letter to buyers on the subject of any variety of lumber. They know approximately what the buyer uses and this enables them to gauge their offerings in accordance with the requirements of the prospective customer. It is not an economical proposition to write these vast number of buyers individual typewritten letters, but it is logical for the man in charge of the lumber sales department to write one letter covering one kind of wood each day and have this letter sent out in duplicate form to every buyer of this particular wood. The most successful sales managers handling out this HARDWOOD RECORD mail-order sales system follow this plan minutely. On Monday he will write a letter devoted exclusively to ash, describing in detail his offerings in this wood. On Tuesday he will talk to buyers of basswood, oak, birch or poplar. In the course of the month other letters pertaining to these same woods are repeated in different forms, and, of course, the answers induced are replied to in individual letters.

This system of soliciting orders of hardwood lumber by mail in no way interferes with a sales force on the road, but manufacturers and jobbers are able to reduce their number of salesmen to a marked degree by the use of this service and reduce their sales cost to a very low figure. For example: The average expense of having a regular traveling salesman call on a prospective customer averages about \$2 per visit. These letters, in duplicate form, can be forwarded to prospective customers, even under 2-cent postage, at a cost not to exceed 5 cents per letter. In other words, it is a forty-to-one proposition in favor of the mail sales system, so far as cost goes.

It is not contended that even a forceful, tactful and diplomatic letter in each indi-

vidual case is as capable of effecting a sale as a competent salesman, but the people who have thoroughly utilized this service have demonstrated that the percentage of letters inducing sales of lumber is very much greater than the forty-to-one cost involved in a personal visit. Again, it would be impossible for the ordinary sized concern to employ salesmen enough to cover the vast number of sales possibilities that is involved in this list of buyers.

The HARDWOOD RECORD would be very glad to supply further suggestions to both users and prospective users of this system in detail and will also be glad to suggest the use of the best form of letter-duplicating apparatus.

A very important fact has been demonstrated by the HARDWOOD RECORD's Information Bureau and pertains to the distribution territory of hardwoods throughout the United States. Every user of wood in every line has been thoroughly canvassed for this information in all parts of the United States, and it is found that eighty-five per cent of the hardwood sales are made in a comparatively small area. It is an area where things are made out of wood. It is within the seven states of Wisconsin, Michigan, Illinois, Indiana, Ohio, New York and Pennsylvania. This would indicate that the New England states, New Jersey, Delaware, Maryland, the High Point district of North Carolina, the St. Louis district and the small quantity of hardwoods consumed in the chief cities of the Pacific coast and other cities in parts of the country not herein mentioned consume only fifteen per cent of the total of hardwoods employed in the domestic trade. These facts are further emphasized by the circulation books of the HARDWOOD RECORD, which show more than sixty per cent of its circulation is in the seven states first named.

### Coolness of Trees

It is not shade alone that makes it cooler under a tree in summer. The coolness of the tree itself helps, for its temperature is about forty-five degrees Fahrenheit at all times, as that of the human body is a fraction more than ninety-eight degrees. So a clump of trees cools the air as a piece of ice cools the water in a pitcher. That is why the legislator has authorized the park authorities of New York City to plant trees in the tenement districts. If the air can be made cooler and purer by the trees, fewer children will die of heat ailments.

Liver in a recent campaign, "What about us in a logic. Did you ever hear about that young woman in Fort Dodge? One spring morning she sat on the piazza of her pretty little home sewing a button on her husband's coat. The husband himself appeared and she said, fretfully, "It's a perfect shame the careless way the tailor sewed this button on. This is the fifth time I've had to sew it on again for you."—EVERYBODY'S.

SPECIMEN STATE GUIDE CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town  
Name of concern  
Name of buyer  
Line manufactured  
Kinds, grades and thicknesses of lumber  
Kinds and sizes of dimension stock  
Kinds and thicknesses of veneers  
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

## HARDWOOD RECORD, Chicago

# PERSONAL LETTERS

*Mr. Business Man  
Good Times  
Personal U.S.A.*

## The Writerpress

Makes it possible to send out from 8,000 to 10,000 **Personal Letters** daily. Not printed forms, but actual typewritten letters bearing the name of the recipient and having all the earmarks of a letter pounded out on the typewriter.

Multiply your best selling arguments by the number of names on your mailing list and the result is largely increased business.

By a new method possible only with the WRITERPRESS, names and addresses can be filled in on the Writerpress at the same time the body of the letter is made, doing away with the typewriter in making form typewritten letters.

## The Direct Inking Carriage

converts the Writerpress into a complete printing plant, enabling the business man to print his own office forms, quotations, price lists, filing cards, cost prices, advertising copy, etc.

Send for descriptive booklet and sample of work.

## The Writerpress Co.

410 Writerpress Bldg., Buffalo, N.Y.

## Corrugated Joint Fasteners

Can be quickly and cheaply driven with

## "ADVANCE" CORRUGATED JOINTFASTENER MACHINE

Made in Different Types to Meet All Conditions

Specially suitable for manufacturers of sash, doors, blinds, screens, coffins, furniture, plumbers' wood-work, porch columns, boxes, refrigerators, etc.

Write for bulletins and prices.

Manufactured only by

**Saranac Machine Co., St. Joseph, Michigan**

## SPIRAL GROOVED AND BEVEL POINTED KILNED HARDWOOD DOWEL PINS

The Spiral Groove holds the glue, and gives holding power similar to a screw. **Means better product.** Pins with good Bevel Point drive quickly. **means more output.** Only pin for Dowel Door Manufacturers.

Automatic Wood Turnings of all kinds. Samples and special discounts on application. **STEPHENSON MFG. CO., SOUTH BEND, IND.**

Dennis Type Machine  
 floor space 3½ x 6 ft.

### JOINTING AND SETTING UP VENEER BY HAND IS A USELESS WASTE OF MONEY

Our patented machines will set it up at the rate of 1,500 to 2,000 lineal feet of jointing per hour, and do it far better than can possibly be done by hand.  
**Our Continuous Feed Veneer Jointer**, which edges and joints in one operation, has three or four times this capacity.

If interested in doing this work at a minimum of cost, write for full particulars.

**THE VENEER MACHINERY COMPANY, 602 Austin Ave. Chicago, Ills.**

Floor Space, 3½ x 15 feet

## DODGE SPLIT FRICTION CLUTCHES

are "making good" in the hardest kind of service—Cement Mills, Smelters, Clay Working Plants, Beet Sugar Houses, Wood Working Mills. Many of the largest Manufacturers in these lines have, after comparative tests and trials, adopted the Dodge Clutch.

There's a good reason why there are more Dodge Clutches sold than any other.

Ask for Bulletin No. G-116.

**DODGE MANUFACTURING CO.**

Station H-55, :: Mishawaka, Ind.

### BURN YOUR REFUSE UNDER YOUR BOILERS.

utilizing the heat to run your mill.

This enables you to dispose of it without expense, and permits you to

#### SELL YOUR WOOD,

for which there is a large and rapidly-growing demand, at good prices.

#### THE GORDON HOLLOW BLAST GRATE

gives as good results with wet, green or frozen sawdust as a draft grate gives with dry wood.—Equally efficient with wet or green slabs.—Generates from 25 to 50% more steam than an ordinary grate.—Gives you perfect control over your fire.—Makes you independent of the weather.—Saves labor in firing.—Lasts a lifetime.—Adapted for either ordinary furnaces or Dutch ovens, and for any number of boilers.

It often

PAYS FOR ITSELF IN ONE WEEK'S TIME.

**GORDON HOLLOW BLAST GRATE CO., GREENVILLE, MICHIGAN.**  
 (Please mention this publication.)

You are requested to write for booklet.

DOVETAILING

414-434 West Front Street, Cincinnati, Ohio

## New Hoosier Improved Short Log Sawing Machine

Made especially for sawing veneer cores and small logs, up to 20 inches diameter and from 2 to 12 feet long.

The machine is built with a heavy cast iron husk frame that carries the feed works and mandrel which runs in self-oiling boxes. It is equipped with a variable friction feed, with cable attachment to carriage. Feed is strong and rapid.

The dogs are of an entirely new style, and dog the log, or piece to be sawed, in the end instead of top and bottom, and can be instantly changed to grip any length log that the carriage will accommodate.

The machine consists of but three pieces, the husk frame, track frame and carriage. It can be quickly and easily moved, and can be operated with a 10 H.P. engine. The machine will saw from 3,000 to 6,000 feet per day and weighs 3,500 lbs.

The largest saw that can be used is a 48-in. diameter.

For further information, address :

**THE SINKER - DAVIS COMPANY, Indianapolis, Indiana**

The Best Skidding Engines are none too good for the service demanded.

This is the principle that has guided our design and construction.

## **RUSSEL COMBINED Skidders and Loaders**

**LOGGING TOOLS  
LOGGING CARS**

Catalogs on Request

**RUSSEL WHEEL & FOUNDRY COMPANY**  
DETROIT, - MICHIGAN

## **RESULTS**

in steam skidding depend largely on keeping the machine busy **at skidding** and in getting the logs up to track at the **nearest** spot.

Frequent moves from one point to another are accomplished quickly by the

### **CLYDE SELF-PROPELLING STEAM SKIDDER**

and require no more time than walking down the track.

The steam guying-drums enable a set to be made while the tongs are being taken out to the first log.

These important features are exclusive in the **Clyde Skidder** and are what determine the **average results** for the month, the year or any other period.

A half million may be skidded with our machine in a single day, with large logs, in thick timber, close to track but the **correct test** of

any machine is the **average** in all kinds of timber, scattered growth and from the long haul as well as the short haul. It's in the **final results** that the **CLYDE SKIDDER** outclasses them all. Let's send our testimonial booklet giving such results from scores of customers.

## **CLYDE IRON WORKS**

# Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock THAT IS IN SHAPE TO GLUE.

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawn Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. THE GLUE WE USE IS GUARANTEED HIDE STOCK.

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed THE BEST.

# CHICAGO

THE GREATEST HARDWOOD MARKET IN THE WORLD

## A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

### The T. Wilce Company

ADVERTISERS' CLASSIFIED DIRECTORY FOLLOWS READING MATTER.

Get an order in early for quartered

### White Oak

We only have 2 cars of 5-4 No. 1 Common and Better.

Ask us about our Log Run

### Bass

We have 4 cars each 4-4 and 8-4—mill culls out—running from 50 to 60% No. 1 Common and Better.

You can get a good price on this Common and Better

### Ash

2 cars each 4-4, 5-4, 6-4, 8-4, 10-4, 12-4 and 16-4; also 1 car 5-4 No. 1 and No. 2 white containing about 20% or more 12 in. and over wide—good tough stock.

How are you fixed on

### Red Oak

We have about 6 cars each 6-4 and 8-4 No. 1 Common and Better and 100 M feet 8-4 No. 2 Common and Better—all dry and good lengths and widths.

### Yellow Poplar

There is a lot of at one of our outside points.

5 to 6 cars 5-8 No. 1 Common  
2 to 3 cars 5-8 No. 1 and No. 2  
2 cars 5-8, 18 in. and over  
1 car 5-8, No. 1 and Better  
100 M feet 4-4 No. 2 Common

If you are in the market for

### Cherry

get prices on 2 cars 4-4 No. 2 Common and 1 car 4-4 Common and Better.

Another chance on Heart Rived

### Cypress Shingles

300 M each 6x20 and 7x24. Can ship immediately.

If you are in the market for

### Chestnut

get prices on 400 M feet each 4-4 and 6-4 Sound Wormy and No. 2 Common; 200 M feet each 6-4 and 8-4 No. 2 Common and Better; we also have 2 cars Common and Better.

Get prices on this

### Soft Yellow Tennessee Poplar

good widths and lengths. One to two cars each of 10-4, 12-4 and 16-4 No. 1 Common and Better.

What about

### No. 3 Common Poplar and Bass

mixed? We have five to ten cars of 6-4 and 8-4.

We can make prompt shipment of the following. This lumber is cut at mills located in the Adirondacks and Canada. It is thoroughly dry; and the Birch is very choice, running largely to Red.

### BIRCH

175,000 feet 4-4, 45 to 50 per cent. 1's and 2's; largely 12 feet.  
30,000 feet 5-4. Good clean stock, good widths; 50 per cent. 10 inch and up.  
30,000 feet 6-4. Wide lumber. 65 to 75 per cent. 1's and 2's.  
10,000 to 12,000 feet 12-4 and 8,000 to 10,000 feet 16-4. No hearts. 6 inch and up.  
6,150 feet 4 inch; 22,360 feet 2 inch; 18,700 feet 3 inch; and 14,000 feet 3½ inch.

### BROWN ASH

Two to three cars 4-4 Log Run, Mill culls out.

### DRY WHITE ASH

200,000 feet 2 to 3 inch Log Run.

*"We Have It If It's Hardwood"*

## SUPERIOR ELM

Our Soft Gray Elm is better than ordinary Soft Elm. It has less shake, is not as hard and is much less liable to warp.

It makes excellent interior finish and is especially desirable for furniture, refrigerators, pews, chairs, tables, etc., and forms a good base for veneers.

# A WEDGE DOVETAIL

(PATENT APPLIED FOR)

OUR  
NEWEST  
FEATURE  
FORCES THE  
GLUE INTO  
THE PORES  
OF THE WOOD

## The LINDERMAN AUTOMATIC DOVETAIL GLUE JOINTER is a

JOINTER AND JOINER. IT PERFORMS  
IN ONE OPERATION and ONE HANDLING

all the operations necessary to complete a glue joint as jointing, glueing,  
clamping, unclamping and edging to width.

Eliminates the delay of getting jointed stock to the finishing or veneer  
room. Saves time, labor, lumber and glue, yet delivers the finished product  
with a reinforced WEDGE DOVETAIL which is a permanent clamp.

May we send you samples and information of this new important feature?

# *General Electric Company*

## Induction Motors for Sawmills and Woodworking Factories

Some of Their Characteristics:

**Rugged Mechanical Construction**

**Large and Long Bearings**

**High Efficiency over Wide Load Range**

**Approximately Constant Speed at All Loads**

**High Overload Capacity**

**Low Heating Characteristics**

**Exceptionally High Starting Torque**

Bank of General Electric Company's Induction Motors each Driving a Matching Machine

The installation of the General Electric Company's Induction Motors ensures the greatest possible output and a low cost of operation and maintenance.

The frame is so designed as to combine great strength and rigidity with minimum weight. The open type of construction exposes the outside of the stator laminations directly to the air, materially improves the cooling of all parts of the motor, and avoids spaces for the accumulation of dust.

The bearings are self aligning, of ample size, and have liberal wearing surface. The oil wells are closed by tightly fitting covers and the opening in the bearing housing at both ends is closed with a washer which pre-

vents the entrance of dust and dirt into the bearings. The bearings are fitted with brass oil rings and the reservoirs are provided with visible gauges which indicate the amount of oil they contain.

An especially valuable feature of these motors is the entire absence of sparking, permitting their installation in places where sparking might cause the ignition of fine dust or even an explosion.

They can be operated in any position, it being only necessary to turn the bearing bracket 90° and 180° relatively to the frame to permit of their being mounted on the wall or ceiling.

**These motors are supplied in all capacities and for all the standard voltages and frequencies. Write for Bulletin 4641-2.**

### Coming Association Meetings

#### NATIONAL VENEER & PANEL MANUFACTURERS' ASSOCIATION.

The annual meeting of this organization will be held at the Auditorium Hotel, Chicago, December 14 and 15.

E. H. DEFEBAGH, Secretary. BURDIS ANDERSON, President.

#### INDIANA HARDWOOD LUMBERMEN'S ASSOCIATION.

The next annual meeting of this association will be held at Indianapolis, on Thursday, January, 13, 1910.

C. H. KRAMER, Secretary. JOHN M. PRITCHARD, President.

#### HARDWOOD MANUFACTURERS' ASSOCIATION OF THE UNITED STATES.

The eighth annual meeting of this association will be held at the Sinton Hotel, Cincinnati, on Tuesday, Wednesday and Thursday, February, 1, 2 and 3, 1910.

LEWIS DOSTER, Secretary. R. M. CARRIER, President.

### General Market Conditions

In the aggregate there are favorable reports of hardwood sales conditions from all the different marketing sections of the United States. However, say what you please, in the eastern states trade is not as good as it was hoped a month ago it would have been at this time. Business comes in fits and starts and is distinctly spotted. Buying will go forward strongly for a few days, and then there will be a cessation of demand. To be sure, everything of a particularly desirable character is picked up promptly, but

lower grades of stocks of not particularly satisfactory sawing, width and grade are dragging more or less.

On the whole, the situation is healthy but nothing indicative of boom conditions or fancy prices. The elements of uncertainty as to the future of values seem to be pretty well eliminated, as buyers recognize that desirable items in nearly every variety of hardwoods are in short supply and very little remains in first hands.

There is an increased sale on common and coarse end of nearly all varieties, induced largely by the fact that firsts and seconds are pretty nearly out of the market. Oak and wide, good poplar are the strongest items on the list, and anything in either kind of wood of good quality is selling rapidly at good prices.

Money is comparatively easy and thus everyone who has any license to get bank accommodations can secure them.

There is every prospect of an increased demand in the furniture, automobile body, wagon, coffin, casket and interior woodworking trades, and doubtless there will be a good volume of hardwood business handled throughout the entire winter.

Prices are gradually stiffening, especially on firsts and seconds and No. 1 common of nearly all varieties of hardwoods.

### Hardwood Stocks out of Balance

With the lumber trade situation as it has been during the past eighteen months, it is undeniable that the result has been to throw the average stock of hardwood lumber at milling points, and in a good many instances at receiving points, badly out of balance. Manufacturers ordinarily have been able to keep their stocks in good shape, but through stress of circumstances for months they have been obliged to market the cream of their stocks, so that they could not keep on their yards a good relative proportion of grades.

In the aggregate, there is a good stock of hardwoods the country over, but most of the yards are stripped of firsts and seconds, and in many instances of No. 1 common. There is undeniably an overstock of the coarse end of nearly all grades, which it is going to take considerable time to clean up and get stocks back in good shape. Every effort is being made to market this coarse end, at prices that will leave a margin for manufacturers, with fair success at the present time.

Of course, the present trend of conditions makes it imperative that manufacturers cut into lumber a large quantity of lower grade timber that formerly was left in the woods to burn or decay. Therefore, the percentage of lower grade product is much greater than it has been in the past. The eventual outcome of this condition undoubtedly will be an immense increase in the manufacture of clear dimension stock from low-grade logs and lumber at points of production, and this seems to be about the only logical solution of an economical method of handling the low-grade problem to advantage.

### The Government's Price List

The Record is in receipt of the latest Government price list covering an alleged record of wholesale prices of lumber, "based on actual sales made f. o. b. milling points" for July, August.

and September, 1909. On firsts and seconds inch plain oak it reports an average price in Texas of \$38.25; in Louisiana, \$34; in Alabama, \$32.60; in Mississippi, \$37.11; in Arkansas, \$36.39; in Missouri, \$38.05; in Tennessee, \$35.74; in Kentucky, \$39.55; in North Carolina, \$36.18; in Virginia, \$36.39; in West Virginia, \$39.66; in Ohio, \$38.93.

As a matter of fact, the price that should have been quoted on inch plain oak during this period is approximately \$43 a thousand, f. o. b. Ohio river points, with prices correspondingly less as the freight from the various states named varies.

The report quotes an average value of quartered white oak at \$63.75 in Alabama; \$65.78 in Mississippi; \$68.38 in Arkansas; \$68 in Missouri; \$64.59 in Tennessee; \$69.33 in Kentucky; \$69.13 in West Virginia, and \$69.08 in Ohio. A just quotation, based on actual sales, should have been \$75, f. o. b. Ohio river points, with prices correspondingly lower in accordance with differences in freight.

On firsts and seconds poplar, the report puts the mill value in Alabama at \$40.80; in Mississippi, \$46; in Tennessee, \$46.18; in Kentucky, \$47.54; in South Carolina, \$37.50; in North Carolina, \$48.10; in Virginia, \$47.25; in West Virginia, \$47.47, and in Ohio, \$46.60. A just estimate of the average value on this grade would have been \$55, f. o. b. Ohio river points, with prices relatively less to comply with varying freight rates.

Other items of both hardwood and softwood stocks quoted in the list are equally out of line. They have been prepared by amateurs in the Forest Service, from information that is either inaccurate or from sources that are not reliable. As before noted in the RECORD, the scheme of the Forest Service in putting out this price list is uncalled for, is a menace to hardwood values and a general nuisance to the trade. The sooner it is suppressed, the better for the lumber trade of the country, and more credit will then redound to the Forest Service for the good work it is actually doing in other lines.

### An Important Announcement

On February 1, 2 and 3, on the occasion of the eighth annual meeting of the Hardwood Manufacturers' Association of the United States, HARDWOOD RECORD will issue at Cincinnati a fifty-two page daily paper, covering full details of this meeting, with a list of attendants, caricatures of prominent members of the association, besides a good deal of general hardwood information. The publication will be issued in the usual faultless typographical form, but will be entirely distinct from regular HARDWOOD RECORD publication.

This meeting promises to be the most important gathering of hardwood manufacturers, merchants and wholesale consumers ever held in the United States, and indications point to an attendance of fully one thousand. The business and entertainment program already arranged for insure features that the hardwood lumberman, whether he be manufacturer, jobber or consumer, cannot afford to miss.

These three issues will aggregate 9,000 copies of 3,000 daily. Two thousand copies each day will be mailed under a Cincinnati postoffice three-cent permit to a selected list of leading hardwood manufacturers, and 1,000 copies will be delivered at the Sinton Hotel, headquarters of the meeting, at six o'clock each evening. Any surplus numbers not taken up by distribution at this time will be mailed under three-cent postage stamps to the chief wholesale hardwood consuming houses of the country.

A limited amount of space has been set aside for advertisers and the unique character of the publication and its special high-class circulation should make it particularly valuable for the exploitation of every variety of logging, sawmill, planing mill and hardwood flooring machinery for jobbers seeking sources of hardwood supply and for general hardwood exploitation.

The advertising rates for three issues of the Cincinnati dailies will be supplied on application.

HARDWOOD RECORD is not prone to put out special issues of the publication, unless the importance of events warrant, and if it did not believe that this special issue would insure good advertising returns it would not solicit cooperation in this enterprise.

The special issues put out at the Detroit annual of the National Hardwood Lumber Association in June, 1909, which were carried two days and were of less than one-half the size and circulation of the proposed Cincinnati issues, have demonstrated to advertisers the value of this character of exploitation.

It is estimated that the cost of putting out a publication of this sort, with the high cost of special mechanical facilities, drawings and engravings, and the added expense involved in establishing editorial offices with a full corps of editors and proofreaders at Cincinnati, will not nearly be met by advertising returns, but the publishers feel that the issuing of these special numbers is of value to the hardwood trade at large, and beyond that the venture will prove a valuable

advertisement for HARDWOOD RECORD, and therefore they expect to absorb a large portion of the cost themselves.

### Annual of the Veneer Association

As announced at the head of these columns the National Veneer and Panel Manufacturers' Association will hold its annual meeting at the Auditorium Hotel, Chicago, on Tuesday and Wednesday, December 14 and 15. Efforts are being made to have this one of the most helpful and interesting meetings the organization has ever held, and an excellent program has been planned. It is particularly urgent that the veneer trade turn out to this meeting to a man, not only because it is the annual gathering, but because a great many important subjects will be brought up for discussion and plans for the forthcoming year mapped out and the experience and ideas of the entire trade are needed for the best interests of the industry. The year 1910 bids fair to be a prosperous one, and the veneer men will receive much benefit by getting together and threshing out their problems.

Besides the regular sessions of the organization the various clubs will get together as follows: The Panel Club will meet Monday at 10:00 A. M.; the Rotary Club Tuesday at 2:00 P. M.;

## GOSPEL

the Quartered Oak Club Tuesday at 8:00 P. M., and the Gum Club Wednesday at 10:00 A. M. It is to be hoped that veneer men will make a special effort to be present at this meeting.

### An Impending Railroad Tie-Up

The United States is threatened with the greatest railroad strike in the history of the nation. Practically every railroad in the country is in imminent danger of being completely tied up by a walkout of a large number of their operating employees. Officers of organizations of engineers, firemen, trainmen and switchmen have agreed upon a uniform demand of a ten per cent wage increase without deviation or compromise. The Brotherhood of Railroad Trainmen announce that they will present their demands December 11, and the wage conference will begin December 15.

Although the railroads will make every possible effort to avert a general strike, it is impossible at this time to predict what the outcome of the conferences will be. Both the railroads and the leaders of organized labor among railroad employees are preparing for the struggle, which, when begun will probably develop into one of the greatest industrial battles that has ever been fought. The situation on both sides menaces the industrial peace of the country. It means that over a million men will engage in the battle with the railroads, unless some important circumstance arises to prevent the struggle.

Already a good many large shippers have been notified of the impending difficulty and the railroad officials have advised them to prepare for emergency, and to get under cover with shipments of coal and lumber, grain and other food stuffs.

Among the railroad organizations that will participate in this universal demand for increased wages are the Brotherhood of Locomotive Firemen and Enginemen, with a membership of 300,000; the Brotherhood of Locomotive Engineers, with a membership of 400,000; the Brotherhood of Railroad Trainmen, with a membership of 210,000; the Order of Railway Conductors, with a membership of 150,000, and the Switchmen's Union of North America, with a membership of 7,000.

Of course, the railroads will resist this horizontal increase in wage scale to the full extent of their ability, just having passed through a serious financial crisis, and feeling that it is absolutely impossible to conduct their transportation lines at a profit at the advance in wages demanded.

With this situation impending, it will be wise for every lumber shipper to insure his stock of raw material at the earliest moment practicable, and then more than likely a great quantity of lumber will be tied up in transit.

### Accusations Against Chicago Lumbermen

The Merriam commission, a local institution, is busily engaged in investigating alleged crookedness in the purchase of supplies for the city of Chicago. The *Tribune* of December 3 reports that this commission finds that rotten lumber has been supplied to the city of Chicago on contracts specifying good, sound oak; that culls in the Chicago market used for crossing planks and having a small market value constitute sixty per cent of the stock of 10,000 feet at the Chicago avenue sewer pipe yards, bought and paid for by the city as common sound oak at \$30 to \$35 per thousand feet.

The report alleges that bids of certain contractors were below the market price for grades of lumber specified, and that it was impossible for the seller to furnish the specified grade without loss to himself. It further alleges that the foreman in charge of one of the city's pipe yards was responsible for seeing that the lumber received was up to specifications, but he knew little about the grading of lumber and never heard of official grades. It states that previous to this year the custom has been to award contracts for all kinds of lumber to the lowest average bidder, but this year the contracts have been split up among the lowest bidders for each kind of lumber used.

The John E. Burns Lumber Company, which has the contract

for oak for the sewer department; the Edward Hines Lumber Company, which has the contract for pine, and the Herman H. Hettler Lumber Company, which has the contract for hemlock, are the lumber concerns accused of supplying lumber below grade.

As a matter of fact, the system under which the purchases of the city of Chicago are handled invites just the result that has happened. In place of having a lumber purchasing agent who knows his business and is honest, the purchases of the city, in common with most other large municipalities, are placed in the hands of political grafters. It is doubtful if the odium will redound to the houses which are supplying lumber to the city of Chicago, but the onus will fall on the purchasing department of the city, which has attempted to get something for nothing—and then graft.

### Odd Lengths

There has been a good deal written and said about the odd lengths question, both for and against the advisability of departing from the old custom of cutting stock to even lengths only. This is a subject of great importance in the conservation of timber, as it can not be denied that considerable waste attends the present general method of cutting to even lengths only.

On the Pacific Coast lumber manufacturers are making great progress in this important step in the conservation of their timber, and practically all of the large manufacturers in the states of Oregon and Washington have entered into an agreement to cut odd as well as even lengths in flooring, finish and similar planing mill products. Already this plan has met with success in the East, where oak and maple flooring and pine and poplar siding are now being cut to odd as well as even lengths.

Considerable opposition to this innovation has arisen among retailers and consumers. The retailer contends that it is impossible for him to dispose of odd length material because of the prevailing methods of construction of wooden buildings, claiming that the initial saving of the manufacturer is transferred to the consumer. This argument is overcome, however, by the proportionally small amount of odd length material which will occur under the new system and because of the latter day practice of laying sub-floors of rough lumber and sheathing on the sides of houses before putting the finishing material in place.

The Forest Service has, because of the conservation element which enters this system, been recommending the cutting of odd lengths for some time past. Of late it has made investigations on the Pacific coast as to the amount of timber wasted under the old system of cutting even lengths only, and reports that in the states of Oregon and Washington this waste amounts to about two per cent of the total cut. Further, the Forest Service states that about 15,000,000 board feet of lumber might be saved annually through this system of cutting in these two states alone; extended to the entire country the figures would be large enough to make this an important item in timber conservation and one well worth the effort of lumbermen generally. The manufacturer realizes that this waste is unnecessary and can be eliminated without causing anyone any great hardship, and it only remains now to educate the consumer in this particular.

### Exports and Imports for October

Advance sheets from the Monthly Summary of Commerce and Finance issued by the Bureau of Statistics of the Department of Commerce and Labor, showing details of imports and exports for the month of October, 1909, give the total of wood and manufactures thereof imported during October, 1909, at \$5,301,062, as against \$4,651,363 for the same month last year.

Under exports of domestic merchandise, the report states that wood and manufactures thereof to a total value of \$5,716,580, during October, 1909, as against \$5,697,279 for October, 1908.

The exports and imports of the country are a fairly good index to the general state of trade in most lines of industry, and it is gratifying that commerce in wood goods for the month of October showed an increase over that for the same month of last year.

## Pert, Pertinent and Impertinent

### To My Best Love

So slender, virginal and delicate—

So cold to all the world, save me alone.

Yet when the flame within thy heart I light,

So tenderly responsive—all my own!

Beneath thine influence each trouble seems

To take swift wings and drop its dusky cloak,

(Dispelled, like mist, amid a thousand dreams),

And lightly soaring forth, ascend—in smoke!

Thy breath is peace and perfume—and thy kiss

Of all that's rapturous the prototype!

Ah, matrimony would be perfect bliss

If wives had half thy charms—my briar pipe!

Nowadays it's a poor rule that won't work five or six ways.

Money is a most efficient substitute for brains in the minds of a great many people.

Gambling has taught many a man how he couldn't make money.

The photographer does not take people for what they are worth but for what he can get out of them.

We usually know what is best for us to do, but the difficulty is in persuading ourselves to do it.

In the prohibition states there is more or less trouble brewing.

Descending from our ancestors is a lot easier job than rising above them.

An inquisitive woman resents nothing so much as curiosity in others.

A few people go around the world, but the majority of us are satisfied to pass through it.

It usually costs less to get a divorce than it does to pose as the defendant in a breach-of-promise suit.

Once upon a time a lawyer met a fool and his money; the next day the fool met the lawyer with his money.

The German "Herr" is an equivalent for the American "Mr." But the American "her" is more than an equivalent for any "Mr." on earth.

## Another Needed Philanthropy

The Boy: Say Mr. Rockefeller, I've got hook worms too. Can't you help me?

A good fellow is usually a man with a lot of bad habits.

In endeavoring to drown his troubles, about the best a man ever does is to make his head swim.

Faith is what makes us believe that the north pole really has been discovered.

To drift with the tide usually means to go broke on the rocks.

Sometimes being sorry for folks is just a mild form of boasting.

Many a man who has the courage of his convictions makes a darn fool of himself.

Probably if we could see ourselves as others see us, we wouldn't believe all we saw.

There are only a few men who can afford to buy champagne on a beer pocketbook—they own breweries.

Some men never do anything on time except to quit work.

Adam could not have had much sense of appreciation—there was no one to have less than he.

A lot of men seem to imagine that the only place where good fellowship exists is in front of a bar.

When a person tries to act superior, it's a pretty sure sign that he needs to act.

The self-made man is invariably well satisfied with the job.

### Morality

Morality's boundaries are fixed by geography. Like fashions in hairdressing, clothes and orthography:

An American scoundrel as likely as not Would be highly respected if born Hottentot. Peculiar proclivities, termed by us bestial, Are very good form in a high-class Celestial;

While fair Saxon ladies whom Turks think undressed

Would by—let us say Fijis—be thought quite oppressed.

We admit it is difficult, strange and confusing To find we should praise where we have been abusing;

But murder and rigamy, nakedness, vice, When viewed in right latitudes really seem nice! Some error was made at the hour of birth In selecting the spot for most mortals on earth. Were we just east or west, doubtless praise we'd be winning— As it is backaday we are children for sinning! —LIFE.

WALDEMAR GIERTSEN  
CHICAGO, ILL.

# Makers of Machinery History

NUMBER X

Waldemar Giertsen

(See Portrait Supplement.)

It is a big step for a foreign born boy to rise from the position of a cleaner of stoves to a place among the prominent figures in the making of woodworking machinery history in the United States. It is a rapid rise, indeed, when the intervening progress is made against serious handicaps and the niches occupied serve more to retard than to hasten the attainment.

Such has been the career of Waldemar Giertsen, president of the Chicago Machinery Exchange. This man has only himself to thank for his success. Coming to this country without funds, friends or special commercial training, he went to work and made work tell.

Mr. Giertsen was born in Bergen, Norway, October 1, 1868. His father was the largest herring merchant on the Norway coast, and his relatives were conspicuous in their walks of life and closely identified with the political history of their sections. Similar positions in this country would be considered as offering a young man fine chances; in Norway it is different, though such a station in life is one to be proud of anywhere.

Mr. Giertsen's education, terminated at the age of fourteen, corresponded to high school training in the United States. Although his school days ended at this comparatively early age, he has always been keen to gain that valuable, practical knowledge acquired through self-education. After leaving school the boy served in a hardware store in Bergen and it may be that there he obtained his bent towards things mechanical, yet the course he was at first compelled to pursue in America did not serve to aid it.

At the age of eighteen Mr. Giertsen left home to try out his ability in America. He came directly to Chicago, where he secured a position as a cleaner of stoves in a Milwaukee avenue store. Later he worked in a dry goods store, where he was advanced to bookkeeper and cashier. This work did not serve to awaken dormant faculties after a service of one and a half years, so he returned to the hardware business, taking a position in the hardware department in Mandel Brothers' big store. His next position was with C. H. Besley & Co., a large concern, and there he acquired much of the knowledge which made possible his successful career in the machinery world. After remaining with this institution two years he accepted a position with the old firm of J. A. Fay & Co. at their Chicago branch, which was later acquired by Manning, Maxwell & Moore. He continued this connection eleven years, saving sufficient funds to enable him to enter business for himself.

On July 1, 1900, Mr. Giertsen purchased with a friend what was then known as the

Machinery Exchange in Chicago, which handled various kinds of second-hand machinery. He disposed of all of the old stock and put in its place high-grade machinery. Four years later he secured control of the business and is now the sole proprietor.

The Machinery Exchange, when Mr. Giertsen acquired the business, was not on a firm footing and the stock carried was not sufficiently modern to meet the requirements of discriminating purchasers such as Mr. Giertsen wished to satisfy. It served, however, as a beginning, and through the foresight of a man who could perceive the commercial necessity of such a business, has developed in nine years' time into a distinct force in woodworking machinery lines.

On January 1, 1909, Mr. Giertsen purchased a controlling interest in the Herman Machine Company of Williamsport, Pa., whose product is sold by the Chicago Machinery Exchange. The exchange also handles the product of Baxter D. Whitney & Sons, Winchendon, Mass.; Greaves, Klusman & Co., Cincinnati, O.; McDonough Manufacturing Company, Eau Claire, Wis.; C. O. Porter Machinery Company, Grand Rapids, Mich.; Beach Manufacturing Company, Montrose, Pa.; Crescent Machine Works, Grand Rapids, Mich., and the West Side Iron Works, Grand Rapids, Mich. The concern also deals in high-class rebuilt machinery.

It is the intention of Mr. Giertsen to manufacture at his Williamsport plant moulding machines on an extensive scale. He is investing at the present time \$10,000 in improved iron working machinery looking to this end. He recently bought a lot 100 by 200 feet on Washington boulevard, Chicago, where he will soon begin the erection of a concrete and steel structure as a

home for his large and growing business. The capacity of this building will be four times that of the present machinery warerooms.

Mr. Giertsen tells an interesting coincidence in connection with the purchase of the property on Washington boulevard which will be the future home of the Chicago Machinery Exchange. For several years he had persistently imagined himself walking into a fine building on that very street. This idea remained in his mind almost continuously until one day a real estate agent visited him and made a proposition to sell him just such a piece as he had so long hoped might be his. The coincidence struck him so forcibly that, notwithstanding the fact that he had not been contemplating building, he forthwith made the purchase without quibble and ordered plans for the new structure which will be practically the same as he had long pictured it in his mind.

Mr. Giertsen is married, his wife being Miss Theckla I. Henschel of Sheboygan, Wis., before her marriage. Their only child is a boy nine years old.

Mr. Giertsen socially is very popular and is identified with a number of clubs. He is a Shriner, a member of the Hamilton, Illinois Athletic, Columbia Yacht and Pickwick clubs. He is an enthusiastic member of the Central church, of which Rev. Frank W. Gunsaulus is pastor.

In meeting Mr. Giertsen one is impressed by a certain decision and determination back of a modest and genial disposition. All that might be said about business acumen, foresight and energy surely applies to this man, for he has succeeded in pushing himself to the very top notch in his line in a few short years and in a strange land.

## Utilization of Hardwoods

Article XXXII

### SANITARY FURNITURE

Quite a large quantity of hardwood is used nowadays in the manufacture of what is commonly known as "sanitary" furniture. This term is somewhat of a misnomer, since the furniture, which consists chiefly of office desks and tables, has little of the sanitary element about it. The expression was supposedly originated by an eastern house, and aside from constituting a convincing talking point, the furniture known by this name is exceedingly attractive, and the sanitary feature has made it very popular.

There has been manifest for a number of years considerable distaste for a desk that fit snugly to the floor or rug. Around the outer edge and under it a world of dirt gathered, as it was neither convenient nor easy to move it in order to sweep under it.

Naturally, when some bright mind hit upon the idea of elevating the desk slightly by giving it legs, the idea caught and carried much favor with it.

The sanitary desk, however, was first introduced in the year 1876, but not with the same trade promptings as its recent successor. The A. H. Andrews Company, of Chicago, brought out a desk of flat-top design in that year that was quite as sanitary as any now in use. The only difference was in the style of the legs, which were much larger and rounding from the top to the bottom and had considerable ornamentation. The late P. D. Armour, the great Chicago packer, bought the first of the early desks, which was of a combination style. This desk had legs approximately fifteen inches in height.

A FINE CURTAIN DESK

The first sanitary desk had legs from ten to fifteen inches in height, while those now in use vary from four to ten inches. The high leg was quite useless and apt to become broken because of its exposed surface, and again it was unsightly. The short legs now used are quite as satisfactory for the purpose they serve and they make a more harmonious and graceful looking desk.

Sanitary desks are made of all kinds of hardwoods, but principally of selected quarter-sawn white oak, mahogany and birch. Sycamore is used for the pigeon-holes and basswood and birch for the drawer bottoms, though oak and mahogany are used also. Southern cane ash is also used to a considera-

SINGLE FLAT TOP DESK, WITH CONVENIENT SIDE COMPARTMENTS.

ANOTHER STYLE OF CURTAIN DESK.

ble extent in desk manufacture. Although up to this time desks have been made almost entirely of solid wood, veneer is beginning to be used and quite a number of desks now have handsome veneer panels.

The prevailing styles are very plain. The straight unornamented legs are finished with a brass cap to prevent nicking and blemishes. The roll-top desk differs in no essential particular from the ordinary curtain desk, but in the flat-top style a new feature that meets with great favor is the several pigeon-hole compartments, small drawers, space for card indexes, etc., on one side, and the usual drawers on the other side. A desk of this style is shown in one of the illustrations. One noticeable feature about the sanitary desk is that the roll-top is low. This makes a more attractive desk and is universally liked, so that the makers are manufacturing but few of the old high-top pattern. Flat-top desks are also being made lower.

Manufacturers are making about half

their product sanitary and half ordinary desks, but the sanitary style is growing steadily, and the prediction is made that in a few years none but this kind will be sold.

The illustrations shown here are from the A. H. Andrews Company and the Commercial Furniture Company, two of the largest desk houses in Chicago. The Andrews company claims the distinction of originating the leg desk in 1876. The Commercial Furniture Company manufactures nothing but office desks and tables and has one of the best factories in the West.

A meeting of the Gulf Coast Lumber Exporters' Association was held in the offices of the Holmes & Herrick Lumber Company at Gulfport, Miss., November 20, to discuss the regulations now governing the berthing of vessels reporting for loading. These regulations make such demands of the shipper that successful compliance with them and at the same time with the terms and conditions of the usual charter party is well-nigh impossible, and it is the hope of the committee that new regulations will be enacted which will be of benefit to all concerned.

## Are There Fortunes In Eucalyptus?

The HARDWOOD RECORD is in receipt of the following letter:

ST. LOUIS, MO., Nov. 29, 1909.—Editor HARDWOOD RECORD: Under separate cover I am sending you a report on Eucalyptus made by Messrs. Von Schrenk, Fulks & Kammerer, timber engineers of St. Louis, who, I am told, rank among the foremost authorities on timber in the United States. Kindly advise me your opinion of it.

The reason for doing so is that having read in one of your previous issues several articles derogatory to eucalyptus, and having personally become very much interested in the industry, after considerable investigation in the West, and knowing that a certain large carriage manufacturing concern in this town is using certain varieties of eucalyptus for hubs and felloes.

Any information which you can give me will be appreciated. Yours very truly,

JAMES MUIR.

The report of Von Schrenk, Fulks and Kammerer referred to is a document of some forty pages. The preface states that the planting of eucalyptus trees for industrial purposes and commercial profit is rapidly becoming widespread, and the general recognition of the value of eucalyptus lumber to replace the dwindling supply of hardwoods is focusing public attention on this new industry of California.

The preface also recites the history and standing of Prof. Von Schrenk, who is a well-known botanist and expert in forestry matters, and incidentally refers to E. B. Fulks and Alfred Kammerer, who, it says, are also technically trained men of high standing, formerly connected with the United States Forest Service.

Referring to the specific report of Von Schrenk, Fulks and Kammerer, it refers to the fact that the timber supply of the United States is rapidly being cut; that this decrease is giving rise to considerable anxiety among hardwood consumers, and that attempts are being made to find substitutes for woods hitherto employed. It states that of all the timber so far investigated, none has given so much promise of extensive utilization as the various types of eucalyptus; that large quantities of this timber have been imported during late years from Australia, notably for the car manufacturing industry, and that these importations have raised the question as to whether it would be possible to grow the desirable species of eucalyptus in the United States.

The report further states that eucalyptus has been grown to a considerable extent in California since 1860, but only recently has the planting of large tracts been attempted. The booklet recites that eucalyptus is a genus of the family *Myrtaceae* and is native to Australia and adjacent islands; that the variety known as blue gum, *Eucalyptus globulus*, was the first introduced into California, and has been most extensively planted. It tells of its reputation as a sanitary tree, which is legendary, as a preventive of malaria. The report states that the rearing of forests of blue gum can be accomplished more cheaply and more easily than that of almost any other tree, while the return is twice or three times earlier than

that of the most productive pine or oak forests; that other species are planted in California, notably the red gum, *Eucalyptus rostrata*; the forest gray gum, *Eucalyptus tereticornis*, and the sugar gum, *Eucalyptus corymocalyx*, and they rank next in order of quantity planted. Other less notable varieties have also been planted.

The report also states that *Eucalyptus globulus* and a few other varieties rank first as timber trees; that their growth is extremely rapid and that their wood is one of the finest hardwoods known to the world [italics are the RECORD'S]. It is stated that in plantations in California the average blue gum tree ten years old is from 90 to 100 feet high and from 10 inches to 12 inches breast diameter and that the other varieties are of slower growth.

Bulletin 196 of the College of Agriculture, University of California, referring to *Eucalyptus globulus*, says:

"Individuals of this species grow erect, as a rule, branching low in isolated specimens, while those in close plantings have small crowns and are particularly free from lateral branches. The bark of the seedlings is light bluish green in color, while that of the trunks of the old trees varies from a light brown to a gray or greenish color, due to the flaking off of the bark in long strips. The limbs are generally smooth.

"The stems of the seedlings are rectangular in shape, while their leaves and those of the sprouts of the old trees are opposite, oblong, bluntly pointed, and of a light bluish green color, darker on the upper side of the leaf. Those of the old trees are elongated, sickle shaped, leathery in texture, and equally dark green on both sides.

"This species is in bloom from January to May, the flowers being white in color, generally solitary, axillary and borne on short stalks. The whitish buds are angular, with a bluntly saucer-shaped deciduous cap, while the mature fruit is dark green in color, with from three to five valves, generally four barely enclosed."

The report recites details of propagation, insects and fungus—enemies of the tree, etc.

Referring to the subject of utilization, it reads as follows: "The principal interest in any wood, which is grown for commercial purposes, lies in the various uses to which the wood can be put when ready for marketing. With the large number of woods which are available for different purposes in the United States, it becomes a matter of particular interest to know what specific quality or qualities the various woods possess which render them more or less fit for any specific purpose. For example, we have been accustomed to consider white oak and longleaf yellow pine as the principal wood for structural timbers; in the wagon industry ash has been the chief wood used for whatever lightness and strength were the chief requisites; in

making tool handles hickory has been the chief wood employed, etc. The wood of the eucalypts possesses certain distinguishing qualities which make them particularly fitted for a large variety of purposes, which must be considered fortunate in view of the rapidly decreasing supply of the high grade hardwoods, which we have been accustomed to use. A careful study of these specific qualities of the various eucalypts has shown that this class of timber is particularly adapted to those industries requiring great strength and elasticity, and likewise to such uses where strength and lasting power are important." [Italics here are also RECORD'S.]

On the subject of the structure of the wood the report notes: "The wood of the eucalyptus family is intensely hard and strong; it ranking foremost in strength among the world's supply of hardwoods. [Italics are RECORD'S.] In its structure the wood differs materially from that of the hardwoods of the United States, the main difference consisting in the closely interlocked structure of the wood fibres, which gives the wood the appearance of great density. When looked at in cross section, eucalyptus wood appears almost solid—that is, the pores commonly seen very plainly in timber like oak, ash and hickory, are found to be very few in number and more or less closed. A great amount of the year's wood production consists of solid wood fibres. The closely interlocked character of the wood fibres is best shown by the appearance of a piece broken in shear. The broken surfaces of the specimen present a peculiar, corrugated appearance."

A paragraph of the document states that "the color of eucalyptus varies materially with the different species from a very light straw color to a dark red-brown, and in going into lumber the wood shows a beautiful grain. Some of the species when finished look almost like the true mahogany. That the presence of the figured grain is a striking quality of most of the species, and it is on this account that it makes very fine finishing material for the interior of houses and for the manufacture of furniture. [Also RECORD italics.] Generally the various kinds of eucalyptus wood are very hard, most of them being among the hardest woods known. The weight varies from 43 to 54 pounds per cubic foot."

The report further notes that the test made by the Forest Service shows that *Eucalyptus globulus* thirty years old is stronger than hickory and that *Eucalyptus corymocalyx* fifteen years old is nearly as strong as black hickory, and ninety-one per cent is as strong as second-growth hickory.

The report recommends the wood as valuable for the wagon and tool industry, furniture, agricultural implements, flooring, poles, piles, ties and posts. It states that the oil extracted from the wood is an excellent antiseptic and is highly valued for its

medicinal properties; that the residue left from the leaves is said to be a very good boiler compound, and that the residue contains a good tannic acid and makes an effective tanning solution for the manufacture of leather. The report concludes with tables showing the growth and yield of sundry eucalyptus plantations.

The document is issued under the auspices of the Sacramento Valley Improvement Company of St. Louis, and with due respect to the distinguished gentlemen who prepared the data for it, **HARDWOOD RECORD** begs leave to make sundry suggestions to people who have become interested in the growth of eucalyptus for commercial purposes with the idea that they can suddenly grow rich in the enterprise. The advertising columns of sundry magazines and newspapers just before the panic were filled with advertisements of eucalyptus promotion companies. During the year of the depression it did not pay them to advertise and these announcements disappeared. Right now, with the returning period of prosperity, there has been a renewal of the exploitation of the prospective profits that might be made in buying California lands and growing this wood.

About this eucalyptus proposition **HARDWOOD RECORD** wishes to impress upon its readers the necessity of extreme caution in making investments in this or any other commercial tree-growing venture.

Generally speaking, there are three distinct enemies to a profitable employment of money for the individual or corporation in artificial tree growth. The most important of these, the one which militates against a reasonable profit, is taxation. Very few states of the country exempt, as should be done, growing timber crops from taxation until the owner has a crop of timber, which logically should only then be subject to taxation.

Second, in many cases there is danger from fire or disease rendering the tree growth unprofitable.

Third, there is no legislation against depredation, the setting of fires and the stealing of timber, which are a constant menace.

With the elimination of these dangers and the utilization of lands unfit for agricultural pursuits, it would be possible for individuals to make handsome earnings on an investment where the variety of trees planted were adaptable to the particular soil of the region. The "glorious climate" and soil of California may be particularly adaptable to the growth of eucalyptus, and beyond question the different varieties planted there do grow with great rapidity, but investors should bear in mind the fact that the cost of land, planting, protection, and notably of taxation, is very heavy.

Again, with all due respect to the eminent authors of the brochure on the eucalyptus of California, the **RECORD** wishes to make further observations.

In the issue of **HARDWOOD RECORD** of April 25, 1909, there was a report of the third annual convention of the National

Hickory Association, which was held at Cincinnati on April 13 and 14. O. B. Bannister, a member of the Executive Committee of that association, in the course of an interesting address had the following to say about eucalyptus as a substitute for hickory.

"Eucalyptus is a hardwood which grows only in California. It is the fastest growing wood on the American continent, which means that it produces more board feet per year than any other. The quality of the wood varies considerably in the different species. The Forest Service is now experimenting with eleven different species to determine its usefulness in the hickory industry.

"Two hundred and fifty-eight trees planted in Berkeley, Cal., twenty-nine years ago now average 14,750 board feet per acre, with a maximum acreage of 44,000 board feet in thirty years. The trees, which were planted 8 feet apart, have an average measurement of 10 to 14 inches in diameter and 80 feet to the first limb, and a tree measuring 12 inches at the butt tapers only 10 inches at the first limb. Some species of eucalyptus are very hard, and have shown strength values which are greater than hickory. The wood is very free from defects, but it warps very badly. However, it is claimed by representatives of the Forest Service that this warping occurs entirely while the wood is in the green state, and that it is quite practicable to dry it successfully and overcome this warping. A factory in southern California has made wheels entirely of this wood and sold them, and found them to be quite satisfactory in service. A plant has recently been put in in California for making rims of this wood, and rims of hickory secured from the central states will also be made.

"The area of production is limited, as eucalyptus grows only in California. It cannot stand frost, and grows very poorly even north of San Francisco. The wood at the present time is worth from \$80 to \$100 per thousand feet for stock which is suitable for wagon material. Of course this is caused by the very small acreage now standing."

Although thoroughly competent to do so, Mr. Bannister failed to commend eucalyptus as a carriage material.

At this same convention a large number of specimens of the blue gum variety of eucalyptus was exhibited, which had been made up into various forms of wagon and carriage materials. The breaking strength of these specimens was shown and the results were so unsatisfactory from a carriage or wagon man's viewpoint that further attempts for the utilization of eucalyptus as a substitute for hickory were not seriously considered by any of the practical men present. A specific report on the fitness of eucalyptus for shaft work was made by the Pioneer Pole & Shaft Company of Muncie, Ind. This report was printed in **HARDWOOD RECORD** of May 25, 1909, but is herewith reproduced:

We received on March 3, 1909, twelve pieces of eucalyptus timber, 1 3/4 x 2 1/2 x 9' long, same having been shipped from San Jose, Cal., by the United States Department of Agriculture for the

purpose of being worked into shafts and forwarded to the laboratory of Forest Service at Purdue University for strength tests.

Our report on the timber and working of it is as follows:

Bent ten pieces into shafts and worked two pieces into cross-bars.

The timber when received was very dry and hard, badly sun-checked, evidently cut from dry lumber and from the top of the pile. In consequence we could not give it any drying or curing treatment.

The timber weighed 4.72 pounds per board foot on the average. Some pieces were of lighter weight than others.

The growth seemingly was very dense, but badly twisted and curly.

Using the sharpest of knives, the timber badly roughed up in planing. In planing this stock from 1 3/4" thick by 2 1/2" wide to 1 3/4" thick by 1 3/4" wide, tapered to pattern for shafts, i. e., 1 1/2" at the heel, by 3/4" square at the point, the sun-checking seemingly worked out, but after the material was steamed and bent these checks burst open badly.

In steaming the stock preparatory to bending, the material showed a relationship to the oak family, staining black in color.

Some of the pieces were steamed four hours, some were re-steamed to nine hours and as long as fourteen hours.

We found it to bend just as successfully after the four hours as after the longer period of steaming. In bending it shaped up very nicely at the points, but squashed badly underneath the heel. We doubt if any of these would pass muster in the trade for a well-made shaft.

In rounding the shafts, after they were bent, they roughed up badly again as in planing.

By belting, or sanding and polishing, by taking considerable time we were able to sand down these rough places to rather a smooth finish, yet it required considerably longer time and care to do this than it does with hickory, with the danger of leaving the shaft with a very uneven surface in an effort to belt down the rough places.

The length of time the timber will hold its bend, of course, would have to be determined. With the exception of one pair of shafts, which we retain, they were sent to the laboratory of Forest Service at Purdue University. The timber coming to us in the condition it was may not be a fair sample of that wood. The fact that it was dry and badly sun-checked of course was against it. Possibly a check of green stock, cured carefully, would show better results, yet if the nature of this timber is twisted and curly, as was this sample lot, and straight-grained material cannot be had, we doubt the practicability of using this for shafts. Will be anxious to know of the strength test.

THE PIONEER POLE & SHAFT COMPANY.

In the **RECORD** of the same date a letter, which is quoted below, was printed. This letter was from H. C. Haner, a well-known, practical lumberman of long experience, and who is pretty nearly an authority on the subject of timber growth:

CROWLEY, LA., May 15.—Editor **HARDWOOD RECORD**: It is a pity the circulation of the **RECORD** does not reach the sections remote from lumber manufacturing sections, so the good advice regarding the proposed "lumber corporations" (?) and other similar schemes would be more widely known as to their character and the results achieved from the methods such as they propose.

This being a section rather far removed from any timber production, the glamor of fortunes made is easily shed and receives a willing and anxious ear. Not long ago, in the daily paper of our community, there appeared a letter from a man who had "gone into timber," to quote the paper, and he was somewhere in the San Joaquin valley in California, and wrote a glowing account of how it was like finding money to go there "with a few hundred dollars and sand enough in his craw to rough it a few years, get a few acres of that soil and plant eucalyptus," and have nothing to do but wait for someone to bring the money around.

As a result there are people here now who have sent for seed and have the little plants growing in boxes and which are ready to set out three inches apart in rows. Just how many more times this "crop" has to be transplanted I do not know. But this enthusiast in the state of California says the trees are planted six feet each way, making them grow tall and straight. Coming south from Los Angeles can be seen many groves of these trees, planted in rows like corn, some of them fully 16" in diameter, and looking at least 100 feet high. Whether they are shade trees or planted for the timber could not be told, nor was there any sign of any cutting having been done.

It has created widespread interest here, as the climate in this section is a good deal like that around Los Angeles, and has inspired some of the parties to experiment with the idea of going

into timber raising. It might look as alluring as some of the ads of the foreign concessions and in all probability will yield about as much in reality. Whatever may be the trade conditions, whether the crop season is too wet or too dry and regardless of the acreage, that crop you mention, the sucker crop, still continues to be large.—H. C. HANER.

An editorial in the RECORD under date of April 25, 1909, referring to the Forest Service report on the qualities of eucalyptus as compared to other standard woods, stated: In strength, hickory being used as a basis of measurement and placed at one hundred per cent, it was found that hard maple in thimble skein wagon axles showed eighty-nine to one hundred and four per cent, while eucalyptus, from selected specimens turned to these axle sizes, developed only from sixty-eight to eighty per cent. Even Douglas fir, for this purpose, ranged from sixty to seventy per cent. In work tests—that is, putting wood to the test of jar and durability of service (hickory representing one hundred per cent), maple showed eighty-four per cent and eucalyptus sixty-six, while Douglas fir showed only fifty per cent.

A careful experiment as to the practicability of using eucalyptus for wagon and carriage poles and shafts, handled out by an expert in this line of manufacture, showed even worse results. It was proven that the involved and crooked grain of the wood made it decidedly unsatisfactory for poles and shafts, while its working qualities were reported as bad, and the labor involved in finishing it was much greater than in the case of hickory.

These two reports demonstrate that eucalyptus forms no logical substitute for hickory for carriage and wagon making purposes.

As a specimen of the organized bombastic exploitation of eucalyptus which seems to be rapidly making its way from California, the following is excerpted from a long editorial article entitled "A Fortune in Hardwoods," which appeared in the St. Louis Star of Nov. 14:

The growing scarcity of good oak timber has increased the cost of everything into which it enters. Notwithstanding the cheapening of all processes of manufacture and of other materials that enter into agricultural machinery, the increased cost of wood has prevented the reduction in prices that should have come.

This suggests the cultivation of oak as a private business venture, but it is a slow growing wood and few owners of land care to devote it to a crop that matures so slowly, no matter how great its ultimate profit may be. For this reason manufacturers are facing a greater increase in the cost of oak timber, with complete exhaustion of the supply as a final result. Naturally they are looking about for a satisfactory substitute. This substitute is the eucalyptus, of which several varieties are especially adapted to all the uses now made of oak.

For years eucalyptus trees have been cultivated in California—imported originally from Australia—for ornamental purposes, and by a few in groves for their timber value. During all that time its qualities have been tested and its habits studied, with the result that it is now declared by the forestry experts of the government and of California to be a perfectly satisfactory substitute for oak in the manufacture of machinery, tool handles and furniture, for building purposes and inside finishing, for timbers, railroad ties and firewood, and more practicable for cultivation because of much more rapid growth. A eucalyptus tree will attain larger size in ten years than an oak will in fifty.

Realizing that more money can be made from an acre of eucalyptus in ten years than from any other crop not requiring great risk and labor, the people of California have begun planting thousands of acres of eucalyptus, confident that the price of hardwood ten years hence will

be even higher than now and that there will be a hungry market for every foot of good timber they can produce. This great planting of eucalyptus was referred to by Mr. Pinchot and received his indorsement as a wise investment of money. Many a California man engaged in other pursuits than farming is laying up something for a not distant future by investing in a few acres of young eucalyptus trees, which will grow while he works and in the end will make him safe against possible want.

And that end is not far distant, because a tree becomes commercially valuable for firewood in five years and increasingly so for other uses as it gets older.

Such a large acreage of these trees is being set out that manufacturers using hardwoods have some assurance of a supply, though entirely inadequate in any proportions likely to be produced in this way.

It almost seems as if some eucalyptus promoter had "seen" the St. Louis Star.

The RECORD has no argument to make against the value of eucalyptus for firewood, medicinal uses, as a boiler compound and a tanning solution, and as stated in this article it appreciates the value of the wood for certain uses. The point which it has endeavored to bring out here is that the properties of the wood as a substitute for the high-class hardwood, in the wagon, furniture and handle industries, are to say the least conjectural.

The foregoing information from all sources at hand is herewith published simply to urge upon investors the necessity of viewing with some suspicion the alluring and bombastic announcements of promotion companies that investment in eucalyptus plantations means the accumulations of sudden and vast wealth.

People unfamiliar with tree growth should remember the one basic fact that nature does the like thing under like conditions. Never in the history of tree growth has it been demonstrated that a particularly valuable wood was of quick growth. Bear in mind the premier of tree growth, the oak:

Three centuries he grows, and three he stays,  
Supreme in state; and in three more decays.

It should further be recalled that any fast

growing tree has a predominance of sap and for qualities of strength and longevity sapwood has small value as compared to heartwood. The sap of some varieties of wood show great strength when green, but there is no fast growing sapwood that has any great and permanent strength when thoroughly dry. Green sap maple is very strong, but breaks when dry under a jar.

The editor of the RECORD professes to have considerable knowledge of wood physics. He has examined very carefully a good many specimens of various varieties of eucalyptus, and he has yet failed to be able to analyze a single specimen of possible high value for carriage or wagon making purposes, for furniture or kindred lines, or for remanufacturing purposes. Its milling qualities, on account of its involved grain, are extremely bad. It is weak in breaking strength. It possesses no beauty of color and very little of grain. He can conceive that eucalyptus might under chemical treatment make desirable railroad ties, good telephone and telegraphic posts and fence posts, but from any specimen of the wood which he has yet encountered, this would be about its limit for utilitarian purposes.

He wishes to remark further that there is nothing said in this article with the intent to be unfair or even unkind to the eucalyptus promotion game, to the promoters, or to the wood itself. This article is written simply, as has been previously stated, to warn investors to exercise extreme care and gain a thorough knowledge of tree growing history before they invest their money on the say-so of promoters, enthusiasts or strangers.

## Hardwood Record Mail Bag

In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.

### Misinformation from a Correspondent

CONASAUGA, POLK COUNTY, TENN., Nov. 30.  
Editor HARDWOOD RECORD: In your issue of November 25, under the head of "Timber Land Sales," page 36, appears an article to the effect that John C. Arbogast has sold to William Whitmer & Sons of Philadelphia, Pa., some 70,000 acres of valuable timbered lands in Polk county, Tennessee, and Fannin county, Georgia, which includes all of the saw mills, the railroads and about 25,000 acres of land owned by the Conasauga Lumber Company in Polk county.

There is absolutely no truth whatever in that part of this article which refers to the Conasauga Lumber Company. We have not sold our property to the Whitmer company or anyone else, nor do we contemplate a move of the kind. To the contrary, we are now figuring on adding to our present holdings a considerable boundary of timbered lands adjacent thereto, and expect to increase our output considerably within the next few months.

You will readily see what a detriment to our business, a report of this kind spread broadcast would be, and we will ask you to do us the kindness of giving as prominent a place in your next issue to our denial of the report as you did to the publication of same in your issue

of the 25th. CONASAUGA LUMBER COMPANY, C. B. Benedict, Vice-President.

The article referred to came from one of the RECORD's regular correspondents, which led it to believe that the information was accurate. THE RECORD takes pleasure in printing this letter, which shows that our correspondent was at fault. The original publication is sincerely regretted.—EDITOR.

### Commends the Record's Cincinnati Issue

CINCINNATI, O., Dec. 1.—Editor HARDWOOD RECORD: We wish to say that we were very well pleased with the Cincinnati issue, and think it was splendidly gotten up.—GEORGE LITTLEFORD.

### Released from Custody

NEW YORK, Nov. 23. Editor HARDWOOD RECORD: Regarding the article your paper published about me recently from your Bristol correspondent: When these papers were first presented here the magistrate seeing the nature of their flimsy character immediately released me on bonds, and when I presented the facts to Governor Swanson of Virginia, showing that I had left Virginia on March 22 to visit my dying sister, and the acts were alleged to have been committed on March 30, and he was shown conclusively that no crime was committed, he withdrew his request for extradition, and today the case was dismissed.—H. I. SOBLE.

The friends of Mr. Soble will be pleased to know that the charges against him were unjustified by the facts.—EDITOR.

# Forest Conservation and Merchandising of Lumber

Hon. J. B. White, of Kansas City, Mo., addressed the St. Louis Lumbermen's Club at its last monthly meeting on the subject "Forest Conservation and the Merchandising of Lumber." This was such a valuable and interesting dissertation on this subject that it is herewith reproduced for RECORD readers:

The subject assigned to me, "Forest Conservation and the Merchandising of Lumber," is so important and means so much to lumbermen that I feel it worthy of much better treatment than it is to receive at my hands tonight.

Production, distribution and exchange of commodities constitutes both manufacturing and merchandising, and conservation comes in as an economic necessity and applies to lumber and trees the same as to all other natural resources.

Abnormally prosperous times spoil us. We become careless in our methods; extravagance is manifest in every department. Our vigilance is relaxed, and to those of short experience to whom generous good times is a new thing are apt to come sad experiences. The little rivulet has begun to flow into their coffers, and they madly rush to increase the stream and become intoxicated in their race for wealth and do not stop to consider that in due proportion as we increase a surplus of product we decrease the price.

That we may, with fair profit, conserve one of the nation's choicest and most limited resources, we should strive to keep a just balance between supply and demand. The theory of a just balance in trade should be the central doctrine of a correct mercantile system.

There is no reason for a trust with extortionate prices, but there is a reason for a trust for the purpose of conserving natural resources and preventing waste and ruinously low prices. In either case the scales are out of balance and a great wrong is done. Whenever one is forced to sell any commodity at less than it can possibly be reproduced for, violence has been done to this theory of trade balance and loss, both to the individual and to the body politic, ensues. When the scales are forced against justice by the compulsory weight of combined control to the extent of a monopoly, and prices are forced upward beyond reason, then there is also a like loss to the individual consumer and also a loss to the nation, with the enrichment of a few at the expense of the many.

Manufacturers should meet and give to and receive from each other information for the good of all. They should study to know the demands and to control the supply measured only by the demand. In proportion as the scales fall to balance is injustice done to the individuals and to the nation, in one case by the waste of buying at ruinously exorbitant prices and in the other case by the waste occasioned by overproduction and a ruinously low price.

We have never studied the cost of lumber production and the cost of growing trees, and it is true that no one yet has ever sold a thousand feet of lumber at a price greater than it can be produced for. We have been prodigal with our trees, because we had so many of them, and it was necessary in early times to cut them down and burn them up in order that we might have corn fields and cotton fields.

Today we are in need of some effective combination that will aid us and aid the nation in saving our trees that we may have the necessary amount of timber for future use.

What can our stumpage be produced for? What can it be logged and manufactured for? And what can it be marketed for? These are the only three propositions to be considered. Below the cost of production there cannot be any trust that is injurious to a community or that is morally or economically wrong. If one

is forced by unfortunate circumstances to sell his corn or cotton for less than it cost to grow it, the community loses. He does not suffer alone. But these farmers get together and agree to limit supply and plant less; a wise action. Waste has ensued, yet corn and cotton will grow another year, but if we cut our trees and sell them at less than it cost to grow them a greater waste has been caused, for another crop cannot be grown in another year, nor in the lifetime of any one generation.

## SUPPLY AND DEMAND

In the world's commerce and trade in natural products, a fair and well-established demand in one balance and in the other a proper supply with a reasonable profit thereon constitutes honest merchandising and a healthy trade condition. In many commodities with normal and satisfactory conditions comes disease and disaster when the pulse is led by excitement to beat in feverish haste, when the bulls and the bears fight for market control, circulate wild stories as to the supply and as to the demand, and the masses who do not know and who let others do their thinking lose their heads and their money. It is wrong that our laws will protect this kind of gambling that changes the market directly adverse to the law of equalization as to supply and demand and permits monopolies to be formed to corner the supply and extort from the people. This is not legitimate trade or merchandising, but is speculation, of the character of high finance, coldly and shrewdly managed by those who know the facts or are better guessers as to the supply that can be brought to the market. We speak freely of this great evil of speculating in the necessities of life, where the public has to pay the loss, yet we, as lumbermen, know just how it is in our own business of manufacturing and merchandising in lumber, where we overproduce and are paying the loss, which is a loss also to the future public. We know we are making too much lumber, that the supply is greater than the demand, and that we have perfect control of the supply and can regulate it according to the demand, and yet we do not do it. We know absolutely that we cannot grow even a fifty-year-old tree containing not exceeding five per cent above No. 1 common for less than \$12 stumpage with all conditions favorable, including low taxation, yet we are selling better trees, 150 years old, for \$5 stumpage, which contain twenty-five per cent above common and makes a difference in value of more than \$12 per thousand from what we are now getting.

We can rightfully insist, without reasonable complaint against us by the public, that we should have at least as much for mature trees of superior quality as it will cost to raise immature trees of inferior quality. It is a positive sin against posterity for a lumberman to sell his lumber at less than cost of growing the trees or less than some good competitive substitute can be provided for. Any law and any trust that will prevent a man cutting and selling timber below the cost of reproducing it and a reasonable added profit, is a good law and a good trust for the people.

If we cannot singly protect ourselves against ourselves we should be permitted to combine ourselves in such a manner that we cannot break a moral principle at the expense of the comfort and needs of future generations. We are not good manufacturers; we are not good merchants; we are not good landlords or good tenants; we are mighty poor business men and should be restrained in the interest of conservation and for the benefit of ourselves and of this generation and of those who are to come after us.

## FOREST CONSERVATION AND THE PEOPLE

Can the demands of forest conservation ever be taught the people? I believe it can, and we

should all enthusiastically help in this cause of good education. Laws are going to be passed, and we must see that they are good and just laws. Private interest must always give way to public interest. The injury of one is the concern of all. The greatest good to the greatest number and equal and exact justice to all are the popular public mixims.

It should be made, and it will be made, unlawful for any individual or corporation to commit waste of natural resources of state and nation. States will endeavor to pass uniform laws, so that the citizens of each state will have the same equal privileges as the citizens of other states. And for forest conservation, one of the most important of our natural resources, something like the following might well be considered:

An act entitled, "An act to encourage forest growth and conservation; to prevent timber waste, and for other purposes:

Section 1. Be it enacted, That whenever it shall appear to the State Forest Commission that waste is being committed on state or private forests, after due examination thereof, notice shall be served upon the owner, party in charge or person or persons committing the waste, and the owner or party offending shall make restitution by paying into the state fund for conservation and reforestation the value of such waste, to be ascertained in manner following:

If the timber cut and removed is being sold at less than cost of reproduction it shall be prima facie evidence of intentional violation of this act, and the difference between the price obtained and the cost of reproduction, to be estimated and ascertained according to the best available methods, shall be the measure of damage to be assessed and collected, as all fines and penalties are adjudged and collected for other misdemeanors. If the whole or any part of such tree is left to waste in the woods, then the market value shall be ascertained in like manner and the entire value assessed against the owner or offending party in same manner, together with sufficient penalty in either or both cases to cover cost of prosecution.

Sec. 2. If the Forest Commission find that waste is occasioned by ignorant or wanton methods, not subservient to economic principles of reproduction, and inconsistent with good lumbering as the same is or should be practiced by efficient and economical operators, and as approved by said commission, then shall notice be given to said offender, or to the owner of such timber, and the violation of, or neglect to observe the requirements of this act and of said notice, shall constitute a misdemeanor and the loss or value of waste occasioned thereby shall be ascertained and collected as in the preceding section.

Sec. 3. It shall be lawful for foresters, owners of timber, loggers, lumber manufacturers and others to meet together, form associations, discuss and agree together upon policies of public and private interest in the economical cutting, manufacturing and marketing of forest trees, and of the products thereof, with the object in view, and to the end desired, that surplus shall not accumulate beyond the demands and requirements of the market, and that waste to the forest and its products and consequent loss to the state be not sustained thereby.

Sec. 4. All acts, or parts of acts heretofore enacted into law, which conflict with or are inconsistent with the spirit of this act, and of its proper and thorough application, the same shall be and are hereby repealed.

Sec. 5. The provisions of this act shall become effective immediately upon its passage, upon receiving the signature of the governor.

Of course, the above proposed legislation presupposes that other legislation appropriate to the needs of conservation has been passed and

a fund provided for the use of the commission.

There is no legislation sought for regulating or proposing to regulate the size of trees that shall be cut. The market will do this. Often a small tree is worth more in dollars than one of the same kind that is larger. Various requirements demand different size trees. A small tree is sooner reproduced. Cut for the market regardless of size, plant, conserve and grow again. This proposed legislation is not offered with the belief that it fills all requirements or that it is most wisely drawn. It has been hastily prepared and is offered as food for intelligent thought.

Now, there is another very important contributing factor coordinating in price conditions and affecting values, which we must consider. Value is not determined by cost of production alone, if it has in competition a commodity that serves as a good substitute; but with no substitute and where the cost of production is as certain and as nearly uniform as it is with lumber there should be little trouble to maintain such a uniform price as would prevent waste.

#### CONSIDERATION OF SUBSTITUTES

Steel and concrete are substitutes for some purposes. We can never raise trees at a cost to take the place of steel and cement in many modern structural buildings and bridges; and if it is true that at a price less than the cost of growing trees, these and other substitutes of brick, stone, paper, composite board, etc., will come in to successfully prevent lumbermen getting cost for their product, including this tree cost, then forestry is doomed unless new uses are found for wood. If as good a substitute can be produced for less money, we might as well cut our present forests while we can. Future generations will not need them because of the better and cheaper substitutes. Forestry will then mean only the care of trees on the game preserves; in national, public and private parks; on lawns and by the roadsides, along the watersheds, and at the sources of rivers and streams; but if more than this is to be required of us, and commercial woods are to be grown, it is very evident that they must bring the cost of growth, for timber will not be grown for a profit unless it brings a profit, and it will not be grown at all except for profit unless by the nation at the expense of the public, which will be no saving in the end.

Now, it is the belief of scientific foresters and of students of conservation the world over that there can be no substitutes for general uses for which wood is now required that can be furnished below cost and a reasonable profit for growing trees; yet they all agree that the individual needs protection and help by the state in the way of lessening of taxes, which will lessen the haste of cutting forest trees. The slogan should be, "Let the tax follow the saw." In all things the consumer pays the taxes, and we are all consumers, so we help pay each other's taxes. No tax of any kind should be paid on timber or on timberland until the trees are manufactured into lumber. It will then not make so much difference what the tax is, as it will be added to the cost, the same as are taxes in other products always regarded as a part of the cost thereof. With no taxes to be paid until the timber is cut the owner has some inducement to protect and foster growth and run the risks of storms, diseases and other dangers.

National wealth is not rightly measured by the balance in the treasury or by money in bank to the credit of its citizens. It is more correctly represented by the available raw materials within the nation's boundaries. Their development calls for labor, and labor becomes an ally and an important added source of wealth. The cost of reproducing such raw materials as can be reproduced includes the labor and fixes the price.

Such commodities as cannot be reproduced, like coal, oil and natural gas, where the supply

is not in sight, estimates are made from such scientific geological data as is available, and the probable supply for decades of years is considered; but the price is most altogether influenced by its competitive substitutes, as, for instance, in certain localities coal displaces wood; coal oil displaces sperm oil and tallow for lights; manufactured gas displaces coal oil; natural gas displaces manufactured gas, and cheap water power, in favorable localities, displaces them all. It produces electricity, which produces heat, light and commercial power at a cost such as drives the others out of all competition.

So far, and in such instances as lumber has a good substitute, will the price be affected by the cost of that substitute; and it may, for a short time, thereby be kept at a price below the cost of reproduction; but it cannot long so remain, for it will not be reproduced at a loss. Yet what are we lumbermen now doing? We are in face of a great demand and a constantly decreasing supply of raw material for which there is no good sufficient substitute, ruinously and wastefully manufacturing more than the market demands and at prices far less than the cost of reproduction.

#### FOREST TREES FOR FUTURE SUPPLY

In the wise economy of growth and selection of forest trees for future supply, trees of rapid growth and those superior in quality will largely take the place of those of inferior quality, all requirements and conditions of soil and location being equal. Some species may become almost extinct for commercial woods. For example, hemlock may give way to white pine of more rapid growth, certain species of oak will displace those of inferior quality. Wise economy demands and justice requires that we secure a maximum of value at a minimum of cost, and that the selling price shall not be exorbitant.

We are entitled to natural advance of raw material which our foresight enabled us to take advantage of, and it is none the less valuable because we bought stumpage for a fraction of its present value. We will commit waste if we sell it for less than it can now be replaced for.

Labor and capital constitute wealth, and capital includes raw material; and when one impairs his capital he commits waste, sustains loss, and if he continues he will surely become bankrupt.

If one takes the risk of advancing capital in any enterprise to employ labor, he is entitled to a safe profit and should control the business free from annoying legislation which prevents or limits his privileges in getting together with other manufacturers gathering such information and having such understandings with each other as will prevent waste of either public or private resources.

The experience of this and other nations is that much legislative interference by the state is most often unwise, does great harm and little good, and history bears out this statement. There are instances where legislation is needed and is justified by humane reasons, such as the regulation of child labor and sanitary conditions and oppressive monopoly; but under the national and state antitrust laws such is their possible power and range that much more harm than good is being done under their radical enforcement, and many of those who helped to frame these laws now say that some provisions should be amended or repealed. This was asked for by ex-President Roosevelt, and I notice that President Taft proposes to carry out the Roosevelt policies and advocates the amendment of the Sherman law.

#### TALK ABOUT A TRUST

Lumbermen have been accused of being in a trust when they were struggling to keep their heads above water and prevent bankruptcy. They have been summoned before courts and tribunals when they had gotten together and were trying to adopt plans to save themselves from impending disaster and prevent waste of their forests. During the panic of 1907, when

it was necessary to consider plainly the situation of their increasing indebtedness and waste of natural resources, it was thought best not to admit reporters, as their publication of certain alarming conditions might, in the excitement, add to the then present dangers. But the cry of trust caused the president and secretary to be brought before the court then in session and the minutes and transactions of the meeting examined before the grand jury.

Sometimes it looks as if a rift is appearing in the clouds. I note that the right of corporations to organize subsidiary corporations to conduct a part of their business was sustained last week by Judge Elmer B. Adams of the United States Circuit Court of Appeals in deciding a suit brought under the Sherman antitrust act. Then, in another state, we note that the state department last week charges that a combine amongst lumbermen exists because the mills only operate four days in a week. The lumbermen reply that they can't get cars. Now when they get cars, will they run six days in a week in order not to be arrested for being in a "trust"? Will lumbermen be obliged to overproduce and commit waste? Will conservation never come until the last tree is cut?

Merchandising is easier if we practice thorough conservation and do not waste by selling commodities manufactured from our natural resources at less than their cost of reproduction. Let the motto be, "Selling a product below cost of reproduction is waste." A reasonable profit above this cost is legitimate merchandising.

Another thing, forest conservation has come to stay. Let it not serve us weakly by its purely academic theories, but let us all join that it may serve us strongly with the practical help we can give to these theories. Practical forestry will prove itself our friend. It is our work. Gifford Pinchot has unselfishly aided us, with nothing to gain beyond the cause he loves. He suffered much discomfort in our behalf because of the prejudice and misunderstanding of the people as to the truth of the situation and what real conservation demands. We owe him a debt of gratitude.

#### CONSERVATION OF WASTE PRODUCT

Until the eighteenth century merchandising, commerce and trade were considered an art, but economists of later years regard it as a science, requiring educated and broad intelligent management. Lumbermen who are progressive in everything excepting that which pertains to their own cult should learn the science and inevitable laws which govern their business, and it is our duty to then lend an energetic hand to help educate the people as to true economic conditions regarding this, one of the most important of our natural resources. When the public mind becomes inflamed over sensational press articles that the forests are disappearing, and that lumbermen are devastating and committing sinful waste, influenced by poetic sentiment and wild prejudice, then the truth needs to be told, and told effectively and well, that unwise and harmful legislation to the whole people be not enacted. They should know that cities and towns, and the demands of a constantly growing population cannot obtain without the marketing of our forest products, and that every manufacturer is eager to save and sell everything he can find a market for.

While in New Orleans I visited the American Turpentine & Tar Company's plant, which is a concern owned by one family and no stock is for sale. They are going to build another plant. They started this plant with sixteen stills. They now have forty stills and they told me that they got from one cord of wood the following products:

Three hundred gallons of pyroligneous acid of uncertain value. They sell it all the way from 4 to 20 cents a gallon. There is an overproduction of this acid, because they have not yet found sufficient uses for it:

10 1/2 barrels of charcoal, at 50c a barrel..	\$ 5.25
50 gallons of finished tar, at 8c a gallon..	4.00
9 gallons of turpentine, at present market value of 52c.....	4.68
1 1/2 gallons of pine oil, at 35c.....	.52
2 gallons of tar oil, at 11c a gallon .....	.22

Being a total of.....\$14.67  
exclusive of the 300 gallons of pyroligenous acid. They told me there was plenty of room for more of these plants. They use the dry

wood, more especially the limbs after the sap has decayed, which they say will take from three or four years after cutting, so that the wood can be used in this what is called the destructive process.

Then there is the new discovery in Chicago, whereby grain or ethyl alcohol is made from sawdust and all kinds of wood refuse by converting the starch in the wood into sugar and then into alcohol, that is in all respects equal

to that made from corn or other grain, and this can be made at a cost of but a trifle over 4 cents a gallon, and, including packages and all expenses, not to exceed 8 cents a gallon ready for the market.

Let us join this movement of conservation and help lead it wisely and well for the greatest good to all. Conservation and new uses for raw material is the foundation of successful merchandising of all forest products.

# Annual Northwestern Hardwood Lumbermen's Association

The twenty-first annual meeting of the Northwestern Hardwood Lumbermen's Association was held at St. Paul, Minn., Dec. 7, 1909, in the directors' room of the St. Paul Commercial Club, followed by the annual dinner at half after six o'clock.

The business session was called to order by President A. H. Barnard with a representative number of members present.

Secretary J. F. Hayden read the minutes of the last annual meeting and of the last monthly meeting, and they were approved without change. President Barnard then presented the following annual address:

extra quantity as to width, then that should be mentioned. The same thing would hold good on any other sales that any of us might make. When a car of lumber is sold at a low price, be sure to give the full reason for selling it. In this way we can all be benefited and arrive at the general market price.

It certainly looks bad to go into a factory yard and see a fine car of 1-inch firsts and seconds birch being sold at \$32, then into another and find a car of clear birch, 12-inch and wider, all red, selling at \$45. The first lot should bring \$35, the last \$65 or even \$75. You could not get in oak for \$75 per M.

Considering the prosperity among the different factories, it certainly seems to me that hardwood lumber of all kinds should be materially higher. I cannot recall a time when all factories had a greater abundance of orders, and under these conditions it seems to me that prices must advance.

I might call your attention to the fact that the associations of these clubs are very popular in the different cities of the East: Buffalo, Cincinnati, Indianapolis, Cleveland, Chicago and Memphis. There it is the usual custom to have these gatherings at the noon hour, having a regular place where different members take their lunch, and they talk over the situation practically every day. They also use this opportunity to buy stock they may want from one another and also use the gathering as a selling proposition. I know, myself, many times that I have had cars of lumber which, apparently, I could not sell; I have offered them to some of you and in that way I have been able to make disposition and help out the other party.

So far as I have been able to ascertain, the inspection department has run along very satisfactory to all members. Mr. F. H. Long has been kept busy and has made his expenses and more every month. This all speaks well for the good work the National Hardwood Lumber Association is doing for us and is doing for the entire country. Nearly all of you can recall when there was no way of adjusting matters of this kind except by fighting it out, which was very unsatisfactory to the consumer. This national association mode of adjusting differences banishes any bad feeling on the part of either party. And so far as I have been able to judge, it has been the means of showing up unreasonable kickers, which is surely a benefit to every man in this association, whereas in the old days the other fellow knew nothing about it. I, myself, have not been backward at all in telling of the different experiences I have had with people where the National inspection was not accepted, and in comparing notes in this way everyone has found out my views and I have also found that you were practically all of one mind.

Regarding the general market conditions, I would like to call your especial attention to the enormous consumption of all varieties of hardwood lumber in the East. Chicago especially is enjoying very good trade, while the report from Cincinnati, Pittsburg, Buffalo and eastern cities seems to be very healthy, with a steady increase in value. Birch and maple are in-

creasing in value very rapidly, and with the enormous demand for these two woods I fail to see why the price should not be \$10 higher. I feel that it would be along the line of reforestation if the price were at a point where the true value was being received for the wood.

We are also talking about the demand, and if we will stop to consider that there is a steady constant demand from all the sash and door factories, and that practically all the furniture factories have turned to birch, it certainly does not seem right to be selling this beautiful wood at the low prices which are now prevailing. Comparing it with hemlock, tamarack, low grade pine, etc., which are in enormous supply with no demand, you will see that the price is

ARTHUR H. BARNARD, MINNEAPOLIS, PRESIDENT.

### President's Address

Gentlemen, it has been my pleasure to preside over the different meetings we have had during the past year, and I trust that you have one and all found these meetings beneficial in one way or another. It has always been my idea that this association was really formed and the good could be derived from it along the lines of a get-together meeting, as there is no question in my mind but what the greatest good can come from these gatherings by each one attending and exchanging views as to the supply and demand of lumber. It would certainly be a fine gathering if we could all talk over plainly and frankly the lumber situation as it appears. When one sells a car of first and seconds lumber, regular widths and lengths, for a good price, it is a fine thing for the other man to know, and right here allow me to say that if you get an extra price by delivering an

W. C. STANTON, ST. PAUL, VICE-PRESIDENT.

unreasonably low. We should be getting at least \$40 for firsts and seconds birch, \$30 for No. 1 common, \$22 for No. 2 common and \$15 to \$17 for No. 3 common. By this comparison I mean the low grade lumber. Then you take the clear birch at \$35. Clear pine is \$65, with a much greater demand for birch.

If this subject could be talked over, I am sure the price could be obtained. I am not saying this with any idea of forcing up the market; simply getting value received for the wood we are delivering.

I thank you all for your attendance at the different meetings and your generous support.

The annual report of the secretary was the next order of business:

### Report of Secretary Hayden

Mr. President and Gentlemen: The past year has been rather uneventful in our association work. Members appear to have been fairly

well satisfied with trade conditions, and other matters affecting the welfare of the hardwood lumber business. Market values have been mending slowly. The railroads have evidently been acting in a satisfactory manner, and the only note of dissatisfaction has been over the inability of the members to secure the services of the National inspector when wanted.

Regarding this latter, your secretary had some correspondence with the secretary of the National Hardwood Lumber Association early in the year and received assurances that he would instruct the inspector to limit his absences from this market to ten days, if possible; and when not able to do so, to leave his address at his Minneapolis headquarters. In spite of this, however, he has not always been available when wanted.

The membership of the association has remained practically the same during the year. A year ago we had twenty-three members. We now have twenty-one. The Minnesota Lumber Company and the Hawkins Land & Lumber

balance:

Balance on hand December 1, 1908.....	\$ 3.93
Receipts .....	126.50
Total .....	\$130.43
Disbursements .....	103.50

Balance on hand.....\$ 26.93  
On motion the reports of the officers were accepted.

#### Report of Board of Arbitration

F. H. Lewis reported for the Board of Arbitration that since the inspection of lumber in the Northwest is in the hands of the National Association, the board has nothing to do with disputes over grades. He believed the work of the inspector had been satisfactory as a rule. He knew of only two cases where a reinspection had been called for, and in one of those the original inspection of the inspector had been preferred by the complainant.

On suggestion of W. C. Bailey, the chairman of the board was asked to get the number of cars that had been inspected by the National inspector and incorporate it in his report.

N. C. Bennett, reporting for the membership committee, said no new members seemed available.

#### Report of Forestry Committee

D. F. Clark presented a good report for the forestry committee. He said that the question involved two things—the cutting of the forests and replacing them by reforestation. The Forest Service had to contend with two great destroyers—insects and fires—and it has made great progress in combating both. He then referred to the rather strong forestry laws enacted by the Minnesota legislature, and particularly to the provision that required railroads to take great care to prevent fires from locomotives. He read from the report of the Forestry Commission of Minnesota showing the possibilities of reforestation, but stating that it was a work for state and national government and not for private individuals. He also read from the figures of the Census Bureau and Forest Service for 1908 showing the number of mills reporting, the cut of lumber and its value. These showed a decrease of 17 per cent in cut and 23 per cent in value. In spite of this, the lumbermen are getting less for their lumber than two years ago. He read part of the constitutional amendment that will be presented to Minnesota voters providing for 1/15 of a mill tax for forestry.

#### Report of Waterways Committee

F. A. Nolan for the waterways committee said he had prepared no report, but wanted to call attention to the fact that the National Waterways Commission, after visiting Europe, had said that we had greater possibilities in the Mississippi river than any European river. The main trouble was that the railroads had gotten possession of the river banks and had all the ground for wharves and docks.

W. C. Stanton asked what had been done by Minneapolis and St. Paul about raising the \$250,000 asked by the government for a high dam between the cities. Warren Seeley, sec-

retary of the St. Paul Commercial Club, was invited in and said that the commercial clubs of the two cities had agreed to raise the money.

After some further discussion the subject was dropped.

A. E. Petterson, for the committee on arrangements, reported that the evening entertainment would consist of a dinner and talk by prominent citizens.

The secretary then read a communication from the St. Paul Manufacturers & Jobbers' Association asking for some expression on the corporation income tax law, but on motion it was decided to postpone action.

The question of better service from the national inspection system was then taken up, and culminated in a motion by Mr. Clark that the secretary write the secretary of the Na-

C. F. OSBOURNE, MINNEAPOLIS, TREASURER.

Company dropped out, and no new members have been added. Whether or not there are other eligible hardwood dealers in this market is best known to the members of the association, and if there are the membership committee is undoubtedly willing to receive suggestions.

At the last annual meeting a rough draft of the new constitution and by-laws was read and a committee consisting of W. C. Bailey, C. F. Osbourne and the secretary, was appointed to finish and present the document at the next meeting. It was revised and read at the meeting of January 18, adopted at the meeting of March 6, and reconsidered, amended and finally adopted at the meeting of March 27.

At the meeting of October 4 the secretary read a letter from the secretary of the Oregon & Washington Lumber Manufacturers' Association asking for support of this association for the "odd lengths" movement. He was instructed to inform the western secretary that our grading rules already officially recognize odd lengths as standard.

Whether or not the work of the association has been satisfactory to the members during the year is not for me to say. The evidence is in favor of an affirmative answer.

#### Treasurer's Report

Treasurer C. F. Osbourne's report showed the following receipts, disbursements and

D. F. CLARK, MINNEAPOLIS, CHAIRMAN FORESTRY COMMITTEE.

tional Association asking him to instruct his inspectors to report their whereabouts to the chairman of the Board of Arbitration of the Northwestern Association.

#### Election of Officers

The president then appointed as a nominating committee W. C. Bailey, A. E. Peterson, F. H. Lewis. After a brief recess the committee reported recommending the following:

President, A. H. Barnard, Minneapolis.

Vice-president, W. C. Stanton, St. Paul.

Treasurer, C. F. Osbourne, Minneapolis.

Secretary, J. F. Hayden, Minneapolis.

Board of arbitration: P. R. Hamilton, chairman; G. S. Agnew, Chas. Oliver, A. E. Peterson, F. A. Nolan.

Membership committee: N. C. Bennett, chairman; F. M. Bartelme, H. Levine.

On motion the secretary was instructed to cast the ballot of the association for the nominees, and they were declared elected.

On motion the chair appointed as a committee to prepare resolutions on the death of James E. Defebaugh, of the American Lumberman of Chicago: W. H. Sill, F. H. Lewis and J. F. Hayden.

The meeting then adjourned.

There were present:

Arthur H. Barnard, A. H. Barnard, Minneapolis.  
W. C. Stanton, Stanton-DeLong Lumber Company, St. Paul.  
D. F. Clark, Osborne & Clark, Minneapolis.  
C. F. Osborne, Osborne & Clark, Minneapolis.  
W. C. Bailey, Minneapolis.  
W. H. Sill, Minneapolis Lumber Company, Minneapolis.

P. R. Hamilton, Minneapolis Lumber Company, Minneapolis.  
H. Levine, Levine Timber & Lumber Company, Minneapolis.  
A. E. Peterson, Peterson-Moore Lumber Company, St. Paul.  
F. A. Nolan, St. Paul.  
F. H. Lewis, Minneapolis.  
H. Booraem, Halsted & Booraem, Minneapolis.  
A. S. Bliss, Payson-Smith Lumber Company, Minneapolis.  
N. C. Bennett, N. C. Bennett Lumber Company, Minneapolis.

T. R. Jones, G. W. Jones Lumber Company, Appleton, Wis.  
T. T. Bartelme, F. M. Bartelme, Minneapolis.  
G. S. Agnew, G. S. Agnew Lumber Company, Minneapolis.  
F. M. Bartelme, Minneapolis.  
Charles Oliver, Minneapolis.  
A. B. Leasure, Charles Oliver, Minneapolis.  
J. F. Hayden, Mississippi Valley Lumberman, Minneapolis.  
George DeLong, Stanton-DeLong Lumber Company, St. Paul.

## Meeting Chicago Hardwood Lumber Exchange

The Chicago Hardwood Lumber Exchange held its regular monthly meeting at the La Salle hotel, November 27, preceded by a delightful luncheon at 12:30. It was in many ways one of the best meetings the exchange has held of late. There were forty-three present. President F. L. Brown presided, and Secretary J. H. Dion recorded.

The chief business to come before the exchange was the report of the Publicity Committee, which has had under consideration for several weeks the question of designing a sticker for use on mail in advertising Chicago as a hardwood market.

After the roll call and reading of the

man of the Trade Committee, no report from this committee was presented.

The Entertainment Committee made no formal report, but Chairman J. L. Lane referred to the fact that the interest in the exchange is manifested by the disposition of the members. Mr. Lane also advanced the proposition that it would be a good thing for the exchange to meet every two weeks instead of once a month, but President Brown, without putting the matter to a vote, decided that the exchange was fully committed to the present arrangement, and it would not be wise to reopen the matter.

H. S. Hayden, chairman of the Publicity

The sticker proposition, as an advertising medium, was discussed at some length by the exchange. Mr. Hayden emphasized the fact that the exchanges of Memphis, Cincinnati and elsewhere are using different forms of advertising, and that if Chicago desired to keep pace it would be necessary that some advertising features be adopted. There was, however, not the slightest hesitancy upon the part of the members to adopt the sticker as one of the best of such means.

F. B. McMullen moved that the secretary call the roll and receive subscriptions for the sticker in order that it might be determined how many to order. The responses were lib-

F. L. BROWN, PRESIDENT.

J. H. DION, SECRETARY.

H. S. HAYDEN, CHAIRMAN PUBLICITY COMMITTEE.

minutes of the previous meeting, which was held October 16, the reports of standing committees were heard.

Chairman Schreiber of the Labor Committee reported things running smoothly in labor affairs, and suggested that all members label their wagons.

Chairman Trainer of the Market Conditions Committee advised that his committee had no report to make, and said that none was required at this time.

At this juncture application for membership for W. W. Dings, secretary and Chicago manager of the Garetson-Greaseon Lumber Company of St. Louis, was presented by Charles Westcott, chairman of the Membership Committee, and accepted.

Owing to the absence of O. O. Agler, chair-

man of the Trade Committee, no report from this committee was presented. The Entertainment Committee made no formal report, but Chairman J. L. Lane referred to the fact that the interest in the exchange is manifested by the disposition of the members. Mr. Lane also advanced the proposition that it would be a good thing for the exchange to meet every two weeks instead of once a month, but President Brown, without putting the matter to a vote, decided that the exchange was fully committed to the present arrangement, and it would not be wise to reopen the matter. H. S. Hayden, chairman of the Publicity

Committee, who has labored assiduously in the exploitation proposition, followed with the report of his committee. Mr. Hayden presented a proof of an embossed sticker which, he said, the committee deemed most suitable for use in advertising Chicago's hardwood interests. This is an artistic design showing the famous Y, indicative of the Chicago river and its North and South branches, in the center, and the inscription "Member Chicago Hardwood Lumber Exchange—Chicago the Greatest Hardwood Market" surrounding it. The color scheme is gold, red and blue, and will attract attention anywhere. These stickers may be had at \$3 per thousand in lots of 100,000 or more. The cost of the original die was estimated at \$6 to \$7, while the set of electros was figured at 75 cents.

eral, and 100,000 were subscribed with a number of members absent. The secretary was instructed to write these concerns and get their subscriptions by mail. Henry H. Gibson, editor of *HARDWOOD RECORD*, in order to aid in the distribution of the stickers and to make them yield the best results, proposed that if the exchange would order for the *RECORD* 50,000, he would see that every letter and circular leaving the office, amounting to approximately 1,000 pieces a day, bore a sticker. This proposition appealed to the members, and in order to facilitate it the Publicity Committee was given full power to act as it deemed best. The exchange voted that the number of stickers to be ordered be increased to 200,000.

This last feature provoked considerable discussion. R. S. Huddleston's statement that the RECORD was the only paper directly concerned that had made this generous offer, and aside from that, it was necessary that the exchange be patriotic and stand strongly for the slogan, "Chicago—Our Market," appealed to the majority, with the result that the publicity committee has power to act as it sees fit.

Chairman Hayden's report brought up another question as to whether the exchange should advertise its membership in small cards in the trade papers and other mediums, but this went over for future action.

Under unfinished business the chair appointed a Committee on Complaints, as follows: Chairman, Edward E. Skeele, F. S. Hendrickson and Theodore Fathauer. President Brown, in referring to the importance of this committee, stated that it is just what

the secretary to write F. S. Hendrickson, expressing regrets on the death of his mother, which occurred November 21 at her home in Ann Arbor, Mich.

There were present at the meeting:

J. D. Attley, J. M. Attley & Co.  
 Clarence Boyle, D. K. Jeffris & Co.  
 Frederick L. Brown, Crandall & Brown.  
 Charles E. Cake, HARDWOOD RECORD.

Company.  
A. W. Wylie.

## Annual Baltimore Exchange

The annual meeting of the Baltimore Lumber Exchange was held December 6 in the Merchants' Club, President E. P. Gill in the chair. The yearly reports submitted showed the exchange to be in excellent condition financially and with respect to membership, some gains having been made. President Gill stated that the volume of business during the past year showed a gratifying increase, and that the methods of the exchange commended themselves for emulation by other organizations. This was especially the case with respect to the system of inspection in vogue here, which had proved so satisfactory as to attract attention in other cities. The New York Lumber Trade Association had decided to inaugurate a similar system, and with this end in view had made a request for information as to details, which Secretary J. H. Manken had gladly supplied. The system in brief provides for a chief inspector, who has under him a number of assistants. These assistants are detailed for work in rotation by the chief, so that all suggestion of favoritism is obviated, and delays in having inspections made are avoided. No member who desires to have a lot of lumber inspected knows what inspector will be sent to perform this duty, and the relations of the inspector to the owner of the lumber are consequently wholly free from bias. The method has worked so satisfactorily that not more than one or two re-inspections have had to be ordered. The man making the inspection is prompted to exercise great care, because, in the event of a re-inspection being ordered, he must pay the expense. The election of officers resulted as follows:

President—John L. Alcock of John L. Alcock & Co.

Treasurer—George B. Hunting of the N. W. James Lumber Company.

Managing Committee—William M. Burgan;  
Parker D. Dix of the Surry Lumber Com-

pany; Edward P. Gill of W. D. Gill & Son; Rufus K. Goodenow of the Canton Box Company; Henry C. Matthews of Thos. Matthews & Son; Ridgeway Merryman; Theodore Mottu; George H. Poehlmann of Poehlmann & Sons; Richard W. Price of Price & Heald; George E. Waters of Geo. E. Waters & Co., and Maurice W. Wiley of the Wiley-Homer Lumber Company.

The business disposed of, the members re-

CHAS. WESTCOTT, CHAIRMAN MEMBER-SHIP COMMITTEE.

its name implies and that its powers and duties should be considered rather than its achievements. The appointment of the Complaints Committee made it necessary that the by-laws be revised in order that the duties and powers of the committee be specifically stated. It is the desire of the exchange to make this committee one of the most important working units of the organization.

Discussion further showed that the by-laws need revision all along the line. Because the constitution specifies that before the by-laws can be changed a notice to that effect, stipulating the amendments, shall be posted in the exchange rooms thirty days before any action is taken, it was voted that the Board of Managers review the by-laws and determine in what particular revision is needed and post proposed amendments promptly in the exchange rooms, and present the proposed changes for action at the next monthly meeting.

The exchange passed a resolution directing

JOHN L. ALCOCK, NEW PRESIDENT BAL-  
TIMORE LUMBER EXCHANGE.

tired to the large dining hall, where an excellent dinner was served, some few impromptu remarks being made by the new president and various members. The affair was entirely informal, and all the more enjoyable for that reason.

The new president has always taken a deep interest in the affairs of the exchange. He has served as chairman of the hardwood inspection committee, as a member of the

managing committee, and in other capacities, and he has endeavored in every way to advance the interests of the trade. He is progressive, and held in the highest esteem as a man and as a lumberman. Under his presidency the exchange may be expected to

enter upon an even larger measure of usefulness than it has in the past. The choice gives great satisfaction, and in the opinion of the membership no better selection could have been made to fill the place of president of the Baltimore Lumber Exchange.

## Annual Louisville Hardwood Club

The Louisville Hardwood Club elected the following officers for the coming year at its annual meeting held on November 23:

President, A. E. Norman, Norman Lumber Company.

Vice-President, E. L. Davis, Edw. L. Davis Lumber Company.

Secretary, D. C. Harris, C. C. Mengel & Bro. Company.

Treasurer, Claude Sears, Edw. L. Davis Lumber Company.

The meeting was an informal affair, and like the usual weekly gatherings was marked by a dinner at the Seelbach Hotel. The

Hardwood Lumber Association. Referring to the latter, he said that the club must soon get busy and do everything in its power to uphold the reputation of Kentucky for hospitality and maintain the pace set by Detroit at the convention last June.

President Norman declared that even the pessimists in the club had been convinced, by the splendid work done, that the organization can do valuable and efficient work, and that now every man in it is for it heart and soul, even to the extent of participating in the vigorous advertising campaign which the club has undertaken, and which he said has brought many buyers to Louisville who have heretofore gone to other markets. Another thing that had been accomplished, he said, was in the direction of modifying objectionable railroad rates, the Transportation Committee having secured the elimination of the discrimination which existed in favor of other Ohio river gateways in connection with shipments into Northwestern territory. Its work in the demurrage question was also highly commending. This committee, he said, deserved the thanks of the club, and was in line to do equally effective work during the coming year.

The Louisville Veneer Mills, represented at the meeting by D. E. Kline, was elected to membership in the club and the Mengel Box Company has applied for membership. These two companies are both leaders in their lines, and as they are large handlers of hardwoods also they are certain to be valuable additions to the club. The Hardwood Club now has nine members, with more in prospect. W. A. McLean, president of the Wood-Mosaic Flooring & Lumber Company, who was formerly a member of the club, was present at the annual meeting, and it is hoped that he will again become a member of the organization. He was one of the most effective members, and both he and his concern have found a gap since the Wood-Mosaic resigned.

Among those present at the annual meeting were Messrs. Darling, of Blakeslee, Perring & Darling of Buffalo; Rubenstein of London, England; Meyers of New Albany, Ind.; Charles Davis of the Mengel Box Company; President Norman of the Norman Lumber Co.; T. M. Brown of W. P. Brown & Sons Lumber Co.; E. L. Davis and Claude Sears of the Edw. L. Davis Lumber Company; Barry Norman of E. B. Norman & Co.; S. E. Booker of E. B. Norman & Co.; Van Norman of the Norman Lumber Company; C. R. Curtis and D. C. Harris of C. C. Mengel & Bro. Co.; and H. J. Gates and Edw. L.

Shippen of the Louisville Point Lumber Company.

At the meeting following the annual, the members of the club paid a neat compliment to the newly elected officers. When all had gathered about the festal board, everyone rose and drank the health of the men who had been selected to guide the club during the next year.

President Norman stated that the standing committees would be elected by the members and not appointed by him, and that this would be done in the next few weeks. The committees which will have charge of the arrangements for the convention of the national hardwood organization will also be selected before the first of the new year. The club begins its second year most auspiciously.

### Open Chicago Office

As before noted in the columns of the *HARDWOOD RECORD*, the Garetson-Greaseon Lumber Company of St. Louis has opened a Chicago office. W. W. Dings, secretary of the company, has moved to the city and has charge of the sales department here, with offices at 1416 Fisher building.

The Garetson-Greaseon Lumber Company is a well-known manufacturer of oak, gum and other southern woods, with headquarters at St. Louis and with several sawmilling plants in Arkansas

A. E. NORMAN, AGAIN CHOSEN PRESIDENT LOUISVILLE HARDWOOD CLUB.

only annual report other than that of the treasurer, Mr. Sears, which showed that financially the club is in excellent condition, was that of President Norman. Mr. Norman talked informally of the work that had been done during the first year of the club's history and referred to the prospects for the coming year. His talk was enthusiastically received, and he was unanimously chosen to direct affairs again. All the elections were without opposition, and the meeting was marked by harmony.

In his annual report President Norman said that the club had reason to be proud of its work during its first year, since it had not only made itself felt in increasing the trade of this city and the importance of the Louisville market, but also in entertaining one convention of hardwood men, the Hardwood Manufacturers of the United States, and securing the convention of the National

W. W. DINGS OF THE GARETSON-GREASON LUMBER COMPANY'S CHICAGO OFFICE.

and Missouri. The company specializes in oak and also handles all varieties of southern hardwoods. In this market Mr. Dings will make a specialty of railroad and corporation trade and Chicago yard business.

Mr. Dings is very popular wherever he is known and he is not a stranger to the wholesale trade of Chicago, as he has sold a large portion of the Garetson-Greaseon Lumber Company's output in this market for several years. His removal to Chicago is a distinct addition to the Chicago hardwood contingent.

The Georgia Veneer & Package Company is a new concern for Lumber City, Ga.

## News Miscellany

### A Distinction for Gum

If it were not for the fact that the new classification of red gum by the Italian government, which makes it a cabinet wood and places it on a fancy wood basis and fixes a heavy import duty on it, it would be a distinct pleasure to red gum manufacturers that the material has been thus classified and given recognition as being fit to be in the same family with mahogany, Circassian walnut and other fancy woods.

Italy formerly admitted gum among the common woods free of duty, together with maple, oak, chestnut, cherry and cedar, but now it has changed the classification to include it with ebony, mahogany and similar hardwoods of great weight and high values in the class of cabinet woods. This places the duty at from three to four lira per quintal (a lira is equal to 19.3 cents and a quintal is equal to 220.45 pounds).

The new rule covers all varieties of gum, such as red, sap and tupelo, and the duty amounts to approximately \$10 per thousand feet, which is prohibitive.

The National Lumber Exporters' Association, with headquarters at Baltimore, is busily engaged with the government authorities at Washington in relation to this new classification by the Italian government. It is needless to say the classification is ridiculous.

### Building Operations for November

Last month building operations in forty-five building centers throughout the country as compiled by the American Contractor, Chicago, show an aggregate gain of three per cent as compared with November, 1908. Although the past eleven months scored a considerable gain as compared with last year, the increase occurred more especially in the spring months and tapered off with the season. Seventeen cities present a loss of from one to eighty-five per cent and twenty-eight show a gain of from one to 659 per cent. Cities which gained fifty per cent or more are: Buffalo, 77; Denver, 80; Hartford, 127; Kansas City, 56; Los Angeles, 66; Memphis, 202; New Haven, 72; Oklahoma City, 659; Omaha, 122; Rochester, 73; St. Paul, 72; Scranton, 64; Worcester, 112. The details are as follows:

City	November, 1909	November, 1908	Per Cent
Atlanta	\$ 344,325	\$ 270,557	21 ..
Baltimore	376,005	376,965	.. 31
Bridgeport	162,275	181,613	.. 16

### New Local Hardwood House

Fred W. Black and Horace W. Black, respectively president and treasurer of the Fred W. Black Lumber Company of this city, with yards at the corner of Blue Island avenue and Robey

FRED W. BLACK, CHICAGO

HORACE W. BLACK, CHICAGO

street, in connection with H. J. Strand as vice-president and B. F. Hamilton as secretary, are the principals in the new Petros Lumber Company of Chicago, with milling operations at Petros, Tenn. Petros is located on the Brushy Mountain branch of the Southern railroad, a line originally built by the state of Tennessee to develop coal properties in Morgan county. This line runs northeast from Harriman.

At the extreme end of the line is a large area of virgin forest, four thousand acres of which are owned by the Petros Lumber Company. The timber is situated on the Big Fodderstock Big

Brushy and Little Brushy mountains. The timber consists chiefly of yellow poplar, oak and chestnut, with some minor woods.

The company is building an eight-foot band mill at a point known as Stevens and will run a two-mile spur up between the Big and Little Brushy mountains as a logging road. All the machinery for the mill is now on the ground and the company expects to begin sawing early in 1910.

The Messrs. Black are well known in the local trade and the Messrs. Strand and Hamilton have been connected for several years with the Leavitt Lumber Company of Chicago, and are also well and favorably known.

### American Woods Corporation

The American Woods Corporation is the name of a new company to engage in the wholesale lumber business with headquarters at Owls Head, N. Y., organized with a capital of \$10,000. The president of the company is S. G. Boyce of Owls Head; vice-president, F. H. Bryant of Malone, N. Y.; secretary and treasurer, G. H. Meyers of Owls Head, N. Y. The company will have a branch office in the Old South building at Boston, Mass., but all financial matters will be looked after by the head office.

The head of the institution is S. G. Boyce, lumberman at Owls Head. The vice-president is his son-in-law, an attorney of Malone, N. Y., and the secretary and treasurer has been associated with Mr. Boyce as his bookkeeper for many years.

### Enthusiastic Meeting Memphis Lumbermen's Club

The Lumbermen's Club of Memphis held one of the jolliest and most thoroughly enjoyable meetings of the year at the Hotel Gayoso, December 4. It was the occasion of the formal launching of the campaign for officers of the club during the ensuing year and it was regarded as highly auspicious that such a splendid feeling of good fellowship was evidenced.

W. L. Crenshaw presided and the attendance was unusually large. The usual luncheon was served. After this had been dispatched President Crenshaw announced the nominating committees, which, after some debate, chose red and blue as their colors, this being the method decided upon for designating the tickets instead of the old plan of numbers. The committees are: Red—S. B. Anderson, Anderson-Tully Company, chairman; George C. Ehemann, Bennett & Witte, and F. T. Dooley, the Dooley-Stern Lumber Company. Blue R. J. Darnell, R. J. Darnell, Inc., chairman; F. E. Stonebraker, the Crittenden Railway Company, and John M. Pritchard, J. M. Pritchard Lumber Company.

Following are the nominees of the two committees:

#### RED TICKET

For president—S. C. Major, S. C. Major Lumber Company.

First vice-president—John W. McClure, Bell grade Lumber Company.

Second vice-president—J. F. McIntyre, Memphis Veneer & Lumber Company.

Secretary and treasurer—J. W. Thompson, J. W. Thompson Lumber Company.

One-year directors—Ralph May, May Brothers; Keith Blanton, Blanton-Thurman Lumber Company; L. C. Nolan, Nolan Brothers.

Two-year directors—A. G. Fritchie, Lamb-Fish Lumber Company; J. F. McSweeney, Memphis Saw Mill Company; R. J. Lockwood, Tennessee Hardwood Flooring Company.

#### BLUE TICKET

For president—F. E. Gary, Baker Lumber Company.

First vice-president—Max Sondheimer, E. Sondheimer Company.

Second vice-president—C. L. Wheeler, J. W. Wheeler & Co.

Secretary and treasurer -J. W. Thompson, J. W. Thompson Lumber Company.

One year directors: E. E. Goodlander, Goodlander-Robertson Lumber Company; C. S. Hendrickson, C. S. Hendrickson Lumber Company; C. S. Gladden.

Two year directors: R. J. Wiggs, R. J. Darnell, Inc.; W. H. Greble, Three States Lumber Company; A. L. Foster, J. W. Thompson Lumber Company.

The nominating committees assured the club that their respective tickets would win without a single member being scratched, but, even after such statements from the chairman of each committee, the members were not certain of the election of any candidate with the exception of J. W. Thompson, who was nominated on both tickets. It is regarded as the "one best bet" that he will have the only walkover of the entire campaign.

The time for campaigning has been shortened to two weeks by the recent changes in the constitution and by-laws, but the campaign will be all the more strenuous because of the shortening of the time for vote getting.

The Lumbermen's Club is the largest local hardwood lumber organization in existence and it is recognized as one of the potent factors in the hardwood lumber industry, having accomplished a great deal of good not only for this city and the lumber interests of this section but also having rendered service of much benefit to the hardwood lumber industry of the world. It is therefore considered a high honor to be elected to office therein and there is no doubt that every candidate will seek to land the office for which he has been nominated. Those who have been called upon to make the race have been identified with the club for some years, as a rule, and have done good work, and their friends will do all they can to elect them. Some of the nominees have become members only within the past year or two, but it is the desire of the members to bring them into closer touch with the affairs of the organization, which, in addition to their fitness for the respective positions, prompted their selection.

The election will be held December 18.

Features pertaining to the launching of the campaign practically overshadowed every other consideration and little other business was transacted. The club listened with much pleasure to an address by John W. Bailey, president of the Day & Bailey Grocery Company, who suggested the formation of a bank, with \$5,000,000 capital, that would cater to the needs of the lumbermen in particular and that would loan money in almost any amount for six months with a guarantee that the borrower could renew at the date of maturity. These remarks were, of course, in the nature of a joke, but the treatment of lumber interests by local bankers and the preference the latter show for cotton as against lumber business furnished the groundwork for the satire along the lines indicated.

James E. Stark of the river and rail committee reported that his committee had taken up the question of estimated weights with the officials of the Southern and Western Weighing & Inspection Bureaus and that a conference would be held at an early date. Mr. Wolfe of the Southern Weighing & Inspection Bureau asked for specific instances of abuse in connection with estimated weights, but the committee deemed that it was rather unnecessary, to say the least, to furnish such evidence. There is some probability that the conference may result in an adjustment of the differences between the members of the committee and the representatives of the bureaus in question.

Announcement was made of the advancement of Joe Hattendorf, who has served the Illinois Central with eminent success in several official positions, with headquarters in this city, to be assistant traffic manager of the Illinois Central System, with headquarters in Chicago, and the club voted unanimously to express to Mr. Hattendorf in some tangible manner the high regard in which he is held by the lumbermen of this city and section. His severance of his relations with the local offices of the company is much regretted by all members of the club, though they congratulate him upon his promotion.

### Shipment of Fine Walnut Logs

Illustrated on this page are two carloads of prime dressed walnut logs recently shipped from Calvert, Tex., by the Penrod Walnut & Veneer Company of Kansas City, to Hamburg, Germany. These were unquestionably two of the finest cars of walnut logs ever shipped out of this country, and were really remarkable for size and quality at the present time, when good walnut timber is so scarce.

The first car contained twelve splendid logs, averaging 35½ inches in diameter, and the total carload amounted to 8,240 feet. The smallest log on the large car was 8 feet long and 31 inches in diameter and contained 365 feet. The second car contained twenty-one logs, averaging 27¾ inches in diameter, and the carload aggregated 6,840 feet.

This fine walnut timber grew on the farm of J. H. Adoue, a banker of Calvert, Tex., and was cut from a tract of thirty-two standing trees which R. L. Jurden, secretary of the Penrod concern, purchased for the company. From these thirty-two trees 28,000 feet of prime logs were cut, and 2,700 cubic feet of figured stump wood.

The largest tree on the tract produced a butt log 14 feet long, 42 inches in diameter, containing 1,264 feet of timber; the second log was 13 feet long, 34 inches in diameter, and contained 731 feet. These two fine logs contained 1,995 feet, quite a record for one tree.

The next largest tree produced a 13-foot log, 40 inches in diameter, containing 1,053 feet, and a second log 9 feet long, 35 inches in diameter,

containing 540 feet, making a total of 1,593 feet for the tree.

The wood was absolutely free from shakes and was very sound in the butts, which, for such old and large-size timber, is remarkable.

The Penrod Walnut & Veneer Company is the foremost walnut concern in the country, and it is to be complimented on securing such a fine bunch of logs, since timber of this character is all but extinct in this country, and only diligent search brings to light an occasional prize such as these.

The Penrod concern produces, besides high-grade walnut veneers and plain and figured long and butt wood of the finest quality, rotary cut red and white oak veneers. Its headquarters are at Kansas City, Mo.

### December Meeting Philadelphia Lumbermen's Exchange

The Lumbermen's Exchange of Philadelphia held its regular monthly meeting, preceded by the usual luncheon, on December 2, President Herbert P. Robinson in the chair.

Samuel B. Vrooman, chairman of the committee representing the exchange at the Deeper Waterways Convention, which was held at Norfolk, Va., November 17, 18 and 19, reported that great progress had been made at the convention and the point reached where the government can make its appropriation without further delay. Mr. Vrooman offered a resolution at this meeting, that the members of the exchange be instructed to join the Deeper Waterways Association, the costs of which are \$5 per annum, and in this way help to increase the fund necessary to carry on this good work. A resolution was carried extending the thanks of the exchange to Mr. Vrooman and his committee for the able manner in which they handled the important work assigned them.

A letter was received from the Philadelphia Car Demurrage Bureau stating that during October 1,693 cars of lumber were reported to this department by the various stations of all lines of railroads within the city of Philadelphia, being a total of 25,395,000 feet of lumber, which is an increase of 534 cars, or 8,010,000 feet, of lumber over that of October, 1908.

### Death of Prominent Indiana Lumberman

Daniel A. Sanders, senior member of the Sanders & Egbert Company of Goshen, Ind., died December 5 at his home in Goshen from an attack of paralysis suffered some weeks before.

Mr. Sanders was born in York, Pa., January 31, 1841, his father being a native German. At the age of twenty-one he began an apprenticeship as a stone-mason, remaining in that trade for thirteen years. Mr. Sanders went to Goshen in 1865. At the termination of his work as a stone-mason he engaged in the buying and selling of timber. At the organization of the

CAR CONTAINING TWENTY-ONE WALNUT LOGS WITH AN AVERAGE DIAMETER OF 27¾ INCHES, TOTAL 6,840 FEET.

CAR CONTAINING TWELVE WALNUT LOGS AVERAGING 35½ INCHES IN DIAMETER, TOTAL 8,240 FEET.

Lesh, Sanders & Egbert Company, in 1892, he was made vice-president and treasurer. On the death of Mr. Lesh the firm continued as Sanders & Egbert Company, Mr. Sanders being the president and general manager. The company has large mills and yards at Goshen and South Bend, Ind. It manufactures hardwood lumber, making a specialty of veneers.

Mr. Sanders leaves a widow and one son, Harry M. Sanders, the junior member of the firm. His death removes one of the influential hardwood men of the central west, his range of activity being general over that territory.

### Meeting Cincinnati Lumbermen's Club

The monthly meeting of the Cincinnati Lumbermen's Club was postponed from Monday, December 7, to Tuesday, December 8, in order to entertain a committee from the National Wholesale Lumber Dealers' Association, which was investigating the Queen City with a view to holding the next annual meeting of that association at Cincinnati instead of Washington, D. C., where it has convened for a number of years past. The members of the committee, who were the guests of the club, were E. F. Perry, secretary of the wholesale association; George F. Craig, president, and A. L. Stone, a director. The committee was entertained royally and it is said that without a doubt the next annual of the National Wholesale Lumber Dealers' Association, which will be held March 9, 1910, will convene in Cincinnati.

Besides the guests from the National Wholesale Lumber Dealers' Association, the club had as guests representatives of various local freight interests.

Four new members were admitted to the club: H. R. Browne, Swann-Day Lumber Company, H. L. Mickle Lumber Company and Standard Lumber Company.

Invitations were extended to the National Box Manufacturers' Association to hold its next annual meeting in Cincinnati in February, 1910.

Those present were:

C. S. Walker.	H. A. Haber.
J. M. Arnold.	J. N. Powers.
J. T. Earle.	F. C. Bryson.
E. C. Skinner.	A. Heidler.
W. W. Alexander.	M. Lyree.
C. E. Fish.	James Buckley.
J. G. Ferguson.	I. M. Asher.
W. S. Sterrett.	N. L. Henton.
George W. Hand.	J. B. Grant.
R. C. Witbeck.	D. C. Ramsey.
T. E. King.	F. H. Duling.
H. J. Brenner.	J. Watt Graham.
Edward Barber.	J. A. Bolser.
James S. Zoller.	S. H. Huse.
C. F. Korn.	T. B. Stone.
Luke Murdock.	C. J. Allen.
W. E. Talbert.	W. H. Flynn.
H. R. Browne.	Ralph McCracken.
E. O. Robinson.	W. C. Otte, Jr.
Lewis Doster.	Geo. F. Craig.
O. E. Fought.	E. F. Perry.
J. D. Serrino.	A. L. Stone.
H. R. Welling.	G. M. Morgan.
H. A. Halliwell.	D. Betts.
E. L. Walker.	A. L. Robinet.
S. Earl Griffin.	J. T. Creahan.
James A. McEntee.	J. L. Roney.
C. D. Galloway.	C. J. Cherry.
H. N. Mead.	J. A. Van Arsdall.
Ed. Dulweber.	F. E. Radina.
G. C. Ault.	M. A. Shudy.
Chas. Groves.	C. C. Trimble.
George Frederick.	M. R. Williams.
F. Stanley.	D. L. Hurrey.
C. W. Harmeyer.	Chas. A. Elliott.
R. L. Gilbert.	

### Missouri Opens Conservation Campaign

Missouri, through its governor, Herbert S. Hadley, has begun a state-wide campaign for forest conservation and the education of the citizens of the state generally in forestry matters. The movement has for its ultimate object the appointment of a permanent forestry commission with larger powers than the present state forestry commission, and to get such appropriations from the legislature as will enable the commission to do the work now regarded as imperative.

Governor Hadley inaugurated the campaign

November 27 by entertaining the Missouri State Forestry Commission at the executive mansion in Jefferson City. The full commission was present save Dr. Hermann Von Schrenk of St. Louis, the chairman. The governor and his wife gave a dinner following which the entire afternoon was spent in formulating plans.

The campaign calls for the organization of a State Forestry Association, the purpose of which shall be to assist the state forestry commission in all matters and to secure to the commission the membership and influence of men prominent in the state.

Forestry matters of strictly an educational character are to form another feature of the work. This would operate through the public school system and universities of the state. Chairs of forestry and forestry courses will be established.

A state forester is contemplated also in the plans of the association, who will devote his entire time and work along practical conservation lines. A survey of the state will be made that will ascertain the actual extent of the state's forest resources. The state forester is to have direct supervision of this work. An effort was made at the last session of the legislature to secure the passage of a bill providing for the appointment of a state forester, but it proved fruitless. But the recent visit of the governor to the timber sections of the state and the wider knowledge of the legislators gained of late will, it is thought, be sufficient to bring about all that is now desired.

It is expected that the commission will avail itself of the visit next spring of Gifford Pinchot, who will make an extended visit throughout the forest districts of the state. Mr. Pinchot will be asked to aid the commission.

The general meeting for the organization of the Missouri State Forestry Association will be held in St. Louis in the near future. The governor is to appoint delegates from all sections of the state. A permanent organization will be effected and this will help in the co-operation of the state forestry commission following Mr. Pinchot's visit. The suggestions that will be made by the chief forester will then be adopted and the state can go ahead in consummation of its present plans.

### New Credit Rating Book Out

The HARDWOOD RECORD has received a copy of the twelfth volume of the Credit Rating Book published by the National Lumber Manufacturers' Credit Corporation, with headquarters at St. Louis. The book has been revised and augmented, and great care has been taken to make it as complete and accurate as possible in a work of this scope. The volume contains a classified list, with capital and pay ratings of all manufacturers, wholesale and retail dealers in lumber as well as factories which buy lumber in carload lots. It is printed in the usual good style and contains a number of excellent features, notably the colored map of each state which precedes the listing for that state.

The National Lumber Manufacturers' Credit Corporation issues these reports twice a year, in April and October. No little credit is due W. F. Biederman, superintendent of the organization, for the general excellent quality of the work.

### A Well-Known Forced Draft System

The distinguishing feature of the Gordon Hollow Blast Grate, and the one that has made it "the grate with the reputation," is the "tuyere."

This tuyere is seven inches in diameter, and there are from four to seven to the bar, according to the length of the latter. No bolt is used, the tuyere being held in place solely by its own weight, which is ten pounds.

In the edge of the tuyere are the blast out-

lets, which are long and narrow, so as to exclude sawdust and ashes as much as possible. Then the shoulder on which the tuyere rests also forms a baffle to prevent matter from entering the bar.

As the tuyeres are removable and interchangeable, they afford access to the chamber of the bar, make it easy to remove rust, scale, etc., from the outlets, and permit tuyeres with larger or smaller outlets to be substituted. This last feature is especially important, as the size of the outlets is naturally determined by the kind of fuel used, and must, therefore, to give the best results, be changed when the fuel is changed.

THE GORDON HOLLOW BLAST GRATE.

The upper surface of the tuyeres is slightly below the general level of the grate, so that the scraper passes over them without touching. They have wings to prevent their canting, and cannot be removed unless lifted vertically. Thus it is impossible for them to become accidentally displaced.

The tuyeres flare slightly, and hence discharge the blast at an angle. This gives an ideal distribution of air.

The Gordon Hollow Blast Grate is the heaviest and most durable blast grate on the market. There are many outfits in use today that have been in constant service since early in the 90's. It is the only blast grate that has stood the test of time and use.

It has been kept thoroughly up to date by practical men, the most recent of the com-

THE TUYERE, THE DISTINGUISHING FEATURE OF THE GORDON HOLLOW BLAST GRATE.

pany's seven patents being dated Aug. 25, 1903, and June 4, 1907.

There is no forwardly directed blast at or near the bridge wall, as the rear end of the grate is quite likely to be bare, or at best but poorly covered, and the inevitable tendency of such a blast would be to drive the smoke out of the feed doors and to overheat the front.

The manufacturer of the Gordon Hollow Blast Grate is the Gordon Hollow Blast Grate Company of Greenville, Mich., which also makes the well-known Tower line of edgers and trimmers.

The Licking River Lumber Company, well-known hardwood manufacturer of Ashland, Ky., has moved its offices from Ashland to Huntington, W. Va. The company has been granted right to do business in West Virginia and has recently increased its capital stock to \$120,000. The principals in the concern, F. G. Eberhart, president, and R. G. Page, secretary and treasurer, are experienced lumbermen of energy and activity and their company will be a welcome addition to the lumber fraternity of Huntington.

### Long Distance Shipment of Logging Machinery

An order for two complete steam logging machinery plants recently booked by the Lidgerwood Manufacturing Company of New York for shipment to the island of Borneo must almost if not quite hold the record for long distance shipments of logging machinery.

A representative of the concern operating a large tract of timber on that island, after investigating logging methods all over the world, reported favorably on this purchase. This would indicate that the machinery built by this American concern is standard the world over.

### Fay & Egan's Patent Sensitive Straining Device

On this page is illustrated J. A. Fay & Egan's patent sensitive straining device, which is the most sensitive yet designed for a band saw. The device operates on the principle of a pair of scales and is susceptible to the least vibration of the blade. The upper wheel is hung on a knife edge and counterbalanced with a compound lever and weights. The device is used on the Fay & Egan band saws only, the accompanying illustration being taken from a 33-inch scroll saw, but is substantially the same on the No. 180 patent self-feed band rip saw, also shown on this page.

In viewing this machine\* in operation one notices particularly the constant movement up and down of the weight. This shows the quick response of the device to the varying strain on the saw blade as it cuts in lighter or heavier wood. So responsive is it that if a block of wood should fall between the saw blade and the lower wheel it would pass around without injury to the blade. This device permits the use of a very thin blade at from two to three times the speed of any other.

The company's booklet entitled "The Symbol of a Perfect Band Saw," which gives in detail all the basic principles involved in the construction of its band saws, band resaws, band rip saws and band sawmills, will be sent to anyone on request. The company should be addressed at 414-434 West Front street, Cincinnati.

### Further Improvements at the Dodge Plant

Ground had no sooner been broken for an additional warehouse at the plant of the Dodge Manufacturing Company, Mishawaka, Ind., than plans and specifications were in the hands of contractors for an extension to the east foundry wherein are located the machines, especially designed and constructed, at a cost of \$50,000 for the moulding of all sizes of "Standard" iron pulleys.

This building will be 360 by 80 feet wide. The walls call for brick with steel trusses for the roof. Two cupolas with capacities of about eight or ten tons of coal per hour each have been arranged for. An eight-ton electric traveling crane will operate between the cupola room and the supply yard and in the foundry a five-ton electric traveling crane will handle the castings and heavy working material.

In connection with the foundry addition, the contract provides for an elevated coke shed, 240 feet long by 15 feet wide, with a Dodge conveyor attachment for unloading cars. For charcoal and limestone new buildings also are planned. Changes will be made in the core room and the sand sheds, and the yards generally will come under a rearrangement to facilitate the moving of cars and supplies.

These improvements, together with the main machine shop extension, will make it possible to double the present output, which has long been necessary owing to the demand for stock goods.

### A Striking Booklet

E. C. Atkins & Co. have just issued a new booklet descriptive of the fitting devices manufactured by the company. These include the Atkins New Ideal Swage for band and circular saws, Atkins Victor and Pribnow Swages for miscellaneous saw work and Atkins New White Band Swage and the Pribnow Swage Shapers. The text is minute and carefully arranged. The booklet gives various details in regard to these tools, prices and instructions for operating. So far as "Perfect Saw Teeth" are concerned, the title is apt and calculated to meet the wishes of the trade.

### Miscellaneous Notes

After extended tests with the dry kilns manufactured by the Grand Rapids Vencer Works of Grand Rapids, Mich., at the plant of the Day Lumber Company at Tangipahoa, La., in which both upper and lower grades of cypress lumber were experimented with, two large cypress concerns in Louisiana have adopted this company's system. The F. B. Williams Cypress Company of Patterson, La., has taken four large kilns and the Albert Hanson Lumber Company of Garden

City, La., is to have two of its kilns remodeled on the Grand Rapids design. F. B. Kelly, manager of the dry kiln department of the Grand Rapids concern, will personally supervise these installations. Mr. Kelly has been in the South some time demonstrating the company's kilns.

Rapid progress is being made by the Central Cypress Lumber Company in the erection of its new plant at Sartori, on the Chicago, Rock Island & Pacific railroad, about fifteen miles south of this place. The mill building proper has been completed and most of the machinery, including an Allis-Chalmers eight-foot band mill, has been installed. The company's offices and a commissary have been opened near the mill-site. This mill will have a daily cutting capacity of from 35,000 to 40,000 feet of cypress and mixed hardwoods. It is expected that the plant will be in operation by January 1.

The Elk Lick Lumber Company has extended its lumber road into a new tract of timber on Shafer's fork of Cheat. This tract consists for the most part of oak, poplar and chestnut, and while rather small, is covered with some particularly fine timber. The Elk Lick Lumber Company's principal products are spruce and hemlock. The officers of the company are: Alonzo Inskeep of McKeesport, Pa.; C. R. Vashinder of Brookville, Pa., and Philip Zenn of McKeesport, Pa. W. E. Reckley, formerly of the Swathmore Lumber Company, is the general manager.

Owing to the increasing demand for the automatic dovetail glue jointer and matcher, the Linderman Machine Company, Muskegon, Mich., has enlarged its plant to twice the former capacity and recently finished a large addition to the machine and stockroom, in which are located the new offices, consisting of a large general office and four private offices. The offices were formerly in the machine shop and the removal of these gives the room which was needed to install new machinery. The automatic dovetail matcher and jointer appeals to all classes of woodworkers and is employed in jointing the cheapest packing-box lumber to the highest grade furniture stock requiring a mirror finish. The latest achievement of the company is the wedge dovetail and the results of the tests just completed verify the saying that it is the strongest joint made.

FAY & EGAN'S PATENT SENSITIVE STRAINING DEVICE

FAY & EGAN'S NO. 180 PATENT SELF-FEED BAND RIP SAW

George Banks of Banks & Co., manufacturers of southern hardwood lumber at Hernando, Miss., died November 29. His father, R. M. Banks, will act as administrator of his estate and in all probability the business will be continued as heretofore.

A deal has been consummated by which the Murfreesboro (Tenn.) plant of the Prewitt-Spurr Manufacturing Company, known as the bucket factory, has been bought by W. R. Patterson, J. W. Overall and W. W. Vaught, the consideration being \$35,000. The new management will enlarge the plant and will use oak, ash and cedar in the manufacture of buckets and churns. The property has been owned by the Prewitt-Spurr Manufacturing Company of Nashville for twenty years and for a number of years was the only factory of importance in Murfreesboro. The new interests will operate as the Tennessee Red Cedar Woodenware Company.

The C. P. White Manufacturing Company has just been organized at Evansville, Ind., to deal in lumber and manufacture woodstuff. It has a capital stock of \$50,000. The organizers are C. P. White, W. T. White, W. L. White and R. C. White.

The Oregon Hardwood Floor Company has been incorporated at Portland, Ore., with \$10,000 capital stock to manufacture hardwood flooring.

The Allen Panel Corporation of Johnson City, Tenn., which has been in the hands of a receiver for some time, has straightened out its affairs and the receiver has been discharged.

The Himmelberger-Harrison Lumber Company, well-known red gum specialists of Morehouse, Mo., has moved its sales department to Cape Girardeau.

The Hardwood Manufacturing Company of Louisville, Ky., has increased its capital stock from \$150,000 to \$200,000.

The Wyatt Lumber Company of Wyatt, La., recently increased its capital stock to \$500,000 and purchased a large tract of virgin timber land in Sabine parish, along the line of the Kansas City Southern. It is estimated that the tract will cut about 65,000 feet of hardwoods and 113,000 feet of pine. The original holdings of the company approximate 60,000,000 feet. The concern plans the erection of a modern plant on the property as soon as conditions will permit. The president of the company is E. M. McDaris, well known to the trade through his connection with the Consolidated Sawmills Company of St. Louis.

Fire in the plant of the American Seating Company, manufacturer of school furniture at Racine, Wis., destroyed \$3,000 worth of hardwood lumber and finished goods, and damaged the buildings to an extent of about \$2,000. The loss is fully covered by insurance. The fire was confined to the dry kiln and storeroom.

The Flanner-Steger Land & Lumber Company of Laona, Wis., has bought from the Chicago & Northwestern Railway Company 8,500 acres of timber land for \$127,454.54. A large sawmill is owned by the company at Laona.

On December 1 the general offices of the National Casket Company, formerly located at Oneida, N. Y., have been removed to New York City at 5-7 West Twenty-ninth street. The lumber purchasing department will also be located here.

The Canton Broom & Brush Company has been organized at Columbus, O., by E. B. Hausen and others. The capital stock is placed at \$30,000.

The Duck Lake Lumber Company of Rocky Mount, N. C., was recently incorporated with a capital stock of \$75,000.

Miles & Whalen of Des Arc, Ark., have been succeeded by the Miles Brothers Hickory Manufacturing Company. The firm will make rims and spokes.

Barger Brothers, extensive dealers in lumber, have moved their offices from Mount Ulla to Mooresville, N. C. They deal in North Carolina pine and hardwood and do an extensive business throughout the Carolinas. They have been in business eight years and have a large trade with furniture factories at High Point, N. C., and other Carolina towns.

One of the latest entries in the lumber field is the Sendelbach-Cram Lumber Company, which will operate at Clarendon, Ark., where it has three mills, cutting oak, gum and hickory. The firm is composed of Edward C. Sendelbach, president, formerly of the Sendelbach Wheel Company of East St. Louis, and George A. Cram, vice-president and treasurer, formerly in the insurance business in this city. The capital stock of the new company is \$25,000, all of which is paid in. It has acquired a large tract of oak, hickory and gum timber on White river, in Arkansas, and will make oak wagon stock and lumber, hickory wagon and wheel stock, and gum staves and lumber. The company will begin operations about the first of the new year.

On November 24 lumber valued at \$25,000 was destroyed by fire at the plant of the Pullman Palace Car Company, Chicago. An overheated stove is believed to have caused the fire.

The Illinois Tie & Timber Company has purchased the plant of the Northern Hardwood Lumber Company of Burlington, Ia., for \$17,133.46. The Illinois company is engaged in supplying railroad ties for railroad companies and will operate the mill below the city.

A charter has been recently granted to the Citizens' Lumber Company of Covington, Ky., with a capital stock of \$10,000.

The Jones Hickory Company has recently leased the plant of the Little Pine Lumber Company at Tannehill, La., and will begin the cutting of hardwood there at an early date.

John S. Goldie, a lumberman of Cadillac, Mich., has contracted to stock several mills with timber this winter and expects to cut 8,000,000 feet of hardwood lumber for that purpose. He owns large tracts of timber in northern Michigan.

## Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

### CHICAGO

Among the welcome RECORD visitors on December 7 were R. K. Allison of Decatur, Ind., president of the Cardwell Mill & Lumber Company, Cardwell, Mo., and George B. Jobson, secretary and sales manager of the A. C. Davis Lumber Company, Columbus, O.

Among the distinguished Chicago visitors during the last few days was William E. Litchfield, well-known hardwood operator of Boston, Mass., and a member of the firm of Litchfield Bros., North Vernon, Ind. Mr. Litchfield was in Chicago December 2 to 4, inclusive, in company with a large delegation from the Boston Chamber of Commerce, which reached here on a special train as guests of the Chicago Association of Commerce. Mr. Litchfield is a director of the Boston chamber of commerce. While here the delegation was entertained with a tour of inspection of the stock yards, the live stock show, a dinner at the Saddle and Sirloin Club, an automobile trip about the city, a dinner at the Congress hotel, etc. In regard to hardwood conditions in the East, Mr. Litchfield says that while the situation is improving, trade is still somewhat spotted. While here in Chicago, Mr. Litchfield paid his respects to the RECORD.

Sam Burkholder, well-known lumberman of

The Antrim Iron Company of Mancelona, Mich., is erecting a new sawmill.

The Carey Lumber & Washboard Company is a new concern for Cairo, Ill., capitalized at \$100,000.

The Furniture & Chair Stock Company recently started business at 1214 Filbert street, Philadelphia. It will manufacture hardwood and dimension stock lumber.

The Dixie Novelty Works is a new concern for Nashville, Tenn., to manufacture wood specialties.

The property of the Breon Lumber Company, bankrupt, Williamsport, Pa., has been sold by the receiver to George B. Breon and the business will be continued under the old firm name.

The Pearson-Hutchinson Lumber Company has entered the lumber business at Nashville, Tenn. It is located on Eleventh avenue, near Church street. The members of the firm are D. S. Hutchinson and E. W. Pearson of Lebanon, Tenn., neither of whom need an introduction to the trade. Mr. Hutchinson has long been connected with the lumber and building industry of Nashville, while Mr. Pearson is a well-known lumber dealer of central Tennessee. The company will deal in all kinds of building lumber and mill work.

The Hardwood Floor Company has been organized by Clark Jackson, R. W. Wilbur and Paul Zedwick, with a capital stock of \$10,000, to manufacture hardwood floors.

The I. P. Russell & Brothers Land & Lumber Company is a new concern for Cape Girardeau, Mo. It is capitalized at \$15,000 by Theodore P., Arch D. and Forrest D. Russell.

United States Senator Bourne of Oregon has bought a farm of 136 acres in Warrick county, near Boonville, a few miles east of Evansville, Ind. He will raise trees on this land and has bought 100,000 catalpa, 50,000 black locust and 10,000 Osage orange trees, to be delivered and set out at once. Thomas P. Littlepage, clerk of the committee on expenditures in the United States Senate, is associated with Senator Bourne in the purchase. Mr. Littlepage has been an expert in tree culture for a number of years.

Crawfordsville, Ind., called on the RECORD December 2, while visiting his trade in Chicago. Mr. Burkholder reports that hardwood business is improving in his section of Indiana and says a better trade in the lower grades of oak is particularly noticeable.

Collin S. Piper of the Astoria Veneer Mills, Long Island, N. Y., called on the RECORD December 2. Mr. Piper says that the big plant of the Astoria Veneer Mills has recently added new equipment of an up-to-date cedar plant for the production of cigar box lumber, and that the entire institution is now very busy sawing mahogany lumber, cutting mahogany and other fancy veneers and making cigar box material for the trade.

Russe & Burgess of Memphis have purchased Mr. Mulvaney's interest in the Mulvaney-Pratt Lumber & Tie Company of this city, as announced in the last issue of the RECORD, and the name of the concern has been changed to the G. C. Pratt Lumber & Tie Company. The company will continue along the same lines, with headquarters in the Fort Dearborn building.

C. L. Willey, well-known manufacturer of hardwoods and veneers in this city, with a large branch at Memphis, has recently installed at the latter operation a 70-inch resaw, which will begin cutting about December 15. This new resaw, with the big band saw, will increase the output of the plant to a million and a half

feet of lumber a month. Mr. Willey, also recently installed considerable new machinery in the veneer department at Memphis, so that he can now manufacture and dry a car of veneers a day. It is his intention to make a specialty of thin plain and quartered oak from 1, 12-inch to 3, 4 inch thick. Mr. Willey, through his Chicago and Memphis plants, is in position to furnish anything in domestic hardwoods and as wide a line of fancy imported woods and veneers as any concern in the country.

Jesse W. Thompson, the irrepressible head of the J. W. Thompson Lumber Company, Memphis, Tenn., was a recent Chicago visitor.

T. J. Christian, sales manager for Maley & Wertz, with offices at Indianapolis, Ind., spent a few days in Chicago the middle of last month.

W. E. Stark of Memphis, Tenn., prominent in hardwood circles in the South, was a recent Chicago visitor.

Fred J. Schroeder of the John Schroeder Lumber Company, Milwaukee, Wis., is the proud father of a baby girl, which arrived at his home November 13.

J. W. Slayton of the Mears-Slayton Lumber Company, 1237 Belmont avenue, this city, with a branch yard in South Evanston, is at present making a business trip through the South.

Another prominent Chicago visitor during the past few days was Rudolph Sondheimer of the E. Sondheimer Company, Memphis, Tenn.

Reports of good business in his section were given by Charles R. Ransom of the Gayoso Lumber Company, Memphis, Tenn., who recently visited the Chicago trade. Mr. Ransom is quite optimistic in regard to the spring trade and believes that business will show continual improvement until that time.

A. R. Vinnege of the A. R. Vinnege Lumber Company has spent considerable time of late visiting Wisconsin hardwood points.

George W. Stoneman of the Stoneman-Zearing Lumber Company, Deval's Bluff, Ark., called on a number of his old friends among the Chicago hardwood trade the last of the month.

W. R. Smith, head of the sales department of the Stearns Company, with headquarters in the Murray building, Grand Rapids, Mich., was a recent Chicago visitor.

E. E. Skeele, the popular member of the Estabrook-Skeele Lumber Company left a few days ago for a business trip to Boston and other New England cities. Mr. Skeele will be gone about a week, and while away will spend a few days with his mother at her home at Greenbush, Mass.

W. A. Cool of W. A. Cool & Son, Cleveland, O., was in town November 26. Mr. Cool came especially to see his representative here, Ralph Ely, who had been ill for about two weeks at the Great Northern hotel. Mr. Ely is much better, and left some days ago for his home in Columbus, O.

All the cak timber on the land owned by the Wachsmuth Lumber Company and the Bayfield Mill Company in Bayfield County, Wis., has been purchased by the Wisconsin Veneer Company of Rhinelander. This company will ship the timber to Bayfield for sawing. It is estimated that upward of 100,000,000 feet will be cut from the timber.

C. L. Cross, the Chicago representative of the Louisiana Red Cypress Company, New Orleans, La., has returned after a month's stay at the Crescent city. Mr. Cross brings reports of a satisfactory number of orders being received at the southern mills, and says that manufacturers are generally quite confident of a good business next year.

John D. Spalding, lumber buyer for the Paine Lumber Company, Ltd., of Oshkosh, Wis., was in Chicago recently on his way South to visit various sawmill operations. Mr. Spalding returned from his wedding journey to the Pacific coast November 10, having spent six weeks in that territory. He speaks very enthusiastically of the Pacific coast.

Walter N. Kelly of the Kelly Lumber Company, Traverse City, Mich., spent several days in Chicago during the latter part of November. Mr. Kelly reported satisfactory conditions in the hardwood market of his section, although he stated that there is still a much stronger demand for the better grades of hardwoods than for the lower. However, he is inclined to think that low-grade lumber will make a better showing next year.

George C. Wilce, vice-president of the T. Wilce Company, large manufacturer of hardwood flooring in this city, made a trip to the company's mill at Empire, Mich., recently. The company's Chicago plant at Twenty-second and Throop streets is running all its machines ten hours a day, and E. Harvey Wilce, president of the concern, says that it has an abundance of orders for both oak and maple flooring in all grades, and that the situation at present is rosy.

W. E. Hosball of Hosball & McDonald Bros., manufacturers of hardwood lumber, with headquarters at New Orleans, La., spent several days in Chicago last month. Mr. Hosball stated that business has shown a substantial gain within the past sixty days, although just at present there is a little slackening, undoubtedly due to the approach of the new year, buyers seemingly not being anxious to put in much stock before closing up their books for this year. Mr. Hosball also referred to the car shortage, which, he says, is quite a disturbing element at present. The company's mill at Eola, La., was shut down permanently last month, as the timber supply tributary to it has been exhausted. The company will undoubtedly find a new location shortly and move the mill.

The Executive Committee of the National Hardwood Lumber Association held a meeting in the association rooms in the Rector building, Chicago, on Thursday, November 18. Reports received from the inspection service showed that this branch of the association's work is giving very good satisfaction. Most of the meeting was given up to routine matters, and arrangements for the next annual meeting of the association were gone over, with a view to mapping out in a general way a line of action for this occasion. Those present were: O. O. Agler, president of the association, Chicago; F. A. Diggins, Cadillac, Mich.; G. A. Landeck, Milwaukee, Wis.; Gardner I. Jones, Boston, Mass.; Charles H. Barnaby, Greencastle, Ind., and Earl Palmer, Paducah, Ky.

The American Trust & Savings Bank has been appointed receiver for the Corwin Lumber Company of this city, bankrupt. Miss Grace Corwin is manager of the concern, which has been in business here for about two years, succeeding the Noble-Corwin Lumber Company of Milwaukee. Miss Corwin is a very capable young woman and a large number of her friends in the trade will regret to learn of this trouble. The assets are placed at about \$1,500 and the liabilities between \$8,000 and \$9,000.

An unusually artistic little booklet has been received by the RECORD from the Ivory Handle Company of Hope, Ark., setting forth the various sizes and styles of the handles it makes, together with current prices on the goods. The little pamphlet is appropriately bound in rough ivory-colored stock, with attractive embossed lettering in pale buff. It is profusely illustrated with cuts, showing the different styles of handles the company makes, and most effectively conveys the idea of a high-grade line of goods.

The Frank Spangler Company of Toledo, O., manufacturer of porch columns, advises that its offices have been removed to rooms 6 and 7 the Smith & Baker building, corner Superior and Adams streets, Toledo. This company specializes in bay poplar porch column work and in bevel siding, drop siding, finish, wagon box boards and moldings of this same wood.

John C. Rodabaugh, representing George W. Hartzell, manufacturer of black walnut lumber and veneers at Dayton, O., visited the Chicago trade November 29.

The leading manufacturers of woodworking machinery of the country spent several days in Chicago last week in a general consultation.

Henry Ballou, superintendent of the big lumber and maple flooring institution of Cobbs & Mitchell, Inc., Cadillac, Mich., accompanied by his wife, spent the last few days of November in Chicago on a visit of pleasure and Christmas shopping.

J. W. Taylor, president of the Domestic Lumber Company, Columbus, O., was among RECORD callers on November 26. Mr. Taylor reports a big improvement in hardwood demand in the territory covered by his concern.

Some changes are reported in the location of the sales staff of the W. M. Ritter Lumber Company of Columbus, O. R. L. Gilliam, who has been located at the Columbus office in charge of sales of the central district, has been transferred to the Philadelphia office, and H. H. Collins, formerly in charge of the eastern office at Philadelphia goes to Columbus in charge of the central district.

J. D. Bolton of the Hayden & Westcott Lumber Company, returned to his desk Monday of last week, after a severe attack of lumbago that confined him to his home for more than a week.

R. Usher of the Paine Lumber Company of Oshkosh, Wis., formerly secretary of the Chicago Hardwood Lumber Exchange, is in the South for his company.

W. L. DeWitt of the Estabrook-Skeele Lumber Company left last week for Manistee and other Michigan points, to be gone several weeks.

C. G. McLaughlin of the McLaughlin-Hoffman Lumber Company, Columbus, O., visited Chicago last week.

Irvine McCauley of the McCauley-Sanders Lumber Company, also Chicago manager for the John Schroeder Lumber Company of Milwaukee, Wis., visited the mills of the latter for a period of thirty days, returning to Chicago last week.

A. G. Fritchey of the Lamb-Fish Lumber Company, Memphis, came to Chicago last week and slipped out again without many knowing it.

A. W. Wylie, the famous gum man of the Fisher building, will leave this week for the South on an extended visit.

H. H. McLaughlin of the McLaughlin Lumber Company has left for a visit to the company's mills at Dumas, Ark.

Leland Arthur, the genial and popular sales manager for Payson-Smith Lumber Company, with offices in the Old Colony building, left this week for Hough, Mo., to look over the mills a bit.

William E. Trainer of the Trainer Bros. Lumber Company is visiting Memphis and other southern points.

Among the visitors to the offices of Schultz Bros. & Cowen, Old Colony building, last week, were J. P. Hynes, a prominent lumberman of Anna, Ill.; W. P. Andrews of Gideon & Andrews, Gideon, Mo., and J. W. Taylor of the Demerlie Lumber Company, of Columbus, O.

H. C. Miller, secretary of the Hardwood Mills Lumber Company, with offices in the Monadnock block, and one of the best fishers and most genial fellows in these parts, returned last week from Merrill, Wis., where he used the gun a bit, besides loading out some birch. Mr. Miller wrote the boys in the office that he got his "quota" of deer, but he did not state whether it was his or the law's quota, there being a decided difference between the two. The opinion was, according to his associates, that he got about two deer, his quota, of course.

J. D. Attley of J. M. Attley & Co. reports the last ship in from Michigan last week, which caused a broad smile, for he feared the opposite at this season of the year.

The Hardwood Mills Lumber Company is distributing its new 1910 calendar, which is a decidedly fine piece of calendar work, with a woman head-piece done in colors. The calendar is large and most attractive.

Jacob Fink, Jr., the two-year-old son of

Jacob Fink of the Fink-Heidler Company, died November 28 after a two days' illness of pneumonia. He was buried in Adlerberg cemetery, Chicago. Mr. Fink's many friends regret such an untimely death.

F. S. Hendrickson of the F. S. Hendrickson Lumber Company is visiting his mills at Hey worth, Okla.

F. J. Heidler of the Fink-Heidler Company, Chicago, met with a serious accident on November 15, when he fell out of the door of a freight car which was being loaded in the company's yards, fracturing the ankle of his right foot and a small bone in his neck, besides receiving a number of painful bruises about the body. He was leaning against the door, which he thought securely fastened, but it suddenly opened, throwing Mr. Heidler against some rough boards. He was taken immediately to his home and the injured ankle placed in a cast. Mr. Heidler is still confined to his home, and the doctor states that he will be unable to return to his office before the first of January.

## NEW YORK

William Threlkeld, secretary of the Indiana Quartered Oak Company, New York, and Kathryn Van der Minden were married November 25 in New York. Mr. Threlkeld is a popular and well known hardwood man of New York City and Miss Van der Minden a charming woman. Friends and acquaintances alike extend congratulations.

George P. Gray of D. P. Fairchild & Co., 1 Madison avenue, has just returned from a business trip in West Virginia.

The engagement of Miss Louise W. Taft, daughter of Mr. and Mrs. Henry W. Taft, who is a niece of President Taft, to Mr. George H. Snowden, the prominent lumberman of Seattle, Wash., has just been announced. The wedding will take place in this city during the coming holidays.

Edward F. Henson, well-known Philadelphia house of E. F. Henson & Co., was in the city for a day or two during the fortnight on his way to Norfolk, Va., to attend the Deep Waterways Convention as delegate-at-large from the state of Pennsylvania.

The Rockville Center Lumber Company has been incorporated at Rockville, L. I., to conduct a retail lumber business with a capital of \$30,000 by M. Horner, D. G. Lee and E. Wagner, all of Hicksville, L. I.

Doyle, Thomson & Co., well-known hardwood operators at the foot of East Thirtieth street, Manhattan, have in addition to their regular premises utilized additional space for storing their own wants in the matter of stock and have arranged to conduct a public storage business and have ample space to take care of twenty or more cars of lumber.

George M. Stevens, Jr., Stevens-Eaton Company, large wholesale house at 1 Madison avenue, has just returned from a ten days' shooting trip in the Adirondacks in company with Frederick Cleveland, Jr., of Albany and J. K. McDowell, the retailer of Syracuse. Mr. Cleveland was the host of the occasion and gave the party some good sport on the famous Dexter reserve, where they bagged a good bunch of game. During Mr. Stevens' absence, George A. Mitchell, president of the company and head of White, Gratwick & Mitchell, North Tonawanda, N. Y., occupied his desk.

A. E. Lane, popular sales manager of the Seattle Cedar Lumber Manufacturing Company of Seattle, Wash., headquarters 1 Madison avenue, has just returned from a business trip to the coast points, where he went over matters at that end of the line. He came back full of good things for his customers and ample assurances of the best possible service for the coming year.

Reports emanating in certain quarters during the past fortnight that H. I. Soble, a hardwood lumberman of 1 Madison avenue, was wanted by the Tennessee authorities on a charge of securing lumber under false pretenses were found by subsequent development to be entirely erroneous. The matter was placed before the governor of Virginia. When it was so clearly shown that the charges were without foundation and that Mr. Soble was not even in Virginia at the time the acts were alleged to have been committed, he withdrew his request for extradition and the case was dismissed on November 23.

The second informal dinner of the Lumbermen's Club of New York was held at the club headquarters, 6 West Twenty-fourth street, Manhattan, on November 17, with about forty members and guests present. The company enjoyed an excellent dinner, followed by a light vaudeville, which rounded out a very pleasant evening. Among the prominent guests from out of town were R. C. Lippincott and Hugh McIlvain of Philadelphia; W. A. Bennet of Cincinnati; James Crowell of Newark; W. H. Judd, Stamford, Conn., and I. N. Rudgers of Montclair, N. J.

William Schuette, William Schuette & Co., 1 Madison avenue, is spending several days at the Kentwood, La., pine mill, the output of which is controlled by his company, in the interest of business.

J. C. Turner, J. C. Turner Lumber Company, 1123 Broadway, New York, has just returned from a visit to his southern cypress mills.

At the residence of the bride's parents at Haverstraw, N. Y., on November 17, Miss Gladys L. Peck, daughter of T. G. Peck, a large brick manufacturer of that place, was united in marriage to Otis N. Shepard of the New York sales office of the Shepard & Morse Lumber Company of Boston, Mass. It was a distinct society event and many guests were present, and after a supper and dance the bride and groom left on a lengthy honeymoon.

H. W. Collins, head of the Philadelphia eastern sales office of the W. M. Ritter Lumber Company, Columbus, O., was in town during the fortnight for several days in the interest of business. He reports hardwood conditions as steadily improving, with the month of November very satisfactory.

F. A. Kirby, sales manager of the Cherry River Boom & Lumber Company, Scranton, Pa., was another prominent visitor, going over matters at this end of the line with Manager W. W. Welch at the local sales office of the company, 1 Madison avenue. Mr. Kirby expressed himself as well satisfied with general business, the volume being fair and the outlook promising.

The wholesale hardwood firm of Uptegrove & Polhemus, 1 Madison avenue, has been dissolved by mutual consent, and G. M. Uptegrove will be the liquidating partner. Concurrent therewith the Marshall-Polhemus Lumber Company has been organized at the same address to succeed to the business. The new company is composed of John Knox Marshall, formerly of Boston, as treasurer and J. A. Polhemus as president. The business will be conducted along the same lines as the old house.

The Creditors' Committee having in charge the affairs of Charles E. Page & Co., wholesalers of Manhattan, issued a report as to the actual condition of the affairs of the company. They recommended the acceptance of a proposition to pay 50 cents on the dollar in cash on the base amount of the total creditors' claim. They recommended strongly that this be accepted, because such amount would be considerably in excess of what would be possible under a bankruptcy settlement. A large number of the creditors have signified their willingness to accept the proposition. The creditors' committee is composed of H. T. Holmes, Fisher Sloan and J. A. McKenney.

## BUFFALO

The organization of the Yale Timber & Lumber Company with capital of \$130,000 is announced. The incorporators are J. B. Wall, M. M. Wall and W. J. Connors. The company owns a large tract of timber in the Yale district in British Columbia and has lately added considerable territory to it.

I. N. Stewart, as chairman of the nominating committee of the Manufacturers' Club, has selected the candidates for the election to come off on December 7. O. E. Yeager is one candidate for first vice-president and A. W. Kreinheder is nominated for re-election as one of the trustees.

A. Miller sells a good lot of hardwood lumber to his neighbor lumbermen and his men were so busy in that line the other day that they were not able to inspect a lot that had been sold in that way, and it was taken without any inspection.

F. W. Vetter has just returned from a trip through the seaboard states down as far as North Carolina. He found good lumber scarce, but saw a rather large amount of low grades in various woods. Some good purchases were made.

The year has been a fine one with O. E. Yeager, but in spite of large shipments out he has been able to put in a large winter stock and estimates that he has at least 3,500,000 feet on the Buffalo yard, not to mention holdings in the South.

The yards of T. Sullivan & Co. have been receiving large amounts of both lake hardwoods and Pacific coast lumber, so that it was not easy to attend to matters connected with the Hardwood Exchange. Lake barges have been hard to get lately.

The Standard Hardwood Lumber Company is taking an inventory at the beginning of December, according to custom, and though the shipments have been pretty heavy right along, the stock will show up well for winter. Southern operations are active.

Almost any kind of lumber can be had in the yard of G. Elias & Bro. and the stock now is heavy.

H. A. Stewart is looking southward again and may be off that way in a week or two. I. N. Stewart & Bro. get considerable oak, cherry, chestnut, poplar and ash from the South.

The trip of Frank A. Beyer to the mills of the Pascola Lumber Company in Missouri will about close up his outside movements till he takes his position as county treasurer at the opening of 1910. He will still be a lumberman after that.

The Buffalo Hardwood Lumber Company reports a large amount of satisfactory business of late, the demand being good enough to carry off a lot of stock that had not been called for until lately, which indicates plenty of trade ahead.

Hugh McLean also mentions a sharp demand for stock that was not wanted till lately and which he has sometimes sold on the road. If the customers had come into the market earlier they would have fared much better.

There is also complaint from Scatcherd & Son of broken stocks, in spite of the good amount on hand as a whole, all of which is a warning to buyers that if they see any lumber that they want they will do well to take it on sight.

## PHILADELPHIA

Chapin L. Barr, secretary of the Whiting Lumber Company, says that with the exception of a slight interference with shipments due to the car shortage the company's mills are active. Good orders are being booked right along and the outlook is encouraging.

John W. Coles does not hesitate to confirm the general report of a decided improvement in trading. He recently made an extended tour

of the North Carolina lumber camps and found an increasing buoyancy of feeling as to existing trade conditions. Prices he says are stiffening all along the line.

Charles K. Parry reports a more ample trading with an outlook for future advance. He has engaged W. M. Stouck as salesman to cover the eastern Pennsylvania field. Mr. Stouck, who is one of the best known young lumbermen in this territory, is sending in some good orders right along. Mr. Parry recently returned from a trip to the mill of the Selma Lumber Company, Selma, N. C., in which he is largely interested, and reports a significant buzz of machinery down there, but a considerable handicap in the shipping department on account of car shortage.

As an evidence of the energetic spirit of Schofield Brothers, it is stated that within a week after the destruction by fire of the mill of the Saltkeatchie Lumber Company, which is controlled by them, the debris was cleared away and a small sawmill purchased and set to sawing lumber for the erection of a new mill. Robert W. Schofield says in ninety days they will be working full blast cutting hardwoods and the famous uniform color red cypress, which has become so popular with the users of this wood. One of the well-known Emerson Company dry kilns has been contracted for, which will have a capacity of 700,000 feet a month. Mr. Schofield spends a large portion of his time at Schofield, S. C., superintending and rushing the work of rebuilding.

Thomas B. Hoffman of the J. S. Kent Company gives a willing testimony as to a quickening in the trade situation. He recently made a tour of the southern lumber fields sizing up matters, and incidentally closing some desirable deals.

W. W. Plask, one of the well-known salesmen in the employ of Schofield Brothers, has severed his connection with this house to accept the management of the business of the Hannum Lumber Company, Atlantic City, N. J., recently incorporated with \$100,000 capital stock.

On November 29 nine railroad cars for the passenger service of the Spokane & Inland Empire System, constructed at the plant of the I. G. Brill Company, Sixty-second street and Woodland avenue, this city, left for the West on their own wheels, instead of the usual trucks. The coaches will be used on the line between Spokane and Coeur d'Alene. Work on the cars was begun about three months ago. The order included two observation cars, two combination smoking and passenger cars, three regular coaches and two combination smoking and baggage coaches. All cars have steel underframes.

A pronounced improvement in trading all along the line is the word of H. C. Magruder, general manager of the Patton Company. The salesmen all testify to an encouraging business reception in their respective territories.

William F. Wagner, secretary and treasurer of the Pooley Furniture Company, has conveyed to the company the lot of ground at the southwest corner of Sixteenth and Indiana avenue, 75 feet by 190 feet, for a nominal consideration, subject to a mortgage of \$7,000. The ground adjoins the plant of the Pooley Furniture Company on Indiana avenue between Sixteenth and Seventeenth streets. The assessed valuation is \$10,000. The lot will be used for enlarging the factory of the Pooley Furniture Company.

Charles G. Blatchley of Wayne, a widely known lumber merchant, with offices in the Drexel building, died on November 16. He was sixty-five years old.

A mountain fire, supposed of incendiary origin, recently burned a mountain timber tract four miles long by two wide, from Hunters' Run to the Mount Holly Springs Dam, just south of Carlisle, Pa. Damage about \$30,000.

On December 1 the sawmill and over 7,000,000 feet of seasoned walnut lumber belonging to F. M. Waring, a prominent contractor of Tyrone,

Pa., were destroyed by fire. The loss is estimated at \$12,000, with no insurance.

H. E. Woolford of the Emerson Company, Gaither building, Baltimore, Md., was a recent visitor to Philadelphia. He reports the company rushed with orders.

Currie & Campbell, wholesale lumber dealers, 810 Commonwealth building, is the latest entry into the lumber field. The firm is composed of Ben C. Currie, who recently resigned as manager of Halpenny & Hamilton, and James H. Campbell, formerly with the Pocahontas Lumber Company, Brookville, Pa. They are regarded a well yoked team with phenomenal pulling qualities. Mr. Currie is one of the best known lumbermen in the East, and bears also the weighty honor of being chosen vicegerent snark of the eastern district of Pennsylvania, Hoo-Hoo. The firm will represent the Pocahontas Lumber Company, Burner, W. Va., and will handle spruce, hemlock and hardwoods, of which they state they will have from 18,000,000 to 20,000,000 feet at their command and ready for prompt shipment at all times. They will also deal in shortleaf and other pine woods.

W. A. Hindle of the Hindle Lumber Company, who has been ill, has just returned from a five weeks' trip with his wife much improved in health.

Settlement was effected November 30 for the purchase of the old Bellevue Hotel property, northwest corner of Broad and Walnut streets, by the Manufacturers' Club, of which a large number of lumbermen are members, for \$1,230,000. The club will erect on this site a large hall, 100 feet by 100 feet, with a seating capacity of 1,000. The first floor of the Walnut street side will be devoted to a dining-room for men; the first floor, Broad street side, will be a reception and reading room. The second floor of the Walnut street side will be a dining-room for women. The third and fourth floors will be taken up by the large hall. The fifth, sixth and seventh floors will contain seventy-two bedrooms and seventy-two bathrooms, and to this all will be added a splendid roof garden. In addition to being a great clubhouse, the Manufacturers' building will be the home of nearly every great industrial enterprise in the state of Pennsylvania, New Jersey and Delaware. It is to be the great exchange or mart for all classes of trade.

The Functon Moulding Company, Camden, N. J., obtained a charter under New Jersey laws November 19. Its capital stock is \$50,000.

The Domotocar Company is the name of a new concern for Trenton, N. J. It was incorporated under New Jersey laws November 23, with a capital of \$1,000,000.

The I. W. Scott Company has recently been organized in Pittsburgh, Pa., to manufacture agricultural implements. It is capitalized at \$5,000.

The Union Saw Company, Camden, was incorporated under New Jersey laws November 23 with a capital stock of \$250,000.

The Wilkes-Barre Automobile Company was recently organized in Wilkes-Barre, Pa., with a capital stock of \$5,000.

## PITTSBURG

The sawmill and a quantity of walnut lumber belonging to F. M. Waring of Tyrone, Pa., were burned December 2. The loss is estimated at \$12,000, with no insurance. It was the finest stock of walnut lumber in the state.

The American Lumber & Manufacturing Company, according to President W. D. Johnston, wound up November with the best showing on its books of any month this year. December is going to beat it, and Mr. Johnston is confident that business will be active in 1910 and that the hardwood men are going to get a big share of it.

Bemis & Vosburgh are cutting from 150,000

to 200,000 feet of lumber daily at their plants at Roanoke Rapids, N. C., Bemis, W. Va., Petersburg, Va., and Victoria, Va. Their reports show that prices are edging up, although competition is still pretty fierce in some lines.

The Germain Company is still hoping for better conditions to prevail in the export trade. In other respects its business is showing much better. Yard trade has been especially improved and conditions in the eastern markets look a great deal brighter.

C. A. Shreve, formerly of Bowling Green, Ky., has been appointed inspector at Pittsburg by the National Hardwood Lumber Association and will locate here permanently in a few weeks. Former Inspector Thompson is expected to join the ranks of a local lumber company the first of the year.

The J. M. Hastings Lumber Company has cut out its hardwood operation at Jacksonburg, W. Va., but has not moved its mill, as it is looking for more timber in that vicinity. The big Canadian operations in which Mr. Hastings is largely interested are moving along steadily. Both sales and shipments are reported good.

The Willson Brothers Lumber Company is keeping its hardwood business well in hand and finds the increase in inquiries and orders very gratifying for this season. Manager I. F. Balsley of this department has been making frequent trips to the East with decidedly good results to show.

The McNitt, Huyett Lumber Company of Center Hall, Pa., will start work shortly cutting on 4,000 acres of hardwood timber near Waddell Station. This is the tract which was recently purchased for \$45,000 from the D. M. Bare Paper Company, and is one of the best lots of timber in Pennsylvania.

State Forester John R. Williams of Franklin county, Pa., has been put in charge of Pennsylvania's newest forest reserve, located on the Ohio watershed in Westmoreland and Somerset counties. The State Forestry Commission secured this tract a few months ago from the Byers-Allen Lumber Company. It consists of 9,000 acres of young oak and chestnut, which will be very valuable in a few years.

Lumber matters are once more getting busy on the Allegheny river. Recent rises have made it possible to float down a large amount of logs and lumber, and \$25,000 worth of lumber was loaded one day last week on flat boats and barges at Tionesta. This will be scattered all through the Pittsburg district.

The A. & S. Wilson Company, the largest contracting firm in this city, has just completed and put in operation a three-story wood-working plant on the North Side. Every machine in the plant is operated by an individual motor. Modern machinery for planing, sawing and cutting all kinds of building lumber, together with a blacksmith shop, wagon shop, storage building and lumber yard are provided.

Riefler & Sons of Tanners Falls, Pa., have just purchased from Kreitner Brothers of Honesdale, Pa., 400 acres of timber land in Mt. Pleasant township, Wayne county, Pa. They expect to cut 1,500,000 feet of hardwood and hemlock and 6,000 cords of acid wood.

L. R. Shreve, president of the Shreve Chair Company of Union City, Pa., recently announced that he has secured a seven-acre site just east of that factory, on which there will at once be erected a modern table factory, to employ at least 50 men. This will be a large consumer of hardwood and will add much to the fame of Union City as a lumber manufacturing center.

The new Shade Gap branch of the East Broad Top Railroad, which has just been completed, has opened up one of the most important timber tracts in Pennsylvania. The road extends from Mt. Union, Pa., into the northern end of Franklin county and penetrates a vast area of hardwood timber.

C. J. Shelburne, president of the Shelburne Lumber Company of Green Bay, Va., and A. P. Irish, vice-president of the Fuller & Rice Lumber & Manufacturing Company of Grand Rapids, Mich., were recent visitors in this city.

According to the Linchman Lumber Company, the market for oak and maple flooring has taken on a very much better tone the past two weeks. There is every indication that this stock will be selling at new record prices after January 1. Building operations have been going ahead in a satisfactory way on account of the fine weather and with a little easier money market the prospects for plenty of buyers of fine hardwood lumber in 1910 would be all.

A fire which caused damage estimated at \$20,000 in all consumed the plant of the Cochran Brothers Lumber Company at Aliquippa, 20 miles below Pittsburg on the Ohio river, November 28. The lumber mill was only partly insured.

David Archibald, R. J. Gardner and H. A. Burg of Denver Falls, Pa., have formed the firm of David Archibald & Co. and will open a yard in that place and deal in lumber and building materials.

The Boswell Lumber Company of Somerset, Pa., has bought for \$160,000 all the timber rights of A. C. Woodman in a big tract of hardwood timber in the Laurel mountains of Somerset and Westmoreland counties, 40 miles east of Pittsburg. One or more railroad branches will be run into the tract shortly and operations started this fall.

The Kendall Lumber Company has increased the capacity of its Crellin, Md., plant nearly 100 per cent by installing an American log roller. Its Croft mills are now cutting 50,000 feet a day, and its hardwood business is coming along fine.

Railroads in the Pittsburg district have already announced that they will spend \$25,000,000 next year in track extensions, larger terminals and other improvements. This does not include expenditures for locomotives and cars. The Baltimore & Ohio Railroad officials state positively that they will not begin work on their contemplated improvements before spring and that there will be something doing right along when these are started, all of which is good news to the hardwood lumber people.

A narrow gauge bridge belonging to the Tri-State Lumber Company of Uniontown, Pa., and located near Dunbar, Pa., was nearly wrecked by supposed vandals about ten days ago. It extended over a ravine 100 feet wide and its stringers and supports had been chopped off just before a heavy train of lumber was to be shot down the grade onto the bridge. County detectives are working on the case, as it is supposed the crime was committed by discharged employees of the company.

The Fredonia Planing Mill & Lumber Company of Greenville, Pa., has lately put in three new machines and a veneer press. The company employs 10 hands night and day and has the contract for furnishing 150,000 feet of hardwood finish for Pittsburg residences.

The Pennsylvania retailers are going to have a rousing good time when they come to Pittsburg January 27 and 28 for their semi-annual convention. To insure this the Pittsburg Wholesale Lumber Dealers' Association has appointed John B. Montgomery of the American Lumber & Manufacturing Company, John Garling of the Empire Lumber Company, A. J. Diebold of the Forest Lumber Company and L. L. Satler of the L. L. Salter Lumber Company a committee to arrange a banquet to be tendered the state retailers by the Pittsburg wholesalers on the evening of January 27 at the Fort Pitt Hotel. The speakers so far secured for the evening include A. F. Sheldon of Chicago, president of the Sheldon Schools of Salesmanship; Carrol F. Sweet of Grand Rapids, president of the

Michigan Retail Lumber Dealers' Association; Arthur L. Holmes of Detroit and George M. Hotchkiss of Chicago, secretary of the Illinois Retail Lumber Dealers' Association.

## BOSTON

Gardiner I. Jones of the Jones Hardwood Company, Boston, spent part of last month on a business trip through the South and West.

Mr. Appleby of the Appleby Lumber Company, Jamestown, N. Y., was a recent visitor in this market.

By an order issued the first of the month by W. F. Berry, the general traffic manager of the Boston & Maine Railroad Company, the positions of assistant freight traffic manager and export freight traffic manager are abolished. Amos S. Crane is appointed freight traffic manager to succeed the late M. T. Donovan.

H. O. Hawthorne of New London, Conn., has started manufacturing wardrobes for the Folding Wardrobe Company of New York. These are something new in the furniture line.

L. H. Tourtellotta has become manager of the Howe Lumber Company of Marlboro, Mass.

The warehouse of the Andrews & Peck Company, Hartford, Conn., was recently destroyed by fire, causing a loss of fully \$30,000 of lumber, finished stock and models. The company carried \$18,000 insurance.

The Cumberland Lumber Company has been incorporated at Hartford, Conn., with Charles E. White, Andover, president; Levitt C. Hayes, White Plains, N. Y., vice-president; C. T. Roe, Whitestone, N. Y., treasurer; F. J. Allen, Brooklyn, N. Y., assistant treasurer, and Edward M. Yeomans of Andover, secretary.

The lumber mill formerly the property of the Alderbrook Lumber Company, near Littleton, N. H., has been destroyed by fire. The mill was purchased a few months ago by the George W. Blanchard Sons Company of Cortland, Me. The loss is estimated at \$25,000.

The Frank Miller Lumber Company of Bridgeport, Conn., has purchased the stock of the Livermore Lumber Company of that city. The latter company was organized about four years ago.

The Sargent & Davis Lumber Company's mill at Lowell, Mass., was recently destroyed by fire, causing a loss of about \$50,000.

At the first meeting of the creditors of the Mitchell & Harding Lumber Company of Lawrence, Mass., a settlement was made whereby they will receive what is due them in full with interest.

A good export lumber business is reported. Large lots are being shipped from Boston each month to South America. Pine, oak and ash are the principal woods exported from this port.

## BALTIMORE

G. L. Wood of the R. E. Wood Lumber Company says things are looking much better of late; some lines are still a little slow in mending, but others counterbalance in activity. Mills are active, lumber is moving more freely than for some time and the company so far has been able to secure sufficient cars for shipments.

F. A. Parker of Mann & Parker recently returned from a trip to New York and Philadelphia. He has no difficulty, he says in placing goods with satisfactory prices. The company is having a big run on the famous gum it manufactures and is receiving numerous orders from houses which have been heretofore buying entirely in Missouri. He states that business is gaining every day.

The Williamson Veneer Company reports satisfactory improvement in business. It is at present engaged, so to speak, in cleaning house, working up all the old log stock and cutting out

some of the old lines. It is the declared intention of the management to select some high-grade veneer and make it a specialty.

Secretary E. M. Terry of the National Lumber Exporters' Association has succeeded, after prolonged negotiations, in obtaining from the Chesapeake & Ohio railroad the concession of clean bills of lading. Other roads have been issuing clean bills for some years. The case of the association against the car service lines at New Orleans over the free time to be allotted at that port will come up for a hearing before the Interstate Commerce Commission at Washington as the Record goes to press. The car service lines last spring gave notice that the free time would be reduced from twenty to ten days, which the shippers regard as a discrimination against New Orleans, other ports having enjoyed the benefit of a longer free time. The shippers asked for thirty days, but were willing to let it go at the old twenty days. The reduction of the free time, they contend, is a grievous burden upon the export business and puts New Orleans at a serious disadvantage. The association has also taken up the matter of the change in regulations as to the use of code words ordered by the Postal Telegraph Company. Under the new regulation, which took effect December 1, the use of arbitrary words is prohibited, only the ordinary English words, not to exceed a certain number of letters, being allowed. This in effect is a doubling of the telegraph tolls for firms or corporations, and will be felt as a heavy tax. The association has filed a protest against the change and will join with other organizations in a movement to induce a rescinding of the order.

From Keyser, W. Va., the report has been received that the Altoona Lumber Company has sold to the Alta Lumber Company, consisting of F. O. Havener and E. J. McGee of Parkersburg and E. Stringer Boggess of Clarksburg, W. Va., 9,000 acres of timber lands, mostly hardwoods and white pine, near Pulaski, Va. There is a railroad and several sawmills on the tract, and operations will be carried on with energy.

John S. Helfrich, wholesale lumber dealer, with offices in the Law building, reports a growing demand for maple flooring in this city and surrounding territory. A decided increase in the use of oak flooring is also reported, some of the yards having lately felt impelled to lay in stocks to meet the wants of the builders.

In this connection it is to be stated that the Maple Flooring Association has within the past few weeks advanced the list of maple flooring \$2 per 1,000 feet on clear stocks, and \$1 on factory No. 1, the advance being dictated, it is explained, by the growing demand. All previous lists have been canceled and the new prices are firmly adhered to.

The Norva Land & Lumber Company, of which Robert McLean, Stewart building, is general manager, held its annual meeting December 1 at Norfolk, the headquarters of the company, when the yearly reports were submitted and the present officers re-elected. The annual reports showed the company to be in excellent condition, and represented the prospects as highly encouraging. The company's foreign business in staves and headings, for which gum is being used, is rapidly on the increase and a growing business in hardwoods has also been done. The company is still at work on the experiments to convert gum and other low-grade stocks into a good grade of lumber by a process in accordance with which lumber is first put into a tank and steamed, so as to draw out the moisture, and then exposed to a dry heat. It is claimed for the process that it prolongs the life of the wood, toughens the fiber and prevents cracking and splitting, as well as warping, the latter one of the greatest drawbacks to gum, which takes on a high polish and could be used for a variety of purposes to great advantage but for this defect.

The plans of the Laurel River Lumber Company, the Tygarts River Lumber Company and another allied corporation, owned by interests

which not long ago bought the assets of Jennings Brothers in West Virginia, and which contemplated the opening of a branch office in the Keyser building, this city, appear to have been abandoned. The lettering on the doors has been removed and the furniture already in the rooms has been taken away.

John Cant, son of James Cant of the Glasgow firm of Cant & Kemp, stopped in Baltimore recently on his return from an extended trip through the Middle West and South. Mr. Cant said he found the millmen everywhere animated by a strong feeling of confidence in the future, and the movement increasing. Mr. Cant was entertained here by John L. Alcock of John L. Alcock & Co. It was his intention to go from Baltimore to Philadelphia and New York, there to take the steamer for home.

William E. Sowers of Hagerstown, Md., has secured an option on 17,000 acres of timber land along a trunk line in West Virginia, and is organizing a stock company with a capital of \$450,000, to engage in the development of the tract. If the deal goes through, mills, railroad, dwellings for the workmen and other buildings will be erected and operations conducted on a large scale.

Cook Brothers of Pittsburg, who control the North Maryland Lumber Company, are about to begin the operation of several sawmills on an 8,900-acre timber tract on the Elk Lick and Savage rivers, near Lonaconing, Md. It is reported from Cumberland, Md., that A. C. Woodman has sold a tract of timber in the heart of the Laurel Hill mountains, near the mining town of Boswell, Md., to the Boswell Lumber Company for \$160,000.

## CHARLOTTE

The sawmill, planing mill, dry kilns, offices, storeroom and warehouses of the Kingsdale Lumber Company, located five miles from Lumberton, N. C., were destroyed by fire a few nights ago. Six dwelling houses, occupied by tenants of the company, were also burned. Total loss is estimated at between \$80,000 and \$90,000, partially covered by insurance. It has not been announced whether or not the plant will be rebuilt.

Extensive damage from forest fires continues to be reported both from eastern and western Carolina. Several fires of serious proportions have been raging in the mountain section as well as in the seacoast territory. The North Carolina Geological Survey has taken the matter up and is sending out a list of queries relative to extent, cause and damage of forest fires in various parts of the state, loss to lumber interests and standing timber, etc. All that can be done to cut down or prevent this annual loss will be done by the state authorities.

The Railroad Commission of South Carolina has just received a ten-page typewritten complaint from Attorneys Miller, Whaley and Mitchell of Charleston, S. C., representatives of a score or more of low county lumber dealers, asking for a reduction on the rates on lumber on the score that the present rates are excessive and unreasonable by comparison with the Georgia and Florida rates. The commission has appointed a hearing for January 4 on the matter. Signing the petition are several big lumber companies of Charleston and the Charleston Freight Bureau and the lumber companies operating at Tyson, Mosedale, Hampton, Moncks Corner, Effingham, S. C., and elsewhere. Lumbermen of South and North Carolina are taking a great deal of interest in the coming hearing and it is thought that ample data will be submitted to bring about a readjustment of rates. North Carolina lumbermen have complained often of alleged discriminatory rates charged, also, by railroads operating in this state.

The Giant Lumber Company of North Wilkes-

boro, N. C., one of the largest in the state, has purchased between 60,000,000 and 75,000,000 feet of pine, oak, poplar and chestnut timber, which it will cut and float down its newly completed flume to its plant at North Wilkesboro. The flume extends into the near-by mountains nineteen miles. The company operates many sawmills in the Blue Ridge and floats large quantities of timber down daily. By means of the flume it brings into North Wilkesboro 40,000 feet of lumber and 35,000 pounds of tan bark, which is shipped by rail from the city to various markets.

A company has been organized at Hendersonville, N. C., to manufacture solid bored columns with patent machinery, patents having been secured by Dr. G. H. Lambert on his own inventions. Capital stock will be \$10,000 and those interested are W. A. Smith, R. C. Clark, G. H. Lambert and others. Capacity of the plant, will be 250 columns per day, 6 to 12 inches in diameter, manufactured from poplar.

The Tolson Lumber & Manufacturing Company of New Bern, N. C., has been chartered with \$50,000 capital by L. C. Tolson and others.

The Pegram Farm & Lumber Company of New Richmond, N. C., has been chartered with \$25,000 capital stock.

The planing mill and lumber yard of Bruce & Bivens located at Pickens, S. C., was totally destroyed by fire a few days ago. Loss is estimated at \$6,000. There was no insurance on the plant.

Widespread depredation by "squatters" on the property of the Waccamaw Lumber Company, in the vicinity of Bolton, N. C., near Wilmington, has attracted state wide interest. Squatters have for some time past been making secret attacks upon employees and property of the lumber company. They claim that the lands, which were secured by the Waccamaw company by Federal court procedure, were taken from them wrongfully. Many of the employees of the company quit work several days ago, fearing further secret attacks. Detectives from Washington were employed, and numerous arrests have been made. At a trial just held in Wilmington the following men were bound over to await trial to answer charges of wilfully injuring property of the Waccamaw Lumber Company: J. W. Brady and his son, Horace Brady. Trial of O. W. Brady and "Shade" Bullard will be held the second Tuesday in December, the charge being spiking logs. In one instance it is alleged that dynamite was used to blow up a skidder.

The Tennessee and North Carolina Railroad, at present running from Newport, Tenn., to Waterville, in Haywood county, N. C., 21 miles, is to be extended to Canton, N. C. The road will lead up Pigeon river and will traverse a rich timber section. Owners of the railroad company are largely interested in the Pigeon River Lumber Company, which owns 55,000 acres of richly timbered lands along the line of the proposed road. The road will be a great boon to the Champion Fibre Company, in that it will give it access to millions of cords of pulp wood and will more than likely decrease the high freight rate in effect all along the Murphy branch of the Southern railway.

Barger Bros., extensive dealers in lumber, have moved their offices from Mount Ulla to Mooresville, N. C. Barger Bros. deal in North Carolina pine and hardwood and do an extensive business throughout the two Carolinas. They have been in business eight years and do a large business with furniture factories at High Point, N. C., and other Carolina towns.

## CLEVELAND

Two Cleveland men are at the head of a big scheme to grow thousands of eucalyptus trees in

California. With the launching of the United States Timber Company, with offices at 1529 Rockefeller building, comes the announcement that the concern has acquired 5,000 acres of land in Salano county, California, with a view to beginning next spring to set out 680 trees to each acre of land, or nearly 7,000,000 trees in all. The trees will be furnished by a big nursery which has been started near Los Angeles.

Willard G. Aborn, head of the Lake Erie Nail Company, is president of the new concern, and W. G. Kennedy, formerly with the Bankers' Security Company in this city is secretary. Among the directors of the company, which has been incorporated under the laws of Delaware for \$150,000, are: J. C. Carpenter, president of the First National Bank at Clifton Forge, Va.; G. H. Sparhawk, chief engineer of the American Bridge Company at Ambridge, Pa.; R. L. Foster, sales manager for the J. C. Pearce Company, Boston, Mass.; F. D. Perry, forester, who is now in Salano county arranging the work; J. G. Fogg, attorney in the Williamson building and coach for Case school, and E. S. Fowler, capitalist of Chicago. A. B. Shaw is to be consulting forester. The eucalyptus flourishes in great quantities in Australia, where it sometimes goes by the name of the Australian mahogany. It is said to be a dense, heavy wood, very hard, equally as hard, when tested, as second growth hickory. Its chief value, the promoters of the company say, is its rapid growth. It is an evergreen, growing all the year round. In a period of ten years it usually grows to a thickness in the main part of the trunk from twelve to fifteen inches. It takes on a beautiful polish and is adaptable for veneering purposes. With the rapid exhaustion of the hardwood supply of the country and the steadily advancing prices of all kinds of hardwoods it is believed that the new venture will be a paying one in a decade's time.

The very latest methods of foresting will be applied and it is believed that fully 600 of the 680 trees planted per acre will be available in ten or twelve year's time. As trees are cut they will be replaced with smaller ones, so the forest will always be in growing order.

The plan was inaugurated by Messrs. Aborn and Kennedy some months ago, but nothing definite has been announced until recently.

One of the most prosperous concerns in the hardwood business in Cleveland these days is the Martin-Barriss Company. Business is reviving so rapidly that the company finds it imperative to extend its plant. As a result several additional buildings are being erected, the largest of which is a two-story structure twenty-three by seventy-two feet. The company reports business to be in good condition, with the outlook for winter consumption of hardwoods bright.

J. V. O'Brien, secretary of the Cleveland Board of Lumber Dealers, estimates that the volume of business being enjoyed by Cleveland concerns is now twenty per cent over that of a year ago and that the same ratio promises to hold good for the entire year.

At the Monday noon luncheon of the Cleveland Lumber Company the sole topic of discussion was the death of J. E. Defebaugh of the American Lumberman, who was well known in Cleveland. General regret was expressed at the news of his death, received that day.

Dawson E. Winn, for many years associated with the Woods-Perry Company, one of the pioneer lumber firms in Cleveland, died some days ago at his home here. The funeral was largely attended by lumbermen and others.

Mrs. Elizabeth J. Barner, wife of George T. Barner of the Barner-Meade Lumber Company, died several days ago at St. Vincent's Hospital after a brief illness. A number of floral tributes were sent by Cleveland lumber dealers, a number of whom attended the funeral.

A unique social organization has been formed by the four lumber companies controlled by C. H.

Foot. It is known as the Quartette Social Club and is made up of the employees of the C. H. Foote Lumber Company, the Scranton Road Lumber Company, the Glenville Lumber Company and the Collinwood Lumber Company. The club proposes to hold a number of dances and parties this winter and follow with picnics and outings next summer. C. H. Foote is president; S. P. Cramer is vice-president; Earl Leshner, treasurer, and H. H. Sherman, secretary.

### COLUMBUS

The W. M. Ritter Lumber Company reports a continued good market in all hardwoods. The sales department reports a good demand for the lower grades and that the movement of lumber is now uniform. Every section of the country is showing up with a good and steady demand. It is the opinion of the company that advances will be the rule in the future and concessions are now about all off.

R. L. Gilliam, sales secretary, and J. W. Mayhew of this company returned recently from a 10-days' trip among the mills of the company in Tennessee, North Carolina and other southern states. W. M. Ritter, head of the company, left for the mills early in the month.

The Acorn Lumber Company, which with its predecessor has been located at 130 East Rich street for more than half a century, has moved its offices and down-town yard to the intersection of West Rich street with the Hocking Valley tracks. The company has been conducting a retail yard at the latter location for some time and the move is simply combining the two yards and moving the general offices. The change was made the first of December.

H. W. Putnam, president of the General Lumber Company, reports increasing orders from manufacturing establishments. He says the only drawback to the trade is the car shortage, which is becoming worse. Mr. Putnam reports scarcity in poplar and plain oak stocks and generally stiffer prices prevailing. He recently attended a Scottish Rite reunion at Dayton, which is near his old home.

A. C. Davis, head of the A. C. Davis Lumber Company, reports steady conditions in the lumber trade. He believes that a better demand will spring up in the near future. George B. Jobson, secretary and sales manager, left on December 1 for an extended selling trip through the Northwest.

John R. Gobey reports better orders in all branches of the hardwood trade and higher prices ruling. Several advances have been made recently in cypress. Mr. Gobey is of the opinion that orders will increase as the season advances. He recently returned from a 10-days' trip to Memphis, New Orleans and other southern points. At New Orleans he checked up his rebates in the two-cent overcharge matter.

C. G. McLaughlin, general manager of the McLaughlin-Hoffman Lumber Company, reports better demand from car works and the manufacturing interests generally. He said: "I think prices will advance shortly and we are not making contracts for future delivery at present figures. The car shortage is beginning to tell." Mr. McLaughlin recently returned from a business trip in northern Ohio. W. M. Boyer, representing this company, left December 1 for an extended business trip through northwestern Ohio and parts of Indiana.

H. D. Brasher left recently for a three weeks' selling trip through southern states. He recently closed a contract for the Ohio agency for the Trinity River Lumber Company of Houston, Tex. During his absence his brother, A. L. Brasher, will look after the office work.

Columbus lumbermen interested in manufacturing have been informed that the United States Department of Agriculture is attempting to have insurance companies consider risks on standing

timber and to write policies covering them. At present it is difficult to have standing timber insured and it may be that some time in the future insurance companies may decide to consider them. One of the features to be considered is the "expectation value" of the young growth.

E. K. Hayes & Sons, makers of carriages and buggies on East Town street for thirty-five years, has been changed by the father, E. K. Hayes, dropping from the partnership. The two sons, Morton H. and R. Lee Hayes, take the concern. The father retired because of age. The concern is one of the oldest carriage factories in the city and had a hand in making Columbus a recognized center for carriage manufacturing.

It has been decided to hold a three days' session by the Union Association of Lumber Dealers which meet in annual meeting in Columbus, January 18, 19 and 20. The complete program for the meeting has not been arranged, but an announcement will be made soon. Numerous topics will come up for discussion among which will be freight rates, demurrage, forest conservation and the Ohio canal system. J. Elam Artz, Dayton, is president; E. A. Hildreth, Columbus, vice-president; Harry Adams, Chillicothe, secretary, and F. G. Torrence, Chillicothe, treasurer. M. J. Bergin of Columbus is on the board of directors.

Lewis Foster, secretary of the Hardwood Manufacturers' Association of the United States, with headquarters at Cincinnati, recently visited Columbus. Mr. Foster was on a trip to various hardwood centers. The association was originally organized in Columbus, where the headquarters were located for several years.

Precisely the same number of building permits were issued by the building inspector of Columbus during the month of November as during November of 1908. In each case the number was 115. However, the estimated value of the projected buildings in 1908 was \$204,015, while in 1909 it was only \$186,345. Since most of the other months of the present year have shown an increase over the corresponding month in 1908, on the whole the record of building operations is not a bad one.

W. L. Whitacre left recently for a three weeks' trip among the mills in the southern states. Mr. Kerr of the firm reports steady conditions in the lumber trade and some strengthening of quotations. He looks for a prosperous season after the holidays.

### CINCINNATI

The heavy increase in the volume of the lumber trade in the Queen City in 1909 over 1908 is clearly shown in the figures compiled from the car service reports by Superintendent Charles Murray of the Chamber of Commerce. The receipts of lumber for the month of November, 1909, were 6,769 cars, as compared with 5,478 cars for the same month last year, an increase of 1,291 carloads in one month. The shipments for November, 1909, were 5,552 cars, while those of the same time last year were 4,021 cars, showing an increase in shipments for the month of 1,531 cars.

Nicola, Stone & Meyers are introducing Philippine mahogany into this market. Several samples have been placed with furniture manufacturers, who are trying the effects of various mahogany finishes as compared with the Mexican, Cuban, African and Honduras mahogany now on the market. The wood shows ready adaptability to high finishes, and has a very attractive figure. The color is somewhat darker than Cuban mahogany, and shows a rich, dark stripe. Experiments are now being conducted by furniture manufacturers testing its working qualities—its liability to warp or crack when subjected to working strains and conditions.

Secretary Lewis Foster of the Hardwood Manufacturers' Association of the United States, returned to his office Monday from a

trip to Memphis and Nashville in the interests of his organization, and the office took on the appearance of a very active beehive. "Hardly time to smile, let alone talk," would be a good sign for the busy secretary to hang on his door.

B. B. Burns of the Tug River Lumber Co. of Bristol, Tenn., was a caller at headquarters during the past week.

The Queen City Furniture Club held its annual election on December 1. The hall of the Business Men's Club was turned into a great election booth, with the colors of the contending parties, the Reds and the Blues, used in the decorations and the lighting scheme. The Australian system of balloting was carried out. The polls were open from 7:30 to 8:30, and on the closing of the polls and pending the count of the ballot, the business session was held. Announcement was made of the annual convention of the Hardwood Manufacturers' Association of the United States, which holds its convention in this city, at the Sinton Hotel, on February 1, 2 and 3, and to which consumers of hardwoods are invited to attend, and it was decided to urge all Cincinnati furniture manufacturers to be present at the convention. Several members announced their intention of attending the Rivers and Harbors Convention at Washington, D. C., on December 8, 9 and 10. The officers elected were: William J. Sextro, president; Joseph A. Sprengard, vice-president; Louis Schneider, treasurer; Wash Rees, secretary.

Clif S. Walker, president of the Bayou Land & Lumber Company, returned last week from a two-weeks' visit to Louisiana, where he went with a company of well-known Cincinnati capitalists to look over a valuable timber right, with a view to purchase. The company spent the time looking over the tract, which contains 60,000 acres, and is located in Concordia Parish, La. The land is covered with virgin forest, for the main part oak and other hardwoods. The excursion proved most satisfactory and the land, as far as practicable, was bought outright. The company will at once purchase equipment and erect a large mill and cut the timber. Mr. Walker expressed himself as satisfied with the deal. He said that he found the woods so delightful that, after the business was consummated, he spent three or four days in fishing and hunting on the tract. He leaves for New York City in a few days to complete arrangements for opening up the tract at an early day.

Superintendent Charles J. Murray of the Cincinnati Chamber of Commerce, who is a great favorite with the hardwood lumbermen who operate on change, has been ill for several weeks, and is now recovering. Mr. Murray has been superintendent of the exchange for a quarter of a century and is long past three score and ten.

Ferd Brenner of the Ferd Brenner Lumber Company left last week for Alexandria, La., where his company operates a large mill, in charge of W. F. Best, vice-president of the company.

Ralph McCracken of the Kentucky Lumber Company spent several days last week at the Burnside plant of the company. J. M. Cheely started for Arkansas and the Southwest about the same time, looking up lumber contracts in which the company is interested.

A most unexpected compliment was paid to the integrity of a number of Cincinnati's hardwood lumbermen last week by a well-known commercial agency when, upon inquiry, it was revealed that the houses inquired into were not only sound financially as to their business, but that they were also so well blessed with this world's goods as to be the financiers of other manufacturing industries.

T. B. Stone of the T. B. Stone Lumber Company is back at his desk in the Union Trust building, after a business trip to New York

and the East, which he says was quite successful. He reports business keeping up remarkably well for this time of the year, and the outlook for the future very bright.

W. A. Bennett, T. J. Moffett, B. F. Dulweber and Clinton Crane, representative lumbermen of the Queen City, left Tuesday at 2:15 for Washington, D. C., to attend the Rivers and Harbors Congress in the interests of a nine-foot stage in the Ohio river.

Fred Conn of the Bayou Land & Lumber Company, in the Mitchell building, is displaying in his office a plank of quarter-sawn white oak which is twelve feet long and twenty-three inches wide. There is not a defect in the plank, and it has the small, wavy stripe which is much in demand by manufacturers of furniture for "tops." The plank was one of a carload of quarter-sawn white oak, manufactured at the company's mill in Hale county, Ala., every board of which was twenty inches and over in width. This is claimed to be the best carload of quarter-sawn white oak seen in this market for several years.

R. C. Witbeck, secretary and manager of the local department of the Ferd Brenner Lumber Company, says the domestic trade is fair. The foreign export trade, however, is not very active, though the prospects look somewhat brighter.

E. A. Deem of the Miami Lumber & Veneer Company of Dayton, Ohio, was in this city last week, hustling for business.

The United Building Material Company, successors to C. H. Pease & Co., has been reorganized. B. A. Kipp is president, R. H. Hackett vice-president, H. Huber secretary-treasurer. These, with Tilden R. French and A. B. Ideson, constitute the board of directors. C. H. Pease, former president of the United Building Material Company, has withdrawn from the company and has gone to Jeffersonville, Ind., where he has joined with his brother, J. L. Pease, in the manufacture of porch columns.

E. Barry Norman of E. B. Norman & Co., Louisville, Ky., spent several days in this city last week looking over trade conditions.

R. L. Saulsberry of the Wright-Saulsberry Lumber Company of Ashland, Ky., was a caller at the Hardwood Manufacturers' headquarters in the First National Bank, last week.

Tom Orr of the Cincinnati Poplar Company, Newport, Ky., returned last week after a trip of several weeks through the East.

R. B. Kyle of the Kyle Lumber Company of Gadsden, Ala., was calling among the Cincinnati trade recently, disposing of his lumber stocks.

John L. Kaul of the Kaul Lumber Company passed through the city last week and stopped over on his way to Pennsylvania.

A. W. Euler, the European representative of Bennett & Witte, writes from Europe that he will be in Cincinnati about the middle of the month. Mr. Euler has just closed a six months' tour of Europe as a hardwood salesman with very satisfactory results.

W. F. Duhlmeier of Duhlmeier Bros. left Tuesday for Washington, D. C., to attend the Rivers and Harbors Congress as a delegate from Ohio.

The Asher Lumber Company is taking in additional ground in the neighborhood of its yards, and is putting a large stock of lumber on sticks.

Frank Scott of T. P. Scott & Co. says that this fall has been the best season experienced by his concern since the business slump, and that trade is still very brisk.

A number of Cincinnati's lumbermen received, Thanksgiving Day, neat wedding notices of the nuptials of Miss Bess Alta Buckley, daughter of Mr. and Mrs. James Buckley of Brookville, Ind. to Mr. Charles E. Webb. The

happy couple will make their home in Cleveland, Ohio. "Jim" was sent a number of letters of congratulation from his host of Cincinnati lumbermen friends.

## TOLEDO

One of the oldest as well as largest general lumber yards in Toledo recently changed hands when Barbour & Starr sold out their business to Kelsey & Freeman. The firm has been in existence since early in the seventies, and at one time was one of the largest yards in this section. Some time ago it sold its maple mill and planing plant to the Phenix Box Company, and the recent deal practically closes out its entire business here. It has extensive interests in Mississippi, to which its future attention will be given.

Hardwood ties, gotten out by a southern firm and afterwards treated to the creosoting process by an Indiana concern, are being used exclusively on the main line and the Minster branch of the Lake Erie & Western in this state. The ties are being distributed at convenient intervals for use when needed. They are the first of the kind received in this section.

A jury in the common pleas court at Toledo this week disagreed in the \$10,000 damage case of Charles Jensen against the Skinner Bending Works. The plaintiff lost two fingers while operating one of the saws of defendant.

The Superior Supply Company of Toledo was recently incorporated with a capital stock of \$30,000. It will deal in builders' supplies and materials of all kinds. The incorporators are Philip Garrigan, contractor; Samuel Hildebrand, contractor; A. B. Luten of the A. B. Luten Brick Company; William C. Brown of the Philip Carey Roofing Company and C. B. Mathes of the Luten company. Large yards with dock and railway facilities will be secured, and an effort is being made to get other contractors and supply men into the company.

## INDIANAPOLIS

Ernest Taylor of St. Louis visited the trade here recently.

Following a trip through Mississippi and Alabama, E. H. Greer of the Greer-Houghton Lumber Company has returned home.

F. P. & W. Ice, hardwood dealers of Mount Summit, have been succeeded by F. P. Ice & Son.

Frank P. Ice has just purchased the hardwood timber on twelve acres of land near Muncie at \$133 an acre. The purchase was made from Orville Boor of Muncie and the price the largest ever paid in that vicinity for standing hardwood.

Building permits issued in this city in November amounted to \$345,185 as compared with \$270,557 in November, 1908. The aggregate permits for 1909 will be about \$1,250,000 more than last year.

The Gemmer Lumber Company, which recently acquired the business of the Standard Veneer Company, is making a number of improvements and has increased its capital stock from \$12,000 to \$25,000.

It is stated that the McDougall kitchen cabinet plant will locate in Frankfort instead of rebuilding in this city. The plant here was destroyed by fire. The company, formerly G. P. McDougall & Son, has reorganized under the name of the McDougall Company, with an authorized capitalization of \$300,000.

The R. W. Monger Lumber Company has just been organized at Elkhart and incorporated with an authorized capitalization of \$40,000. Those interested in the concern are R. W. Monger, Bertha A. Monger and F. W. Gampher. John L. Hinshaw, Edwin M. Hinshaw and

John F. Beals are interested in the Grant Lumber & Timber Company, just organized here, and which will make a specialty of hardwoods. The company is incorporated and is capitalized at \$10,000.

J. P. Huffman and A. P. Conklin of the J. P. Huffman Lumber Company recently returned from an extended business trip through the South.

The Security Ladder Company has just been organized at Goshen and is capitalized at \$25,000. Members of the company are William O. Valette, George A. Riley and Lou W. Vail.

The board of public works, Indianapolis, is preparing to let contracts for all of the hardwood counters and grille work in the new city hall building. Specifications are now being drawn. The contract will amount to about \$10,000.

The Wood Mantel Manufacturers' Credit Association met in this city a few days ago in annual convention. The principal topic of discussion was methods of publicity. Manufacturers reported an encouraging trade during the year, but at the same time complained of the encroachment of mantels made from other materials. Officers elected were: President, H. C. Steul, Buffalo, N. Y.; vice-president, M. L. Dame, Harriman, Tenn.; secretary-treasurer, H. T. Bennett, Indianapolis; executive committee, G. O. Eha, Cincinnati; J. J. Price, Knoxville, Tenn.; G. W. Johnson, Moline, Ill.; W. F. Stuhlmiller, Buffalo, N. Y., and C. W. Fox, Detroit, Mich.

## MEMPHIS

The E. Sondheimer Company states that it is meeting with a good run of orders, and Max Sondheimer, president, stated at the meeting of the club Saturday afternoon that he would have to decline the nomination for vice-president of that organization because of the belief that the coming year would be one in which he would have to give all of his time to the business of his firm. The club would not accept his declination, however, and he will make the race. The statement is given only to show what some of the prominent members of the trade here are looking forward to during the coming season.

C. D. Hendrickson, a prominent manufacturer and wholesaler, reports an improvement in the demand and states that his mills are working on full time and that they will be kept in steady operation.

C. L. Wheeler of J. W. Wheeler & Co., Madison, Ark., says it is still impossible for his company to operate its mill at Madison, but that, as soon as the water stage will admit, it will be placed in operation on full time.

James R. Blair of the L. H. Gage Lumber Company and the Crittenden Lumber Company, which has its big mill at Earle, Ark., is authority for the statement that the latter is working at full capacity and that all the hardwood plants in that section of Arkansas are being worked on full time.

C. R. Ransom of the Gayoso Lumber Company says that, while his firm has not shipped quite as much lumber during the past thirty days as during the preceding similar period, it is enjoying a very satisfactory run of business and that its stock has improved in quality materially as a result of the delivery of a great deal of low-grade stock.

The J. W. Thompson Lumber Company reports a very good demand for its output. The mill of the Brasfield-Thompson Lumber Company at Biscoe, Ark., however, has been closed down for some days. The shut down is only temporary.

C. L. Willey, Memphis and Chicago, has recently installed a resaw here that will bring the capacity of the firm to 1,500,000 feet of hardwood lumber per month. This will be in

readiness for operation by the middle of December. Within the past few months the firm has increased its facilities for the manufacture and prompt drying of veneers and now has a capacity of a full car per day.

J. F. McIntyre of the Memphis Veneer & Lumber Company, North Memphis, is authority for the statement that all the veneer machines this firm will install have already been set up and that it is running at full capacity and is finding a very satisfactory demand for its output. This is the company which bought out the holdings of the old Memphis Rim & Bow Company in Memphis.

The East End Lumber Company, recently incorporated with a capital stock of \$10,000, is now erecting a hardwood mill east of this city which will cut between 25,000 and 35,000 feet. Furthermore, it may be stated that the plant will be in readiness for operation by January 1. The principal incorporators are J. P. Bailey of the Valley Log Loading Company; R. M. Bailey, an Arkansas lumberman, and N. A. Hurst, who has been employed by local lumber firms in a number of capacities. The plant will be located on the Union railway (Belt line).

The E. Mossman Lumber Company has purchased the site of the old Standard Box Company in the eastern part of the city and will remove its plant to this city. It has its headquarters at Ft. Wayne and Evansville, Ind. This is the third or fourth Indiana firm to decide on removal to Memphis within the year.

J. M. Brown and A. E. Silverthorne, who recently purchased the controlling interest in the Interstate Lumber Company, which has a large band mill at Columbus, Miss., and extensive timber land holdings in east Mississippi and west Alabama, are among the incorporators of a new railroad which is to run from Winfield, Ala., via Columbus, to some point on the Alabama, Tennessee & Northern, probably Aliceville or Dancy. These gentlemen, together with the other stockholders, have already applied for a charter and the announcement is made that, as they have plenty of money for financing the new road, this is to be completed by the end of 1911 at the latest.

The announcement is also made that the Goodyear interests have decided upon the extension of the New Orleans & Great Northern in an easterly direction about fifteen miles from Columbia, Miss., in order to facilitate the development of some of their extensive timber land holdings in that section. Additional interest is lent to this announcement because of the belief that it foreshadows the removal of the plant and yards of the Pearl River Lumber Company, a subsidiary of the Goodyear syndicate, from Brookhaven to Columbia or Georgetown, Miss. Work on the extension is to begin immediately after the first of the year, the locating surveys having already received the approval of Mr. Goodyear, president of the New Orleans & Great Northern.

The New Orleans, Mobile & Chicago Railroad Company has been formally chartered under the laws of Mississippi, Alabama and Tennessee and has already taken over the Mobile, Jackson & Kansas City road, which runs from a point in Tennessee through east Mississippi to Mobile. The new owners have ample money behind them and additional interest is lent to the change of ownership of the Mobile, Jackson & Kansas City by the fact that the new management proposes to extend the line farther north, probably to Jackson, Tenn., and to make other noteworthy improvements in the property.

The legal separation of the Rock Island and Frisco Systems will, aside from the divorcement of the offices and forces that have been employed in this city, have little bearing on the local situation. Lumber interests, however, are pleased to note that there will be increased competition, believing that this is more than apt to result in even better service than afforded under the consolidation of the two roads.

Joe Hattendorf, who has been assistant freight agent of the Illinois Central, with headquarters in this city, has been promoted to the office of assistant general traffic manager, with headquarters in Chicago, and it is understood that D. W. Longstreet, who was in Memphis until about eighteen months ago, will be returned here. Mr. Hattendorf, while comparatively young, has risen rapidly and his many friends among the lumber fraternity are very much pleased over the last promotion given him, although very sorry to lose him from among their number.

President W. K. Kavanaugh of the Mississippi Valley Transportation Company recently launched with a capital stock of \$10,000,000 and numbering among its stockholders and incorporators some of the leading business and professional men of Memphis, addressed the Business Men's Club here during the past week on the plans and purposes of this company. Mr. Kavanaugh has been a most important factor in the advancement of the cause of "fourteen feet through the valley," and he pointed out that the launching of the big carrying company he is backing will tend to stimulate Congress to greater activity in connection with improving the Mississippi and thus hasten the day when the channel is deepened from the lakes to the gulf. He also pointed out that the rehabilitation of steamboat service on the Mississippi would be of untold benefit to every city on the Mississippi and to all the territory contiguous to this mighty stream. He insisted that the company proposed to establish terminal facilities entirely in keeping with its needs and the needs of the different river cities and that the actual beginning of operations would result in a decided decrease in rates on the heavier classes of freight. Mr. Kavanaugh pointed out also that, while the capital stock is \$10,000,000, the company would begin its service when \$1,891,000 was actually paid in. He stated that in Memphis alone the company would expend at least \$150,000 in terminal facilities. There were a number of prominent lumbermen attending the meeting addressed by President Kavanaugh and the statement may be made that they are enthusiastic over the promise of rate regulation held out by the company of which he is the head.

The Queen City Wagon & Manufacturing Company has been incorporated under the laws of Mississippi, with headquarters at Meridian. The capital stock is \$10,000, and W. G. Jackson and others are the incorporators.

There is bright prospect for the resumption of the big plant of the New South Plow Works, Columbus, Miss. F. D. Lundigan, Marion, O., has secured an option thereon which expires January 1, and those who know him well express confidence in his exercise of the option of purchase before its expiration. The plant is a very large one and quite an important consumer of hardwood lumber.

The Bayou Meto Lumber Company has been granted a charter under the laws of Arkansas, with headquarters at Stuttgart. Its capital stock is \$10,000. Charles H. Odell and others are the incorporators.

The Loholis Lumber Company, incorporated under the laws of Indiana, is preparing to do business in Arkansas, with headquarters at Frinkley. A copy of its articles of incorporation has been filed with the Arkansas authorities and John B. Jones, Brinkley, has been named as state agent.

The Luxora Coopers Company of Cape Girardeau, Mo., has also filed a copy of its incorporation papers with the Arkansas secretary of state and has named George E. Carter of Luxora as its agent for that state. The company is capitalized at \$40,000 and claims to have \$30,000 invested in Arkansas.

The Huntington Wood Manufacturing Company of Huntington, Tenn., will engage in the manufacture of boxes, crates and baskets at Hope, Ark. A site has already been selected and

work on the plant will be begun as soon as the machinery arrives. The company will employ about seventy-five persons. B. F. McCrosky, who will be general manager, has already removed from Huntington to Hope and will be in active charge of construction and operation.

The charter of the Ohio Handle Factory of Jonesboro, Ark., has been amended so as to increase the capital stock from \$40,000 to \$80,000.

When this issue of the HARDWOOD RECORD reaches its readers Clydes S. Lambert will have joined the ranks of the benedicts. Cards have been out for some time announcing the approaching marriage of Mr. Lambert and Miss Lucile Jane Merriwether of this city. The bride-to-be is quite popular in Memphis social circles, while Mr. Lambert is well known among the local hardwood fraternity and has also a wide acquaintance among the general hardwood trade. He is a member of the Nickey & Sons Company and is also prominently identified with the Lumbermen's Club of Memphis. The ceremony will be held at the Central Baptist church on the evening of December 8.

J. W. Thompson of the J. W. Thompson Lumber Company has recently returned from a business trip to Chicago and other markets.

W. B. Morgan of the Anderson-Fully Company has returned from an extended trip through Texas.

Wick Ransom of the Gayoso Lumber Company is the proud father of a boy who arrived at his home only a few days ago. "Wick" is rather modest about the youngster, but "Brother Charley" says it is the greatest boy of the age and predicts that he will be able to go all the day and night gait of the lumbermen of Memphis before he becomes very much older. This isn't all "Brother Charley" says, but it will give some idea of the high esteem in which the latter holds his little nephew.

The Lamb-Fish Lumber Company is working its big band mill at Charleston at full capacity and its other woodworking plants at that point already completed are also going on full time. Its box factory at Chaney is handling a very satisfactory volume of business also. This company is now erecting the necessary buildings for its planing mill and dimension stock plant at Charleston and will later transfer its box plant at Chaney to Charleston also, in line with its plan of consolidating all of its manufacturing enterprises at the latter point.

A. G. Fritchey of the Lamb-Fish company is leaving for the North and East and will be gone for some time. He says, however, that he will be back in time to make a strenuous effort to secure enough votes to insure his election as one of the "two-year" directors of the Lumbermen's Club, for which he was nominated at a recent meeting.

Mr. Ransom, father of C. R. and W. A. Ransom, was a guest of his sons in Memphis during the past week.

The Bellgrade Lumber Company, with headquarters in this city, and with its big mill and timber land holdings at or in the vicinity of Belzoni, Miss., states that there has been a very decided change in the attitude of large consumers of lumber and that there is not only a more active demand but that the indications point to still further improvement. In fact, this company reports that it has booked enough orders already to run until after the first of the year, and that, owing to this fact and to the belief of the management in still higher prices, it has temporarily withdrawn its stock from the market. This is almost without precedent for a number of months except in the case of some firms which have persistently refused to sell their lumber during the depression in prices, and is regarded as highly significant.

R. J. Darnell, Inc., reports a very satisfactory demand for its output. The firm is running both of its big band mills here and its entire

venor machinery. It is also working its allied plant at Leland, Miss., on full time. This is operated by the Barnell Love Lumber Company.

## NASHVILLE

Nashville in the near future, it is learned from local lumbermen, will likely secure a handsome addition to her list of flooring plants and lumber establishments. The Strasburg Manufacturing Company of Saginaw, Mich., is said to have secured options on a site on the river front in East Nashville upon which will be erected a large flooring plant. The investment will represent something like \$150,000.

The plant of the A. L. Hayes Stave Company in East Nashville has been sold to the Home Building Company of Nashville for a consideration of \$10,000. The plant covers some eight acres and has been successfully operated for the past ten years.

Following a meeting of citizens and shippers living in the valley of the Cumberland a local association has been organized with the object of securing further improvements from the government for the Cumberland river. The association proposes to work through congress, and it has constituted an executive committee with power to send out representatives to secure data for the congressional committees. It is to be called the Nashville Cumberland River Association and will cooperate with the Cumberland River Commission. Nashville lumbermen are greatly interested in any move to improve transportation facilities on the Cumberland through the lock and dam system, and among the members of the executive committee of the local association is John B. Ransom. It is expected that the local association will soon have a membership of at least 200.

Although this is not the season of the year for any particular activity in the matter of building permits, yet the totals in Nashville for November, 1909, are well above those for the same month in 1908. The figures are \$86,540 for 1909 in November as against \$58,734 for the same month in 1908.

John B. Ransom and John W. Love of the executive committee of the local Y. M. C. A. met this week with the other members of the committee and following the session it was announced that the committee had agreed upon a site for the new Nashville Y. M. C. A. building, which will cost \$200,000. This site will not be made public, however, until the next meeting of the committee on December 15.

The Nashville Hardwood Flooring Company is making extensive improvements to its big plant in West Nashville. In a new building, 50x90 feet, twelve new machines will be installed, including band, rip and re-saws, and two big matchers. In addition the company is also installing a blower pipe system which, when finished, it is said, will be the largest blower in operation in the country. It is estimated that these improvements will enable the plant to turn out about 75,000 feet of its Acorn brand of flooring a day.

Lewis Doster, the popular secretary of the Hardwood Manufacturers' Association, and who once, not so long ago, claimed this city as home, was back in town the other day "on business," and greeting old friends who gripped his hand in welcome. Mr. Doster was most enthusiastic concerning the prospects for the approaching annual meeting of the association in Cincinnati, next February. He believes that the meeting will be one of the most interesting as well as one of the most important yet held. The uses of hardwoods, both from the standpoint of the sawmill man and the consumer, will be among the interesting subjects to be discussed.

A special from Lexington, Tenn., announces that a new wholesale and retail lumber con-

cern has been organized there and known as the Morgan-Fuller Lumber Company. The officers of the company are: G. A. Morgan, president; G. B. Morgan, vice-president; A. H. Fuller, secretary-treasurer, and T. A. Morgan, assistant secretary. The Messrs. Morgan live near Wildersville, Tenn., where they have a large sawmill. Mr. Fuller will install an office at Lexington.

A. M. Petway of Dickson, Tenn., has recently purchased a body of fine timber from J. M. Pardue and will install a mill on it in the near future.

Specials from Sparta, Tenn., announce unusual activity in that section in the past few weeks. Hundreds of wagons of lumber, it is said, have been brought to town and then shipped away on the N. & C.

There is now no further danger from forest fires in Tennessee. The winter rains and rough weather seem to have set in for keeps and in many sections fires that have burned stubbornly were quickly extinguished in the drenching December downpours.

A recent visitor to Nashville was Gardner I. Jones of Boston of the Jones Hardwood Company of that city. He came South not only to buy lumber but also to ascertain conditions in the producing center.

The Prewitt-Spurr Manufacturing Company reports active business, especially the woodenware portion of its operations.

The Davidson, Hicks & Greene Company reported excellent business. It has been busily engaged for weeks in putting in a good supply of lumber at its mills.

Interesting and, it may be said, startling views are entertained by Maj. W. M. Harts, government engineer at this point, upon the kindred subjects of reforestation, rainfall and floods. Mr. Harts combats the views of the government forestry bureau regarding the effect of deforestation on rainfall and the flow of rivers. He favors the restoration and replenishing of the forests in order to protect the lumber supply of the future, but he states that on the other hand many noted meteorologists have long since abandoned the idea that trees in any way affect the rainfall. He challenges to production of any record showing any change in the climate of a section on account of deforestation or reforestation. He grants that trees hold back water, but does not agree that this is always advantageous. He figures the deforestation of the Cumberland valley during the past thirty-five years to have been upward of twenty per cent; he declares that records show the floods have diminished in height and their duration has shortened. He says that if this same logic were pursued to its end it would result in a proposition of deforestation in order to benefit the streams below.

A new railroad line, which will open up a timber section on the Tennessee and Mississippi lines, has applied for a charter. The incorporators are T. D. Webb, Charles Carter, George R. Knox, Samuel Caldwell and T. H. Crotzer Jr. The capital stock is \$250,000. The line will run from a point in Tennessee near Brownfield to Jackson, Miss., and will be fifty miles long. When built the line will be turned over to the M. K. & T.

Claiming that he represented a branch of the Barrett Lumber Company of Chicago, at the town of South Bend, Ind., a smooth stranger is said to have "taken in" a number of people in the neighborhood of Dresden, Tenn., recently. His game was to buy lumber and consign the same to the branch termed "Barrett-Williams Lumber Company," of South Bend. He would pay cash for the first shipments and then, on the strength of his first orders, would order more; this time a check was to follow upon the arrival of the lumber. The stranger, who presented himself as a "Mr. Williams," is said to have bought some fifteen carloads of

lumber in this manner, operating around Dresden, Jackson and Camden. He was arrested and put in jail at Camden, Tenn.

## CHATTANOOGA

A. M. Thompson, manager of the Consumers' Lumber Company, has returned from Hazelton, Pa., where he was called by the sudden death of his brother, George W. Thompson.

Among the recent callers among local lumbermen was W. H. Braddon of London, Ontario. Mr. Braddon is president of the Scott Lumber & Machine Company and vice-president of the Columbia Handle Company, both of London, Ont. The latter company owns and operates mills in Alabama and Tennessee and Mr. Braddon is here for the purpose of inspecting a 3,000-acre tract of lumber near Paint Rock, Ala. He will look over some ash forests in Missouri before his return.

W. E. Campe & Son Company is the style of a new firm just incorporated here to deal in all kinds of lumber and timber, as well as to manufacture the same. The new concern is capitalized at \$35,000.

The Case Lumber Company is closing out its yard near Rossville, Ga., owing to the expiration of its lease there. In the future its yard will be at the Case-Fowler mill, at Anderson, Tenn. The company's main office will be at the Chattanooga Wheelbarrow Company's office, Mr. Fowler being the head of both firms.

The Lamb-Fish Lumber Company of Charleston, Miss., started its mill on November 8 after a shut-down of about 60 days for repairs. The company will move its mill at Chancy to the former place.

The mills in this section that depend upon getting logs by rail are meeting with more success this fall than they wish for. Their yards are full and overflowing and side tracks are full of cars waiting to be unloaded. The logs are of a better quality than has been seen here for some time.

The Cincinnati edition of the Record was quite interesting to Chattanooga lumbermen and among the familiar faces shown, Ferd Brenner and W. F. Best were once in business here, and W. E. Heyser was partially raised in this city.

## BRISTOL

An important deal was consummated last week, when the Morton, Lewis, Willey Lumber Company, which has for fifteen years operated a band mill in Bristol, sold its planing mill and mill and yard site in Fairmount to the Peter McCain Lumber Company of Bristol, formerly the Paul W. Fleck Lumber Company. The purchasers get everything east of the line of the Bristol Belt Line railway, and will take possession January 1. They will operate the planing mill and use the yards. The yards of the company at the old James Strong Lumber Company site, in south Bristol, will be abandoned at once.

The Conasuga Lumber Company, of which John B. Ransom, of Nashville, is president, is extending its holdings. The company has a band mill in Polk County, east Tennessee, and is operating extensively in this section.

The Yellow Poplar Lumber Company of Coal Grove, Ohio, has about finished cutting out the yellow poplar timber on its Buchanan County, Virginia, tract, and will shortly turn the band mill at Whitewood and the remaining timber over to the C. L. Ritter Lumber Company of Bristol, which purchased the property some months ago and which will operate the mill.

J. A. Wilkinson has purchased additional timber holdings in West Virginia and will extend his operations in that state. His Bristol mill is running regularly and inquiry at the general offices of the company reveals the fact that the company is enjoying a good trade.

E. L. Warren of the Warren-Whaley Lumber Company is back from a trip to the East. He left orders for more than 2,500,000 feet of lumber, for spring delivery.

W. S. Whiting of the Whiting Manufacturing Company was here this week and visited his company's band mill at Abingdon, where he found things moving along nicely. He says that the outlook for the lumber trade was never better than it is right now.

There is not a car shortage in this section, though the railroads report that all their transportation equipment has been pressed into service by the general increase in business.

Judge Hal H. Haynes of Bristol a few days ago heard a cross-bill, filed by C. B. Allen, asking for a receiver for the Standard Oak Veneer Company. He took the matter under advisement. Some weeks ago he dissolved an injunction appointing a receiver for the company, on the ground that the proof did not show that it was justified.

One million dollars is involved in a coal and timber land deal just consummated, whereby a West Virginia syndicate, headed by D. A. Ohley, acquires a 29,000-acre tract of land in Buchanan and Dickinson Counties, Virginia.

The yards of the T. W. Thayer Lumber Company, at Damascus, Va., near Bristol, were destroyed by fire this week, entailing a loss of \$8,000, with no insurance.

W. M. Ritter of Columbus, Ohio, head of the W. M. Ritter Lumber Company, which operates extensively in this section, is here this week with a party of friends on a hunting expedition.

## LOUISVILLE

Thanksgiving was spent by the hardwood men in the most enjoyable ways. Business was, of course, quite abandoned. Some hunted, others attended the big football game, which is always an occasion of delight to Louisville people, though it is only a "prep" affair, and others stayed at home and played with the children. It would perhaps be invidious to say who did which, so the division will just be allowed to stand as stated.

Members of the Hardwood Club are much pleased with the announcement that the good roads amendment to the state constitution, which it was reported at first had been snowed under at the election November 2, won by a majority of 5,000, as shown by the official count. A banquet is to be held here December 15 for the purpose of celebrating it.

J. E. Davis, brother of Edward L. Davis of the hardwood company of that name, was in town last week. He said that many logs are being cut and that operations have been extended until late this fall on account of good weather. Good roads are getting more plentiful in the southern part of the state, especially in Logan, Simpson and Barren counties. His men have cut enough white oak logs to last both the Glasgow and the local mill for four months.

R. F. Smith of the Ohio River Sawmill Company was one of those who hunted Thanksgiving. He had pretty good luck and shot a lot of quail. He is hunting again this week, being almost inseparable from his dog and gun at this season of the year. He said that business is good and prices steady, and that shipments have been up to the average.

The Louisville Point Lumber Company people have all they can do. Business is good and prices are holding up well. As soon as the river rises logs will begin coming down from the mountains. The company gets all of its logs by water, some of them coming from points back in the hills 150 miles from a railroad. A lot of this is low-grade stuff, however, which wouldn't do to transport by any more expensive method.

D. E. Kline of the Louisville Veneer Mills, the new member of the Hardwood Club, is much

pleased with his experience with that organization, and said that he hopes to get as much from it in a social way as in the way of business advantage. He is preparing for the annual meeting of the veneer men this month and thinks that higher prices will be the principal topic of conversation there. Mr. Kline has noted during the past year or two an increasing demand for Circassian walnut, which he said is being sold in this country principally by English firms. Regarding another feature of the veneer business Mr. Kline said: "The gum men ought to realize that gum is here to stay and that it will command better prices if they'll only ask for them."

J. G. Brown of W. P. Brown & Sons Lumber Company is down South looking after getting out lumber for his company. T. M. Brown, who is staying on the job, said that everything is in fine shape and that the demand for all grades is good.

Clarence R. Mengel, president of C. C. Mengel & Brother Company, spent Thanksgiving playing golf. J. C. Wickliffe, secretary of the company, has returned from the West Indies. During the heavy storms which passed over that section he was at Inaugh, a port of the Bahamas. D. C. Harris, traffic manager of that company, who is a member of the Transportation Committee of the Hardwood Club, was much interested in the plan of demurrage suggested by the National Association of State Railroad Commissioners at its recent meeting in Washington. This practically coincided with the suggestions made by the Hardwood Club to the subcommittee of that organization. A. T. Siler, chairman of the Kentucky Railroad Commission, has announced since his return from the Washington meeting that he favors reciprocal demurrage, or in lieu of that average demurrage. He said that a meeting to consider this question will be held shortly after January 1.

Barry Norman of E. B. Norman & Co. watched the high school football team play and win Thanksgiving day. He used to be a member of that eleven himself, so that he enjoyed its triumph hugely. A week or so before he had taken an automobile trip with his father, A. E. Norman, and hunted quail in the fastnesses of Shelby county. They had good luck. Business with his company is good, he said, and the box factory, which is being looked after by S. E. Booker, is working overtime to take care of all the orders which have come in.

The mill of the Mengel Box Company at Hickman narrowly escaped being burned when the oil mill of Richmond & Bond was consumed with a loss of \$100,000. The employees of the company, who have a fire department of their own, turned out and prevented the flames from reaching the box factory. The company has subscribed \$5,000 to a fund for the construction of a levee at Hickman to prevent an overflow of the Mississippi, and the levee will be built at once. It will cost \$10,000.

The creditors of the Kentucky River Poplar Company, which has been put into the hands of a federal receiver, are seeking to compromise their claims, and a meeting for this purpose was held recently at Lexington. Lumbermen believe that the company is inherently sound.

An interesting fact was brought out recently in a local paper which stated that four of the largest industries of their kind in the world are located immediately adjoining each other in South Louisville. Three of them, as it happened, are interested in the production or consumption of lumber. The companies are the Kentucky Wagon Manufacturing Company, C. C. Mengel & Brother Company, B. F. Avery & Sons, plow manufacturers, and the Standard Sanitary Company. They have a combined capitalization of \$15,000,000 and employ 5,000 men.

Kentucky lumbermen are much pleased with the showing of this state in the census report of the lumber business covering 1908. It is shown that there were 1,530 active mills in op-

eration, a gain of eighty over the preceding year, and that Kentucky is first in the production of oak, the amount being 138,863,000 feet, or 30.4 per cent of the total production. Kentucky is one of four states which furnished two-thirds of the output of yellow poplar, and is well up in the production of red gum, though this showed a decrease compared with 1907. In the production of hickory, walnut and sycamore this state was ranked among the leaders.

The Waller Manufacturing Company of Lexington suffered a loss of \$2,000 by fire December 2. It manufactures furniture.

The cost of the furniture which has gone into the new capitol of Kentucky at Frankfort is given as \$50,000. It is made of mahogany and oak and is the output of a Milwaukee concern.

Henry Wolke, former president of a furniture manufacturing company of that name, died recently in Pasadena, Cal.

The Salt Lick Lumber Company has increased its capital stock from \$50,000 to \$100,000. It is located in Bath county.

Mr. and Mrs. Charles C. Mengel have announced the engagement of their daughter, Miss Jane Potter Mengel, to Arthur Dwight Allen. Mr. Allen is connected with the Belknap Hardware & Manufacturing Company in an executive capacity and is prominent socially.

Here is a budget of local railroad news: The Louisville & Nashville, in order to anticipate a car shortage, is making 1,200 new freight cars. The Louisville & Nashville is reported to have bought the Lexington & Eastern with the intention of extending it into eastern Kentucky's coal and timber country. The Mountain Central railroad is being extended from Campton to Hazel Green for the purpose of opening up more timber land. The Covington & Big Stone Railway Company has incorporated for \$150,000. It will build a line into eastern Kentucky. Owensboro may be the terminus of a new railroad projected from Indianapolis. The name of the new road is the Chicago, Indianapolis & Evansville. It will go through some valuable timber and coal lands in southern Indiana and western Kentucky. The Traffic and Transportation Club, which numbers many lumbermen in its membership, has opened headquarters at 128 South Fourth avenue. J. B. Ford of the Southern railway is president.

A. E. Norman has many claims to fame. He is the head of the Norman Lumber Company, a foremost hardwood concern; he is president of the Louisville Hardwood Club, and he is the father of a family of good football players and chips off the old block in the sense of being good lumbermen, too. But he has a new distinction, that of chairman of the building committee of the Fourth Avenue Baptist church. The church is building a handsome new edifice at Fourth avenue and Oak street, and the cornerstone was recently laid. Mr. Norman took a prominent part in the ceremony, reading a history of the church and detailing the efforts of the congregation to secure the new building. The church is one of the largest and most active in the city.

## ASHLAND

The Yellow Poplar Lumber Company opened its large splash dam in the "Breaks" of Big Sandy Friday, December 3. The opening of this large splash dam was of great interest to all river operators, it being the first of its kind ever constructed. A large number of photographers were on the ground taking various pictures of the dam and logs, and a very large crowd of people from a number of cities in this section witnessed the opening of same. The work on this dam occupied several months and a channel of three miles has been cleared through the canyon, which will enable the timber to drift through with less difficulty and expense than ever before. The company will receive a very large supply of the finest poplar

timber in this, its first run, and same will be manufactured into lumber at the Coal Grove, O., mills. The company reports business very satisfactory and everything in excellent condition for a big year of business in 1910.

Giles Wright, president of the Wright-Saulsberry Lumber Company, has returned from a business trip through Canada, Michigan, Ohio and Illinois, and advises business very satisfactory and everything on the upward movement in the lumber business. Mr. Wright says that on his trip he could see every indication of prosperity, a great many of the manufacturers enlarging their plants, doubling their capacities and all of them putting in their usual number of laborers employed two years ago. The company has a large stock of lumber at present, but is not operating its band mill, as the present supply of logs is sawed out. It is, however, operating its timber tracts very heavily and with favorable tide will be supplied again with large amounts of oak and poplar timber.

R. H. Vansant of Vansant, Kitchen & Co. has returned from an extended business trip in the interests of the company and advises prospects very satisfactory. The company has opened its band mill again, sawing mostly all oak. It is shipping large amounts of poplar lumber to its various customers and is planning for a large business for 1910.

F. K. Conn, vice-president of the Bayou Land & Lumber Company, Cincinnati, O., was a business caller in our city this week. He advises business very satisfactory and states his firm is buying large amounts of lumber and shipping direct to customers. The company makes a specialty of red gum lumber, which it manufactures at its own mills in the South, operating five different mills. Mr. Conn divides his time, spending part of it in the Cincinnati office and a part at the mill operations in the South. The company exports a large amount of its gum lumber and Mr. Conn advises that prices have materially increased in all lines of stock now handled.

B. F. Searcy of the Whisler & Searcy Company, Ironton, O., has returned from a business trip to the company's mill in West Virginia and advises everything running along very satisfactorily and that the company is loading out a large amount of stock at present. Large orders are being secured for oak lumber with increased prices over thirty days ago.

W. J. Fell of Salt Lick, Ky., was a business caller in our city, spending several days at his stave plant here, and advises business very satisfactory in both lumber and staves. Mr. Fell spends a portion of his time here since opening up his factory at this place.

George Francis, representative of G. P. Magann & Co., a Canadian lumber firm, was a welcome caller in Ashland, returning from a business trip over the Lexington division of the C. & O. Mr. Francis advises trade very satisfactory and a receipt of a large number of orders for car stock.

The Ashland Lumber Company reports business very satisfactory in its planing mill and retail yards and at the present time has its band mill closed on account of log supply. It expects a good supply of timber on the first tide.

### ST. LOUIS

Building operations for November, according to the report of the building commissioner, show a gain over the corresponding month last year of nearly \$100,000. Fifty-two more permits were issued last month than in November, 1908. The total operations for the month valued \$1,458,610 against \$1,366,511 for the corresponding month last year.

The following is a report of the movement in lumber at this market during November: Receipts by rail during November, 1909, were 14,320 cars; during November, 1908, they were

11,109 cars, an increase of 3,211 cars in 1909. Receipts by river during November, 1909, were 123,000 feet; in November, 1908, they totaled 199,000 feet, a decrease of 66,000 feet this year. Shipments by rail during November, 1909, were 10,153 cars. Shipments by rail during November, 1908, were 7,707 cars, an increase of 2,446 cars this year. Shipments by river during November, 1909, were 21,000 feet, in comparison with 124,000 feet in November, 1908, a decrease of 103,000 feet.

The lumber inspected and measured by the Lumbermen's Exchange of St. Louis during November was as follows, as reported by Secretary Bush:

	1909.
Plain oak.....	124,443 feet.
Quartered oak.....	93,334 "
Ash.....	63,894 "
Walnut.....	2,578 "
Bitternut.....	283 "
Poplar.....	98,772 "
Hickory.....	6,815 "
Pecan.....	2,914 "
Maple.....	5,603 "
Basswood.....	154 "
Cottonwood.....	4,063 "
Gum.....	69,780 "
Cypress.....	217,014 "
Birch.....	15,780 "
Yellow pine.....	"

Total.....705,427 "

This is a gain this year of 33,132 feet.

The following slate will probably be put through at the election of the Lumbermen's Club to be held on December 14. The two nominating committees have met and approved the slate: President, R. J. O'Reilly of the O'Reilly Lumber Company, a hardwood lumberman; vice-president, C. D. Johnson of the Frost-Johnson Lumber Company, a yellow pine wholesaler; second vice-president, Henry A. Boeckeler of the Boeckeler Lumber Company, a retail lumberman; treasurer, E. C. Robinson, a line yard lumberman, and secretary, John B. Kessler, the present secretary.

John V. Rosewarne, inspector of the National Hardwood Lumber Association, died here on November 23 and the remains were taken to Chicago for interment. Before coming to St. Louis Mr. Rosewarne was with the Hayden & Westcott Lumber Company, Chicago, and was inspector for the Pullman Car Works in Chicago. He was an excellent inspector and was commended for his honesty. A committee of local hardwood men took up a collection for a beautiful floral piece. George E. Hibbard, local director of the National Hardwood Lumber Association, also added an individual one.

E. L. Page, manager of the hardwood department of the Alf. Bennett Lumber Company, reports a satisfactory business. Orders have been much larger in volume than was looked for at this season of the year. Prices have been well maintained.

The Schaeff, Pfau & Ganahl Planing Mill Company has removed from its old location at Kosciusko and Lafayette avenue to their new factory, at 3323 South Broadway.

The Drake Lumber Company, incorporated on November 12 with a capital stock of \$15,000, has elected its officers, as follows: R. E. Drake, president; F. S. Burbee, vice-president, and W. E. Rauch, secretary and treasurer. Mr. Drake was a hardwood lumber commission man and about a year ago formed a partnership with Mr. Burbee, and they handled hardwood exclusively on a commission basis. On the first of January a year ago Mr. Rauch joined them. They recently decided to incorporate and the Drake Lumber Company is the result.

A good business for this time of the year is reported by the Garetson-Greason Lumber Company. W. W. Dings, the Chicago manager of the company, is down at the mills of the company in the South and will be there for the next couple of weeks. He is making a thorough inspection of stock conditions.

A satisfactory condition is reported by G. E. W. Luehrmann of the Charles F. Luehrmann Hardwood Lumber Company. All classes of

hardwood lumber are in better demand, particularly gum, than they have been.

A strong demand for walnut is reported by W. R. Chivvis.

George Cottrill, secretary of the American Hardwood Lumber Company, says there is a gradual improvement being noticed in the hardwood lumber trade and sales are getting better right along.

According to George E. Hibbard, vice-president of the Steele & Hibbard Lumber Company, hardwood lumber conditions are getting to be about normal. Prices are much better than they were and the demand is increasing.

After making a trip through the East in the interest of the Lothman Cypress Company, E. W. Blumer, sales manager of the company, has returned. He says there is a rapid improvement for cypress being noticeable in the eastern market.

Among the recent visitors in this city was George W. Allport of the Allport Land & Lumber Company of Pine Bluff, Ark.

Louis F. Gruner, secretary of the Philip Gruner & Bro. Lumber Company, was quietly married here last week at the Grace Episcopal Church to Mrs. Lillian V. Powers, a widow of Richmond, Va. They have been engaged five years. They met at Richmond when Mr. Gruner was on a vacation. Mrs. Powers is the daughter of a wholesale grocer at Richmond. She is well known in St. Louis society circles. They will be at home to their friends January 1 at the West End hotel.

At a meeting of the State Forestry Commission held at the Executive Mansion at Jefferson City on November 27, plans were laid for the organization of a state forestry association patterned after those of Oregon and Louisiana and designed to promote forestry and to lay down suggestions for the conservation of the present timber supply, now fast becoming depleted. Gifford Pinchot, chief of the forestry department of the national government, will be invited to address the convention, in which his suggestions for looking after the future timber supply of Missouri will be had. Before the convention meets, Mr. Pinchot will be invited to make a tour of the Ozark country visited by Governor Hadley as a guest of the State Forestry Commission. Among the members of the commission present were W. E. Barnes and W. A. Garetson of St. Louis. The convention, which will be called by Governor Hadley, will be made up of delegates appointed by the several county courts of the state. The association proposed will go before the legislature next winter and ask for the enactment of a law creating a permanent forestry commission and providing for an appropriation to maintain it. The members of the present commission serve without pay.

Governor H. S. Hadley has appointed James S. Garetson of the Garetson-Greason Lumber Company of St. Louis, Mo., a member of the Missouri Forestry Commission, to take the place of W. W. Dings, who resigned following his removal to Chicago to take charge of the company's office there. Mr. Garetson is one of the most thoroughly experienced lumbermen in St. Louis and his appointment will bring considerable prestige to the commission. Fourteen years ago he became connected with the Garetson-Greason Lumber Company, of which he is president. During all these years he has been a close student of lumber affairs, as well as of the subject of forestry, so that it is generally felt that Governor Hadley showed very good judgment in appointing him to this important body.

### LITTLE ROCK

The H. D. Alfrey Land & Manufacturing Company is the latest large concern to be chartered by the state. It is capitalized at

\$100,000, fully subscribed, and with one of the most experienced men in the state back of it, promises to make a lively addition to the manufacturing industries of Jonesboro, where it is located. The company will manufacture all kinds of woodenware, particularly of the hardwood variety. The Alfreys are well-known in Arkansas hardwood circles.

Lumbermen all over the state have been much interested in the action of the State Tax Commission in boosting up the valuation of their lands. However, very few of them have made strenuous objection, as the "boost" has been general with all kinds of property. The commission has just given notice that the assessed valuation of timber land in Desha county is to be raised from \$3 to \$5 per acre.

According to a statement filed in the chancery court by Gus K. Jones, receiver for the Ed Murry Lumber Company, the assets of the company amount to \$23,240.12, with liabilities amounting to \$14,428.81.

The Rogers Novelty Milling & Manufacturing Company, capitalized at \$15,000, has been chartered. The company will operate at Rogers, in Benton county. Ira Prouty, O. B. Clark and G. P. Harbin are the incorporators.

One of the saddest accidents chronicled in hardwood circles in this state for many a day was the tragic death of H. M. Foley, secretary of the H. D. Williams Cooperage Company, on November 29. Mr. Foley, in company with some young ladies, was making a run in a motor car out over a part of the tram-road of the company, near its mammoth plant in Searcy county, when, in descending an unusually steep grade, he lost control of the car and it dashed down the incline at a fearful speed, throwing him to the ground and mangling his body fearfully. By a miracle the young ladies were saved, although painfully injured. One of them was able to walk back to the plant and report the accident. The young women were Miss Edith Wilson of St. Louis and Miss Ruby Duncan of Poplar Bluff, Mo.

The Rex Hoop & Stave Company, a Michigan corporation, has entered the state and will invest \$25,000 of its capital in plants and holdings at Helena, Phillips county, naming Kenneth P. Alderman of Helena as its agent.

The Diamond Lumber Company, a new company incorporated to operate in the "Pike County Diamond Field" country, has been chartered. It is capitalized at \$25,000, and the incorporators are: O. G. Gardner, Z. A. Copeland and K. E. Hallman. The company's headquarters will be at Kimberly, in Pike county.

The Lubollis Lumber Company, an Indiana corporation, has entered the state and has invested \$10,000 of its capital in Arkansas. It will have business headquarters at Brinkley, and Col. John B. Jones of this city has been named state agent. Col. Jones has also been named state agent for the Iowa Land & Lumber Company.

## BIRMINGHAM

The Alabama hardwood market continues to show increasing strength, though values are by no means what they should be. The feature of the situation right now is that the entire trade is affected by the holiday let-down. Indications are, however, that after the first of the year there will be a distinct improvement and that the output will be moved readily. Poplar seems in the best demand, with gum second. Oak is dull. The state's production has not varied to any extent.

A meeting of interest to hardwood men will be that of the Building Material Men's Exchange on December 9. At this session a feature will be the appointment of a committee on nominations for the annual elections to be held in January. Report also will be made by the

committee on affiliation with the Chamber of Commerce. The exchange is composed of leading lumbermen and building material men of this district.

A. B. Cleneay of the Oden-Elliott Lumber Company of this city, a lumber expert, is now in Mississippi.

## NEW ORLEANS

Though the local dealers report a somewhat better inquiry from Europe for hardwoods and other lumber, the situation here has not changed materially in the last fortnight. Exports have not been heavy and buyers are not active in this market. Cypress has strengthened its position somewhat lately, but generally the same conditions which applied to hardwoods a fortnight or a month ago prevail today.

The purchase of two large squares of ground at Carrollton avenue and the New Basin Canal has excited considerable interest here the last week, especially since it is intimated that this will be site for a new lumber mill. The site measures 300x600 feet. R. J. Perkins bought the property, but no announcements have been made as to the disposition that will be made of it. Mr. Perkins is the attorney for the men interested in the new corporation.

Considerable interest attaches to the efforts being made by the Illinois Central railroad to secure space along the river front on which to construct a large wharf for handling lumber shipments. The company wants to extend Stuyvesant docks and to provide in the extension for a large lumber wharf to be equipped with all the latest and most modern machinery for handling lumber. The matter is still pending.

It is stated from Lake Charles, La., that Peavey & Burns of Mansfield, La., have purchased for \$1,000,000 about 20,000 acres of land near Lake Charles and will establish a large double-band and circular mill with a capacity of 100,000 feet daily.

E. B. and S. B. Lowe of Grand Rapids, Mich., have sold to the International Harvester Company of Chicago 50,000 acres of stumpage in the vicinity of Hattiesburg, Miss. The consideration was \$1,500,000.

A new handle factory is being erected by A. L. Way of Hammond, La., at Head of Island.

## MILWAUKEE

The Mississippi River Logging Company has been chartered at Chippewa Falls, Wis., with a capital stock of \$34,500. William Irvine, Sam B. Nimmons and E. L. Ainsworth are the incorporators.

A third logging and lumber company to operate in Oregon has been organized at Janesville, Wis. The capital stock will be \$400,000, held principally by Janesville men, and it will cut 340,000,000 feet of standing timber within ten miles of Portland. Four years ago the Forks Lumber Company, capital \$100,000, was organized at Janesville and is now cutting 27,000,000 feet near Everett, Wash. Last year the Pendleton Timber Company, capital \$200,000, was formed by Janesville men, to operate on a tract of 6,608 acres in British Columbia, near Thunder Bay, containing about 325,000,000 feet of timber.

The government sawmill at Neopit, on the Menominee reservation in Wisconsin, will be equipped with another resaw and enlarged to give more room for workmen and thus make the enterprise profitable. A. M. Riley, the new superintendent, has started things with a rush and means to continue a good pace. His son, also an experienced lumberman, has been placed in charge of the logging on the reservation. Father and son form a good team and there should be no complaint.

John Rehfeld has been appointed sales man-

ager for the H. W. Wright Lumber Company of Merrill, Wis.

The Upham Manufacturing Company of Marshfield, Wis., is planning to convert its steam power plant to electric and use the individual motor system. Since the sawmill was closed the Upham company has found its fuel bills unprofitably high. The new plant will develop 400 horsepower.

The Crocker Chair Company of Sheboygan, Wis., has increased its capital stock from \$200,000 to \$500,000. Plans are under way for enlarging the plant, which is already one of the largest of its kind in the West.

John A. Johnson, for thirty-six years identified with lumbering and logging in the vicinity of Wausan, Wis., succumbed recently to cancer of the stomach. He was born in Sweden in 1845 and came to America at the age of twenty-eight.

The Wohlfinger Box & Package Company has been organized at Elmwood, Wis., with a capital of \$30,000. The incorporators are John Wohlfinger, C. L. Graves and T. J. Mahon.

Julius Ewald of Minneapolis contemplates the establishment of a box and veneer factory at Cumberland, Wis.

Electric operation of sawmills is a success, judging from the results obtained by the Good-year Lumber Company at Tomahawk, Wis. This is the first electrically driven sawmill in the world and has been running only a short time.

The McAphee Lumber Company of Cayuga, near Glidden, Wis., has started its sawmill. The company purchased the entire cut of the Cayuga Lumber Company and has several thousand feet of logs from its own 1908-9 cut on hand, so the logging operations will be postponed until after January 1.

Donald McDonald of Newberry, Mich., has been appointed superintendent of logging of the Foster-Latimer Lumber Company of Mellen, to succeed Al Stewart, who is now with the Mellen Lumber Company in a similar capacity.

The Northland Lumber Company of Green Bay, Wis., will cut 15,000,000 feet this year. The mill property has been entirely rebuilt at a cost of about \$30,000. Two hundred men will be employed in the different departments. The company has extensive holdings in the upper peninsula and there is enough timber to operate the mill at Green Bay for twenty years or more. Three camps will be established, with 150 men in each. The company owns ten miles of railway and two engines.

The Peninsular Box & Lumber Company has completed its shipments of box wood from Crivitz, Wis. The daily output averaged 30,000 feet.

The John Schroeder Lumber Company of Milwaukee will cut about 18,000,000 feet of lumber at Saxon, Wis. The damage done to its camps on Lake Superior last summer has been repaired and everything is in good running order. The Schroeder sawmill at Ashland has been closed after a cut of 25,000,000 feet.

The J. S. Stearns Lumber Company of Odanah, Wis., will cut 40,000,000 feet this winter. With about 60,000,000 feet of last winter's cut still unsawed the mills in the Lake Superior region will be busy all next summer.

The Wisconsin Veneer Company of Rhinelander, Wis., has purchased all the oak timber on the holdings of the Wachsmuth Lumber Company and the Bayfield Mill Company in the vicinity of Bayfield. Much of this timber will be cut this winter and shipped to Rhinelander.

The Diamond Lumber Company of Green Bay, Wis., expects to occupy its new steel sawmill on January 1. The building, costing \$80,000, replaces the structure destroyed by fire last summer. It is perhaps the nearest approach to a fireproof sawmill in the world.

C. H. Grundy has been appointed receiver for the Marinette, Tomahawk & Western Railway Company on application of the Bradley Company of Tomahawk. Mr. Grundy is superintendent of the road. The object of the proceedings is not announced.

John A. McDonnell of Chippewa Falls, Wis., author of "Lumberman's Log Scale Record," and known as one of the best scalers in the business, died suddenly of heart failure. He lived in Chippewa Falls for thirty years.

The English Manufacturing Company of Appleton, Wis., is building a large addition to its dry kilns. Other improvements are projected.

About 150,000 feet of choice hardwood timber in the yards of the A. J. Lindemann-Hoverson Company, Fourth and Russell avenues, Milwaukee, was destroyed by fire last week. The barns were saved and the immense plant was not touched.

The North Star Lumber Company, a Minnesota corporation, capitalized at \$500,000 and \$50,000 interests in Wisconsin, has filed a statement to do business in this state.

The veneer plant of the Morris Manufacturing Company at Morris, Wis., is being dismantled. The company was forced to close because its timber supply gave out. The plant was erected only twelve years ago.

### WAUSAU

The Rogers Lumber Company of Nashville is doing the heaviest business in its history this winter. Besides having more men in its camps than ever before, cutting logs, it is completing three and one-half miles of railroad to a tract of timber on Post lake owned by Morse & Tradewell. The Rogers company has contracted to build the railroad to the timber and saw 20,000,000 feet of logs. The contract binds the company to saw 2,000,000 feet per year. The cutting of this timber, in addition to that owned by the company, gives employment to many men. The company this fall extended its own line of railroad and now has a total of twelve miles. An additional locomotive has been purchased.

The Wolf River Chair Company of New London has installed a 200 kilowatt dynamo, which will supply 250-horsepower. The dynamo weighs twelve tons. The installation of this dynamo gives the company a large additional power over the old steam engine it supplanted.

The Bradley Lumber Company of Tomahawk recently lost a suit in which it was the prosecuting party. In the fall of 1906 Henry Mundt of Dubuque, Iowa, arrived in Tomahawk in quest of Christmas trees. He was directed to a Mr. Hicke, who bargained with Mr. Mundt for all the trees in a swamp on Mr. Hicke's farm. The Dubuque man supposed all of the swamp belonged to the farmer, but it did not, and he removed several thousand trees from the Bradley company's land. After being bound over for trial Mundt took French leave and was caught only a few months ago.

Claude Foote of Whiting felled a giant maple which, in falling, bent a beech tree and the latter, like a catapult, sprung back and instantly killed the man.

This will be a very busy winter around Bayfield. It is said that upwards of 1,000 men will be employed in the woods in that section.

For the first time in its history logging operations will be conducted on Isle Royale this winter. This is the largest fresh water island in the world. After the tug boats have made their last trip to the island with supplies, the crew will be cut off from communication with the world until late in April, 1910. The Long Point Lumber Company of Duluth is cutting the timber.

The Gooding & Mylrea Lumber Company of Wausau, with mill at Wittenberg, will cut about 1,000,000 feet of logs this winter in Forest county.

The Moore & Galloway Lumber Company of Fond du Lac, which is logging near the town of Galloway, has just completed two long spurs of logging railroad. The company is

cutting an immense lot of logs, which are being hauled by rail to the firm's sawmill in Fond du Lac. The company employs a steam loader.

The Raymond Log Loader Company of Marinette reports a very good business in its sales department this season.

The Schroeder Lumber Company of Ashland will cut about 20,000,000 feet of logs in the vicinity of Saxon this winter.

The Wiedeman-Lindem Company of Marinette is supplying the hardwood interior finishings for a large postoffice building being constructed in the West. The company is installing new machinery, which will increase its output.

The following Wausau lumber companies will cut a total of nearly 1,000,000,000 feet of timber this winter: The Barker & Stewart Lumber Company will cut 25,000,000 near Glandon; this company will also buy some from smaller concerns and farmers. The Alexander Stewart Lumber Company will cut 14,000,000 feet at Grandfather Rapids; this company is the principal stockholder in a large body of timber purchased by Wausau parties some time ago in northern Michigan. The question of whether to build a mill near the tract or to ship the logs to Wausau is being discussed by the owners. If the latter plan is adopted this tract alone will keep the Wausau mill in operation for ten years. The Jacob Mortenson Lumber Company will cut 13,000,000 feet of logs around Parrish and Bloomville; the Fred Schubring Lumber Company about 10,000,000 feet near Rinzle, and the Brooks & Ross Lumber Company (with mill at Schofield) about 30,000,000. The latter company will have three camps in Vilas county, one in Langlade county, and one each at Rosholt and Mercer. All of the logs cut by these companies will be hauled to their mills by rail and sawed. In addition most of them will buy small stocks of farmers and others.

The Monico Lumber Company of Monico Junction has been organized. B. F. Jillson is president, P. E. Kabel vice-president and treasurer, A. K. Jillson secretary.

The Wisconsin Veneer Company's plant in Rhinelander is temporarily closed on account of a shortage of logs. It is expected that a supply will be received soon sufficient to keep the plant in continuous operation.

The Consolidated Farm Company of Marshfield, which is a cooperative colony, has purchased the Aug. Stecker mill, near that city, and 4,000,000 feet of timber.

The W. H. Hatten Lumber Company of New London presented all its employers with a turkey for Thanksgiving. This is an annual custom with this concern.

The Foster Lumber Company of Hiles will cut about 18,000,000 feet of logs this winter.

The Vollmer-Below Lumber Company, Marshfield, has purchased the Maxwell mill at Melien. The plant has a capacity of 50,000 feet per day. The company owns a tract of timber near the mill which will be cut. The mill will be operated this winter.

The John R. Davis Lumber Company of Phillips, which lost its mill by fire a few weeks ago, announces that it will rebuild on a larger scale. The company has also intimated that it may move away from Phillips.

The Ingram Lumber Company, which has been doing business at Ingram for several years, has cut all its timber in that section.

A deed has just been recorded at Wausau for a large tract of land in Marathon county, sold by the Joseph Dessert Lumber Company of Mosinee to the Mosinee Land, Log & Lumber Company. It conveys over 3,000 acres and the price paid was \$133,000. It has several million feet of timber on it.

The Chicago & Northwestern Railway Company has sold to the Flanner-Steger Land & Lumber Company of Chicago 8,500 acres of

timber land near Crandon. The price paid was \$127,454. The latter company owns a sawmill at Blackwell, to which the logs will be shipped.

The absence of snow and cold weather so far has made logging conditions in northern Wisconsin anything but favorable.

### DETROIT

Building permits in Detroit during the month of November showed a gain of more than 48 per cent over November, 1908. During last month permits for 412 new buildings at a cost of \$1,414,770, as against 243 buildings at a cost of \$972,800 in 1908, are reported. The total building operations for the eleven months of this year amount to \$13,217,780, a gain of 37 per cent over the corresponding period of 1908.

A bill has been filed in the Wayne circuit court by the Detroit & Mackinac railway to compel the state railway commission to allow a larger rate on lumber from the upper peninsula. The railroad alleges that because of the thinning off of the timber in the upper peninsula and the heavy competition of the water lines it is not getting enough business to afford to carry lumber at the present rate.

W. W. Watterson of the Radeker Lumber Company of Parkersburg, W. Va., was in Detroit last week, a visitor to E. W. Leech's hardwood lumber yards.

The last boat load of hardwood lumber was brought to the Thomas Forman docks last week by the steamer M. T. Green. The cargo was maple from Boyne City.

The Auto Wheel Company has been organized at Lansing with a capitalization of \$150,000 to manufacture automobile wheels. It is a reorganization of the Lansing Spoke Company. The plant of the company has been purchased and new buildings will be erected.

"Nick" J. Whalen and other well-known Michigan men are to start a furniture factory in Bartle, Cuba, the machinery for the plant already having been shipped. Mahogany will be the chief wood used. It is expected to secure most of the skilled labor in Michigan.

### SAGINAW VALLEY

The hardwood lumber industry is holding its own. Nearly all the mills on the river will be operated during the winter. These include the Bliss & Van Auken mill at Saginaw, which is operated the year through, with a fine flooring plant in connection with the sawmill. The flooring business has improved greatly during the last ninety days and in addition to an increased domestic consumption large quantities are shipped abroad. Bliss & Van Auken are having a fine run of business and the plants are busy. The Strable Manufacturing Company, also at Saginaw, operates a flooring plant. A considerable portion of the raw material comes from the sawmill of the Batchelor Timber Company at West Branch, that company being heavy stockholders of the Strable concern. The S. L. Eastman Flooring plant is having a successful run. The company has received a large quantity of stock from the Kneeland-Bigelow Company at Bay City, taking 12,000,000 feet in 1908 and 8,000,000 feet the present year. In addition the company will receive a lot of maple lumber from the S. A. Robinson Lumber Company at Goodar, Ogemaw county, in which Mr. Eastman is one of the stockholders. The plant of W. D. Young & Co., at Bay City, is running its sawmill and flooring plant day and night and is pushed to keep pace with its orders. It is only a question with the firm of getting its stock shipped to the buyer. A good portion of the output goes to Europe. The firm is confident that flooring prices will shortly advance. The work of erecting the new Hanson-Ward flooring plant at Bay City is being pushed rapidly and

It is expected it will be ready for operation early in the year. The company is building an up-to-date plant and the machinery is new and of the most approved pattern. The Kneeland-Bigelow and the Kneeland, Buell & Bigelow sawmills are to run through the winter, the former day and night and the latter ten hours daily. Mr. Bigelow, the manager, speaks very confidently of the conditions of trade, and says he can see that business is increasing steadily from week to week and month to month, the close of every period showing an increase over the preceding one, while prices are strong and in some kinds of stock are considerably higher. The output of this firm will approximate 40,000,000 feet this year. Last year the plants were both shut down a number of months owing to dullness in the market. The Campbell-Brown Lumber Company plant and the Knapp & Scott mills have been running through the year. The Gates mill will not be operated during the winter.

Victory Bros.' single band hardwood mill, eight miles from West Branch, burned last week, involving a loss of \$8,000, with no insurance. The mill was cutting for Albert Tow, who lost lumber valued at \$2,000. The mill was cutting 20,000 feet daily.

The Richardson Lumber Company's single band sawmill at Bay City will run through the winter ten hours a day. The company has a hot water pond, into which the logs, a train load every day, which comes from the North, are dumped. The plant is cutting about 60,000 feet a day.

The Mershon-Bacon Company, at Bay City, manufacturer of box stuff from hardwood, is erecting a new plant. The plant the company has been operating is in one end of the planing mill and inadequate to the development of the company's business. The new plant will afford adequate facilities for handling the increased business, which has assumed proportions of magnitude.

Another industry that calls for a large quantity of hardwood is that of the Woodworking Company, engaged in the manufacture of hardwood skewers. The output is nearly a million a day. The product is shipped all over the world where skewers are utilized, recent orders having been shipped to London, Liverpool, Glasgow, Paris and other cities in Europe and into every state in this country. Hard maple, beech and birch are the timbers used. The company carries a stock for five years constantly on hand, and it comes from northern Michigan.

The sawmill of the Churchill Lumber Company at Alpena is still in operation, but the other three mills have shut down for the season. The mills have had a successful season and the output will exceed 50,000,000 feet.

M. D. Olds of Cheboygan has finished his logging road from the mill down the shore into Presque Isle county. He has over twelve miles of main line and eight miles of branches finished and next spring extensions will be made. The road will handle 75,000 feet of logs daily from the woods to the mill and three camps of his own and five jobbers will take the logs from the tree and convert them into saw logs. Three steam loaders and skidders will be employed. The sawmill will be operated through the winter.

The sawmill of the Embury-Martin Lumber Company at Cheboygan will be operated during the winter, cutting hardwood.

The new band mill of the E. H. Stafford Manufacturing Company at Sand Bay, Bois Blanc Island, a few miles off Cheboygan, will be completed and start operations early in the year. It will have a capacity of 50,000 feet daily, and the firm has an eight years' stock. The product to a large extent will go to the hardwood manufacturing plant of the owners at Ionia, Mich.

## GRAND RAPIDS

Gibbs, Hall & Allen, Inc., have reopened offices in the Murray building, after a short stay in the Leonard building, and Secretary W. C. Hall will give his entire attention to the lumber business again. He had been giving some time to the Cookerette Company of this city, a concern in which Gibbs, Hall & Allen are still interested, but now returns to lumber again. A. Gibbs is visiting the mills in the upper peninsula.

S. P. Coppock of the S. P. Coppock & Sons Lumber Company, Fort Wayne, was a recent caller on the lumber trade here.

Ed Ward of this city, a furniture salesman for many years, is now interested with others in a timber proposition in the upper peninsula.

Uptegrove & Beckwith, mahogany and veneers, have removed their warehouse from Muskegon and Seventh streets to Court street and Shawmut avenue, where they have a larger building and better facilities for business.

The flooring plant of the Nichols & Cox Lumber Company is being operated on a twelve-hour per day schedule and business prospects are excellent. The company will supply 400,000 feet of maple flooring for the new Wanamaker build-

ing in Philadelphia and has contracts also to supply the new government buildings in North Chicago and in this city.

The Lumberman's Club of Grand Rapids held its monthly meeting December 1 at Bauman's new cafe rooms and an excellent dinner was enjoyed by the members. Harry C. Angell of the H. C. Angell Company presided in the absence from the city of President Fred I. Nichols. Transportation matters were taken up for discussion and the queries taken from the question box proved an interesting feature as usual. The club will hold its annual meeting in January.

The forestry course at the Michigan Agricultural college, Lansing, is proving popular, under the direction of Prof. Baker. The seniors will go to the lumber camps of the W. H. White Lumber Company in Charlevoix county December 13 to spend ten days studying up-to-date lumbering methods in camp. An expert from the United States Forest Service at Washington will spend three days with the boys in camp, giving them lectures on forest exports and products. The White company is at present cutting sugar maple, beech, elm, oak, hemlock and a little white pine.

The King Milling Company of Lowell will install a complete cooperage plant in that village.

## Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

### CHICAGO

Local conditions in hardwoods are remarkably good for this season of the year. Probably the very mild weather has helped conditions in this section materially, for certainly the yard trade is very good indeed. There is every prospect of a strong demand for hardwoods throughout the winter, as there is a manifest shortage in stocks among all the leading remanufacturers in this market.

Some items of oak, poplar, birch and maple are in low supply and strong demand, but, generally speaking, there is a very fair stock in hands of local operators.

### NEW YORK

The hardwood market at New York shows an improvement from the standpoint of consumption, particularly among the local manufacturing trade. The yards are also buying quite freely and prices are much stronger all along the line. The demand for good-grade stock is holding its own and the grades less plentiful are naturally very firm, with an upward tendency. The market for good grades, however, has been assured for so long a time that the salient feature of current conditions lies in the improved demand for cheap lumber, and it has really been very encouraging during the past fortnight to note the increased demand for low-grade hardwood in many channels. The local manufacturing trade seems to be receiving increased demand for its product and in consequence is buying more freely than for many months past, which, together with the improvement in demand among the yards for winter supplies, has given a strong movement to hardwoods.

The stocks most in call are plain and quartered oak, birch, maple, chestnut and poplar. In the better grades, stocks seem to be short and the market generally is firm. There is a feeling that good-grade lumber will take care of itself very nicely under any conditions between now and spring, and that the low-grade market therefore must of necessity be commensurately improved in both the matter of demand and prices by reason of the scarcity of good-grade lumber and its naturally higher values.

### BUFFALO

It appears to be agreed among the city hardwood dealers that, though they are pretty well stocked up as a whole, it is not easy to keep a full assortment and it is not going to be easy any longer. Customers are asking for odd or unusual lengths and sizes. While the chief demand in quartered oak is for inch and five-quarter, there is call for six and eight-quarter, which most dealers cannot furnish offhand as they used to. The general demand is rather unsteady now, almost every dealer making a different report, due to the near close of the year, and though consumption is good, it does not lead to buying unless some mill has run short of this or that stock sooner than was expected and must have it quick. Oak leads, as usual, and a good supply of quartered would not last long in this market. There is none too much birch either and good poplar and chestnut sell fast, but cherry and white ash are still in their dull season. There is still an ample supply of low grades in almost any wood. The prices are pretty strong and would be stronger but for some price-cutting reported recently. It is believed by everyone that lumber will be higher next year than it is now. Hardwood lumber is going up in the South, and the Pacific coast is also putting its prices up now against the coming demand of next year. It would seem better policy to hold lumber than to sell it at a forced price.

### PHILADELPHIA

Business has been well sustained in all lines during the last fortnight. The furniture factories in eastern Pennsylvania, the automobile and carriage builders and the railroad and trolley car shops are buying more freely. Prices hold stiff in all good ends of hardwoods. Apparently there is a sufficient demand for hardwoods to absorb the present output of the mills, but unfortunately complaints are coming in from all sides of the difficulty of obtaining adequate cars for required prompt shipments. Some of the millmen, who have already sold close up to the

ax, are advising their salesmen to go slow for a while. The interior finish concerns report a copious fall business and future outlook promising. Poplar is holding a good position, with fair prices, quartered and plain oak is strong and ash is running close; chestnut commands a steady call with firm prices; maple, birch and, in fact, all the standard woods, maintain good status. Veneers are showing better and mahogany gives promise of an abundant activity and advancing prices. Although the hardwood situation has not improved in the same ratio with the cities farther west, it is confidently predicted that a rush in buying in the near future will force the values upward with a rapidity that will cause an unfortunate stampede for those who persist in playing a waiting game.

### PITTSBURG

The fine weather of the past few weeks has helped lumber sales much in the way of building operations, for yards have been forced to stock up which otherwise would have held off until after the inventory season. The average dealer, nevertheless, would much rather see cold weather now, for he believes its effect upon business in general would be enough better to more than offset the ill effect which it would have on building operations. All tendencies in the lumber market at present are toward larger orders and higher prices. The hardwood market in this respect is particularly favored, and hardwood men as a result are feeling mighty good. They have profited much lately by the enormous gain in operations of railroad and manufacturing concerns as well as by the larger purchases made by the contracting trade. It is safe to say that at least 25 per cent more hardwood was sold in November than in September. Many wholesalers claim that their November sales will be almost normal compared with the average months of 1906 and the first half of 1907. Prospects for 1910 business are fully normal in every respect.

The feature of the market during the latter part of November was the rapid and steady increase in the movement of low-grade hardwood. Sales the past two weeks, however, show that the pendulum has swung the other way and that so far as quantity, at least, is concerned, medium grade stock was much the better seller. This is bringing much business to the country mills and stocks there are being reduced rapidly. It is probable that mill inventories taken the latter part of this month will show at least 40 per cent less stock on hand than one year ago. Local car shortage on branch railroads has been reported frequently lately and the fear of a freight handlers' strike has also done much to hasten purchasing agents to get in their orders since December 1.

### BOSTON

The market for hardwood lumber has ruled a little less active since the first of the month. The falling off in demand is no doubt due to the fact that buyers try as far as possible to keep their stocks down so as to have as little on hand at inventory time as they can. Prices on all grades of hardwoods are firm, with an upward tendency. Stocks of lumber on hand are smaller than usual at this season. The piano trade has been fairly active for the past three or four months, but now a falling off is reported. One Boston manufacturer continues busy, however, and is producing seventy-five pianos a week. Chair manufacturers are rather busy and are good buyers of lumber. Furniture manufacturers in general are doing a larger business in this vicinity. Manufacturers of interior house finish have had an active fall and most of them are still to be found with a good volume of orders on hand.

Mahogany dealers report a larger demand and anticipate higher prices owing to a short supply the world over. The production was materially reduced during 1908. An advance of \$5 to \$10 a thousand is not unlikely, and it is reported that the supply is only about sixty per cent of normal. Veneers have been selling well to the furniture trade. Quartered oak continues very firm and prices tend upward. Dealers state it is becoming more difficult to find dry lumber. Sales of one-inch, ones and twos, have been made as high as \$90, but few buyers have been willing to pay more than \$88. Plain oak is firmer. Culls that sold as low as \$24 are held by some now at \$30. Maple and ash are firm with a fair demand. The better grades of cypress have been marked up.

### BALTIMORE

With the approach of the close of the year it is not to be expected that there will be a marked increase in the movement of hardwood stocks. If the demand keeps up as it has done, it must be regarded as conclusive evidence of the strength of the market, and every manufacturer as well as dealer has ample reason to feel satisfied. The movement has continued to grow notwithstanding the nearness to the holiday season, which shows still more strikingly the improvement that has taken place in the business situation. That the gains keep up is attested by all who have had an opportunity of late to get a comprehensive view of the situation. The same reports are made by those who have been in the Middle West, by those who took in the northern territory and by the millmen, who state that their plants have been and are still kept busy.

Prices are advancing not less than the consumption, and the increases are firmly maintained. Oak, ash and other woods have been marked up lately, and the manufacturers seem to experience no difficulty in getting the raise. Poplar still heads the list in point of activity, but the other woods in the hardwood list are not far behind. Stocks at the mills are small, as a rule, and the car shortage interferes materially with delivery. Comparatively few yards have laid in extensive stocks. The general replenishing of supplies is still to be done, so that default in delivery may easily give rise to embarrassment. A growing preference for hardwood floors is one of the developments of the hardwood trade in this section. The exporters are in an expectant mood. Stocks abroad have been decreasing, and the large home requirements have made the manufacturers somewhat indifferent to the foreign market. Another factor in checking the exports has been the discontinuance of the practice among brokers of advancing not less than three-quarters of the value of a shipment on the bill of lading, which was formerly a strong incentive, especially for the smaller mills, since they could get a prompt return on their output. The new year is looked to for a big improvement in the foreign business, which would have expanded before now, but has been restricted by the political situation in England, where the budget fight has affected all branches of commerce.

### CLEVELAND

The hardwood trade in this section is in an exceptionally healthy condition. There is a good movement of plain oak, although prices are scarcely any higher than six months ago. The call for quartered oak is also brisk at even prices. Poplar is moving well, some trouble being experienced by the dealers in securing sufficient quantities of high grades to go round.

The month preceding Christmas is always more or less dull, but the dealers say that they are experiencing a good line of orders and that the

outlook for a big trade in the new year is unusually bright.

### COLUMBUS

The chief feature of the hardwood market in central Ohio during the past fortnight has been increasing demand for all grades. Reports received from traveling salesmen indicate a generally good demand from practically every section of the country. The only drawback to the market at the present time is the increasing car shortage. Shipments have been delayed to a certain extent and considerable complaints have been heard, especially from Michigan shipments. Lumbermen are of the opinion that the car situation will be one of their greatest problems during the winter season.

Prices have strengthened materially under the better demand from manufacturing establishments and the yard trade. Mills which have contracts are calling for a larger amount of stock and in some instances the manufacturers and shippers are having a difficult time to furnish the extra supply. In practically every case the maximum figures in the contracts have been exceeded. Advances are reported in the better grades of quartered and plain oak. Poplar is strong, especially in the wide sizes. Chestnut is in better demand and slight advances have been made in the higher grades, particularly No. 1 common. Ash is moving better and the market seems to be broadening. Hickory is also in good demand and prices are firm. Other varieties are steady.

### CINCINNATI

The hardwood market of the Queen City, while still active, is showing the decline that precedes the closing of the year. While a few of the prominent hardwood concerns maintain a showing of great activity, the majority are willing to concede that the figures for the year 1909 are about complete, and are now patiently awaiting the opening of the year, when it is anticipated there will be a great awakening in all lines of business. There is a general feeling of confidence among the lumbermen that the opening of the year 1910 means continuous prosperity until the closing days.

Poplar seems to be the leading feature of the market at present, the transactions continue to be heavy, and there is a strong tone to the market, prices being well maintained. Quarter-sawn white oak is in good request, with a fair demand for plain. Plain and quarter-sawn red oak is in good supply, with a fair volume of trade. Ash is moving slowly, but prices are strong, with a good stock on hand and in sight. There is a fair volume of trade in hickory for wagon and carriage makers' stock, with a good supply on hand and available. Red gum is still an attraction for furniture manufacturers and the volume of sales shows a steady growth. Walnut stocks are accumulating, owing to the weakness of the demand for export. Cherry is accumulating and the stocks on hand and available are greater than for several years past.

### TOLEDO

The greater widths of poplar are in strong demand and holders of that kind of material are in position to demand fancy prices. The enormous operations of automobile concerns which use wide poplar in automobile bodies are fast exhausting the supply. Widths of 24 inches and over are extremely scarce. Other grades of poplar show signs of weakness, with a plentiful supply on hand. Oak is still in big demand, not only from builders but from factories as

well. Prices on both quarter-sawed and plain oak are still at the top notch. Maple is also strong and orders are being filled with some difficulty. There has been some call for beech at prices ranging from \$19 to \$20 for log run birch. Birch is selling around \$20 to \$22 for the better grades and is apparently much more regular than it was some time ago. There has been some call for elm, the bulk of it being used for crating purposes. While the supply of basswood is more plentiful than for some time, it is still demanding good figures. The local supply is not very large and orders are still being liberally placed for all kinds of hardwoods. The factory call for hickory, chestnut, ash and maple is at least normal and prospects are good for a fair winter trade.

**INDIANAPOLIS**

The exceptionally fine weather throughout November and the first few days of December was stimulating to the hardwood trade, and business was brisk. Business this year has been at least 30 per cent better than last, and local hardwood men say the outlook for 1910 is very encouraging.

Quartered oak remains the most popular hardwood in the local market, with prices slightly higher than a month ago. Poplar is also in good demand, with the market brisk for mahogany and other woods used largely in interior finish and furniture manufacture.

**MEMPHIS**

The production of hardwood lumber in the Memphis territory is gradually increasing and, with one or two exceptions, the statement may be made that all plants of manufacturers having headquarters in this city are running except in cases where the mills are located on streams which are at present at such a low stage as to make it impossible for them to bring out their timber. This condition is more notable at present in some portions of eastern Arkansas than in any other part of the Memphis territory and there is therefore more inactivity of plants in that region than anywhere else in the Memphis district.

The market is improving and the undertone is becoming much better, with the result that manufacturers are anxious as a rule to increase their holdings of lumber. The belief prevails that the new year will bring a much increased demand and that the spring trade will be large. In Memphis proper practically every hardwood mill is running on full time and all the wood-working plants, including the box factories, hoop mills, stave plants, dimension mills and others, are running at full capacity.

Shipments of lumber during the past few weeks have been on quite a large scale, with the result that there has been a tendency toward decrease in the amount of lumber on local yards. There has been also a decided gain in the amount of low-grade lumber shipped, with the result that the stock of lumber here is better, as a whole, than it has been for a long time. In fact, this is regarded by members of the trade here as one of the gratifying features of the local situation. It is also notable that there has been none of the decrease in business that is usually coincident with the approach of the end of the year and the time for taking inventories. Consumers have shown an increasing amount of interest and the volume of business clearly reflects this fact.

**NASHVILLE**

Lumbermen appear to be well satisfied with the local market and conditions in general, for that matter. Prices continue strong, giving no

indication of weakening, and it is believed that December will prove an excellent month. Naturally there is a little let-up in the local trade for the reason that the bad weather has set in and building operations, of course, are not so brisk as in the months of better weather.

The season for inventories will soon be at hand, however, and further advances are not anticipated at this time, not until after the first of the year, at least. Many of the consuming factories, behind in their orders, are clamoring for lumber.

The demand for high-grade hardwoods continues quite brisk. Plain and quartered oak in the higher grades are both reported scarce and selling well; also wide poplar. The lower grades of these are rather quiet. Maple and birch are holding their own. There is some trading in chestnut and basswood. Cypress is rather active.

**CHATTANOOGA**

The hardwood condition in this section is improving right along and the outlook is for a good trade after the holiday season is over. Buyers are plentiful and are placing orders for future deliveries. Prices are strengthening some and the demand is now including the lower grades, which have been the drug on the market for some time. Yard men are preparing for the future and accumulating stocks of all kinds. Altogether, the trade is satisfactory, but not yet as large as before the panic.

**BRISTOL**

Lumbermen here say that the outlook for business is fine. There is a general belief that business will show great improvement soon after the first of the year. The car supply is what might be termed as adequate so far, though the railroad traffic officials report all transportation equipment in service. Lumber prices are steady, but there is a slight lull in trade, attributed to the holiday season. The outlook is considered very bright indeed.

**LOUISVILLE**

The market for hardwoods is active, though the demand is perhaps not so strong as it was a month ago. This is easily accounted for, however, on the ground of the lateness of the season and the preparations being made by consumers to close their affairs for the year and take stock. Beginning with January 1, however, it is expected that the demand will be resumed in large volume. As it is, a lot of lumber is moving, plain and quartered oak and poplar being the chief items on the list. Large buying has stimulated the movement of the low grades also. Prices are steady with an upward tendency expected to develop materially in the next few months. The demand for mahogany is fair, though hardly up to expectations. Veneers are in good demand, the output of all local mills being large and at advanced prices.

**ASHLAND**

A continued increase in demand for all kinds of hardwoods is noted by our several manufacturers and prices are becoming more satisfactory each week. Furniture manufacturers, and in fact all lumber consuming factories, are beginning to lay in new stocks and replenish those which they have allowed to become very low the past two years. Buying is being done more freely and orders being placed for future delivery. Millmen are very much pleased over the present conditions and the future prospects and they are inclined to be on the optimistic side of

the question of the outlook for lumber business for the coming year.

The demand for chestnut and plain and quartered oak is greatly increasing in all grades and thicknesses. The demand for beech and maple is becoming much better, with prices a little advanced. Poplar continues to increase in value, manufacturers here receiving more inquiries and orders than they are able to supply. The lower grades of poplar, which have been very slow in moving for the past two years, are becoming much more in demand and stock moving off in a very satisfactory manner.

### ST. LOUIS

There is a steady improvement noticeable in St. Louis in the hardwood market. Considering the fact that it will soon be the first of the year, the volume of buying being done is most encouraging. Nearly every item of good stock in the hardwood market is either in fair or active inquiry and demand. Low-grade hardwood lumber, however, is still only in fairly good demand by consumers, but the call is increasing. First and seconds have been showing an advancing tendency owing to the demand, and consumers have been trying to utilize a lower grade. This has caused a much better demand for low-grade lumber than otherwise would have been the case. Cypress buying is large. While there have been no large transactions reported, orders have been numerous and frequent. According to mill reports, dry stocks of this item are smaller than the manufacturers would like to see. This is resulting in some difficulty in filling orders. For this reason the prospects are quite good for an advance about the first of the new year.

### LITTLE ROCK

Not since the flush days before "the panic" has there been such a satisfactory condition in the lumber industry in this section as prevails at present. The demand for material is unusually strong and mills are running just about as regularly as conditions in the woods will permit. Logging was above the average this fall.

It is remarkable that the wail of market depression is little heard these days, and the lumberman has discarded his "long" face for one that looks like "business is good."

### MILWAUKEE

Business is gradually becoming easier and it is expected that trade will be inclined to be quiet until after the holidays at least. While the excellent weather that Wisconsin has been experiencing of late has enabled the building season to be extended much later than is usually the case, this source of trade is rapidly dwindling. The sash and door factories are curtailing their orders for material, a natural result of the diminished demand for their output. It is expected that with the opening of the new year the sash and door manufacturers will begin to lay by heavier stocks for the rush building season that is expected next spring. The furniture factories are buying fairly well in various lines. The railroads are in the market only for repair stocks.

One of the disappointing features of the Milwaukee trade is the fact that the box factories are not placing larger orders. These plants seem to be running rather quietly and the result is that low grades are something of a clog on the market. The demand for low-grade stocks from the box plants has been easy throughout the season. Prices are being well maintained. Basswood, oak, ash, elm and poplar seem to be in leading demand. Maple is somewhat easier.

### MINNEAPOLIS

Gradual improvement in prices for hardwood lumber is resulting from the gradual decrease in the amount of available dry stock. This is particularly true of the upper grades, but is extending to the lower grades also. Oak is especially strong, and firsts and seconds have been selling at higher prices than for months. The difficulty is in getting the stock. Basswood is stronger and the call for the better grades is taking everything in sight. The supply of birch has diminished until it does not now have to hunt for purchasers. Lower grades of birch are not bringing what the dealers believe they should bring. As compared with pine, grade for grade, low-grade birch is bringing less, whereas it ought to be worth more. The same can be said of the upper grades. The furniture factories have been fairly good customers of northwestern hardwood dealers, and the great activity in building has made a demand for such woods as are used for interior finish. This trade is still good, and the sash and door factories are busy on this class of work and expect to continue so right up to the end of the year.

### SAGINAW VALLEY

The market has been in good form. There will probably be an easing up during holiday time as usual, but thus far business has steadily increased. Manufacturers and dealers report an increasing trade every week and they are crowding shipments. Box cars are becoming scarce and there is call for more of them now than are available. Interior mills are also moving stock freely. Here dry lumber is short of trade requirements. Basswood, maple and birch are especially wanted. Prices are very strong and an advance is likely in these commodities. Manufacturers are talking higher prices for flooring. Low-grade hardwoods utilized for box manufacture are in good call. Logging operations are active, with every promise of a good supply of logs for the ensuing year. Lumbermen are decidedly optimistic as to trade next year. In fact, the prediction is hazarded that in the movement of stock it will be an extraordinary year and that good prices will rule.

### DETROIT

There is a fair demand for all grades of hardwoods, while prices are holding up good. During the past two weeks an increased demand has been noted for cypress and kiln dried oak. Poplar and maple are still in strong demand, while basswood is in fair demand. Increased trade is noted among the box manufacturers and in the veneer and panel trades, while great activity is maintained by the manufacturers of hardwood flooring.

### LIVERPOOL

Trade in Liverpool is very quiet. The budget, the general election and the House of Lords are the three main topics of conversation and business is being neglected. It is predicted, however, that when these factors are removed a season of good trade can be looked for. All these disturbances are very unsettling, as American business men realize at their election times.

Mahogany was not as strong at the last sales, prices on the average being slightly lower. Buyers are not advised to make purchases yet, as it is thought prices will be much lower. Oak planks are somewhat weaker, while ash planks are very strong. Prime whitewood is also strong and in urgent demand. Stock in certain items is very low. Cottonwood and satin walnut have

also enjoyed a substantial lift. Birch is weak, stock being much too heavy for the demand. Hickory and ash logs are badly wanted. A few parcels have arrived and record prices have been realized. Shippers holding any stock of these woods could make a good profit by sending it here. The market is quite bare of stock and all the logs have gone into immediate consumption. Buyers are really scrambling for any wood in sight and shippers need not be afraid of asking a price. Maple flooring is also in urgent demand, especially the favored size, 7½x2½, for the skating rink floors. Shippers are not advised to send much to England until after January, unless it is such items as hickory logs, ash logs and planks and wide canary whitewood boards. These items will find a good sale, but the excited condition of the political world is all against a good market.

## OAK FLOORING

An artistic volume by Henry H. Gibson, editor Hardwood Record; 40 pages, in colors, on heavy India tint paper; tells all that's worth knowing about Oak Flooring, its hygienic qualities and low cost; as well as the proper finishing and care of oak floors.

Profusely illustrated, an ornament to any office or library table; contains no advertisements, and constitutes an authoritative text-book on this important subject. Of special interest to architects, builders, house-owners and women. Price 50 cents. A limited number have been purchased by leading oak flooring manufacturers who authorize distribution FREE (until supply is exhausted). Copy will be sent on receipt of 10 cents in 2c stamps to cover cost of packing and mailing. Address quick: Book Dept., HARDWOOD RECORD, 355 Dearborn St., Chicago.

## TOO LATE TO CLASSIFY

For other Wanted and For Sale Matter See Page 58

### FOR SALE—QUARTER-SAWED WHITE OAK.

57,000 ft. 1x10 to 14" Indiana quarter-sawn White Oak, high grade ones and twos, National rules of inspection; band sawn and trimmed, bone dry, and every piece showing a flashy figure entire length.

AMERICAN LBR. & MFG. CO., Pittsburg, Pa.

### FOR SALE AT A BARGAIN.

Fruit Package machinery equipment complete. Further particulars furnished on application. JOHN MOTCH, Kinmundy, Ill..

### STANDING TIMBER FOR SALE IN GEORGIA.

69 million feet Pine—mostly short leaf or "N. C. Pine."  
10 million feet Cypress.  
39 million feet Oak.  
30 million feet Gum.  
14 million feet Ash.  
2 million feet Poplar, Hickory, Cedar, etc.

164 million feet.  
Located on 21,492 acres—about one-third in fee, balance 19 to 29 years' lease. All in condensed tract, favorably situated on two railroads and a navigable river.

We are not manufacturers or brokers, but owners.

THE SIZER TIMBER COMPANY,  
15 William St., New York, N. Y.  
Care Robert R. Sizer & Co.

### HARDWOOD STUMPAGE FOR SALE.

1,000,000 feet White Oak; 500,000 feet Red Oak; 200,000 feet Spruce, Pine and some Poplar and Ash. Located in Lauderdale county, Miss., 3 miles from the A. & V. R. R., and good level road. This is prime timber—large trees for quarter-sawing or veneer. Will sell at a very reasonable price.

WHITAKER BROS. CO., Meridian, Miss.

### SPOKE FACTORY FOR SALE.

Complete spoke plant with hickory stumpage. Four "Egan" lathes; two "Defiance" lathes; two dry kilns all in first-class condition and now running. Oak and Hickory stumpage of good quality to last 10 years. Address

"BOX 60," care HARDWOOD RECORD.

# PERSONAL LETTERS

*Mr. Business Man  
Good Times  
Personal U.S.A.*

## The Writerpress

Makes it possible to send out from 8,000 to 10,000 **Personal Letters** daily. Not printed forms, but actual typewritten letters bearing the name of the recipient and having all the earmarks of a letter pounded out on the typewriter.

Multiply your best selling arguments by the number of names on your mailing list and the result is largely increased business.

By a new method possible only with the WRITERPRESS, names and addresses can be filled in on the Writerpress at the same time the body of the letter is made, doing away with the typewriter in making form typewritten letters.

### The Direct Inking Carriage

converts the Writerpress into a complete printing plant, enabling the business man to print his own office forms, quotations, price lists, filing cards, cost prices, advertising copy, etc.

Send for descriptive booklet and sample of work.

### The Writerpress Co.

410 Writerpress Bldg., Buffalo, N.Y.

## Corrugated Joint Fasteners

Can be quickly and cheaply driven with

### "ADVANCE" CORRUGATED JOINTFASTENER MACHINE

Made in Different Types to Meet All Conditions

Specially suitable for manufacturers of sash, doors, blinds, screens, coffins, furniture, plumbers' wood-work, porch columns, boxes, refrigerators, etc.

Write for bulletins and prices.

Manufactured only by

**Saranac Machine Co., St. Joseph, Michigan**

### SPIRAL GROOVED AND BEVEL POINTED KILNED HARDWOOD DOWEL PINS

The Spiral Groove holds the glue, and gives holding power similar to a screw. **Means better product.** Pins with good Bevel Point drive quickly, means more output. Only pin for Dowel Door Manufacturers.

Automatic Wood Turnings of all kinds. Samples and special discounts on application. STEPHENSON MFG. CO., SOUTH BEND, IND.

## "Phoenix" 6-Foot BAND MILL FOR HARDWOOD Serves You Right

SPECIMEN STATE GUIDE CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town  
Name of concern  
Name of buyer  
Line manufactured  
Kinds, grades and thicknesses of lumber  
Kinds and sizes of dimension stock  
Kinds and thicknesses of veneers  
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

## HARDWOOD RECORD, Chicago.

# American Hardwoods and Where They Are Sold

## Some Interesting Statistics Showing Where the Hardwoods of the U. S. are Sold

During the past four years the HARDWOOD RECORD, by means of sending out nearly one thousand letters and report blanks daily, has collected information from the chief hardwood buyers throughout the United States, covering their normal annual requirements by quantity, kind, grade and thickness. This information has been put into the form of condensed paragraphs, which recite the state, town, name of concern, use to which the lumber is put, the name of the purchasing agent, with the other information added. Up to this date forty of these bulletins have been issued. This information, when pasted up on tabbed cards, as shown on page 64 of this issue, and filed alphabetically by towns, between state guide cards, forms a roster of the leading wholesale hardwood consumers of the United States, and makes a ready reference, showing from what source trade in every line of lumber, including foreign woods, dimension stock, veneers and panels may be intelligently sought. This information is free to every display advertiser in the HARDWOOD RECORD, and is being utilized by the majority of them to their manifest advantage.

As before noted, these bulletins, including all back numbers, are supplied free to advertisers, and where people desire to paste up their own system, the only additional cost involved is that of the tabbed cards, which cost \$3.50 per thousand, and a set of state guide cards, costing 75 cents. However, in a good many instances, advertisers have preferred that this service be pasted up for them in complete form, with the extra tabs removed from the index cards, and filed alphabetically by towns between state guide cards, enclosed in a four-drawer oak cabinet. The service thus prepared is sold to advertisers at practically cost—the sum of \$35. This includes 1,000 extra cards to continue the service as subsequent bulletins are issued. Once a year a correction sheet is sent out to all concerns listed in this service, and if there are any corrections to be made they are supplied and issued in a correction bulletin form. Thus the service is kept up-to-date. There is no question about the accuracy of the information involved, as in every instance it comes direct from the purchasing agent of the various concerns.

Up to this time more than 15,000 requirements are shown on this service, which, in part, list up about as follows:

Buyers of Ash .....	625
Buyers of Basswood.....	600
Buyers of Beech.....	215
Buyers of Birch.....	550
Buyers of Butternut.....	65
Buyers of Cherry.....	200
Buyers of Chestnut.....	475
Buyers of Cottonwood.....	250
Buyers of Cypress.....	425
Buyers of Elm.....	350
Buyers of Gum.....	375
Buyers of Hickory.....	300
Buyers of Mahogany.....	350
Buyers of Maple.....	675
Buyers of Oak.....	1,350
Buyers of Walnut.....	165
Buyers of Poplar.....	675
Buyers of Sycamore.....	110
Buyers of Dogwood.....	15
Buyers of Persimmon.....	12
Buyers of Locust.....	10
Buyers of Holly.....	15
Buyers of Dimension Stock .....	650
Buyers of Veneers and Panels.....	550

With this information at hand the manufacturer or jobber in hardwoods is able to address an intelligent letter to buyers on the subject of any variety of lumber. They know approximately what the buyer uses and this enables them to gauge their offerings in accordance with the requirements of the prospective customer. It is not an economical proposition to write these vast number of buyers individual typewritten letters, but it is logical for the man in charge of the lumber sales department to write one letter covering one kind of wood each day and have this letter sent out in duplicate form to every buyer of this particular wood. The most successful sales managers handling out this HARDWOOD RECORD mail-order sales system follow this plan minutely. On Monday he will write a letter devoted exclusively to ash, describing in detail his offerings in this wood. On Tuesday he will talk to buyers of basswood, oak, birch or poplar. In the course of the month other letters pertaining to these same woods are repeated in different forms, and, of course, the answers induced are replied to in individual letters.

This system of soliciting orders of hardwood lumber by mail in no way interferes with a sales force on the road, but manufacturers and jobbers are able to reduce their number of salesmen to a marked degree by

the use of this service and reduce their sales cost to a very low figure. For example: The average expense of having a regular traveling salesman call on a prospective customer averages about \$2 per visit. These letters in duplicate form, can be forwarded to prospective customers, even under 2-cent postage, at a cost not to exceed 5 cents per letter. In other words, it is a forty-to-one proposition in favor of the mail sales system, so far as cost goes.

It is not contended that even a forceful, tactful and diplomatic letter in each individual case is as capable of effecting a sale as a competent salesman, but the people who have thoroughly utilized this service have demonstrated that the percentage of letters inducing sales of lumber is very much greater than the forty-to-one cost involved in a personal visit. Again, it would be impossible for the ordinary sized concern to employ salesmen enough to cover the vast number of sales possibilities that is involved in this list of buyers.

The HARDWOOD RECORD would be very glad to supply further suggestions to both users and prospective users of this system in detail and will also be glad to suggest the use of the best form of letter-duplicating apparatus.

A very important fact has been demonstrated by the HARDWOOD RECORD's Information Bureau which pertains to the distribution territory of hardwoods throughout the United States. Every user of wood in every line has been thoroughly canvassed for this information in all parts of the United States, and it is found that eighty-five per cent of the hardwood sales are made in a comparatively small area. It is an area where things are made out of wood. It is within the seven states of Wisconsin, Michigan, Illinois, Indiana, Ohio, New York and Pennsylvania. This would indicate that the New England states, New Jersey, Delaware, Maryland, the High Point district of North Carolina, the St. Louis district and the small quantity of hardwoods consumed in the chief cities of the Pacific coast and other cities in parts of the country not herein mentioned consume only fifteen per cent of the total of hardwoods employed in the domestic trade. These facts are further emphasized by the circulation books of the HARDWOOD RECORD, which show more than sixty per cent of its circulation is in the seven states first named:

# We Make Machinery and Tools for the Care of Saws

Hanchett Automatic Sharpener for Both Band and Circular Saws

**Size No. 5**

For Band Saws  
2-7 inch wide

For Circular Saws  
6-28 in. diameter

Weight  
500 lbs.

List Price  
\$125.00

This sharpener is designed for use in factories desiring a machine for caring for both small circular saws and band resaws. The frame is made very strong, stiff and rigid, and only the best material procurable is used in the machine. It is nicely finished in oil proof flat black paint, and all small parts are either polished or nickel plated. All wearing surfaces are scraped and fitted to a nicety, and protected from emery and dirt.

In designing this machine we have aimed at simplicity of construction and adjustment. It can quickly be changed from band saw grinding to circular saw grinding and vice versa, by any common factory hand.

It has all the improvements of our larger sharpeners, and is strictly "Hanchett Quality" in every respect.

## JOINTING AND SETTING UP VENEER BY HAND IS A USELESS WASTE OF MONEY

Our patented machines will set it up at the rate of 1,500 to 2,000 lineal feet of jointing per hour, and do it far better than can possibly be done by hand.

Our Continuous Feed Veneer Jointer, which edges and joints in one operation, has three or four times this capacity.

It interested in doing this work at a minimum of cost, write for full particulars.

THE VENEER MACHINERY COMPANY, 602 Austin Ave. Chicago, Ills.

Floor Space, 3½ x 15 feet

Dennis Type Machine.  
floor space 3½ x 6 ft.

## New Hoosier Improved Short Log Sawing Machine

Made especially for sawing veneer cores and small logs, up to 20 inches diameter and from 2 to 12 feet long.

The machine is built with a heavy cast iron husk frame that carries the feed works and mandrel which runs in self-oiling boxes. It is equipped with a variable friction feed, with cable attachment to carriage. Feed is strong and rapid.

The dogs are of an entirely new style, and dog the log, or piece to be sawed, in the end instead of top and bottom, and can be instantly changed to grip any length log that the carriage will accommodate.

The machine consists of but three pieces, the husk frame, track frame and carriage. It can be quickly and easily moved, and can be operated with a 10 H.P. engine. The machine will saw from 3,000 to 6,000 feet per day and weighs 3,500 lbs.

The largest saw that can be used is a 48-in. diameter.

BUYERS OF  
 ALL KINDS OF

**HARDWOOD LUMBER**

# Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock **THAT IS IN SHAPE TO GLUE.**

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawed Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. **THE GLUE WE USE IS GUARANTEED HIDE STOCK.**

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed **THE BEST.**

Factory and Veneer Mill: ALGOMA, WIS. Veneer and Saw Mill: BIRCHWOOD, WIS. Home Office: ALGOMA, WIS.

Wagon Stock. Write us before selling.

**Fisher Building, CHICAGO**

## A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

*Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.*

# A WEDGE DOVETAIL

(PATENT APPLIED FOR)

OUR  
NEWEST  
FEATURE  
FORCES THE  
GLUE INTO  
THE PORES  
OF THE WOOD

## The LINDERMAN AUTOMATIC DOVETAIL GLUE JOINTER is a

JOINTER AND JOINER. IT PERFORMS  
IN ONE OPERATION and ONE HANDLING

all the operations necessary to complete a glue joint as jointing, glueing,  
clamping, unclamping and edging to width.

Eliminates the delay of getting jointed stock to the finishing or veneer  
room. Saves time, labor, lumber and glue, yet delivers the finished product  
with a reinforced WEDGE DOVETAIL which is a permanent clamp.

May we send you samples and information of this new important feature?

### LINDERMAN MACHINE CO.

## NO FRICTION TROUBLES ON "BERLIN" RESAWS

**A Belt-and-Pulley Device that Gives More than Twice the Power of a Friction**

### Three Horse-Power With a Friction

On resaws carrying a 6 inch blade or wider, a friction device does not give the required power. It has been proven that such a method will produce three horse-power—**but no more.** Think of trying to pull a heavy timber through a resaw with only three horse-power;

### Seven Horse-Power with "Berlin" Method

There is just one way of transmitting sufficient power—plain belts over ordinary pulleys. That way is "Berlin" way, and the above illustration shows it all very plainly. The belts shift instantly from one incline-step cone to another. This method on actual test produced over **seven horse-power.**

### A Few Details

Those flange pulleys with their belts and tighteners, furnish a very fast or very slow speed. This places a wide range of feed under instant control of the operator.

To illustrate, raising that horizontal lever at the extreme right, gives a very slow feed—throwing it down gives a fast feed. This provides eight speeds of feed—the highest 135 feet per minute greater than the lowest. All belts are provided with tighteners to take up the slack so that endless belts may be used. The shafts run in ordinary babbitted boxes which are easily renewed.

### Large Band Saw Book—Free

This is only one feature of Berlin Resaws. Our 64-page Band Saw Book tells all about them—tells **why** "Berlin Bands Are Better." This book will be placed in your hands, postpaid, if you'll just write for one. It's nicely printed, well-illustrated and contains complete descriptions of the entire line. You will be under no obligation whatever—put your letter in the next mail.

## Coming Association Meetings

### INDIANA HARDWOOD LUMBERMEN'S ASSOCIATION.

The next annual meeting of this association will be held at Indianapolis, on Thursday, January, 13, 1910.

C. H. KRAMER, Secretary. JOHN M. PRITCHARD, President.

### HARDWOOD MANUFACTURERS' ASSOCIATION OF THE UNITED STATES.

The eighth annual meeting of this association will be held at the Sinton Hotel, Cincinnati, on Tuesday, Wednesday and Thursday, February, 1, 2 and 3, 1910.

LEWIS DOSTER, Secretary. R. M. CARRIER, President.

### NATIONAL WHOLESALE LUMBER DEALERS' ASSOCIATION

The next annual meeting of this association will be held at the Sinton Hotel, Cincinnati, Ohio, on Wednesday and Thursday, March 2 and 3, 1910.

E. F. PERRY, Secretary. GEORGE F. CRAIG, President.

## General Market Conditions

In some of the chief commercial centers where the holiday spirit reigns supreme, there is a marked cessation of hardwood business, but in others, notably in the Middle West, there continues to be a large volume of business. Ordinarily at this time of year trade falls off to a minimum, but owing to the prospect of an impending car strike, the manifest shortage in many varieties of lumber, and

the feeling that prices are likely to be higher instead of lower, a good many orders have been placed during the last fortnight.

Collections as is usual at this time are remarkably slow. Money at banks is comparatively easy, and any business man of good commercial standing, can get all the bank accommodation he requires at moderate discount rates.

The particularly short item of stock is firsts and seconds plain white oak, with plain red a close second, as well as firsts and seconds and panel poplar. There is a markedly increased demand for No. 1 common and most all the standard grades of No. 2 common in oak are selling fairly well. In northern woods maple and birch in shipping condition are practically exhausted from first hands.

The hardwood flooring manufacturers are having a remarkably good trade when the season of the year is considered.

A notable feature of the present situation is the increased call for the good end and mill run gum among furniture makers. There is a greater development in the use of gum for furniture and interior trim than was ever before known.

Good cottonwood, especially in stock of widths, is sold very close up to the saw. The demand for the lower grades is daily improving.

There is an increased call for basswood and prices are showing better.

Mahogany and other foreign woods are in good supply and in fair request. High class mahogany logs are scarce, but neither log nor lumber prices show any advance.

The majority of veneer and panel factories are pretty well loaded up with business. Most of these orders were taken at very low prices, and there seems little hope of advancing values until present orders are cleaned up. It is undeniably true that veneers and panels are being marketed much below their intrinsic worth, and that with the continuation of good business prices on these commodities will get up somewhat in line with lumber values.

The entire hardwood situation looks good, with every prospect of a continuation of an excellent business for months to come, at constantly augmented values.

## An Impending Railroad Strike

The RECORD does not want to pose as a calamity howler, but there is still an undercurrent indicative of an impending strike among railroad operators. Railroad authorities are doing everything in their power to avert this calamity, but today it is apparently a question whether the demands of the allied engineers, trainmen and switchmen will be met by the railroads or be modified to an extent that will make mutual concessions and harmony possible.

There is not very much in the daily press referring to this subject, but at the same time the various railroad employees' organizations are shaping up their demands on the railroads for presentation and there is serious danger of a railroad tie-up. It is sincerely to be hoped that the good business in sight will not be interfered with or stopped by unwise action on the part of either railroad operators or railroad officials. However, there is manifest danger in the situation.

So much the wiser will be both sellers and buyers of lumber if they take prompt steps to avoid a shut down of both sawmills and remanufacturing institutions for want of shipping facilities, by doing business now while railroad facilities are in fairly good shape.

### Tertium Quid

Just at this time there has sprung into prominence in hardwood grade making problems "the third person"—the wholesale consumer. Two decades ago when hardwood manufacturing first assumed importance in lumber affairs of the country, the jobbing element practically assumed control of inspection matters and for nearly a decade thereafter dominated the classification of hardwood lumber into grades. About ten years ago hardwood manufacturers broke into the game and insisted that they have something to say about inspection. Since that time the various grading rules of hardwood lumber have been jointly handled by manufacturers and merchants in the trade.

Latterly, the remanufacturers of hardwood lumber, people making

furniture, wagons, automobile bodies, coffins and kindred lines consuming hardwood lumber, are insisting that the present and rather conflicting inspection rules of hardwood lumber made by both the leading and minor associations and exchanges do not provide for grades that best suit their requirements. Some of these remanufacturers, as represented by their associations, have formulated rules of their own which in many cases have been made without sufficient knowledge of the subject, but nearly all are asking that they shall have a hand in basic grade making. In parallel columns subjoined are three expressed opinions on the subject of the rights of the eventual buyers of lumber to have their say about inspection matters:

EARL PALMER, PADUCAH, KY.

The expressed opinion of Earl Palmer, who has been the dominant factor in National Hardwood Lumber Association affairs for the past six years:

Any attempt to draw the consumer into the grade-making business, where hardwood lumber is concerned, will only muss things up. In the consideration of this question it is well to revert to the primary purpose, or object, for classifying lumber into various grades. It is obvious that it is not in order that a certain grade may be used in the manufacture of furniture, another grade for house trim, or another grade for some other purpose, but log run lumber is classified into different grades in order to arrive at standards of value. This was necessary because of the existence of so great a difference between the values of different stocks of log run lumber. If lumber all cut out clear, there would have been but one grade. But owing to the fact that all lumber is not clear, and the further fact of the great diversity existing between the values of different log run stocks, it was absolutely necessary that standards be adopted for the classification of lumber into various grades, in order that the value of a given stock could be correctly approximated.

It is true that consumers have taken advantage of this method of classification by using the particular grade that they have believed to be best adapted for their use; and the standard grades of hardwood lumber as they exist today are of sufficient variety to enable the intelligent consumer to select just the quality of lumber that best suits his business. It is an error, however, to assume that grades were diversified in order to afford the consumer an opportunity to make these selections, and any scheme of grade-making based upon such an assumption will result in confusion worse confounded.

EARL PALMER.

R. H. VANSANT, ASHLAND, KY.

The opinion of R. H. Vansant, chairman of the Executive Grading Commission of the Hardwood Manufacturers' Association and a ruling spirit in unification of hardwood grades of that organization.

Dec. 14, 1909.

To Wholesale Consumers of Hardwoods:

I take the liberty of addressing you upon a matter that I regard as of paramount interest to all consumers of lumber as well as to the manufacturers. The Hardwood Manufacturers' Association of the United States invites you to attend its next annual meeting, which will be held at the Sinton hotel, Cincinnati, O., on February 1, 2 and 3.

It is the purpose of our association to frame hardwood inspection rules that will be just and fair both to the consumers of lumber and the manufacturers. To bring about this result we have asked the consumers of lumber to become members of our association, assuring them that they will have a fair representation on the Executive Grading Commission. We now take a step further and ask your organization to appoint a competent person to meet with the Executive Grading Commission a few days before our annual meeting and go over the rules we now have in force and suggest such changes, if any, as we may all think necessary to make the rules fair and just to the consumer and the manufacturer. I will call a meeting of the Executive Grading Commission at Cincinnati on Monday, January 31, to consider such changes as may be proposed. This will give us three days in which to consider the matter, and by dividing the work we will have ample time to accomplish our purpose. I hope you will accept this invitation.

We will be very glad to meet the consumers of lumber at our annual meeting, especially the authorized officers and committees that may be appointed by the different organizations.

Hoping to hear from you favorably in regard to this matter, and with highest respect, I am,

R. H. VANSANT

W. A. BENNETT, CINCINNATI, O.

The opinion of W. A. Bennett, a "middle of the road" hardwood association man who has achieved commercial success on the slogan of a "square deal to both seller and buyer."

In order to warrant the success of any organization for the making of lumber grades, the wants of the consumer must be taken into consideration, and his endorsement likewise. The association that looks to the future in this respect is up-to-date and will be the one that will bring around the goal we have all worked and looked for. The matter was proposed by me years ago at our meeting and was voted down. The opposition then and now comes from the class of trade that buys on one grade and endeavors to sell on another. The success of this class of dealers is of a character that the customer gets the worst of it, and they are not the best, because they must necessarily sell lower than those who make good and sell at higher prices. The consumer should be taken into lumber associations as an advisory member and not as a legislative one. There should be, however, a deference shown their wishes, and as there are enough of them to use all the log product, they should be well and honestly advised with. The National association was first in the field in this work and should have reaped its advantages, but it is too late now, as the Manufacturers' association, not only in this but in many other ways, has the advantage and confidence in the minds of the consumer and large manufacturers of lumber, and deservedly so, because its line of progression has been of a kind commending itself to men who use and consume the woods that are sold by all of us in the trade.

In the line of advancement I cannot help but admire them, and they must necessarily appeal to all fair-minded people. They are on the right road, and while we do not belong to their ranks, we may some day.

BENNETT & WITTE.

Per W. A. BENNETT.

The RECORD has contended for years that the details of specific rules covering the inspection and measurement of hardwood lumber are of minor importance, if these rules reasonably accommodate themselves to the present lumber output of hardwood logs and the grades reasonably fulfill the requirements for the eventual use to which hardwood lumber is placed.

It is further contended that lumber is made into a variety of grades not for the benefit of the manufacturer, but for the accommodation of users thereof; that every manufacturer would prefer to sell his lumber output mill run as a whole from the tail of his mill. Admitting that hardwood lumber is divided into grades to accommodate the uses to which the product is placed, why should not these grades be made to accommodate so far as possible the eventual use to which hardwoods are put, if the proposed grades will adapt themselves to the present lumber output? Why should not the man who uses the lumber have a voice in grade making? It must be recalled that values cannot be interjected into lumber through the grade medium, but that the price will follow the grade in every instance. It must be further remembered that the price at all times is in the hands of the owner of the lumber. Any good business man will sell anything he has to market if the buyer will permit him to make the price.

This proposed overhauling of lumber grades may prove somewhat revolutionary. It may upset the entire theory of lumber production and inspection. What if it does, if the result is for the better?

Say what you will of the present systems of hardwood inspection, they are crude, involved, out-of-date and illy adapted to present-day economical utilization.

Ninety-five per cent of hardwood lumber is cut up into various sizes. Outside of counter tops there is scarcely a piece of hardwood lumber used in its original full board form. It would seem logical that an entirely new system of hardwood grading might be evolved that would lend itself to modern economical utilization. It might be conceived that primarily a grade of two side firsts be produced; then a grade of one good face lumber; then a grade in certain

woods of sap lumber; next, one, two and possibly three grades of tipping lumber; next, three, four or a half dozen grades of cross-cutting stock, showing cuts of varying lengths. Lastly, a grade of mills available for box making and crating stock.

It is up to the manufacturers, jobbers and the wholesale consumers to agree on common-sense and justice in the matter of hardwood inspection, and the wise man in any of these divisions of the trade should "get busy" and have his say on the subject.

The time is right now!

## Annual of National Wholesalers

At a meeting of the Board of Trustees, held at the New York office of the National Wholesale Lumber Dealers' Association on December 10, it was unanimously voted to hold the next annual meeting of this association at the Sinton Hotel, Cincinnati, on Wednesday and Thursday, March 2 and 3.

This is the first meeting the association has held in the West for several years, and indications point to the convention being one of the largest in the history of the organization. A number of important matters will be presented for discussion and consideration, and the meeting promises to be one of great interest. Details as to

program, banquet, etc., have been left with the executive committee, George F. Craig, Philadelphia; R. W. Higbie, New York; F. R. Babcock of Pittsburg; F. E. Parker, Saginaw, Mich., and A. L. Stone of Cleveland.

The RECORD, in common with a large number of middle West lumbermen, is well pleased to know that this important and high-class organization will hold its annual meeting at Cincinnati. Heretofore the organization has been made up chiefly and the interests very largely have lain with the manufacturers and jobbers of Buffalo, Pittsburg and the region lying east thereof. Holding this meeting at Cincinnati should insure the organization a large number of new members from the middle West and the West, and make it national instead of largely local in its interests.

## Forthcoming Annual of Hardwood Manufacturers

Elaborate plans for the big annual meeting of the Hardwood Manufacturers' Association of the United States are well under way. This meeting, as has been previously announced, will be held in the Sinton Hotel, Cincinnati, on Tuesday, Wednesday and Thursday, February 1, 2 and 3. This gathering of the hardwood interests of the country will not be confined to manufacturers, but there is a promised attendance of those prominent in the hardwood jobbing and remanufacturing industry. Quite a number of furniture manufacturing and kin-

dred organizations will attend in a body. It is estimated that the attendance will number fully one thousand. Matters of more general moment to the hardwood industry as a whole will be presented at the meeting than ever before attempted at any affair of this sort.

The entertainment features are also elaborate. As before mentioned in these columns, the RECORD considers the meeting of such importance that it will publish during the three days' session a fifty-two page newspaper recounting the events of the meetings as they transpire. These papers will be mailed, under Cincinnati postoffice

## A MERRY CHRISTMAS

Don't draw a long face and say holidays are a nuisance. Just remember when you hung up your stocking beside the old fireplace and the happiness that the red-topped boots and sounding drum brought to you.

It is well, at least once a year, to get away from the business of life for a few hours, to enjoy the laughter of children, the handclasp of friends, and the love of relatives; to drop all the weariness and struggle, all the sordidness and annoyance, that comes day by day, and enter into the simple life of children; to look out upon the world through the rose-tinted glasses of youth; to smile over old memories with friends, and above all, to carry a little joy and happiness to others.

Don't be ashamed of the Christmas spirit, for the Christmas spirit is the sentiment which is the best part of you. It makes you believe in the honor and the rectitude of others, and it makes others understand that under your hard crust of business energy and discrimination there beats a heart full of tolerance and charity.

Throw off all thought of the sawmill, the lumber yard, the factory and the office for at least one day; tell your wife she was much prettier than any of her daughters at the same age, and see her color as girlishly as when you presented her with your first Christmas gift; listen to the words of wisdom, your son home from college imparts on the subject of football; kiss your young lady daughter under the mistletoe; enjoy all you can of simple home pleasures.

Make it indeed A MERRY CHRISTMAS!

permit, to the number of nine thousand copies, to hardwood manufacturers, jobbers and wholesale consumers of hardwoods.

More specific details of this meeting will be found in the news section of this issue of the RECORD.

## Eucalyptus

In HARDWOOD RECORD of December 10 was an article on the subject of eucalyptus. The exploitation of the growing of eucalyptus as a highly profitable commercial proposition on the part of various promotion companies dealing in California lands was the feature of the times that inspired this article. Incorporated in the story was a report on eucalyptus from Von Schrenk, Fulks & Kammerer, consulting timber engineers, of St. Louis.

The RECORD is in receipt of the following letter from this concern:

ST. LOUIS, Dec. 18.—Editor HARDWOOD RECORD: My attention has just been called to the article on eucalyptus in your number of December 10. While as a rule I do not like to discuss matters of this character, I feel that some of the statements made in that article might be misinterpreted and beg to submit the following:

The general impression which the reading of this article gives is that we are in some way or other connected with the Sacramento Valley Improvement Company in recommending the growing of eucalyptus for timber. I wish to make it very plain that we are in no way connected with this company and are in no way responsible for their operations. At their request we wrote for them a technical report on the qualities and character of eucalyptus wood, and in which report, you will note, we stuck strictly to the subject, and made no recommendation either for or against engaging in the planting of eucalyptus wood, or as to whether anyone would be liable to profit by same or not. It was the kind of report which we would have submitted to anyone who asked the question, What is eucalyptus? I wish to make this as clear as possible, fearing that some of your readers might assume that we were officially endorsing the purchase of lands for the growing of eucalyptus timber, which, as stated above, we have never done.

As far as the statements made by us as to the value, the qualities and uses of eucalyptus are concerned, with all respect to the editor of the HARDWOOD RECORD, we stand by these statements as representing the best information obtainable at the present time in regard to eucalyptus. A careful reading of our report will show that most of the data are taken from the best authorities we could find, among them the United States government timber tests and the reports of the forest officers of the state of California.

All I wish to emphasize is the fact that we are not in the business of exploiting eucalyptus, and no one who reads our report could for a moment accuse us of any such intent. My only object in addressing you is to correct the giving of what, I am sure, was an unintentional wrong impression. Yours very truly,

VON SCHRENK, FULKS & KAMMERER,  
Hermann von Schrenk.

The RECORD is very glad to note that Dr. Von Schrenk and his associates are in no wise connected with the promotion companies recommending the growing of eucalyptus as a logical commercial proposition, or an enterprise for the safe investment of savings.

The RECORD does not wish to say that the growing of eucalyptus is not a good commercial proposition, but it simply quoted the report of Von Schrenk, Fulks & Kammerer on the subject of the wood, and then recited the result of practical tests made under the auspices of the National Hickory Association and the opinions of well informed and practical users of hardwood.

From this article it can very readily be deduced that the editor of the RECORD had considerable misgivings about the high estimate placed on eucalyptus in the report referred to, and was equally skeptical on the commercial possibilities of growing this wood. The publication takes pleasure in printing the letter of Von Schrenk, Fulks & Kammerer, especially their disclaiming any interest in the eucalyptus proposition, save in supplying the report, which they state was based on data taken from the best authorities they could find, including the United States government timber tests and the reports of forest officers of the state of California.

## The Ballinger-Pinchot Controversy

Present prospects are that the controversy between Richard A. Ballinger, Secretary of the Interior, on the one hand, and Gifford Pinchot, chief of the Division of Forestry, on the other, will be a subject of investigation.

Collier's does not hesitate to make the claim that Mr. Ballinger, has deliberately assisted land grabbers in various nefarious enterprises that tend to the absorption of valuable public domains to the use of individual corporations without just recompense to the government.

It is pretty well established in the public mind that no matter what errors Gifford Pinchot has made in his life work at the head of the Forest Service in this country, he has been impeccably honest in everything he has ever done. He has stood up for the rights of the people against the entire mass of corrupt politicians and their henchmen who have attempted to defraud the government of public domains. Mr. Pinchot is on the level always, and there is a distinct suspicion in the public mind that the same is not true of the Secretary of the Interior. There must needs be some flame where there is as much smoke as has been wafted about the peculiar transactions in which Mr. Ballinger has been at least indirectly interested.

The President cannot afford to lose Gifford Pinchot; he cannot afford to retain Richard A. Ballinger.

## The American Exhibition in Berlin

Manufacturers and business men throughout the country are taking an active interest in the American Exposition to be held in the city of Berlin during the months of June, July and August, 1910. Already applications for space have been received by the American committee from many different states, and it is probable that every branch of American progress will be shown at the exposition.

The holding of an all-American exposition in Europe will be of great value in increasing our export trade with European countries, already of enormous proportions and constantly increasing. The selection of Berlin as the location for the fair is also wise, as it is the leading city of Germany, which country takes one-fourth of our European exports, and, further, it can be truthfully said that it is the commercial center of all Europe.

One of the most important and most extensive exhibits will be the display of our timber resources, which is as it should be, as the timber industry of the United States is one of the greatest industries, not alone of this country, but of the entire world. An exhibit showing our vast interests in this direction will, of course, have to be divided into several sections to portray our diversified line of forest products.

The exposition is in very competent hands, both the German and American committees being made up of men who will lend prestige to the undertaking in the eyes of the business world. The American committees, which have headquarters at 50 Church street, New York City, are headed by J. Pierpont Morgan as president. Prince Henry of Prussia, brother of the emperor, is president of the German Reception Committee.

## National Box Manufacturers' Annual

The attention of the hardwood trade, especially those who are interested in the sale of lumber suitable for box manufacture, is called to the annual meeting of the National Association of Box Manufacturers, which will be held at French Lick Springs Hotel, French Lick, Ind., on February 23, 24 and 25. It is the desire of the principals of this association that every hardwood manufacturer interested in supplying box material shall be present at this convention and participate in its deliberations.

The French Lick Springs Hotel, at which the meeting is to be held, is beautifully located in the wooded hills of Indiana. The building is modern in every particular and affords accommodations for something like seven hundred guests. The sleeping apartments are all outside rooms. The hotel grounds comprise over six hundred acres of natural park.

## Pert, Pertinent and Impertinent

### A Christmas Vampire

A fool there was, and he made a gift,  
(Even as you or I).  
He bought it with taste and care and thrift  
(For a lady his friends thought rather swift),  
And when he gave it, the lady sniffed,  
(Even as you or I).

A fool there was, and he gave his cheque  
(Even as you or I).  
For a necklace of pearls without a fleck,  
(And it didn't at least suit the lady's neck),  
And she never thanked him a single speck!  
(Even as you or I).

Oh, the judgment and taste and time we waste  
On the gifts at Christmastide,  
Which we give to the lady who isn't pleased  
(And now we know she could never be pleased  
And never be satisfied).

Oh, the chink we lose and the think we lose  
On the things we buy with pride  
To give to the lady who never is pleased,  
(And now we know she can never be pleased  
And never be satisfied).

The fool was fleeced to his last red cent,  
(Even as you or I).  
She threw him aside, when his gold was spent,  
(And nobody cared where the lady went),  
And the fool gave way to loud lament,  
(Even as you or I).

And it wasn't the loss, and it wasn't the dross,  
The reason that same fool cried:  
It was coming to know that she never was  
pleased,  
Seeing at last she could never be pleased  
And never be satisfied).

—Carolyn Wells, in *The Smart Set*.

### Christmas Toast

O here's a hail and  
here's a health,  
May nothing but luck  
pursue you;  
The merriest of Christ-  
mas, and  
Happiest of New Year  
to you.

The surgeon is ready  
to cut any old thing  
except his bill.

Religion would be of  
little use if people  
would measure their  
actions by the golden  
rule.

Patience in little  
things and the ability  
to handle great things  
seldom go hand in hand.

Even the promoter  
isn't always faithful to  
his trust.

**A Christmas Wish**  
May the message of  
Christmas,  
Good will and good  
cheer,  
Like the green of the  
holly,  
Keep green all the  
year.

You may have ob-  
served that satisfied  
people, as a rule, keep  
quiet about it.

The world is made up  
largely of also rans.

You can always tell  
a hard drinker by his  
mug.

If hearts are trumps  
it's up to the wise  
young man to play a  
diamond.

Common sense is the  
foundation of all true  
reforms.

### Merry Christmas

May you  
have a  
hundred years  
of Christmases  
and all of  
them happy  
New Years.

### At Christmas Time

Then e'en the elevator boy  
Displays an air polite,  
And greets you with a nod of joy,  
And stops the car just right.

### The Christmas Shopper

There once was a fair Christmas shopper  
Who spent all she had but a copper;  
Then her stern husband spoke,  
"I am glad she is broke,  
For only bankruptcy could stop her."

### Courage

Wipe away your tears, little girl;  
I pray you, do not cry;  
For Santa Claus is coming  
In the sweet buy and buy. —Life.

## Getting Very Popular

**The Lumberman:** You are getting to be a regular gum chewer.  
Try some more---It's good.

### Some Christmas Thoughts

A fat Christmas means  
a lean New Year.

Better a candied ap-  
ple on a stick than a  
jeweler's bill on the  
way.

Be tactful in filling  
another's stocking, lest  
you put your foot in it.

Forgive your enemy  
today, even if you have  
to start a new quarrel  
tomorrow.

Let your gifts go into  
the hands of a receiver,  
but don't get into his  
clutches yourself.

A ton of coal in the  
cellar is worth two  
baby grand pianos in  
the creditors' schedule.

Let the baby beat the  
drum and Willie toot  
the horn. That is their  
idea of peace on earth.

Success.

A no-account husband  
has developed many a  
feminine financier.

People who set a  
good example never  
know what it will  
hatch out.

It's easier for most  
girls to return a man's  
love than his presents.

Everything comes to  
those who wait—except  
the things that others  
consider worth going  
after.

Wisdom is knowing  
what not to do and not  
doing it.

After putting his best  
foot forward many a  
man has had his leg  
pulled.

Love may be blind,  
but the blindness can  
be cured by a breach-  
of-promise suit.

People who feel sure  
of their ability usually  
make the least display  
of it.

# Builders of Lumber History

NUMBER LXXXVII

CAMERON L. WILLEY

(See Portrait Supplement.)

The foremost producer of mahogany and other foreign woods and of oak, walnut, ash, bird's-eye maple, curly birch and poplar veneers, as well as one of the largest hardwood manufacturers in the United States, is C. L. Willey of Chicago.

Mr. Willey in years has just passed the meridian of life, but not the meridian of energy, industry and forcefulness. His picture, in supplement form, accompanies this issue of the RECORD and is a striking likeness of the alert, clear-eyed, astute business man that guides the destinies of the big Chicago and Memphis institutions bearing his name.

Mr. Willey was born at Danville, N. Y., in 1856. He is a lumberman by inheritance, training and acquisition. His grandfather, Paul Willey, as well as his father, Charles B. Willey, were not only sawmill men but sawmill builders and were associated together in the construction of a sawmill in the state of New York as far back as 1839. From this start Charles B. Willey, the father, went on and built thirty-one other mills during his life-time. Mr. Willey's father died about three years ago at the ripe age of eighty-three, a successful business man of the old school.

The Willey family is of English and Scotch descent, but has resided in America since long before the Revolution. C. L. Willey supplemented a common school education with a graduating course at the Russel Institute at Le Roy, N. Y., and beginning with 1871 he worked in and about his father's sawmill at Warren, Pa., getting a practical experience in lumber operations. In 1887 he entered the lumber business in Allegheny, Pa., handling pine and hardwoods and continued there until 1890. His specialties at that time were walnut and cherry, but later he handled a general line. During 1882 he filled a single order for eight million feet of cherry, for which the source of supply was Pennsylvania. This lumber was sold quite largely to the furniture trade, and in his association with this line his attention was called to the veneer business and its future possibilities.

After a careful geographical and commercial analysis, in 1890 Mr. Willey came to Chicago and started in the veneer business. He found that there were but two or three experts in the United States that knew how to properly fitch mahogany and other fancy logs for veneer purposes, and he decided that there was room for at least one more in that line. Such an expert he has surely come to be, for today C. L. Willey is recognized as the leading expert in judging the quality of fancy mahogany logs, as well as in knowledge of how best to open up these logs to secure the finest figure and a maximum quan-

tity of high-class veneer product.

Mr. Willey's present immense veneer and lumber plant is located on Robey street near Blue Island Avenue, in this city. This institution backs up to a dock front on the south branch of the Chicago River, and in the plant is located a sawmill, seven veneer saws, two of the largest and most modern types of rotary cutters, an immense slicer and the various other machines and appliances that go to make up the largest veneer plant in the world. Here in his big log yard he carries stocks of the finest mahogany, specializing in Cuban and African woods, padouk, walnut, bird's-eye maple, oak, curly birch, ash and various other varieties of fancy foreign and domestic logs.

Three years ago Mr. Willey purchased twenty-three acres of land within the city limits of Memphis and built there a modern double-band and resaw mill, and another big veneer factory. This plant produces largely oak and gum lumber, oak fitches and rotary cut gum veneers. Mr. Willey employs a resident buyer of fancy logs at Liverpool, and numerous log buyers at points in the United States, where the highest type of the particular timber in which he is interested grows. He also has a large corps of lumber salesmen under the general direction of his chief assistant, Clarence E. Ingalls. His son, C. B. Willey, a chip of the old block, is in general charge of

the large and varied Memphis operation.

In the furtherance of his business, Mr. Willey makes two annual trips to England, seeking sources of fancy log supplies for his Chicago plant. From time to time he has purchased from sundry gentlemen's estates in Great Britain, all the English oak trees that they would sell, and repeatedly he has pitted his judgment against other buyers in the purchase of remarkably fine specimens of mahogany, Circassian walnut and padouk. His ability to see inside the bark of a log and know its value is regarded as phenomenal by his contemporaries in the trade.

Mr. Willey is an extremely conservative man in his business affairs. He analyzes the commercial situation and everything pertaining to his affairs carefully, but once his mind is made up he can be counted on to make commercial ventures that are astounding to ordinary foreign woods and veneer producers.

It goes without saying that Mr. Willey is an eminently successful business man, and his judgment and council are sought by many men not only interested in his particular line of endeavor, but in other affairs of commercial importance.

Mr. Willey resides in a mansion on Grand Boulevard in this city, and notwithstanding his strenuous business life, finds time to enjoy the many comforts of his artistic and beautifully appointed home.

## Hardwood Record Mail Bag

[In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.]

### Congratulates the Record

BAY CITY, MICH., Dec. 20. Editor HARDWOOD RECORD: Pleased indeed to note the growth of your paper, and hope it will continue. Your understanding concerning carrying our advertisement in special issue of HARDWOOD RECORD at Cincinnati is correct. Wishing you the compliments of the season.

KNEELAND-BIGELOW COMPANY.

CHAS. A. BIGELOW, General Manager.

### Inquiry About the Sugar Tree

PADUCAH, KY., Dec. 10. Editor HARDWOOD RECORD: Would sugar tree be considered maple? An early reply will be greatly appreciated. — J. T. MORGAN LUMBER COMPANY.

The variety of maple sometimes called sugar tree is the hard or rock maple (*Acer saccharum*).—EDITOR.

### Ready for Work in the German Forests

The RECORD is in receipt of the following interesting note from Dr. C. A. Schenck, director of the Biltmore Forest School. The

Doctor, accompanied by forty of his students, is carrying on his forest work in Germany during the winter months.—EDITOR.

DARMSTADT, GERMANY, Dec. 4.—Editor HARDWOOD RECORD: We reached Darmstadt on November 24 and are beginning to have the time of our lives.

Darmstadt is situated between the Rhine valley and the mountains framing the Rhine, and is connected with the woods by street cars, and forms an admirable center for the students of forestry. How I wish that you were along with us!

Your suggestion to level the roads for us before we get back to the United States toward a visit with the students to one of the prominent Michigan manufacturing sections, is excellent. Immediately upon my return to the States, in April, hope we can arrange for a meeting, so as to make things definite. A very merry Christmas — C. A. SCHENCK.

Because of its great toughness, applewood is considered one of the most valuable woods for making handles. The wood is very scarce and the price is high, the average being about \$50 per thousand board measure to the owners of the trees. The wood is most abundant in Indiana, Ohio, Illinois and other middle states, and farmers in these localities dispose of their wornout apple trees to handle makers. Usually a portable sawmill is moved on to the property to cut trees. E. C. Atkins & Co., the large saw manufacturers of Indianapolis, Ind., purchase a good deal of the applewood in these sections.

CAMERON L. WILLEY

CHICAGO, ILL.

## Wonderful Yellow Poplar Proposition

One of the most interesting developments in current lumber history is the present season's operations of the Yellow Poplar Lumber Company of Coal Grove, Ohio, in yellow poplar timber. These operations are especially interesting from the fact that yellow poplar lumber in all the better grades is at present in heavy demand with a scarcity of stock.

The timber holdings of the Yellow Poplar Lumber Company are largely located in Dickson county, Va., a county without a railroad and with no transportation by water save through the break of the Cumberland Mountains known as the breaks of the Big Sandy. This gorge of the river is embanked by cliffs rising to an altitude in places of 1,500 feet. The rough mountain torrent through the gorge is strewn with stupendous masses of rock, often fifty feet in height. Only in exceptional seasons of heavy rain was it possible to run this portion of the river with logs, and then only with great danger of loss through fire, sap rot and delay. Above this gorge the Yellow Poplar Lumber Company owns a timber area carrying about 150,000,000 feet of the type of poplar that has made the Big Sandy river famous during all lumber history. To get this timber out and to the company's mills at Coal Grove has been the engineering problem which has confronted this corporation.

The Yellow Poplar Lumber Company has compassed this difficult feat of woods engineering. It has been accomplished by building an immense splash dam in the main Russell Fork of the Big Sandy just above the five mile breaks of the river. This is the largest splash dam that has ever been erected. The extreme length is 360 feet and it contains five "flues" or flumes each 40 feet wide, which are temporarily filled with an ingenious arrangement of timbers, spars and planking,

held in place by wooden triggers. These triggers consist of pieces of timber 10 inches in diameter and 6 feet long that are fitted between 18-inch steel girders projecting from the concrete piers above the top of the abutments and 36-inch timbers that extend from pier to pier, and which support the ends of the spars carrying the splash board planking. The dam is anchored in solid rock at both ends and at the base. Holes are bored in these triggers, and sticks of dynamite placed therein, which are exploded simultaneously when a full head of water is secured, thus releasing the false work, turning loose the vast body of water and splashing out the logs above the dam and driving them through the brakes of the lower river. This dam backs water up to a depth of twenty-five feet over a large area and affords ten to sixteen feet of water through the five miles of the breaks of the Big Sandy. It carries the logs down to the lower reaches of the river which are free from rocks and other obstructions, at which point they are put into rafts for floating down the Big Sandy to Catlettsburg; thence they are transferred across the Ohio river to the company's mills at Coal Grove.

An accompanying picture, made by the editor of *HARDWOOD RECORD* on November 17 last, shows the concrete splash dam nearly complete. The piers of this dam are 32 feet long at the base, sloping to the top, and are 10x20 feet in size. The end piers are nearly 100 feet long. The upper ends of the piers have a five-foot V-shaped nose of extension to ward off the logs and lessen the impact of the water. The dam is mounted on a sub-dam five feet above the river bottom, and there is let into the solid rock foundation of the river bed. After the excavation was blasted the entire surface under the piers was drilled and sections of 60-pound steel rail set on end to

form anchors for the piers. It has taken forty carloads of cement to build the structure. The cement was shipped by rail to Elkhorn City, Ky., and then transferred by wagon over two mountain ridges. It has required seven months to transfer this cement, and forty mules have been constantly employed in the work. The cost of this dam is said to have been about \$40,000. Its dimensions are 25 feet high above the sub-dam, 360 feet across the top, and about 340 feet at the base.

On November 17, at the time the picture was taken, there was dumped in the gorge above the dam nearly 30,000,000 feet of poplar logs, averaging 750 feet apiece. This dump is more than two-thirds of a mile in length, and the logs, by aid of a Lidgerwood hoisting engine and trolley line, were carefully packed crosswise the stream as closely as matches in a box. The dump contains 36,000 large virgin forest yellow poplar sticks of timber, ranging in length from 12 to 38 feet, with an average of 750 feet to the piece, amounting to 81,000 logs of sawmill length.

This is the largest assemblage of poplar logs ever made at one point in lumber history, and is a part of the 40,000,000 feet which constitutes the log crop of the Yellow Poplar Lumber Company for 1910 manufacture.

On December 4 the dam was turned loose with a splash on which 6,000 logs were put through. At this time the dam did not have a full head of water, only about 21 feet. The first splash was successful in every respect. The second splash of the dam, with a comparatively light head of water, was made on December 13, when a second batch of 6,000 logs was put through. A considerable quantity of them got through the breaks successfully and passed Elkhorn City, Ky., where they are being rafted.

YELLOW POPLAR LUMBER COMPANY'S BIG CONCRETE SPLASH DAM, UNDER CONSTRUCTION, RUSSELL FORK, BIG SANDY RIVER, ABOVE BREAKS.

It will be recalled that there as yet has been no heavy fall of rain this season in the upper Big Sandy region, and the splashes are made with the water from springs and seepage from the mountain sides. With a reasonable flow of water doubtless a splash can be made every twenty-four hours, which will insure the entire 40,000,000-foot poplar log crop of the company being splashed into water where it can be floated to the company's mills.

The second picture shown in this article is a view of a small part of the cross section of the river in which this vast mass of poplar logs has been packed for splashing out. This dump is located in a gorge of Russell Fork, and the logs are piled forty feet deep, and extend two-thirds of a mile up and down the river above the dam. The Yellow Poplar Lumber Company is certainly to be congratulated on following the courage of its convictions in making this large investment for the purpose of getting out its timber. This body of timber has been passed over ever since poplar manufacture began as being absolutely an impracticable logging proposition. It remains for the Yellow Poplar Lumber Company to place on the market this season nearly one third of the yellow poplar timber that exists on the upper main stem of the Big Sandy river.

#### Preparations for the H. M. A. Annual

The headquarters of the Hardwood Manufacturers' Association of the United States at present is about the busiest spot on earth. With an augmented force in the offices of Secretary Lewis Doster, his executive clerk, N. L. Heaton, is rushed getting out circular matter in regard to the annual convention to be held in the Sinton Hotel, Cincinnati, February 1, 2 and 3. When it is considered that the plan of the convention embraces the sending out of invitations to ten thousand consumers of hardwoods, it will be readily apparent that a giant task has been undertaken. It is the intention of the principals in the association to make this the greatest convention in lumber history.

Outside the regular discussions of the convention there will be a moving picture show demonstrating forest operations from the felling of the tree to its manufacture into finished lumber. The opening of the big splash dam of the Yellow Poplar Lumber Company on the Big Sandy river, when over ten thousand logs were moved, will also be shown. There will also be interesting stereopticon views of forest and mill operations and lectures by forest experts.

A novel enterprise will be the publication of a daily paper by *Hardwood Record*, giving full information of all the proceedings up to the minute of going to press. These will be distributed to all attending the convention, and, besides, many copies will be mailed, which will carry the news of the convention to thousands of lumbermen in various parts of the country who are unable to attend.

Secretary Doster is now making an extended trip through the South.

The association is sending out a circular to the consuming manufacturers of hardwood lumber, extending to them an invitation to attend the forthcoming annual meeting. The letter is signed by R. H. Vansant, chairman of the Executive Grading Commission, and in it he states that there will be a meeting of this commission a few days before the annual, to meet delegates from organizations of consumers, when the rules now in force will be gone over and suggestions of such changes as may be considered necessary to make the rules just to both the consumer and the manufacturer will be received. On Monday, January 31, will be held a meeting of the Executive Grading Commission to consider the changes that have been proposed. It is said that the plan has met with favorable consideration in a number of cases, and a large attendance of consumers is anticipated.

#### Important Milwaukee Lumber Change

G. M. Maxson, until recently secretary of the Cooper & Maxson Lumber Company, the well-known wholesale hardwood house of Milwaukee, has retired from that concern, and organized the Maxson Lumber Company with headquarters at Milwaukee, Wis. The company has a capital stock of \$50,000 and is located at 221 Grand avenue. Mr. Maxson is the head of the new concern, and while it will handle a full line of lumber, it will make hardwoods a specialty. Incorporation papers will soon be completed and the company fully launched.

The Cooper & Maxson Lumber Company under the direction of W. E. Cooper, president and treasurer, will continue in the general wholesale lumber trade as in the past.

SECTION OF DUMP CONTAINING 36,000 LARGE VIRGIN FOREST YELLOW POPLAR STICKS RANGING IN LENGTH FROM 12 TO 38 FEET, SCALING 27,000,000 FEET OF AN AVERAGE DIAMETER OF 25 INCHES, CLOSELY PILED IN GORGE OF RUSSELL FORK, BIG SANDY RIVER; PROPERTY OF YELLOW POPLAR LUMBER COMPANY, COAL GROVE, OHIO.

# A Forestry Student's Letters to His Father

The following are extracts from the personal letters of one of the forty boys of the Biltmore Forest School who accompanied Dr. Schenck to Darmstadt, Germany, last month, where they will pursue their studies during the winter. In the spring the boys will return to America and will take up their work on the property of the Little River Lumber Company at Townsend, Tenn. During the summer they will be located at the operations of the C. A. Goodyear Lumber Company at Tomah, Wis., and later they will spend a month at one of the chief lumber manufacturing points in Michigan.

These letters are breezy and boyish, and every lumberman who is the father of a boy will enjoy them. More of these letters will appear in the RECORD from time to time.

## Diary Aboard Ship

Tuesday, Nov. 9.

We sailed at 9 o'clock. I waved goodbye to Father until we were out of sight, then went below and wrote letters to be mailed off Sandy Hook at 11 o'clock.

An amusing thing happened when Hutchinson, commonly called the "wood Pussy" among the foresters, got left and came steaming up alongside the Potsdam aboard a tug, which he hailed from the dock. It cost him \$15 for getting left. Were outside by 12 o'clock and at 2 o'clock out of sight of land. Weather fair and I have not felt seasick as yet. At 4 o'clock the band played for an hour. After supper we sat around and sang songs and told stories with Doc Schenck.

Wednesday, Nov. 10.

Arose at 9 o'clock; had hot salt bath, followed by a cold shower; breakfast at 9:30. Weather fine and although the boat pitched considerably I have not been sick. The ocean is never smooth, they tell me, and this is the way the boat always rocks.

Meals aboard are fine. For dinner I ate more than I have ever eaten before, I believe. This afternoon, I slept outside in my steamer chair until the band began to play. Watched the prettiest sunset I have ever seen.

The wind is coming up tonight and they say it will be rough tomorrow. Went to bed at 10:30 after playing bridge for two hours.

Thursday, Nov. 11.

Arose at 9 o'clock; had my bath. The boat pitched considerably, but I did not feel it. Had breakfast at 9:30 and at 10 Doc started lectures on Sylviculture. Later I slept until dinner at 2 o'clock, in my steamer chair. I am outdoors most of the time. This salt air sure is great, and how one does sleep! The wind blew like the deuce this afternoon, coming from the East; later it changed to the North, and tonight the boat rolled so Harold beat it to his bunk right after supper.

Friday, Nov. 12.

I awoke at seven in the morning at an awful sound. The boat seemed to be turning over on its side and my suit case came sailing down from the bunk above and scattered its contents all over the floor. Jones rang the bell for the Dutch steward, who tends our room. He is the Dutchest Dutchman I ever saw. Cannot speak a word of English and we talk to him in sign language. He began to pick up my things when I winked to Jonesie and we both started to make a noise

like we were vomiting on him. You should have seen him beat it out of there. Yesterday he told me that he makes \$8.00 per month plus his living. I finally managed to get out of my bunk, but, Lord, how that boat did roll! It seemed every time we rocked that something was pulling the bottom out of my stomach. I managed to dress and get into the closet, when in came some puking Dutchman, who shot his bunch from the door to all three closets and all over the floor. That got me going and I beat it up on deck, to see huge mountains of water rolling toward me, so that I concluded to go below again and managed to drop in my bunk just in time to save myself from losing my lunch.

I stayed there until four o'clock in the afternoon, then I managed to get up on deck again, where I stayed until supper, which I ate in my bed. I cannot go near the dining-room in rough weather. It rocks too much and the smell's enough to make you sick, alone. I went to bed at eight o'clock, after carefully perusing the "Wireless News." They print a paper aboard each day with the important news of the day as well as stock market reports.

Saturday, Nov. 13.

This morning I arose and felt much better. The wind has shifted to the east again, and the boat pitches but does not rock any more. I feel quite like myself today and I do not believe I will get sick again. Had a good breakfast and then went above, where I slept until noon. Doc has cut out lectures during this rough weather. I think he is getting sick himself. Several of the fellows have been awfully sick. Little "Tommy" Thomas has thrown up twenty-four times since we have been out and has not left his bunk once. The new fellows are a good crowd and I am sure that I'll like them. The trip is getting tiresome already, and especially so in this rough weather, when second cabin is rather disagreeable, as you cannot walk. If one could exercise it would be better, but here we are so low down that you cannot walk the deck because of the waves breaking over them. Above, in first cabin, they walk all the time, but here all you can do is to go way up on the little poop deck and lie down in your steamer chair.

I spent the afternoon in the smoking-room telling stories. The boat is rocking fearfully, but I do not notice it and feel as if I am all over my sickness.

At 5 o'clock this afternoon, all of the fellows who are interested in Michigan, got together and I led them in a locomotive as we figured that the two teams were just starting to play then. We are out of connection with American shores by wireless, but the operator says he can now get Ireland O. K. and he hopes to get reports of the game for us tonight. I had quite a talk with him yesterday. It is awfully interesting to hear him tell of his work. He says that when things get tiresome for him he cracks jokes over his instrument with the operators on other ships on the ocean or with the shore; says they even have a laugh signal which they give at the end of a joke, and he then showed me by pulling down a lever and laughing at the man 400 miles back at Cape Sable. They hear the wireless through a telephone receiver which they have at their ear at all times. Before them they keep a chart which gives the courses via wireless which our boat passes each day or it tells at a glance to what boats we can telegraph as well as what stations. I cannot write this very plain, as the boat rocks too much. I'll close now until tomorrow.

The gang are all sitting around here in the smoking room telling stories and the boat is raising h !!

Sunday, Nov. 14.

This is the roughest day we have had so far, but I do not feel the least bit sick. The wind comes directly from the east, so the boat pitches instead of rolling.

I awoke at 9:30; had a bath and then went up on deck. Started to go forward when an immense wave swooped over the boat and simply soaked me. Had to go below and change all my clothes, so I decided to stay indoors the rest of the day. We have now been out seven days and the captain tells us it will be seven more days before we land, as this wind has kept us back. Lord, but it is getting monotonous. Only one day of good weather so far, so that we have been penned in here in second cabin most of the time. If you meet anyone who is going across, for Heaven's sake tell them to take a fast boat and go first cabin, for this is almost unbearable. I don't believe I'm cut out for a sailor anyway, and I think of all the sad boats the Potsdam is the saddest.

It makes you hot as thunder to think of the Lusitania leaving yesterday and passing us before we reach the other side. However, I'll stick it out, as there is a better time coming. I told Dad's story at dinner table about the woman who got on the train in Arkansas, only I applied it to the Potsdam, and it made an awful hit. I must stop now. Guess I am a little homesick today.

We sighted a Russian battleship today, but she passed us also. Every boat on the Atlantic passes the Potsdam on one trip—fine ship! Am going to bed now.

Tuesday night.

Did not write anything for Monday, as I remained in bed all day.

Well, this is sure the worst I have ever experienced. I am writing this tonight, sick at head and heart, I can assure you. Never have felt so fierce. For two days the wind has blown a gale; worst of the year, the captain says, and we are now two days late, with present prospects pointing to more. Last night I awoke being banged about in my bunk while this old tub was trying to turn acrobat and stand on her nose. Yesterday I felt so rotten and the boat banged around so that I stayed in my bunk all day and night. The food is getting tiresome. I am bilious and for two days we have been cooped in here between decks without breath of fresh air and the place smells like the steerage. If anyone suggests second cabin to you people, tell them to take my tip and steer clear. When I come home I come via Lusitania, first cabin (5 days). This life on an ocean wave is no joke.

We are now half way and tonight the captain is afraid of a hurricane. Let her come. I've got to the stage where I don't care. However, I'll stick her out. The fellows are all some balled and sore on the whole game. They'll be O. K., though, when we sight Hol land.

Wednesday, Nov. 17.

Weather same as it has been every day of the trip. Am feeling much better, though, as I took two of Dr. Duncan's black pills last night, followed by a dose of Hunyadi water this a. m.

There is absolutely nothing doing on board the ship and the food is fierce. Sleeping is a hard proposition now, as the air below is so poor because everything has been closed up owing to the rough weather. I never saw such waves in my life. They break every

once in a while and go away over the boat. It has rained almost every day we have been out and I am so sick of the sight of water that when I see land again I'll shout for joy.

We sight land Friday afternoon, arriving at Rotterdam Sunday morning. This letter will be mailed at Bologne Saturday morning, which is the first stop the boat makes. I have been thinking about meeting you people over here.

Thursday and Friday, Nov. 15 and 16.

Yesterday it was too rough to write, so I have delayed until today (Friday).

We received word via Wireless last night from Holland that a great storm was approaching us. It hit us about midnight and washed away the steel railing and plates in the bow of the boat so that we had to stop an hour or so for repairs. Today the weather is still bad and the worst sea imaginable is running. However, it does not phase me, as I am no longer inclined to be sick. I received my mark in mensuration today. I passed with 80 per cent, which was not bad, considering I wrote my paper 15 minutes before I left Asheville. I was afraid of it and am glad that I have passed successfully. I have now but one more exam., the B. F. S., to take under Schenck, and I have never failed in one, which is a record only equalled by two in the class.

We sight land tomorrow noon, probably arriving in Bologne tomorrow night late. This letter will be mailed from there and this will be the last instalment. We get to Rotterdam Sunday and we should be there now (Friday). I sure will be glad to get off this old tub, as I believe this is the most uncomfortable two weeks I have ever spent. If we were able to get fresh air it would not be bad, but we have been penned in here like cattle for two weeks. I have arranged for good rooms in Darmstadt with Jonesie. Am feeling fine. Will write from Darmstadt Tuesday.

#### Letters from Germany

DARMSTADT, GERMANY, Thursday, Nov. 25.

Dear Dad: Six o'clock Thanksgiving Evening and soon I will be sitting down to a turkey dinner with the fellows. I arrived here last night. Was in Rotterdam two days

and liked the place very much. Such a funny town, with canals everywhere about you and one has to be careful for fear he will make a false step at night and fall into one. We saw wooden shoes, piles of them, and windmills, right in the town. Imagine a town of 300,000 people in America with herds of cows being driven through its streets at all hours of the day. Such fun as we had roaming about there. Some gentleman, a friend of Doc's, who owns a fine steam yacht, took us all over the town via the canals, also all over the harbor of the Maas River, or the mouth of the Rhine, where we saw thousands of boats. Rotterdam is the shipping town of Europe, you know.

We left there yesterday morning, coming up the Rhine Valley in the funniest compartment train you ever saw. Saw the most important historical points to be noticed: Old castles, hundreds of years old, and looking the part, standing high upon some hilltop and overlooking the Rhine Valley. I saw Die Lovell Tower. What impressed me most, however, was the farms. They use every bit of ground here, even if it be the steepest hill, for they terrace the sides so a hill looks like a lot of steps, and on top of these dinky little gardens or steps they raise vegetables, corn, etc. The woods are great and everything is pretty, yet bearing an artificial air about it which is not like old U. S. A.

We arrived here last night and I sure am impressed with the place. Americans are few here and a curiosity. No American ever comes here, they say, as it is not a town for sight-seeing. However, it is a great university town and you see thousands of students on the streets. This morning I was up early and hunted all day for rooms, but without satisfaction, until I introduced myself with a few others to a bunch of German Corps students (Fraternity), with green caps. They looked at us when we offered our hands and said "agreeable" and we managed to talk to them a little. They were fine fellows and gave us the name of an Englishman studying there and we hired a taxicab and looked him up. He is a "jolly good chap" named Crawford Maxwell and is living with his mother and sister, who were also very hospitable to us. We got Maxwell in the machine and he took us to the student quarters of the city, where Jonesie and I obtained a fine suite of

rooms (2) with rolls and coffee for breakfast, at 30 marks per month apiece (\$8.00). One room, for sleeping, is a peach, and the other has a piano, bird, flowers in every window, etc., and clean as a whistle. We are situated over a store, nearly across from the University.

Do you remember of my telling of George Merck (had met him and his sister at Doc's), the nephew of Doc's, who was such a fine boy and who was up in the woods with us last summer and made so well with the boys. His father is the Merck who is the great drug importer of the country (U. S. A.). They have a great home in East Orange, N. J., and a villa here in Darmstadt, the best in the place, with a park, etc. George has offered his house for a lecture hall of the B. F. S. We went up there today and found the place ready for us with an American flag covering the whole side of the immense drawing-room, with our school insignia and "Welcome B. F. S." on it. It sure was great and every one uncovered and gave three cheers for Georgie. We also sent a wireless telegram of thanks to Mr. Merck, the father, who is on his way over here now.

Doc is the whole cheese here in this town. The honorary "Oberforster" or head master of all the foresters of the state and they all know him and kowtow to him. He only has to salute one man in the town, all the others must salute him. They also all know about his trouble with Vanderbilt and stand with Doc to the finish and they can't understand why he should suffer an insult like a discharge. Here he has always a life job.

No one speaks English here, but I find that I can make myself understood pretty well with what German I had while in college. Besides, I will pick up my vocabulary quickly, living in a German home in the student quarters. Jonesie and I are away from the rest, so it will be a good thing for us, I think.

Today is Thanksgiving day home and here it is also holiday, being the Grand Duke's birthday, so we are going to celebrate both occasions by having a turkey dinner tonight and followed by a Sangerfest. Later we are all going to an assembly of militia men and students where Doc is to speak and they all make speeches about the Grand Duke. We are all going.

## Annual National Veneer and Panel Mfrs.' Association

The fifth annual convention of the National Veneer and Panel Manufacturers' Association was held in the Auditorium hotel, Chicago, December 14 and 15, being called to order by President Burdis Anderson at 11:30 a. m. Secretary E. H. Deebaugh recorded.

It was an enthusiastic meeting in every sense and as President Anderson stated: "We have terminated four years of splen did work." The attendance was large. The actual results accomplished embraced the adoption of a policy of more aggressive and greater individual work; a line of investigation to determine actual cost and accounting systems for the manufacturer; an increase of \$15 in the annual dues through an assessment by the executive committee; the recording of the unanimous support of the association in deep waterways matters, and two changes promulgated by the rules and grading committee.

After the president's address, followed

BURDIS ANDERSON, RETIRING PRESIDENT.

by that of the secretary, the president announced the substitute appointments for the standing committees as follows: O. C. Lemke to act in the absence of J. A. Underwood on the committee on constitution and by-laws; H. M. McCracken as chairman in the absence of M. C. Dow, Jr., on the membership and credentials committee; Nathan M. Willson to fill Mr. McCracken's place on the resolutions committee; W. S. Walker as chairman of nominating committee in the place of D. W. Williamson and R. C. Dayton in the place of C. W. Talge on the auditing committee.

The convention adjourned at 2 o'clock to give the subsidiary organizations, the Rotary, Gum, Quartered Oak and Panel Clubs, an opportunity to meet.

President Anderson stated that the work of the association for the past four years had been quite satisfactory. He made a strong plea for individual work, contending that the individual must make more of

an effort himself instead of looking to the organization as a collective body to accomplish all the results or benefits. He urged all to "be boosters and not knockers," a slogan that appealed to the convention greatly. Second only to his individualistic talk was his frank statement that veneer and panel manufacturers do not know market values and have not arrived at an actual cost system for their business. Cost and cost accounting were clearly up to the manufacturers to determine and to follow. His whole address was a plea for definite cost systems.

P. B. RAYMOND, INDIANAPOLIS,  
PRESIDENT.

#### President's Address

This is the fifth annual meeting of the association and completes four years of our association work. The first two years we enjoyed years of comparative prosperity; the next two years we experienced very decided business depression, and like the Scripture story of the lean and the fat kine, the lean years have swallowed up the fat years. When the association was started we anticipated much greater results and much more rapid progress than has been accomplished. The work of the association has devolved very largely upon a few individuals, and while this is doubtless common to associations and enterprises of this character, the fact of its being common makes it none the less unfortunate, and every member of this association should thoroughly understand that to accomplish the best results and bring about all that we have reason to expect in this association, we must have the individual effort of every member.

When two years ago I was asked to accept the nomination for president, in view of the two years that had passed and the fact that we had not accomplished then as much as some of us had hoped for, I felt that while there were other men in the association that were better qualified and who should have been honored with the position, nevertheless it would not perhaps be difficult to keep the work going and bring about as great and as good results in the succeeding year as has been attained the past. As I look back at that time, I am reminded of the story of a boy that proposed to go in swimming in November. His mother rather objected, saying it was too cold. Later, however, she noticed he had sand on his shoes, his hair was wet, and said, "Well, son, where have you been?" "I have been in swimming." "What! in November?" "Was not the water too cold?" "No, it didn't seem so to me, but a man came down and watched me for a while, then took off his clothes and jumped in. He said, 'Great Jehosaphat!' and jumped right out again."

It might have been well for me to follow the example of the man who found the water too cold for him. The Inspection and Credit Experience Bureau that was established I think has

been found advantageous to a good many of our members. We made one change nearly two years ago in employing Mr. Young as assistant secretary of the national association to cooperate with us in our work and along the lines of the auxiliary organizations. Some changes have been made, but I feel, gentlemen, that we have not succeeded in getting the results that we were entitled to, and that every member of this association should make it his personal business to boost the national association. Be a booster and not a knocker. The main thing this association, like every other association, is in existence for, is better prices. This is not a philanthropic enterprise or benevolent institution and unless we get more uniform and generally better prices for our product through the efforts of this association, the association is a failure, because that is the main thing that it was established for.

We have succeeded in introducing some uniform methods in some lines; we have better recognized grading rules and some points of trade ethics have been agreed upon that are an advantage to the veneer and panel trade, but the paramount interest is price and better values; when we consider, gentlemen, that possibly twenty panel men, twenty rotary cutters and fifteen or twenty producers of quartered oak could get together and practically control the prices; make the prices what they should be; make such prices as would give commensurate returns upon the brain and capital employed, it seems utterly ridiculous for the present demoralized price conditions to prevail.

We occasionally see mention in some of the trade papers about market prices of veneers and panels. Now in many lines I want to say there are no market prices. When a man buying panels buys three-ply quarter-inch quartered oak panels for \$30 a M. as a large manufacturer in the East told me a short time ago he was doing,

E. H. DEFEBAGH, CHICAGO, SECRETARY.

and another man wants \$40 or \$45 for the same panels, will somebody tell me what the market price of panels is? This manufacturer of furniture, the consumer or user of those panels, asked me what it costs to manufacture quarter-inch three-ply panels. I said I did not know; that I was not in the panel game. He said, "Do you think they could be made for \$30?" I said, "Not according to the figures of the best panel men." He said, "We cannot make them for that, but we are buying them for that, so we are buying all we need of them."

The same conditions prevail in quartered oak and in rotary cut stock. When birch door stock is being sold by very well informed manufacturers, manufacturers who keep accurate account of cost, at from \$10 to \$18, \$18 for all styles, and another manufacturer in the same district, hardly as well equipped, offers the same stock at \$10, will somebody tell me what the market price is on that product? When 3/16-inch pin block stock that some of our older and more experienced manufacturers want \$17 to \$17.50 for with crossings in one, two and three pieces, no guarantee of the percentage of one-piece stock, and a consumer in Chicago buys all whole-piece stock of the same thickness hard maple for \$13.50, delivered in Chicago, will somebody tell what the market price on that stock is? When small drawer bottoms are offered at recommended prices of \$16 in Grand Rapids and one of our members sells the same stock for \$10.50, delivered in Grand Rapids, will someone tell me what the market price is? I maintain, gentlemen, there is no market price on veneers and panels. The man who talks market price feels that the market price is whatever the buyer is willing to pay for it, and the buyer has demoralized the

market. I believe that the principal cause of this condition is the fact that comparatively few of the manufacturers have a cost system that gives them reliable and accurate figures on cost.

A man goes into the market without absolutely positive information of his cost; he wants the business; he wants the order; he wants a price for it, but he takes what the buyer is disposed to give him. Now if that same man figured his cost carefully, it is reasonable to suppose that he would raise his price; that he would at least have a minimum. I think it is reasonable to suppose that he would raise his price; that he would not sell his product for less than cost.

While the association, as I say, has not accomplished all that we might have hoped for, I see no reason why we should not get closer together and make prices on every line. The question of making prices brings up the question of the Sherman act and the legal ethics of the matter, but it certainly is no violation of any law for any bunch of manufacturers to get together and agree that they will not sell their product for less than cost. The question of what has been accomplished and what we hope for in this association reminds me of another story of a woman's expectations for her son. She said: "When Johnny was a baby I expected when he grew up that he would become a minister, but when he got to be four years old I decided that if I could save him from the gallows I would be doing all that could be expected of one weak woman," and while I hoped for and expected much greater things for the association during the past two years, I have felt very much for the past year if we could keep the association alive and active until this time of depression was over and until business should be resumed, that about all would be accomplished that could be reasonably expected. That time of improved business has arrived.

When talking with many of the manufacturers that are present in Chicago today, I have learned that a good many have more business in hand today than at any time during the past two years, and this brings us again to the most vital point, which is, with this improved business and increased demand we should insist on prices that will give us reasonable returns. We need larger profits; we need more accurate and careful figuring of costs to secure those profits, and I think that the most vital and important consideration for this association is the question of costs.

One objection that has been raised to the adoption of a uniform cost system or cost systems for our different products has been that it

H. S. YOUNG, INDIANAPOLIS, ASSISTANT  
SECRETARY.

is claimed that a difference in the method of operation, difference in equipment and location of different plants, would make it impossible to use any uniform system; and, while that objection has some weight, there are so many items of expense that are common to every rotary cutter, to every manufacturer of sliced and quarter-sawn stock, and to every panel maker, that I believe positively that it would be possible to adopt uniform cost systems sufficiently general so that without any very serious change they could be adapted and made applicable to each and every plant represented in our indus-

try. It does not make any difference how we figure cost, provided we get results. Someone said costs must be figured by results, and in no other way. If some manufacturer has a cost system that is giving him satisfactory results upon which he can positively figure a legitimate profit, which will show on his books at the end of the year as he anticipated, he does not need any uniform cost system that we might adopt; but it is unfortunately true, gentlemen, that some of the manufacturers in the veneer and panel industry have no conception of their costs. One man who has been in the business a good many years and has, very fortunately made money, stated to me here in this hotel a few months ago when I asked him if he could produce certain stock at the price he was selling it for: "To tell you the truth, Anderson, I am ashamed to say it, but I do not know, as I do not know what anything I manufacture costs me; but I am going to find out." He is not the only man in this situation, gentlemen. Just give that condition a thought. We should put into use cost systems that will bring results.

M. W. PERRY, ALGOMA, WIS., DIRECTOR.

Information and better knowledge to the manufacturer will right there and then get more uniform selling prices and very greatly improve the business. I think that the question of cost and cost accounting is one that the association should give very serious, careful consideration.

One thing we so hoped for in the association, one of the points that we had in mind when the assistant secretary was employed, was the possibility of getting a man into this work that would be interested in it and become sufficiently well informed upon the practical features of our different lines to visit some of the plants and, where a manufacturer is selling stock of any character for less than the cost of the majority of the manufacturers, find out whether it is because of his peculiar situation or his much greater ability that he is able to produce that stock for so much less, or whether it is because he simply does not know, and then be able to put him on the right track. Every man who is induced to bring his price up to a profitable basis helps every other man in the business, and we can all well afford to give some time and expend money and energy to get the general trend of prices higher than they have been, and especially to get up prices that are demoralizingly low.

One of the most prominent bankers in Chicago, in a recent discussion of the basis of credits, stated that no manufacturer is entitled to credit who does not use a reliable cost system and figure positively his cost. I think, gentlemen, that statement is too logical to admit of any discussion, and I want to say once more that I think the figuring of cost and a general campaign of cost education and the discussion of cost information is positively the one point of greatest importance to this association, because it is only in that way, by inducing every manufacturer to figure cost and to know his cost, that we can ever get the manufacturers to maintain any reasonable prices. The man who does not know cost has no real appreciation of any price list, and really does not know whether the prices are high or low; and while to a good many of our manufacturers this talk is unnecessary, there are many more that need it, and the men who are informed on the subject

of cost need to educate the others for their own protection.

That is the main part of what I have to say, gentlemen. The financial situation of the association is not so blooming that we felt it would be possible this meeting to have a luncheon or dinner. Our financial situation reminds me of the story of the man whose banker called him into the private office one day and said, "Where do you keep your money?" "Why, I keep it in your bank here; I have an account here." "I know; but where do you keep your money; all you keep here is an overdraft."

Secretary E. H. Defebaugh, in his address, was no less earnest and pointed in the discussion of the cost system and made a plea for more individual work. He wanted, he said with much emphasis, to see the resolutions committee "do things," and with characteristic force the secretary asked that all take a hand for a general boost all along the line.

#### The Secretary's Address

Mr. President and Gentlemen: In my absence yesterday our president robbed my office of the subject I had in mind to talk on, and has put it in such a way that it leaves very little for me to say. I am really so interested in the success of this organization, which was perfected several years ago to help you work out your problems, that I feel it is my duty to talk right from the shoulder. The trouble is there are not enough men in it who are willing to give time to put

H. J. BARNARD, INDIANAPOLIS, DIRECTOR.

it on its feet, to make your business a profit-sharing one, and make it possible to pay dividends instead of being run on the basis where you take care of the grocery bill only and are satisfied.

A national association is formed to bring various trades together, men of every country, that they may exchange notes, get a clearer idea of all business, so they will be able to get better prices and work in harmony. We have some eight or ten committees and in the past they have done good work; have gotten together and talked over various features of inspection and have accomplished something. They have also talked over values and have accomplished something. You have compared notes on prices and understand that it costs money for you to live and that you have not been putting that salary in your cost account. Some of you have discovered that logs were really costing more money than you figured in your selling price, because the logs purchased this year were not as good as those bought last year. You have overlooked the fact that John Smith in New York has written you a letter stating that your car of veneer stock sent does not suit. It is not up to grade; it is split; it is defective; it is not what he ordered, and you have the car thrown back on your hands. After peddling this stock all over the East you had to take a cut price for it. You may forget that this car, instead of showing a profit, showed a net loss. The reason of this is because your assets are not a good

bank credit, and unless you know actually how much it costs you are liable to lose money.

The Constitution and By-Laws Committee has not been able to do much for you because they were not able to say you must do certain things. All the officers could say was, "Gentlemen, we would like to have you participate in this program." You have neglected, gentlemen, to take this association to heart. You should all belong to the same and not allow three or four men to do the praying and paying for the entire association. I do not know as we could have a better plan of organization than to bring out the fact that you have good clubs, and if you will join these clubs, join them in the right spirit, go to the meetings, no matter where they are; go to them with open hand and heart, and say: "Gentlemen, here is my business; I am willing to tell you anything about it; willing to cooperate with you to do things." Do not sit back in a corner and say, "Oh, well, So and So will figure that out; he has plenty of time." Of course there must be a leader, a man who is willing to make sacrifices in associations; this is true in this as well as in other associations. No association succeeds unless some man says: "Gentlemen, I will give my time and let you look over my books, and even divide my trade with you," and this has been done in this association. The man who makes these sacrifices does it because he believes in the industry and is in it to make money and knows the only way is to cooperate with his competitor.

We have a committee on resolutions. The sorry thing about the Resolutions Committee in most associations is that it seldom has anything to say except a few words about some fellow that is dead. This committee should, when the members come to these meetings, pay close attention to what is brought out here and then say what the policy of the association should be. If this Resolutions Committee would in plain English state to the veneer trade of the United States that the prices obtained for veneer are not enough to net a profit in the business, the man who is really interested in his own business would accept it and determine not to sell goods unless he makes a profit. If the members of this association will only understand they are partners, not in crime, but in an endeavor to do something for themselves, then we will have an association to be proud of.

Here we are, forty or fifty men from every part of the country, who realize the need of an association, yet we are not doing what we should to make it better. We are on the eve of enlarged business in every line. The steel and box industries indicate a large volume of business for 1910. Here there has been no effort

CHAS. BARNABY, GREENCASTLE, IND., MEMBER EXECUTIVE COMMITTEE.

made to eliminate contracts made in December that may carry you next year on a basis of cost instead of being able to take advantage of an advance on account of increased volume of business. It is just possible, gentlemen, that this is true in every line—lumber, cement, plaster business, all the lines interested in the material trade. Why? Because the manufacturers of the United States are not in closer harmony. When a man comes to this town of Chicago he thinks it is more important that he should buy a Christmas gift than attend the meetings and not only listen to what is said but say something.

Next comes the Valuation Committee, with the idea that it should report as to what present conditions are. The members should get out a notice to the venter people stating that we cannot make a price list, but that every man should adhere to the prices. Gentlemen, these are plain facts, and you know it right down in your hearts, as does every man who is a member of these clubs and knows what our trade is up against. Hence I am telling you the truth. Every fellow who does not rub shoulders with his competitor knows that when he rubbed shoulders with the buyer he had to pay the price. These committees, when named by our president to make up reports for tomorrow afternoon, should make up reports that will mean something.

I attended a convention of thirty-one hundred organizations, some of them having as many as one thousand members, in Washington last week. Every man wanted something locally, but would be satisfied if Congress would meet the policy along the line suggested by the Deep Waterways Convention, the funds to be distributed through engineers of the United States who have already examined these waterways and find it desirable for this government to improve them. We will accomplish something in getting profits in 1910 the same as the Waterways convention is bound to get an appropriation from Congress, unless the congressmen of the United States are not true to the people of the United States. If we are not true to ourselves and our families there is no use belonging to this association; there is no use for a national association. If we are, and we have reason to believe we are, or we would not be here, then let us work this problem out before we leave here, and then work in harmony through local associations and clubs. You will determine you are the master of your own business, and through cooperation with the members of this association you will tell the customers you are; and your goods will be sold in 1910 at your price, not the customer's.

Take the Committee on Membership and Credentials. The credentials end of it does not cut any figure, for it merely specifies manufacturers of veneers and panels. What is a thousand-mile trip, if you can change the policy of your business and make it pay, in preference to the non-dividend paying institution? We need members; we need every man in the industry in this association. We have sixty-three members; we should have one hundred, and live ones at that, men who are willing to come to the front and do anything necessary to work out the problems.

A few years ago we used to say Chicago was the coldest place on earth. Today four thousand men in the Association of Commerce once a week get together and spend two hours at luncheon, through the Ways and Means Committee, and if you want inspiration you should go there and see 150 of the best men in Chicago. They meet there because they are interested in making Chicago the greater market in the world. Then, as members of this association, we should be interested in making our association profitable. We can do it, gentlemen, if we want to, and now is the time.

I would like to see the Committee on Inspection and Grades get busy again. The manufacturers of lumber in the Northwest, the men who perhaps have made money out of the timber, shifted along as we are doing until about fifteen years ago. They were making money but not nearly as much as when they got together on inspection and grades, and the first thing they did was to form an organization. The minute they got together in harmony and decided on grades it meant \$5 per thousand more, a pretty good dividend, gentlemen, pretty good dividend. If the members of the veneer association through harmony, cooperation and friendly relations with each other, were to increase the selling price of their product ten per cent in 1910, you have opportunity of increasing twenty per cent from what you have been selling for. Is not this worth while? Therefore, in appointing your Committee of Inspection and Grades give it something to do. It will make it easier to get this ten per cent or twenty per cent more in 1910. If you were closer to your customer and discovered he could use a substitute of lower grade, would you not be cleaning up the product of your logs better? These things come about by cooperation, gentlemen, by discussing the various phases of your business honestly, and not being afraid to talk. No man comes to this meeting and telling the idea of accumulating information and telling it to someone else. Men in the veneer trade, as I have known them, have done less than those of other lines, but in other words they are truer men; do not take advantage of other fellows; insist on opening up their personal business to help you as well as themselves. That being true, it seems to me every man should come to this meeting interested in his subject and talk specifically of how you can better improve your business.

Arbitration and Grievance Committee: We have heard very few reports from this committee. In other lines this has been of great benefit. If the buyers in the United States who consume veneer understood that just claims and unjust grievances where the buyer would not be fair in the market were put on a blackboard at the national association meeting; if they knew

it would come up before the manufacturers, they would do less kicking. This is where the Committee of Arbitration and Grievances could help, but it is not fair for individuals through the association to be unfair to the buyer. The man who would avoid criticism must do nothing; be nothing or say nothing. Gentlemen, this Grievance Committee should be used. If you have a bad complaint and cannot settle put it up before the Grievance Committee for settlement. The members can help you and make it possible to get fair value for your stock, and if you sell No. 1 stock you are not going to get paid for No. 2.

The National Association of Veneer and Panel Manufacturers is practically an insurance policy for your business. You all take out insurance for your families, so that when you pass away there will be something to take care of them. Everyone should take out a policy in this association. It will not only pay your dues, but will bring you in closer harmony and enables you to help yourself as well as your neighbors. Let us take out this policy for 1910. If it is necessary to have meetings every month, let us get together. The only way to do this is to work in harmony and cooperate through this national association. Those of you who are in the clubs stick there, if it costs you \$500 a year. You will get the dividends back. You have all seen the sign at railroad crossings, "Look out for the cars." If you will just keep your eyes about you and are satisfied the other fellow is all right and work with him, the cars will not hurt you. The trouble is you are all afraid of the cars.

Gentlemen, we have been very much pleased with the cooperation given personally by most of you, whenever I have asked you to do something in my office as secretary. I have heard Mr. Young say the same thing and know our president has secured your cooperation, but we need more cooperation. Do your part. I can look in the eyes of men here to whom I have said, "Would you like to do this or that?" They would say, "You bet." We should have sixty-three good men who are willing to do anything that is for the good of themselves and the association. All we need is the personal interest in this organization and when a matter comes up in which you are asked to do your part, do it. It will mean that the national association will talk; it will mean that every club you have will bring best results. With these two things in mind we can accomplish anything we start out to do, and I hope we will start out to do them today. I hope you have suggestions here and that the work of this convention will be memorable in the history of the association.

#### Coöperate in Waterways Movement

The secretary had something to say also concerning the "water cart" proposition in this wise:

I am very much interested in the water cart proposition, in other words, nine feet through the valley. Commercial associations of the United States are trying, as you all know, to secure \$50,000,000 appropriation to improve our harbors, dockage and secure deep water which will mean water transportation, which further means better facilities to carry freight longer distances at very close prices. The railroads admit the fact that they need an increase of freight shipments. In ten years they have only prepared to increase their facilities twenty-eight per cent, while the increased business is over 110 per cent. So if we have anything like 1907 business we will be in the same fix we were in the fall of 1906 and spring of 1907. If we have water transportation to increase the freight facilities, to take care of manufactured product in times when we need shipments; when we need orders and facilities in order to follow them, it will mean a lot to the business world, and I would like to suggest to you that a committee be appointed to cooperate with this association by urging congressmen in your particular districts to follow the specifications of Mr. Taft in his speech at Washington last week when he said he was in favor of the proposition because it was recommended by engineers of the United States that waterways be improved from Chicago to the Gulf, from Missouri river to the Gulf.

A committee, composed of S. B. Anderson, Memphis, Tenn.; W. S. Walker, Portsmouth, Ohio, and J. D. Saunders, Park Falls, Wis., was appointed to draft resolutions to express cooperation in this movement and the wish of the association to put the matter before the congressman of the various districts.

#### Mr. Kline's Address

The president called on D. E. Kline to read a paper on the "Comparison of Log

Prices for Ten Years," which was a very clear resume of this proposition. The paper follows:

I have been requested to prepare a paper for your consideration upon the above subject.

The cost of logs ten years ago, and at all subsequent dates, is a matter of fact and history. I find from my own records that in 1899 we paid the following prices per thousand feet for No. 1 logs, delivered at our yard:

POPULAR	
Under 20" diameter.....	\$17.50
20 to 29" diameter.....	19.50
30" and up diameter.....	20.50

WHITE OAK	
Under 20" diameter.....	\$19.00
20 to 29" diameter.....	21.50
30 to 35" diameter.....	25.00
and for 36" and up, for which we offered a premium so as to obtain large logs for quartered veneers, \$35.	

I recollect also that every lot of oak must contain some 36" and up to make it sufficiently attractive to consider.

Gum .....	\$12.00 to \$14.00
Sugar .....	12.00
Walnut .....	25.00 to 35.00
and I find in one lot three logs for which I paid \$70. They must have been extra choice.	
Ash .....	\$15.00 \$16.00 \$17.00
Lynn .....	14.00
Sycamore .....	10.00 12.00

It must also be remembered that, at that time, we bought only No. 1 logs, and while I find that in some instances logs had been cut in measurement for minor defects, I do not find that we bought No. 2 and No. 3 logs at any price. In addition to the better quality then to be had, veneer men bought only the larger logs. We confined our purchases to logs 20 inches and up in diameter, but did at times take some logs as low as 18 inches, this rule applying with us particularly to poplar and oak.

The history of log prices during the decade has been a gradual but constant increase. I hardly need say anything about the prices today. The fact is that they are from 66 $\frac{2}{3}$  per cent to 100 per cent higher than in 1899.

Now, how about prices for our output? In 1899 the business of the country had barely recovered from the shock of the panic of 1893. Prices, however, for goods in these lines had not reached those of the days up to May, 1893, nor have they since. Profits previous to 1893 were good but not excessive. They have never been reasonably good since that time. The course of our prices in the face of the marked increase in cost of raw materials has been downward, and continued downward, until the launching of this association, exactly four years ago. Then we enjoyed two years of somewhat bettered conditions, until the flurry of 1907 came along; and then, as our sporting friends would say, "ali bets were off," and "price chaos" (or very nearly so) ruled supreme. Happily the bettered condition of the demand in the past year, and particularly the past few months, has enabled us to stiffen up somewhat in price. But that prices are still too low is certainly the case; the best evidence of which is that we are not now getting the prices of 1892 and early 1893. Is there any other business on the face of the earth that has stood for this sort of thing? I think not.

Let us take a few items of staple manufacture. The recommended price today for 1/30" rotary cut poplar cross banding is 16 $\frac{1}{2}$  per cent higher than it was in 1892, and prices were not as strong in 1899 as they were in 1892; 1/8" and 1/4" R. C. poplar dimension stock was lower in 1899 than in 1892, and is only about 25 per cent higher today than in 1899; 1/20" S. C. poplar is today only about 12 $\frac{1}{2}$  per cent higher than in 1899.

In glued up stock, 1/4" 2-ply poplar in 1899 was supplied at 20 per cent less than in 1892, and is today 50 per cent higher than in 1899, and not high enough at that; 1 1/4" plain oak panels in 1899 were 7 $\frac{1}{2}$  per cent lower than at any time up to 1893, and never equaled the price of that date until 1906; since then have dropped back again. During the past few months there has been a gain in prices, but today's figures are only 4 $\frac{1}{2}$  per cent better than in 1892; 1 1/4" quartered oak panels, with both sawed and slice cut faces, show better advances, recommended prices today being 25 per cent higher than in 1899. Quartered oak tops, 5-ply, are today \$5 to \$10 per thousand feet less in price than in 1892, and during the period ranging from 1893 to 1906 were sold at nearly 12 per cent lower figures than today.

But someone says that improved methods of manufacture have cut down the cost of production, and we can, therefore, manufacture at a less cost than ten years ago. I think not. In the production of veneers proper the rotary cutting machines and slice cutting machines were run just as fast ten years ago as today, and there have been none but minor improvements in their manufacture. Therefore, a machine of the same capacity, run on the same wood and

thicknesses ten years ago, cut as many feet of logs as today, better in quality, and by reason of its better quality, a larger proportion of saleable dimension stock. Veneer saws have increased their output only by increasing the speed of the feed. Ten years ago saws had been speeded up in feed to about the maximum.

In the panel line there have been some improved machines added, notably jointers, splicers and improved power presses, but taking the slightly decreased cost of manufacture, by reason of these saving devices, I venture to say that the saving to the entire trade would not represent a reasonable interest on the average investment of all the plants engaged in the trade. Then, too, some plants are better arranged and better equipped than others, without saying that some are better managed than others, which is possibly the case. Again I venture an assertion that the difference in cost for a given amount of output per annum, between the poorest concern in this organization and the best one, would not be equivalent to the interest on the average investment of all the plants engaged in the trade.

Manufacturers have been getting together in the clubs during the past few years and have been trying to show each other, and those on the outside, that by reason of the cost of manufacture, which is fixed by circumstances beyond their control, that the prices obtained were not sufficient to yield a reasonable profit. Some progress has been made, but too much consideration has at all times been given to the buyer. If we could only forget the buyer and agree that certain things, by reason of their cost, and to yield a reasonable profit, ought not be sold below certain figures, and by reason of these conditions shall not be sold below those figures, then what we are here for today, and what we have met for during the past four years, has been accomplished.

A member of the Rotary Cutters' Club, at one of its meetings, introduced a resolution which I had the pleasure of seconding and which was adopted unanimously. Its wording was something like this: "The fundamental principle of this organization is to persuade all of its members to obtain all they can for all of its products." I will close by saying that I still believe thoroughly in that doctrine and that I have been preaching it and working for it during the entire existence of this association.

#### Dues to Be Increased

A review of the association work for the year just closed, particularly the work the association had in mind for the future, established the fact that the prevailing yearly dues of \$10 were inadequate to meet the requirements. Since any change in the matter of dues is primarily to be determined under the constitution and no change in the constitution can be made for one year hence, the executive committee was empowered to make a levy of \$15 to meet this exigency. In order to cover this point D. E. Kline introduced the following resolution:

Resolved, That the Executive Committee be requested to levy an assessment of \$15 for 1910, and that the secretary be instructed to give official notice to the membership of the proposed change in the constitution, to be acted upon at the next meeting and providing that the annual dues shall be advanced to \$25 a year thereafter.

In order that the various committees might have sufficient time in which to consider matters coming before them the convention at 2 o'clock adjourned to Wednesday at 1:30.

#### WEDNESDAY'S SESSION

It was much after the hour set for the Wednesday session before the convention was called to order by the president. The committee reports were taken up in their order.

#### Committee Reports

The committee on constitution and by-laws had no report to make.

The committee on membership likewise had no formal report, though one new member was unanimously elected, the Kile Manufacturing Company of Akron, Ohio.

The committee on resolutions was divided

into two parts, the one on waterways resolution and the other on regular resolutions. Under the first the following resolution was unanimously adopted:

Resolved, That it is the sense of this organization that we indorse the action of the Rivers and Harbors Congress recommending a policy to legislators at Washington which will insure the required appropriation, whether it be out of current funds of the government, or by the issuance of bonds, to carry out the surveys made by the engineering corps of the Federal government to improve the waterways and harbors of the United States; that this resolution recommends a properly proportionate annual expenditure for this purpose for ten years, thus to insure "fourteen feet of water through the valley," and such other improvements as shall result in greatly increased transportation facilities.

We recommend further that each member of this association write a letter urging his congressman to frame an enabling act in the sixty-first Congress, second session, to the effect cited above; and by this association be it further

Resolved, That as a body we authorize and direct the secretary of this association to place copies of these resolutions in the hands of each member of the Senate and House. Be it further

Resolved, That it is the sense of your resolutions committee that it recommend to the association action upon the suggestion of its officers that a plan for dissemination of better information as to cost of producing veneer and panels be devised; and we suggest that every veneer and panel manufacturer make it his special duty between now and January 1 to compile such data and submit it for a composite recommendation by the Cost Committee as to the cost of cutting the various classes of veneer.

Your committee further recommends that it is the sense of this meeting that the individual, financial and personal support of the members be given unreservedly to the association, and that we as individual members agree that from this date forward we will give our counsel and support to this association with the same interest that we would exercise in the veneer operations in which we are engaged.

It is further the sense of the committee that we indorse the resolution adopted at yesterday's meeting as to increase in dues; and we suggest a committee on ways and means that will plan for greater influence and producing powers for this national organization.

C. H. BARNABY,  
W. C. CALHOUN,  
N. M. WILLSON.

There were no regular resolutions offered.

The committee on inspection and grading made a report favoring some changes in the grading rules. A new section, to be known as Section VII, was adopted as follows.

Fitch stock consists of sundry lengths and sundry widths ten inches and up, the sheets to be kept in consecutive order as they are cut from the fitch. The stock is to be at least two-thirds No. 1 faces; the sheets in the face stock to cut three-quarters clear stock in cuttings of not less than 6 inches by 24 inches.

Note—The term cutting as used in these rules means a piece of veneer equal to No. 1 faces.

Another, known as Section VIII, was adopted also:

Log Run Stock—Stock of any thickness, random widths and lengths, as the logs will make 6 inches and wider, not less than 75 per cent to be 12 inches and wider. Not less than 50 per cent shall be No. 1 face stock, and the remainder shall be suitable for center and backing stock.

The sheets in the face stock are to cut three-quarter clear stock in cuttings of not less than 6 inches by 24 inches.

The committees on cost and valuation, arbitration and grievances, railroad classification and entertainment and programs had no reports to make.

Usually the committee on entertainment and programs makes provision for a banquet, but it was found that the funds of the association were not sufficient at this time to provide for a banquet.

The auditing committee announced that the treasurer's accounts had been checked and found entirely correct, and the report was adopted.

#### Next Meeting Place

At this juncture W. D. Cannon, manager of the convention bureau of the Business Men's Club of St. Louis, was introduced by the secretary. Mr. Cannon invited the association to hold its next meeting at St. Louis, promising every facility and attention possible. There being no further invitations St. Louis was decided on.

The nominating committee, consisting of A. E. Gorham, W. S. Walker and Walter G. Bass, presented nominations for new officers and the convention adopted the list with one exception, the nomination for president. The choice of the committee was Burdis Anderson, who has served the association for the past two years, and the committee thought it but proper that he be given a "fat" year in addition. Mr. Anderson demurred, saying he felt the honor was due someone else. After some discussion the following officers were elected:

President—P. B. Raymond, Indianapolis, Ind.  
First Vice-President—C. T. Jarrell, Humboldt, Tenn.

Second Vice-President—W. C. Calhoun, Sheboygan, Wis.

Third Vice-President—N. M. Willson, Jamestown, N. Y.

Secretary-Treasurer—E. H. Defebaugh, Chicago.

Assistant Secretary—H. S. Young, Indianapolis, Ind.

Directors—Hains Egbert, M. W. Perry, Alex Lendrum, J. C. Hill and H. J. Barnard.

Executive Committee—Burdis Anderson, F. W. Eggers, Charles Barnaby, C. T. Jarrell and P. B. Raymond.

President Anderson was giving a rising vote of thanks for the very able manner in which he has conducted the affairs of the office of president.

The convention then adjourned.

#### The Attendance

The following were in attendance:

Burdis Anderson, Great Lakes Veneer Co., Munising, Mich.

W. R. Anderson, Packages, Milwaukee, Wis.

Walt G. Bass, Indianapolis, Ind.

E. W. Benjamin, Cadillac Veneer Co., Cadillac, Mich.

W. E. Bonesteel, Worden Tool Co., Cleveland, O.

E. W. Benjamin, Cadillac Veneer Co., Cadillac, Mich.

W. A. Bennett, Bennett & Witte, Cincinnati, O.

S. G. Boyd, C. C. Boyd & Co., Cincinnati, O.

C. H. Barnaby, Greencastle, Ind.

Mr. Bush, Strong Veneering Co., Gerry, N. Y.

R. S. Bacon, Bacon-Underwood Veneer Co., Mobile, Ala.

H. J. Barnard, Central Veneer Co., Indianapolis, Ind.

Charles E. Cake, HARDWOOD RECORD, Chicago.

W. C. Calhoun, Frost Veneer Seating Co., Sheboygan, Wis.

C. T. Crandall, Crandall Panel Co., Brocton, N. Y.

Harry P. Coe, Coe Mfg. Co., Painesville, O.

L. P. Groffman, St. Louis Basket & Box Co., St. Louis.

E. H. Defebaugh, The Barrel and Box, Chicago.

M. C. Dow, Goshen Veneer Co., Goshen, Ind.

R. C. Dayton, Wisconsin Veneer Co., Rhineland, Wis.

H. E. Dougherty, Hoosier Veneer Co., Ladoga, Ind.

F. W. Eggers, F. Eggers Veneer Seating Co., Two Rivers, Wis.

J. T. Edwards, Medford Veneer Co., Medford, Wis.

C. O. Ferguson, Veneers, Indianapolis, Ind.

George R. Ford, The Barrel and Box, Chicago.

Henry H. Gibson, HARDWOOD RECORD, Chicago.

A. E. Gorham, Gorham Bros. Co., Mt. Pleasant, Mich.

E. E. Hemingway, Wisconsin Land & Lumber Co., Mattoon, Wis.

F. E. Hoffman, Hoffman Bros. Co., Ft. Wayne, Ind.

J. S. Houston, J. S. Houston & Co., Chicago.

T. W. Howlett, Philadelphia Textile Mfg. Co., Philadelphia, Pa.

B. C. Jarrell, B. C. Jarrell & Co., Humboldt, Tenn.

D. E. Kline, Louisville Veneer Mills, Louisville, Ky.  
 E. V. Knight, New Albany, Ind.  
 Mr. Kile, Kile Mfg. Co., Akron, O.  
 J. H. Mather, L. & I. J. White Co., Buffalo, N. Y.  
 O. C. Lemke, Underwood Veneer Co., Wausau, Wis.  
 Alex. Lendrum, Penrod Walnut & Veneer Co., Kansas City, Mo.  
 B. W. Lord, Chicago Veneer Co., Burnside, Ky.  
 M. M. Marsh, American Lumberman, Chicago.  
 Ralph McCracken, Kentucky Veneer Works, Louisville, Ky.

E. R. Morrison, Warren V. & P. Co., Warren, O.  
 Mr. Parsons, Holland Veneer Works, Holland, Mich.  
 M. W. Perry, Ahnapee Veneer & Seating Co., Algoma, Wis.  
 Allen Quimby, Houlton, Me.  
 P. B. Raymond, Adams & Raymond, Indianapolis, Ind.  
 F. A. Richardson, Michigan Veneer Co., Alpena, Mich.  
 Mr. Russell, Capitol Veneer Co., Indianapolis, Ind.  
 J. D. Saunders, Park Falls Mfg. Co., Park Falls, Wis.

Joseph A. Setter, Setter Bros. Co., Cattaraugus, N. Y.  
 Charles Thompson, Cadillac Veneer Co., Cadillac, Mich.  
 A. H. Wells, Standish, Mich.  
 D. R. Webb, Edinburg, Ind.  
 W. S. Walker, Portsmouth Veneer & Panel Co., Portsmouth, O.  
 Nathan M. Willson, Pearl City Veneer Co., Jamestown, N. Y.  
 H. S. Young, Assistant Secretary National Veneer & Panel Association, Indianapolis, Ind.  
 A. F. Zimmerman, Kiel Woodenware Co., Kiel, Wis.

## National Rivers and Harbors Congress

The National Rivers and Harbors Congress met at Washington, D. C., December 8, 9 and 10 with over 3,000 delegates from all sections of the country in attendance. It proved the greatest congress yet held and the recommendations adopted in the form of a platform are vastly more comprehensive and significant on the question of waterways improvements.

President Taft made the opening address, which reviewed the situation throughout the country. He said that never before had he seen so much activity in the matter of inland waterways, that in California, Texas and on the Atlantic seaboard there were waterways associations composed of prominent men which had plans for extensive operations. The president favored a bond issue of \$50,000,000 to carry on these several improvements.

### President Taft's Speech

One has to travel all over the country to find out how much one does not know about it, and to find out what the people are thinking about. You go into the Northwest and find the development of the Columbia is one of the great projects of many who live in that neighborhood. You go into far distant Texas and you find that they have an inland waterways project reaching down into Louisiana and the bayous of the Mississippi down along to the Gulf, and that has demonstrated its usefulness as a part, and that only needs further addition and improvement to carry out a great system of waterways that shall reach farms and plantations at present far beyond the reach of any railroads. And so, as you come to the eastern shore of the country, you find the inland, and I do not know quite why they call it inland exactly, but it is the inside waterway, the project fostered by the Atlanta Deep Waterways Association.

It is well that in every part of the country is a project of that sort to awaken the interest to those who live there, for while we are all patriots and while we are all in favor of all the country we are just a little more intensely in favor of that which is nearest than we are in favor of that which is very far away, and the danger to this movement, the test of the value of the movement, is going to be seen when you get off that very safe platform that you are in favor of—a policy and not of a project—and get down to the business of pushing projects.

### PROFITING BY THE PAST.

One of the things that I think we ought to do is not to decry the past. It is wise to take from the past that which is valuable and build upon it. The trip down the Mississippi river was an eyeopener to many of us. The work which has gone on at the end of the river and near its mouth and up along the banks of the Mississippi and in Louisiana and up into Arkansas is a work that commends itself to everyone who sees it. It is work both in the preservation of the farms and in the establishment of a great waterway. The work which has been done by the government through its corps of army engineers in strengthening the banks of that river is a work of experimentation, but work which has demonstrated the possibility of treating that river in such a way as to hold the banks and keep the river within them and to insure a reasonable depth where steamers can go.

### THAT 9-FOOT CHANNEL

Now, I don't think I betray a secret when I say that the gentleman who has most to do with the initiation of projects in Congress is fully

charged with the necessity of doing something in the next Congress to foreshadow or, rather, to begin, a policy with respect to those rivers. You have the Missouri, the upper Mississippi, the Mississippi between St. Louis and Cairo, and the Ohio between Pittsburgh and Cairo, all of them satisfying the requirements that you have to put in your platform with respect to the improvement of the waterways. That is an improvement in the heart of the country, an improvement that reaches to more states than any other improvement that can be mentioned in this entire country. It affects not only the states along whose borders the improvements will be made but it affects all the states along the borders of the Mississippi beyond Cairo, for the project will also include and must include the investment of a sufficient amount of money to keep the 9-foot stage always between Cairo and New Orleans. I state away that there are a great many gentlemen in this country who are in favor of something more than nine feet between Cairo and the Gulf, but you have got to get nine feet before you get fourteen. When you once get into operation that system that I have outlined, so as to show the benefits that can be derived from it, what will go on thereafter no man can foresee. The truth is that the engineers will tell you that after you have harnessed the Mississippi river by protecting its banks no man can tell what the depth of that river will be made by the river itself confined within reasonable banks. In other words, what I am urging, what I am laboring for, is something practical in the way of a moderate project in order that you may go on and gradually develop a larger project than that which was in your minds at its initiation, but that you do something practical by taking the materials that you have, and as you go on and as the business increases, demonstrate to those in the country who are not so near to that improvement its advantage to the entire country in the reduction of railroad rates and in the actual transportation of that kind of business that the river will attract.

### BONDING THE IMPROVEMENT ENTERPRISE

Now, speaking to this assembly—I think it was this assembly—we have so many congresses in favor of so many good things that sometimes there is a little difficulty in distinguishing, and when you all meet together in Washington at the same time there is danger of mistaken identity as to associations—but, at any rate, a year ago President Roosevelt and I were together on a platform before the Conservation of Resources convention, I think it was, in which we both advocated the issuing of bonds in order that a project for improving waterways when begun should be completed in a reasonable time. Now, I am still a consistent advocate of that theory. I believe that the government is entitled to as rapid a method of developing an enterprise and putting it through as private corporations, and as they always issue bonds, or generally do (some of them are fortunate enough not to have to) in order to expedite the completion of these projects, it would seem wise for the nation to do so where it will accomplish the same result.

But I want to suggest a word of caution. You are going to encounter in Congress great opposition to the policy of issuing bonds right out of hand. You are much more likely to get from Congress a declaration of policy in the shape of a declaration that a certain improvement ought to be carried out and spread upon the minutes of Congress in the form of a resolution of a declaration in a statute. Now, what I advise you to do is to get that declaration. Then when the time comes that political exigency may prevent the appropriation of sufficient from the current revenues to put the proper part of the project through the coming year or the coming two years, as economy requires, then the question of issuing bonds will arise. I would get the declaration first and not have the bonds first, for the reason that you will encounter the objection by Congress that the issuing of bonds and the receipt of the money will develop a desire to be extravagant. This may not meet your views, but I have thought it over, and I know something about Congress

I know where you are going to encounter opposition and I believe the best way is the natural way with these gentlemen. You lead them on to declare in favor of the Missouri improvement, in favor of the St. Louis to St. Paul improvement, in favor of the Ohio improvement, all of which have been approved by the army engineers, and get them recorded in the statute of this country as declaring that these things are to be carried out and let them make their first appropriation from the revenues of the country, and then you have them where they must issue bonds, unless the revenues afford a sufficient amount each year to carry that project on economically and with due rapidity. I tell you, gentlemen, you are getting as the boys and girls used to say in hunting a button—you are getting warm. You are at a point where you can accomplish something if you don't stop it by doing it the wrong way.

### CO-OPERATION OF THE WAR DEPARTMENT

I don't feel justified in giving advice to a body like this on a subject which they have studied so much, or I should not offer it except that I have had pretty close association as secretary of war and otherwise with the army engineers, who have given their lives to the study of these improvements. I know these army engineers very well. Doubtless you do, as you have met them in the districts to which they were assigned. I venture to say that in your whole experience you have never met men of a higher standard of character, of a higher devotion to public duty, and of greater skill in their profession than these same army engineers. They are selected from the first ten or the first five of the graduates of West Point, and they have a little ring in the army which I might betray to you by reason of some inside information. If a class comes out to that which has not developed very good material in the way of engineers and mathematicians somehow or other the chief engineer advises the secretary of war that for that year they do not need any particular addition to the corps, and so it is that they have acquired a greater proportion of the mathematical and engineering ability of these who graduated from West Point than they really were entitled to. They have gone on, and with but one exception their record is clear in the honesty, and I had almost said the severity, with which they have expended the government's funds, and have seen to their being put into material at a cost which was an honest cost.

### DEPENDENCE UPON ARMY ENGINEERS

But it has been said that they were crotchety, that at times they did not apparently watch the sound of progress; that they were slow sometimes in the building up of improvements. I am not prepared to say that those criticisms with reference to individuals were not well founded. You can not take a great corps like that, numbering as it does a great many officers within it, and not find men who fail to keep up with the procession; but I am very sure from talking with General Marshall and with a number of other men at the head of the corps that they are fully charged with the increasing interest in this country among the people and among the business men in the development of the inland waterways and that you could not have a safer body of men to advise you than the army engineers.

I count it one of the great good fortunes of this country when the country had to build the Panama canal that after using the great ability of civil engineers we finally settled down upon the army engineers to carry that project through.

### A SOURCE OF RELIANCE

So it is with respect to the waterways. They have recommended to the chairman of the waterways committee in the House a system of improvements that I believe will meet the judgment of this convention, if it be moderated to the possibilities of what can be accomplished. I think you can secure upon the statute books of this country a declaration in favor of continuing contracts to build the four or five projects which the engineers have recommended in such

a way that even if you do not get the bonds voted at first if the time arises when the revenues will not permit their use—I mean the current revenues—to continue that work with reasonable rapidity you can move upon the government for the issuing of bonds. I would make the fight for bonds when the conditions strengthen the argument in their favor. It is a strong argument that you will have to meet; that if you are going to issue a large amount of bonds just for the purpose of putting them into the waterways as their necessity may develop then there is a temptation to extravagance. Perhaps it is my judicial experience, but I always feel as if you ought to shape your policy in order to win, not according to the enthusiastic suggestions of your imagination but in order to overcome the obstacles that you are likely to encounter in winning the end which you seek.

And now, ladies and gentlemen, I am very much obliged to you for giving me such attention. I realize that what I have said comes from the lips of a mere tyro, but it comes from one who has some temporary responsibility in respect to the matter and from one who is thoroughly in sympathy with the general object which you seek here—the development of all the waterways of this country by a general policy in such way as to reduce and control railroad rates and in such way as to stimulate upon the bosom of the waters the transportation of such merchandise as is peculiarly fitted to that character of carriage.

#### Address of President of Congress

Hon. Joseph E. Ransdell, president of the congress, next addressed the conference. He said in part:

You have assembled here from every part of the Union without regard to section, political belief or business interest for the purpose of voicing your sentiments on a question that intimately concerns every citizen of the republic—the question of transportation as affected by improved waterways. A small but resolute band met at the Arlington hotel in January, 1906, and those who were present then are delighted at the marvelous growth evidenced by the general voice of the press in advocacy of our policies, and by this splendid assemblage of the leading men of the United States. We advocated then, as we do today, a broad, comprehensive, businesslike policy for improving every meritorious watercourse in the land without mention of special projects; and we insisted then, as we do now, upon the necessity of an annual rivers and harbors bill carrying an appropriation of at least \$50,000,000 to be expended in the prompt execution of such projects as have been approved by the engineer corps, which sum is fully warranted by the magnitude and importance of the interests involved. Our united forces have become a mighty power, actuated by the patriotic determination to improve all our waterways and make them what nature's God intended they should be—the cheapest of all freight carriers and the best of rate regulators. Much has been accomplished and many are beginning to study and understand this subject, but the battle is not yet won, and if we divide our strength and grow selfish the result is most uncertain.

#### WATERWAY IMPROVEMENT A NECESSITY

We must carry on the fight with unrelaxing energy and make the people who elect the congressmen and state legislators understand that water transportation is much cheaper than rail for heavy, low class, bulky articles; that a well improved system of rivers and canals along our seaboard and interior, standardized as nearly as possible so that freight can move to and from any part of the Union without breaking bulk, would furnish admirable facilities and prevent the freight congestion which caused such heavy losses three years ago and which threatens to recur; that while nature has given the United States many fine waters, they have been sadly neglected by our national government, which took control of them in 1796, and it will require a large expenditure properly to improve them; that we have given railroads a free hand in the past without any restrictions whatsoever, and in many instances their unfair methods have destroyed water commerce, and that most of the terminals on water courses, which should be for the common use of all transportation agents by land and water, are owned by one or more railroads and used for selfish interests with scant regard to public welfare.

This situation must be changed and will be as soon as the people demand it. It is the duty of the friends of waterways to see that the demand is made immediately and strongly. Let us work together for that end and forget our local interests until our national lawmakers have adopted the broad, comprehensive policy for the improvement of the nation's waterways advocated by us. We must insure the success of that policy by an annual appropriation of \$50,000,000, secured by an authorized bond issue of fifty millions a year to be used when current revenues are not available.

Let me give one concrete example of how river improvement work has been carried on: In 1907

Congress adopted a project for six feet slack water navigation on the upper Mississippi between St. Paul and the mouth of the Missouri river a distance of 658 miles—at an estimated cost of \$20,000,000. An appropriation in cash of \$500,000 was made and a like sum for each of the following three years—a total of \$2,000,000 in four years—was authorized, especially providing that not more than \$500,000 should be spent in one year. At that rate, as solemnly set down and provided by law, it will take forty years to complete this project, one of the most meritorious in the Union—a splendid river flowing through as fertile land as we have on the continent, with a large and wealthy population on its shores, and many fine manufacturing cities. Forty years! and yet these people are taxed to build the Panama canal in ten years. Where is the reason or justice of such a thing? Echo answer "Where?" This case is merely used as an illustration, and there are many similar ones. If we had our authorized bond issue of fifty million dollars a year this truly great and worthy project could be placed under continuing contract at two to three millions a year until completed and others of similar merit treated in like manner.

#### ATTITUDE OF THE RAILROADS

Another important subject for this convention to consider is the attitude of our great railways toward a broad, liberal policy of waterway improvement. From close observation and the best obtainable information, I fear many of our leading railway men are unfriendly to this movement and, while not in active opposition, they are either totally indifferent or quietly antagonistic. In my opinion, this is a great mistake on their part, and it would be much wiser for them to espouse actively the cause of improved waterways. A slight study of the subject will show that nearly all of our great cities and large centers of manufacturing and business are on navigable water courses and receive the benefits of water competition in cheapened freight rates and increased facilities; and yet it is in these localities that the railroads do their most remunerative business. If our great river systems were improved thoroughly so that navigation thereon was first class, freight rates would be much cheaper, but there would be such a large growth of population and business of every kind, the cream of which would go to the railroads, that they would profit very largely thereby, and as a business proposition it would pay them to have the waterways fully developed. Many of the best paying roads in the Union parallel the improved waters, as, for instance, those adjacent to Long Island sound, the Hudson river and Erie canal and the Great Lakes.

Governor Herbert S. Hadley of Missouri, United States Senator Chamberlain of Oregon, Governor Wilson of Kentucky, F. W. Grandell of the Travelers' Protective Association of the United States, Hon. John Dalzell of Pennsylvania, and Governor Frank B. Weeks of Connecticut spoke of waterways conditions in their respective sections and advocated both a bond issue and an extension of the program for improvements.

Hon. George Burgess, representative in Congress from Texas, made the only adverse speech of the conference. He opposed it on the ground that, compared with the waterways improvements of Germany, for instance, the task ahead of the American government is too stupendous for contemplation. He thought the work might be undertaken more conservatively by improving a little here and a little there until the practicability was tested.

There were other speeches from senators and representatives in Congress as well as from many men prominent in the business and commercial world. John A. Fox, special director of the rivers and harbors congress, stated that during the last year he had traveled over the country four times, given out 600 interviews, had written half a hundred articles for newspapers and magazines and in that time the sentiment for improved waterways had increased fully one hundred per cent.

#### Platform Adopted

The conference adopted the following platform:

The National Rivers & Harbors Congress includes in this convention 3,150 accredited delegates, farmers, manufacturers, merchants, maritime and professional men and members of commercial bodies, representing the greater part of the tonnage of the United States, as well as the shipping interests of the country at large.

This congress is assembled to urge upon the government of the United States the immediate adoption of a broad, liberal, comprehensive and effective policy of rivers and harbors improvements, with profound conviction of its responsibility, and earnestly requests the attention of the President of the United States and the Senate and the House of Representatives of the national Congress to the matters herein set forth.

Every commercial country in the world is working to better its transportation methods, knowing that upon easy, cheap, and sufficient transportation depends the material prosperity of its people, and knowing that to the country which first perfects its system of transportation will come the commercial supremacy of the world.

Every foreign country is utilizing its rivers and harbors and other waterways as the chief factors in perfecting its system of transportation, and the government of every foreign commercial country has deliberately assumed the responsibility of making its rivers and harbors and other waterways adequate for all transportation purposes.

The United States, with resources and courage great enough to undertake successfully the building of that gigantic and most useful water highway, the Panama canal, controlling its own navigable waterways to the exclusion of private effort, is alone among the world powers in neglecting the improvement of its waterways, and has so failed to develop them into effective freight-carrying navigability that the inadequate transportation facilities now seriously impair our commercial growth, and cause enormous waste of our agricultural resources, retarding the settlement of the country and hindering its productive development.

Unless these transportation facilities be made sufficient the United States can not hope either to increase its domestic commerce or extend its foreign commerce as it should, or to take advantage of the opening of the Panama canal, in order to compete with other commercial countries in the markets of the world. This government has the power to give the United States absolute commercial supremacy over all other countries; and the sixty-first Congress now in session can do much to accomplish this by appropriate legislation.

A rivers and harbors bill should be passed as early as possible in the present session of this Congress, appropriating at least \$50,000,000 for the purpose of carrying forward, under the continuing contract system, such rivers and harbors projects as have been heretofore entered on or finally approved, and as are of such a character as surely to fit into and carry into effective use any larger, comprehensive and connected waterway system that may be subsequently adopted; and annually for ten years thereafter an equal sum should be appropriated; and

We believe that the annual river and harbor bill should be placed upon an equal footing with other great appropriation bills and we condemn the present method of appropriation whereby the river and harbor bill carries only such sum as may remain after the other budgets have been authorized.

All projects approved by the government engineers and adopted by Congress should be put upon the continuing contract system and monies provided for their completion as rapidly as physical conditions permit, such monies to be paid from current revenues when practicable or from an issuance of bonds when necessary.

To secure the development of our rivers and harbors on a comprehensive and systematic plan, a department of public works, with a cabinet officer at its head, should be created, which department should have charge of and control over all public works of this and of a similar character. This need in no way prevent the use of the United States corps of engineers now having charge of rivers and harbors work. This corps is now manifestly insufficient for the work it is called upon to do, and we urge that it be sufficiently increased, utilizing in the permanent organization so far as is practicable the United States assistant civil engineers now in the employ of the government. We endorse the bill now pending before Congress for the increase of this corps and urge its enactment into law. We believe that this corps of engineers should be given authority and it should be made its duty to formulate and suggest to Congress plans and projects for rivers and harbors improvement.

In order fully to secure the benefits of waterway improvement to the shippers of the country it is absolutely necessary that the harbors, lakes

and rivers should have the most modern terminal systems for the vessels. We earnestly urge upon the people of states and cities, where waterway improvement is proceeding, the importance of establishing public terminals and landing places with the most modern appliances and equipment for loading and unloading freight, and of beginning this work immediately.

Actuated by the desire to see the United States become the chief commercial country of the world, we, the delegates to this National Rivers & Harbors Congress, present this statement of the transportation conditions now existing, and the remedy we propose, for the consideration of the President of the United States and of the national Congress, and on behalf of the people of our country we urge the adoption of these recommendations.

#### Officers Elected

The following officers were elected:

President—Joseph E. Ransdell.  
Secretary and treasurer—J. F. Ellison.  
Special director—John A. Fox.  
Directors for the Atlantic seaboard—William H. Lincoln, Boston, Mass.; Olin J. Stephens, New York; George E. Bartol, Philadelphia; J. Hampton Moore, Philadelphia; H. C. Warren, New Haven, Conn.; John R. Sherwood, Baltimore, Md.; and Anthony Higgins, Wilmington, Del.

South Atlantic Seaboard—E. J. Hale, Fayetteville, N. C.; W. S. Reamer, Columbia, S. C.; John C. Freeman, Richmond, Va.; D. U. Fletcher, Jacksonville, Fla.; Howard Stafford, Augusta, Ga.; and E. Lommus, Columbus, Ga.

Gulf seaboard—Martin Behrman, New Orleans; S. Tallaferrro, Houston, Tex.; H. Pillans, Mobile, Ala.; Roy Miller, Corpus Christi, Tex.; and R. L. Simpson, Gulfport, Miss.

#### IN MISSISSIPPI VALLEY

Entire Mississippi valley district—Thomas Wilkinson, Burlington, Iowa.; W. P. Kennett, St. Louis, Mo.; Eli Warren, St. Paul, Minn.; W. K. Kavanaugh, St. Louis, Mo.; Charles Scott, Rosedale, Miss.

The Great Lakes District—Edward H. Butler, Buffalo, N. Y.; James H. Davidson, Oshkosh, Wis.;

E. W. Wickey, East Chicago, Ind.; T. Edward Wilder, Chicago, Ill.; H. I. Sephard, Toledo, Ohio; Alex McDougal, Duluth, Minn.; and P. W. Collman, Oswego, N. Y.

Ohio Valley district—W. B. Rodgers, Pittsburgh, Pa.; Albert Bettinger, Cincinnati, Ohio; John L. Vance, Columbus, Ohio; Henry Riesenberg, Indianapolis, Ind.; and George H. Parsons, Cairo.

#### OTHER DISTRICTS

Tennessee and Cumberland district—M. T. Bryan, Nashville, Tenn.; and J. A. Patten, Chattanooga, Tenn.

Arkansas Valley district—John A. Fox, Arkansas.

Missouri Valley district—Lawrence M. Jones, Kansas City, Mo.; and I. P. Baker, Bismarck, N. D.

Pacific Coast district—A. H. Devers, Portland, Ore.; George C. Pardee, Oakland, Cal.; and Dr. N. G. Balcock, Walla Walla, Wash.

United Commercial Travelers of America—W. A. Johnson, Covington, Ky.  
Travelers' Protective Association of America—A. D. Brackett.

#### Prominent Lumbermen in Attendance

Edward Hines, Chicago, Hines Lumber Company.

W. B. Stillwell, Savannah, Ga., Southern Pine Lumber Company.

Sam P. Swinford, Houston, Tex., secretary Texas Lumbermen's Association.

Julius Seidel, St. Louis, Mo., president St. Louis Lumbermen's Club.

T. S. Underhill, Philadelphia, Pa., Wistar, Underhill & Co.

W. D. Gill, Baltimore, Md., W. D. Gill & Son.

R. C. Blades, Elizabeth, N. C.

W. C. Underhill, Hartford, N. C.

F. C. Gillingham, Philadelphia, Pa., F. C. Gillingham & Son.

Tom Vrooman, Philadelphia, Pa., Vrooman Company, Limited.

Victor Kugler, Philadelphia, Pa.

F. Smedley, Philadelphia, Pa., Smedley Bros. Company.

James M. Reilly, Newark, N. J., secretary New Jersey Lumbermen's Protective Association.

G. H. Barnes, G. H. Barnes Hardwood Lumber Company.

A. W. Johanning, Johanning Lumber Company.  
Carl H. Holckamp, Holckamp Lumber Company.

J. W. Hanksins, Robinson Lumber Company.

Thos. C. Whitmarsh, chairman of the committee appointed at the November meeting of the San Antonio classification conference, made a report on which there was a general discussion.

A resolution of respect to the memory of the late James E. Defebaugh, editor of the American Lumberman, was introduced by W. E. Barnes and unanimously adopted.

A resolution was introduced by Thos. E. Powe asking the Lumbermen's Club to put itself on record as opposing the bridge arbitrary. There was considerable discussion, and it was finally referred to the traffic committee.

President Seidel then related the results of his visit to Washington as a delegate to the Rivers and Harbors Congress. He then read his annual report, a brief outline of which follows:

Following the usual custom, President Seidel in his annual address made a comprehensive report on the work the club has accomplished during the past year. He stated that the club now has 108 members, a gain of 42 during the year. The Publicity Committee, he said, has done some very effective work. It has distributed 28,000 tracts, advertising St. Louis as a lumber center. One of the excellent suggestions made by President Seidel was the readjustment of the work of the committees of the club. He suggested that the board prepare for each committee a set of working rules, so its duties will be more clearly defined.

Mr. Seidel reported that three cases of arbitration had been submitted to the club's committee, and brought out the fact this means is infinitely more satisfactory than a decision in the law court, where controversies are decided by law points only, while in this method of arbitration the decision is given by men familiar with the various intricacies of the business.

The work of the club in opposing the attack that was made to annul the lien law of the state resulted in getting the co-operation of other interests, and the law was not disturbed. He dealt exhaustively with the subject of forest conservation and suggested that the scope of the Committee on Public Affairs be broadened to include legislation, to see that good legislation prevails on this important subject.

President Seidel, in conclusion, made an effort to rouse lumbermen to the importance of taking more interest in politics. He said that, considering that the lumber industry is third in this country, lumbermen ought to be more concerned with politics generally as well as with laws affecting matters concerning the lumber business in all its phases.

The treasurer's report was read and accepted and H. S. Price and Robert J. Fine were appointed a committee to audit the accounts.

#### Election of Officers

The election of officers then took place. The two nominating committees appointed at the November meeting, having selected the same ticket, these were elected as follows:

President—Richard J. O'Reilly.

First vice-president—C. D. Johnson.

Second vice-president—H. A. Boeckeler.

Treasurer—E. C. Robinson.

Secretary—John B. Kessler.

However, Mr. Seidel was nominated for the presidency by Thos. C. Whitmarsh, from the floor, and his nomination was seconded by Mr. Knabel. Although the nomination of Mr. Seidel was not withdrawn by Mr. Whitmarsh, in spite of it having been seconded by Mr. Knabel, Mr. O'Reilly, who was the choice of the two nominating committees, as well as

hardwood lumbermen had always been foremost in the support of the National Association; that there are few cities in the country where all branches were better organized than in St. Louis; that he believed the country was on the verge of the best times it has ever known.
